Since it is the consistent policy of the United States not to initiate preventive war, it is plain that our deterrent of war before it starts (and our survival if it does) depends on our ability to counterattack promptly and with great force and precision no matter how severe the enemy's initial attack. Such a defense requires two things: First, the United States long-range weapons and their delivery systems must remain adequate in numbers and second to none in quality. Second, the bases from which these weapons are launched must neither be nor appear to be vulnerable to an enemy's initial attack. This last requirement cannot be overemphasized. The present contest is not a game in which the aces are hidden. The enemy must know and know well that his best calculations and best efforts cannot earn him immunity from a blow of magnitude equal to, or greater than, that which he has attempted.

Therefore the security of the base system from which our retaliatory attack is launched is a major concern of our military

planners. To compensate for the limited range of our present bombers and missiles, we now have bases well advanced toward the enemy targets. Yet fixed bases on foreign soil in close proximity to the enemy cannot always be used—because of problems of sovereignty. Nor can they be defended adequately. In these advanced locations they offer the most obvious, immovable, exposed targets for surprise attack by relatively short-range enemy nuclear weapons.

The concentration of all the services on increasing the range of our weapons steadily reduces our dependence on bases near the target. However, a corresponding increase in range of enemy weapons would also make even our immovable home bases vulnerable to sudden overwhelming attacks which could prevent our counterattack.

In a recent magazine article Gen. Charles A. Lindbergh pointed to the vulnerability of airbases as a weak spot in our atomic deterrent potential. He emphasized the importance of decentralizing and scattering our bases to prevent their simultaneous destruction. He assumed quite logically that we cannot conceal the location of our land bases from enemy intelligence agents.

On the other hand, sea bases can be readily decentralized and scattered and their location cannot be predicted by the enemy. This is of great importance because long-range pilotless missiles such as those developed from German V-1 and V-2 types (which will be among the major threats to our fixed land bases in the future) cannot be used effectively against moving targets. This is a fundamental weakness inherent in the guidance problem for very long-range missiles. This weakness confers a very great advantage on the nation that invests a goodly share of its deterrent and retaliatory potential in forces operating from mobile bases.

It is therefore submitted that:

1. Our defense in nuclear warfare must be based primarily on a well-advertised ability and intention to counterattack with overwhelming force.

2. For maximum assurance against a surprise attack, at least a part of the United States counterattack potential must be decentralized and dispersed far and wide on moving bases. This might be called an ultimate or an additional deterrent, supplementing our fixed-base striking forces. In any event it is so important that if we did not have mobile sea bases we should be forced to invent them. Fortunately we have them.

The most practical moving base for an offensive weapon today is that which moves on water. There are several such bases. It can be a surface ship such as the carrier or it can be a submarine from which aircraft or missiles are launched, or simply the sea itself from which seaplanes supplied by mobile tenders operate against the target. Moving bases may eventually shift to the air, but such a development requires endurance in aircraft beyond anything presently in sight. For today's use, inventing an American mobile deterrent force for the atomic age is not necessary. Because the Navy has not lost sight of the strategic and tactical value of mobility which the sea provides, naval power stands squarely in the road to meet future national strategic requirements.

On this faith in the enduring virtues of mobility the American carrier striking force was founded. That force is mobile deterrent power today. Furthermore, carrier forces have the additional virtue, uncommon these days, of diverting enemy intentions and weapons away from our populated areas and out to sea. This is extremely important when considering such things as radioactive "fallout."

The mobile deterrent forces the United States will need must have three characteristics. First, they must have the ability to deal devastating blows precisely—a high rate of destruction against the enemy's striking

power. Second, they must be self-sustaining for periods sufficient to render overwhelming injury to the enemy, so that even if our shore bases are destroyed they can still continue from the far seas to hurl destruction at the enemy's military vitals. Third, although invulnerable to long-range pilotless missiles, they must still be defensible against the modern humanly guided weapons.

Those are the three characteristics which must mark the carrier striking forces of today and tomorrow.

Future carrier striking forces can be visualized as a handful of large ships able to maintain high speeds in all sea conditions—say, 3 carriers, 7 guided missile cruisers, and 2 high-speed resupply ships per task force. This small task force may be contrasted with the 100-ship Task Force 58 of World War II and its many dozens of logistic support ships. This handful of a dozen ships will be far more economical, yet more powerful and more mobile. The ratio of punch to overhead will be tremendously improved.

This mobile force will be spread out over an ocean area the size of the State of Maine. It will be so widely dispersed that no single weapon, of any size now visualized, can seriously damage more than 1 ship.

Such a force would pack a very great offensive punch. It would include aircraft able to deliver large yield weapons under all weather conditions against enemy bases 1,500 or more miles distant. It would have other smaller, supersonic aircraft, each able to deliver in the medium ranges a weapon large enough to knock out an opposing air base or missile site. Coordinating with such carrier forces will be advanced forces of nuclear-powered submarines, launching atomic missiles against targets at relatively short ranges.

These forces would be self-sustaining for some 30 days of war operations, a long time in terms of atomic war. Most of the ships would have nuclear propulsion. Aviation fuel and weapons resupply would come from the 2 fast supply ships traveling with each task force.

Because of the dispersion of the force's ships and the range of its weapons, such a carrier force could exert a tight and exclusive control over an area of 60,000 square miles—the 6 New England States rearranged into a circle 275 miles in diameter. An enemy vessel or aircraft would approach that area at its peril and few would live to penetrate even part way to its center.

In the past, fast carrier task forces have been satisfied to have 1 or 2 cracks at the enemy attackers. Antiaircraft and anti-submarine defenses have been tightly concentrated around the carriers for mutual reinforcement. Combat air patrols were dispatched to break up enemy attacks 50 miles out. Against the Japanese this was enough. In 1 day alone—the Marianas turkey shoot—the Japanese threw 545 aircraft against such a formation and had 366 shot down. Against nuclear attacks even this high performance is unacceptable, even though it is not expected that the mobile deterrent force would face such numbers.

Against air attack, the future carrier force would have a defense system unrecognizable when compared to that of our World War II task force. Short range antiaircraft weapons would be absent because they have been made obsolete by the distance from target to release point in modern high-speed bombing. Instead, defense against air attack would in great part depend on medium range guided missiles carried aboard the cruiser missile ships. Nuclear warheads would be available for missiles fired against large bomber formations, should the enemy be unwise enough to concentrate his aircraft.

Against enemy submarines there would be concentric rings of warning and defense, provided primarily by helicopters based on the guided-missile cruisers. The outer ring

would be effective many miles from the carriers. Nuclear antisubmarine weapons would also be available. The use of destroyers will be entirely different from the procedure of World War II and probably none would be employed in a carrier task force.

This exploration of the potential capabilities of future carrier defense has been mentioned in some detail because of the prevailing feeling that carriers are easy to sink. Those who share that feeling fail to distinguish between putting a carrier out of action and stopping the carrier force as a whole. In the defense of the modern carrier task force, the objective will be to stop all attackers before they reach release position. A failure will not sink the entire force, although it may knock out any one ship.

But the unpleasant fact of nuclear war is that today practically everything is vulnerable, particularly airfields. Nuclear tests tell us exactly what size atomic bomb is required to lower the center of any man-made runway in the world to a depth of 100 feet. Any runway so attacked will stay sunk. But it is obvious that of the two bases—fixed and mobile—the latter has a far greater chance of survival.

The sea base, moreover, has other important advantages:

First, it enjoys unobstructed radar vision.

Second, the location of that sea base cannot be predicted. The location of the carrier force will not be a secret, but within its vast dispersed control area the carrier location will be obscure. Moreover, the carrier task force's defense system will be especially designed to limit enemy reconnaissance.

Third, the sea base's offensive punch would be used to stop attacks at their source—the enemy's bases—using the full advantage of our mobile basis against their fixed bases. The ace we do not mind showing is that we will know course and distance to their fixed bases in advance, while they will not know the exact whereabouts of our mobile bases.

Such a carrier task force is the application of atomic capabilities in an exacting blend of air and sea power, of carrier-based fighters relying on warning and control furnished by cruisers, of warning and antisubmarine helicopters operating from cruiser decks, of carriers poised behind cruiser-launched missile umbrellas, and of all ships in turn depending on the effective destruction of enemy forces and bases by carrier-based bombers and submarine-launched missiles. It is the logical development of sea-air power in the atomic age. This would be our primary mobile deterrent force for the age of long-range missiles. It is a force which the Navy must perfect before that age comes, and which, though it would not escape unscathed, would have a most favorable exchange rate in a battle as well as the power of diverting the enemy forces from our homeland.

This future carrier force has been projected to demonstrate that the carrier has not yet reached its ultimate development as a major weapons system. Further, the principle of the mobile air base, which it exemplifies, is, of necessity, experiencing a resurrection among exponents of airpower.

In addition to the carrier, there will be other mobile deterrent forces to strengthen United States strategy in the age of missiles. Very long-range missiles launched from submarines and surface ships constitute one fruitful line of advance. Also promising is the long-range attack seaplane. This has an additional advantage which the carrier force lacks—seaplane forces can be widely dispersed overseas in many small, relatively inexpensive units, in areas where maintenance of other forces would be too costly. The appearance of modern United States seaplanes in an area thousands of miles from American soil could establish a threat to an enemy's flank and require a diversion of his defenses from other fronts.

The seaplane can soon be given the speed and altitude and load-carrying capabilities of land-based jet bombers. It can be given the ability to operate from any sheltered bay, gulf, lagoon, and estuary having water depth of a few feet. It can be given the capability to land in semisheltered sea areas adjacent to the enemy's shore, refuel, rearm, and replenish from a waiting submarine and proceed on its mission. It need not return to the area whence it departed. With these capabilities it could deliver powerful weapons to vital targets, yet operate from a mobile base well removed from threat of heavy attack. The operating base, a seaplane tender far to the rear, can be given missile and helicopter defenses against light air and submarine attack. It can be moved frequently to foil enemy attack; no advance preparation is needed and no expensive facilities are left behind as improvements to someone else's property. Nor are the sabotage and espionage problems as great for a floating base.

With perhaps half a dozen seaplanes, a single tender, and a pair of logistic submarines, an integrated force could be provided that an enemy could not ignore. Once nuclear propulsion can be fitted to the seaplanes—and for this they appear ideally adapted—the submarines could be dispensed with and the tender base moved still farther back out of attack range.

Use of a proper seaplane force is good deployment—an essential to nuclear warfare. It permits tomorrow's Navy to attack from unpredictable directions and to dilute, divert, and divide an enemy's attacking forces.

It is therefore submitted that, first, survival of the United States requires a supplementary reserve of nuclear striking power which can be launched from mobile bases and, second, the Navy's development of weapons systems employing sea and air provides such power in natural course. It is important to note also that such naval forces can be equally effective in both nuclear war and nonnuclear war. This permits us to apply the type and degree of power appropriate to the situation and avoids the predicament of being unable to use force when necessary because the only force available is too great for the circumstances.

Whether or not we become engaged in limited wars in the future, there will be jobs to do which may not involve all-out nuclear assault on the enemy's sources of military strength. Allies must be supported, supplied, and in some cases fed, and our own raw material needs must be met. And so transports, both surface and air, must flow safely across the oceans. Perhaps tactical air support for hard-pressed allies must also be provided, without atomizing a friendly population. It is likewise conceivable that in the later phases of a nuclear war the patterns of a nonnuclear, conventional war may return.

In any event these naval striking forces have the dual capability for both types of war. Most of the existing fleet was designed for the nonnuclear, and successfully so, as the Pacific wars have shown. New construction, modernization, and modifications will continue to be adapted to the atomic. But they will retain their flexibility however the issue may be joined. Mobility makes them irreplaceable as a safety factor today; the same mobility and flexibility spell economy in a world where the exact place and nature of the next threat cannot always be anticipated. They will be replaced only by weapons of greater mobility, speed, and range.

The United States must face up realistically to the problems and requirements of nuclear war. As a first priority, varied types of striking forces must be adequately maintained which alone can deter nuclear warfare, and which alone can be decisive in the first phase of such a war if it comes. A reasonable effort must also be devoted to home defense and to the support of our overseas commitments; even though the defen-

sive is not decisive, the enemy cannot be left an open invitation to move unopposed.

If adequate strength is to be maintained in this critical area while supporting a reasonable civil economy, there must be a constant re-examination of both the kind and the qualities of forces. Those types of weapons which give relatively less security per man or dollar—however useful they may be for specific purposes—must be questioned and reappraised. While the possible requirements of limited war must not be neglected, the maintenance in peacetime of forces which in unlimited war could be useful only in the later stages, and might even be serious burdens in the early stages, must likewise be questioned. It must be appreciated that in nuclear war it takes far fewer men to destroy at unheard of rates, and that it will take more and more men for reconstruction of industry, transport, and essential shelter.

As the nature of war changes many of our present weapons and forces will inevitably become relics of history, including elements of the Navy and of naval aviation as well. All weapons systems must stand the tests of mobility, multi-purpose flexibility, speed and range, lethality, and the other attributes. Our obligation is to discard those which do not measure up and to accelerate the development of those which show promise.

With this approach, the Navy has a future more vital and more demanding than ever before.

Tuna: This Industry's Illness Can Be Fatal

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Point Newsweekly, February 3, 1955, published in San Diego, Calif.:

TUNA: THIS INDUSTRY'S ILLNESS CAN BE FATAL

(By Robert K. Lawson)

The closing last week of the Van Camp Sea Food Co., Inc., plant in San Diego only dramatizes an already existing condition—the near fatal illness of the tuna industry.

The Van Camp shutdown was much publicized. Few know, however, that the High Seas plant here, subsidiary of Star Kist, has packed no tuna since the fall of 1954. Thus San Diego, "tuna capital of the world," is left with a single operating cannery—Westgate California Tuna Packing Co.

Essentially the Van Camp closing, while generated by the sad state of the industry, is timed to accomplish specific things. Negotiations with the independent cannery workers union were set to start in a month or two. The closing will pretty well knock the wind from union demands for a wage increase.

The canneries are bucking boat owners' demands for \$330 per ton as a price for tuna. The official price is now \$300 and it is said that only boat owners who will accept \$270 are making sales to the canneries.

Van Camp operates two older and less efficient canneries in the San Pedro-Terminal Island area. The San Diego plant is more modern, better equipped and more efficient. Thus the decision to close the plant here, instead of one of the older plants, would seem to have been dictated by a desire to influence negotiations with the cannery workers on the one hand and the boat owners on the other.

Robert L. Beamon, Van Camp's general manager, says the cannery should be open again by albacore season—around June 1. Maybe sooner. And maybe not.

He blames high inventories which in turn have been created in part by the influx of tuna from Japan. Meantime San Diego has 800 more unemployed, and this week was feeling the loss of the \$50,000 weekly payroll.

San Diego possesses one of the most unique economies in the United States, with a virtual guarantee of at least \$174,697,054 Navy payroll annually, plus \$83,962,736 from agricultural production, and \$39 million tourist-trade income.

Despite this apparent cushion, her financial security is intrinsically geared to the manufacturing facilities that form her largest source of income, where fluctuations in the production of manufactured goods frequently cause devastating effects.

Ranking first, second, and third in this category are aircraft, with \$321 million; tuna, with \$65,822,000; and its allied industry, shipbuilding and repair, with \$14,106,000. Combined the "big three" employ most of the 52,150 people who produce industrial products valued in excess of \$540 million annually.

With the end of World War II the United States instituted a reconstruction and rehabilitation program in Japan.

Very soon the production of fish outstripped the food requirements of the Japanese, who do not eat processed fish in any form. They consume only fresh fish, and something had to be done with the surplus. It turned out to be an admirable export item.

Meanwhile the United States producers (San Diego, San Pedro, Terminal Island) had indoctrinated the palates of the American people for tuna canned in oil to the tune of around 8 million cases annually by 1948. The American tuna fishing fleet (San Diego) was producing most of the market requirements, with a few thousand cases from Peru and other countries making up the balance of imports.

Japanese imports began to arrive in this country, and by 1949 they held about 2½ percent of the American market, which by that time had climbed another half million cases. The rise in imports cost the American fleet proportionately, but the matter was not considered seriously at that time.

It was shortly after this that the Japanese importers got busy (aided by a reduction in tariffs) and they slugged over 3 million cases into this country in 1950. The effect was, to put it mildly, devastating. It tied up one-third of the American tuna fishing fleet hard and fast in San Diego harbor. It cost the owners and operators thousands of dollars that fall.

The Japanese recognized their mistake (and duly noted quota proposals in the U. S. Congress and they voluntarily imposed a quota on tuna exports until the glutted market situation here could recover. They reduced exports about 1 million cases per year for the next 2 years. The American fleet staggered through, although it never fully recovered.

By 1953, however, the importers were back in the saddle. They shipped in another 3 million cases that year, and the American fleet took another staggering blow. It was not as critical this time, though since the American market had now reached a capacity of about 11 million cases.

Another factor aided United States boat owners. Building steadily since the end of the war, the fleet strength had reached 214 vessels when the crisis struck in 1950. By 1953, however, the fleet had shrunk to 183.

Following the 1950 market glut, the tuna industry repeatedly appealed to the Government for a tariff or quota, or some form of control over imports. These pleas ran afoul free trade policies and the need to keep the

Japanese economy going to save that nation from the clutches of Communist domination.

Many vessel owners got out of the business, reinvested their money in other enterprises, or transferred their vessels elsewhere. They are continuing to do so, and the end of 1954 saw the American fleet strength reduced to 163 vessels; exactly where it stood at the end of the war.

Meanwhile the Japanese fleet continued to build and imports of tuna continued to soar. The fall of 1954 saw another 50 vessels of the American fleet tied up in San Diego harbor. Many waited as long as 30 days, and more, after arriving in port following 60 or more days at sea before unloading their catch.

When the Japanese tuna import glut struck last year, the American Tunaboat Association, a boat owners' cooperative corporation in San Diego, representing a membership of about 70 percent of the American tuna fleet, held a contract with the cannery guaranteeing a price of \$330 per ton. The glut reopened negotiations and resulted in a reduction of \$30 per ton in the price.

This contract expired on December 31, 1954. However, vessels which had sailed for the fishing banks were considered to be eligible for the contract price, even though they did not return until after January 1, 1955. There is current a strong rumor that the vessels being unloaded today are those whose owners agree to accept as little as \$270 per ton.

Fishing is like no other business in the world; yet it is also curiously like any small business. Each vessel is a small business. The owner may have an investment ranging from \$250,000 to \$600,000.

Economics of a hypothetical fishing trip could run something like this: Most vessels in the \$500,000 class are equipped to carry 300 tons of frozen tuna. The owner, and there can be as many as 10 or more with equal investments of \$5,000, undertakes to go out to the fishing banks.

He acquires a crew of 15 men on what is called a share basis. This means that all members share out equally on the amount of fish caught. If he returns with a full load, he should receive \$90,000 for his catch if the prevailing price per ton is \$300.

Fifty percent, approximately, of the price received for the load goes to cover operating expenses—insurance, bait licenses, depreciation, owner's share. The balance of \$45,000 to be split among the crew of 15, or about \$3,000 each before taxes. If there were 10 owners they would receive a proportionate share after other deductions.

On the face of it, this appears to be fairly high wages for the fisherman. Considering other aspects of the situation, however, it just about equals the wages paid for comparable jobs ashore. The boats don't always come in with a full load.

And here is where the Japanese import situation cuts more deeply into the fleet's financial welfare. United States boats may be tied up in port for long periods waiting to unload their catch at canneries where the imports take precedence.

The impact of a tie up of 50 tuna clippers in San Diego harbor can be presented graphically in dollars. Fifty tuna clippers could hold 10,000 tons of tuna, with a value of about \$3 million to the fishermen.

Coupled with this fact, the valuation of the tuna clippers would be about \$15 million. The \$15 million, which is not earning dividends, and is actually costing money tied up, plus the \$3 million, not in the fishermen's pockets where it could be spent, takes about \$18 million out of circulation in San Diego.

When the 1950 glut shattered the fleet, owners who couldn't get out of the business found it expedient to place their vessels under foreign registry.

It was relatively simple to operate in other countries, and it presented some very distinct advantages. The boats were required to hire nationals of those countries for a crew and to pay United States type wages only to their own captain, engineer, and navigator. On the crew they saved money.

True, they got \$30 less per ton, but they more than made this up in the cheaper labor, and they were assured of full fishing time. Freezer vessels took their catches promptly. Minor repairs were accomplished in foreign shipyards.

There has been much talk of lack of cooperation within the industry. Both the cannery and the fishermen-producers obviously desired the same thing in the form of excessive Japanese imports. They have never gotten together, however, because each takes a markedly dim view of the problems confronting the other.

The cannery maintain they have spent about \$9 million building a 12-million case tuna market. The money has been shelled out in publicity, public relations, advertising.

The canner is naturally sensitive to his responsibility to maintain this market. He is pretty sure the market will continue to expand.

His stand is that he cannot afford to gamble on the possibility of running short of the raw materials necessary to supply the market. The fishing business, being relatively unpredictable causes him to seek a method of locking his door against the hazard of poor catches by the domestic fleet.

With a view to accomplishing this security the cannery are increasing their interests in South American countries, Puerto Rico, and the Central Americas. The grand play, from where we sit, is that if the United States fishermen get legislation to slow the imports, the cannery will have insured their supplies of raw materials by these overseas investments.

The constant shrinkage of the American fishing fleets cuts into the shipyards and repair business here. Repair of the tuna clippers provides a large share of the shipyard income, and it is entirely illogical to presume the owner of a vessel based abroad would elect to travel several thousand miles for a repair job here.

San Diego, relieved of a good portion of the shipyard repair business, and relieved of many of the fishermen, presents some significant economic aspects to this community. The loss of revenue from personal property taxes on the vessels, together with other taxes, and the sale of several thousand dollars in provisions and fuel and oil each trip is not a small item. In addition there are the taxes and wages of the fishermen.

It is not inconceivable that foreign canneries could can the fish and ship the product into the United States utilizing foreign labor and facilities. This function, because of present tariffs, would leave the American cannery with the job of sealing the can—a mighty thin industry.

There are strong rumors that a huge fish freezing and storage plant is under construction in southern California. Fishermen wonder whether the plant may be utilized to hold their catches, or to freeze and hold the surplus Japanese imports they have every reason to believe will continue to climb.

The answers to these questions may be just around the corner. But if past performance curves are any criterion for these observations the situation could explode momentarily. Right now, based on statistics for the first 9 months of 1954, the American fishing fleet holds about 56 percent of the American market, Japan 38 percent.

Ceremonies Honoring Rev. A. A. Skonieczki, Rt. Rev. Bronislaus Michalski, and Hon. Philip J. Philbin

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the Record, I include therein a news account of impressive ceremonies recently conducted at Saint Stanislaus Hall, Three Rivers, Mass., in honor of my friend, a great and able leader of the Polish cause in this country, the Reverend A. A. Skonieczki, and the Right Reverend Bronislaus Michalski, Prothonotary Apostolic of London, England, an outstanding spiritual leader and chaplain for the Polish Army in exile, and myself.

At the exercises I was invested with the Order of Polonia Restituta and it would be impossible for me to express my appreciation to my very dear friend, Father Skonieczki, for so thoughtfully arranging the occasion and the Polish Government in exile for so generously bestowing upon me its highest civilian award. In a very humble spirit indeed, I express my gratitude.

Father Skonieczki has been a powerful voice and a tower of strength in fostering true Americanism, patriotism and devotion to the principles of liberty. His unflagging efforts for the cause of Polish freedom have endeared him not only to his own people, but to all lovers of freedom. That his work and the work of so many other devoted leaders, who are striving to secure liberation of Poland, may soon have a triumphant result, is the hope and the prayer of all Americans.

It is because of the unselfish, untiring efforts of Father Skonieczki and men like him, who are inspired with noble American principles and dedicated to the achievement of freedom for the oppressed and persecuted, that the people behind the Iron Curtain are able to keep their courage high and their faith for ultimate deliverance unshaken. Father Skonieczki and his associates, who are working for liberation of subject nations, compel the admiration of all other Americans because in the best sense they represent unyielding devotion to the principles of democracy and freedom.

The news excerpts which I insert are part of my remarks.

At Palmer last night speaking at a dinner honoring his appointment to the order of Polonia Restituta, high decoration of the Polish Government in Exile, conferred upon him for "outstanding service and contributions to the cause of freedom," Congressman PHILIP J. PHILBIN blasted organized world communism and urged peace based on justice for all nations.

PHILBIN declared that despite solemn pledges before, during and after World War II, "the Communist conspiracy is forcing the United States and the free world to live virtually in a huge armed camp."

"There can be no lasting peace based on tyranny exploitation, and in justice," he said. "The liberation of oppressed nations behind the Iron Curtain is not only necessary on moral grounds. Until it is accomplished, there can be no true peace in the world and a peace movement based on oppression, the continuance of insidious Communist infiltration and appeasement of those working for the destruction of freedom can only end in disaster."

"This Nation must stand for its principles, protect its rights, its interests, and its liberties. It must defend the cause of freedom. It can never waver or retreat before the forces of Red aggression. Our Nation must stand fearlessly for security and peace predicated upon principles of justice, confident of our great strength, military, economic, and spiritual, united in our determination, come what may, to protect the cherished way of life."

Honored also by the gathering were the Reverend A. A. Skonieczki and Msgr. Bronislaus Michalski, both of whom were decorated by the Polish Government for distinguished service.

POLISH AMERICAN CONGRESS, INC.,
Washington, D. C., January 25, 1955.

Hon. PHILIP J. PHILBIN,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN PHILBIN: We are taking the liberty of bringing to your attention that February 7, 1955, will be the 10th anniversary of the famous wartime meeting of the Big Three which marked the beginning of a series of retreats of the free world before the forward march of Soviet aggression. We refer, of course, to the meeting of Joseph V. Stalin, Franklin D. Roosevelt, and Winston S. Churchill at Yalta in 1945.

Under an agreement reached there—or, rather, extracted by Stalin under the threat not to join in the war with Japan—the Soviet sphere of influence has been carved out in Eastern Europe. The enslavement of several European nations—Poland included—has been sanctioned by the two western leaders, caving in under Stalin's blackmail.

At Yalta, too, the way was paved for the sovietization of China. The Yalta compact remains an executive agreement, never ratified by the United States Senate and therefore not binding. Repeated Soviet violations of the Yalta agreement deprive that document, secretly drafted, of its last vestige of questionable validity.

Millions of Americans believe that the Yalta agreement should be denounced and declared not valid. All unilateral actions undertaken by Stalin under the cloak of that most unfortunate result of personal diplomacy, should be declared illegal. Only a compete and unhesitating renunciation of the Yalta agreement by the Congress and the executive branch of our Government could restore American prestige in Europe and Asia.

Referring to your splendid record in the fight for American security and our moral leadership of the free world, we beg to submit to your attention the necessity of raising your voice on the Floor of the House on Monday, February 7, in defense of the Polish Nation—the prime victim of the Yalta deal—and the other nations, victimized by Soviet imperialism.

You may rest assured that the expression of your views on that occasion will find most appreciative response in the minds and hearts of those who deeply believe that as long as Yalta remains unrepudiated and un denounced, the enslaved nations of the world—our most faithful allies—will be unable to trust our word.

Respectfully yours,

CHARLES BURKE,
Washington Representative,
Polish American Congress, Inc.

PALMER, MASS.—Three Rivers and portions of its neighboring villages, where the spark of righteousness, loyalty, and faithfulness to its Polish ancestry still burns brightly in the hearts of the older generation, despite many persecutions now and in past years, where the flower of budding young Polish womanhood and manhood blossoms for one common cause to take sides with brethren in every city and town in the United States and Europe to return of ravaged Poland to the rank it once held and should now hold among the peace and God-fearing peoples on the earth, listened to an inspiring and forceful speech in St. Stanislaus Hall last night delivered by Poland's friend in Congress, Hon. PHILIP J. PHILBIN, of Clinton, representing the Third Congressional District.

His rousing talk was timely, for it came upon the occasion of 3 persons being honored during a testimonial banquet, 1 of them being Mr. PHILBIN himself. A capacity crowd attentively listened in hushed silence, applauding and cheering as the occasion merited, as Representative PHILBIN held his audience spell-bound with a dynamic and well-chosen speech.

There were 700 persons of Polish ancestry, both young and old, who came to heap tribute upon their beloved pastor, Rev. A. A. Skonieczki of SS. Peter and Paul Parish, who now holds the title of honorary commander in Polonia Restituta, and was recently appointed honorary colonel-chaplain in the Polish Armed Forces—to revere and admire the Right Reverend Monsignor Bronislaus Michalski, protonotary apostolic of London, England, who has jurisdiction over displaced soldiers of the Polish Army and displaced civilians now living in England—and to receive into their hearts a dear friend and crusader in the Polish cause, Congressman PHILIP J. PHILBIN, who was honored by Monsignor Michalski by having a medal and ribbon pinned about his neck, giving him a similar title as Father Skonieczki's, that of honorary commander in Polonia Restituta. The medal is the highest award bestowed upon an individual by the Polish Government in exile and is comparable only to the Congressional Medal of Honor given someone in the United States.

And, there were many of the older folks present, who inspired and spurred on by Representative PHILBIN's blast upon the tyrannical governments of the world, principally communism, who are trying to stamp out the last flickering hope of a new Poland, were noted to nod their heads in agreement on certain statements and to equally show signs of negation on others as Mr. PHILBIN drilled home his aims to continue the fight to obtain protection for the peoples of oppressed Poland and other similar nations who have felt the scourge and pestilence of an invader and the hand of death and destruction in their lands. Many were the elderly listeners of Polish heritage who brushed aside a tear now and then, no doubt taking back thoughts to dear ones in the fatherland who have either felt the heavy hand of tyranny fall on their heads and to those who have been scattered to the four corners of the earth by war.

Representative PHILBIN branded the Kremlin and its supporters who have infiltrated with their diabolical schemes and policies into every nation of the world as cruel, vicious, unscrupulous conspirators who would crush all peace-loving nations on the face of the earth under the foot of tyranny and urged all to take up the fight against the terroristic Communists with their plague of hatred and death.

Representative PHILBIN was one of three who was honored last night at a testimonial dinner given those who have taken up the torch in the fight to liberate suppressed Poland and other similar nations. He cited the Katyn massacre of the Polish officers

one of the most atrocious crimes in the history of mankind and said no peace will ever be entertained until the last of those who would crush and enslave be exterminated. He said nations with the horror of death and bondage hanging over them, should be protected. He lashed out: "We shall never stop—never remain silent—never cease to fight—to free nations from this communistic scourge and the principles it stands for."

A member of the Armed Forces Committee in Washington, he told of the death-dealing weapons now being held by aggressors and the United States, touching briefly on the hydrogen and atomic bombs. He urged the continued making of these destructive missiles and stocking them so that the United States can be prepared for any nation who should dare to challenge our rights for peace, liberty, and pursuit of happiness.

Representative PHILBIN said he took up the fight on Poland's behalf, because he was an American and all real Americans refuse to stand by and see a smaller nation maltreated and annihilated by a tyrannical force. He said he is one of a large group of crusading men who started the march to see Poland and other hard-pressed countries returned to rightful places in the world and would continue with zealousness and determination to fight on until this goal is achieved.

Before Representative PHILBIN took over the rostrum, another inspirational speech was delivered by Chaplain Col. Andrew T. F. Nowak, United States Army, Retired, Chicopee Falls. Father Nowak thanked committees who were instrumental in bringing the Polish people together on this momentous occasion. He heaped tribute on the 3 honored guests and touched upon Generals Kosciuszko, Pulaski, and Krzyzanowski and other Polish soldiers and immigrants who came here during the early years of our country and helped to mold the Government and policies now in the United States. Also extolling the work advanced on Poland's behalf by Father Skonieczki, Monsignor Michalski, and Representative PHILBIN, were speakers, Rev. Marian Stanczyk, of Ludlow, and Rev. Bronislaus S. Rosnik, of Providence, R. I. The latter, always fighting for liberties of oppressed Poles, was instrumental in having a statue of General Pulaski erected in Roger Williams Park, Providence, R. I. Father Skonieczki closed the speaking program by thanking all for their efforts in making a going away affair for Monsignor Michalski such a success. Monsignor Michalski, a seminary associate of Father Skonieczki, has been a guest at the local rectory for many weeks and soon returns to his work in England.

Other guests at the head table were Rev. Joseph Piszczalka, M. S. Westfield, Rev. John P. Kochanowski, Gilbertville, Rev. Walter Rozpad, Woonsocket, R. I., Rev. Josephat Piasta, Chicopee, Rev. Oswald Loretan, of Bondsville, Rev. Michael Bielak, Ware, Rev. Leonard Pakulski, O. F. M. of Holyoke, Rev. Joseph Niedzwiecki of Southbridge, Rev. John Klekotka of Greenfield, and Rev. John E. Abertin, SS. Peter & Paul Parish.

Interspersed with the speechmaking was a program of Polish dances, songs, and duets. Participating were the SS. Peter and Paul mixed choir, Misses Irene and Lillian Frydryk, Benigna Smola, Edwin Olearczyk, Mary Wielkiewicz, Richard Nowak, and Barbara Salamon. Fr. Loretan of St. Adalbert's, Bondsville, gave the invocation and Rev. Leonard Pakulski of Holyoke, conducted the closing prayer. Rev. John Aubertin served as master of ceremonies. As the inspired crowd wended its way through the doors of the hall after singing of the Polish national anthem, many were the happy faces to know that so much has been done for their cause in the fight for freedom and happiness.

Eisenhower Record at Midterm

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent, I am extending my remarks to include the following article from the March 1955 number of Democratic Digest:

THE EISENHOWER RECORD AT MIDTERM—
BACKDOWN GOVERNMENT

Most of the newsmen who attended the President's press conference of January 12 emerged shaking their heads in bewilderment. This was the conference at which the President discussed the now famous Ladejinsky case.

Previously, the White House had stood squarely behind Agriculture Secretary Benson in his firing of the land reform expert as a security risk. It had then made known the President's full approval of the rehiring of Ladejinsky for what Foreign Aid Director Stassen termed a "sensitive" job in Vietnam. Despite this White House position, Benson was sticking to his view of Ladejinsky as a security risk. Obviously, the President's position needed clarification.

What the reporters got instead was uncertainty and confusion. Mr. Eisenhower gave his full backing to the right of Benson and Stassen to hold contrary views about Ladejinsky and, while, of course, he had to support Mr. Stassen's rehiring of Ladejinsky, any mistake of judgment in the matter would rest on Stassen's shoulders.

The President having reversed his field 3 times in the course of 1 press conference, a reporter remarked as he left the conference, "If this keeps up, Ike is going to be known as 'the man who wouldn't stay put.'"

The Ladejinsky case was just one of many instances in the first 2 years of the Eisenhower administration in which the White House had shifted its ground or completely yielded its position. This wavering White House leadership, which left all of the Cabinet officers without any certainty of top-side support of their positions, has resulted in what some call government by backdown.

The most recent and, in the view of many, the most significant example of government by backdown concerns the much-heralded Marshall plan for Asia program.

This program was formulated by Secretary of State Dulles and Foreign Aid Director Stassen to combat communism in Asia through extensive economic aid which, it was hoped, would bring the same remarkable recovery and the same receding of communism that the Marshall plan brought in Europe.

But when Messrs. Dulles and Stassen launched their program within the administration, they did not reckon on the power or persuasiveness of Treasury Secretary Humphrey, whose main concern is balancing the budget at all costs. Humphrey was attending a South American conference when the Dulles-Stassen plan was first broached. Upon his return, he is reported to have berated Stassen for inaugurating such an expensive plan.

The President, who had been thought to support Dulles and Stassen, quietly shifted his position toward Humphrey's, and neither the state of the Union message nor the President's budget contained any direct reference to the Marshall plan for Asia program.

Apparently, remarked the magazine *Commonweal*, this trial balloon has been shot

down not by sources outside the Eisenhower team, but by the administration itself.

Another recent important instance of government by backdown was in the so-called New Look defense policy. In 1953, pressed by what it felt to be the political necessity of making a drastic cut in the Truman budget, the administration slashed the Air Force funds by \$5 billion. The following year, with the Indochina crisis dominating the headlines, the administration reversed its field, and restored the Air Force cuts. This year, defense cuts are again the order of the day—with the Army bearing the brunt.

To those who have watched the President closely and critically over the past 2 years, these major reversals are not surprising. They are part of a consistent pattern of Presidential backdowns. For example, during the public storm over the removal of books from the shelves of United States overseas libraries, which many compared with book burning in Germany, Mr. Eisenhower exhorted a college commencement, "Don't join the book burners." But a few days later, the Washington Post was to comment, sadly, "If the President's words at Dartmouth are to have practical meaning, they must be applied first within his own administration."

In the face of this Presidential wavering, it is no wonder that the State Department issued no less than 11 separate directives on the types of books to be removed from overseas library shelves.

In a similar vein, the President in November 1953, enunciated what he called the Abilene code—the right of every man to face his accuser. Despite the acclamation with which this pronouncement was received, the President did nothing to alter his own Government security system so as to afford that right to Federal employees, many of whom have been fired because of anonymous charges.

Having twice declared that communism would and should not be a 1954 campaign issue, the President later twice commended Vice President Nixon on his campaign role, although Mr. Nixon had himself, in his nationwide stump speeches, spark-plugged the GOP exploitation of that issue. Moreover, having declared his firm intention not "to make of the Presidency an agency to use in partisan elections," Mr. Eisenhower later yielded to the pressures of Republican leaders and established an alltime presidential record for participation in an off year election campaign, even to the extent of endorsing some Republican candidates who had openly opposed his program across the board. It was during the course of his partisan campaign, that the President made his prediction of a "cold war of partisan politics" if a Democratic Congress were elected, a statement from which he felt obliged to back down in his first postelection press conference.

There was another series of presidential backdowns, made in the face of—and often to avoid—a showdown fight with Old Guard Republicans in Congress. Best known of these is his 1954 surrender on his 3-year trade program and his acceptance of a 1-year extension of the trade agreements act. Sometimes forgotten as part of the backdown on trade are the President's appointment of an arch-protectionist to the Tariff Commission, his endorsement of a plan to "pack" the Tariff Commission with a 4-3 GOP protectionist majority, and his raising of the tariff on Swiss watches.

Another celebrated Presidential backdown was on the question of amendments to the Taft-Hartley labor law. On July 31, 1953, a set of Taft-Hartley liberalizing amendments apparently agreed upon by the President and Labor Secretary Martin Durkin were about to be sent to Congress, when the death of Senator Robert H. Taft caused a delay. Meanwhile, the content of the Eisenhower-

Durkin amendment "leaked" to the press, bringing a storm of protest from old guard forces in Congress. The President withdrew his support from the Durkin proposals and Durkin resigned in protest.

In 1953, Mr. Eisenhower came out for 35,000 public housing units, but when 83 percent of the House GOP succeeded in killing his proposal outright, the President backed away from a fight. Later, he called public housing a "moral obligation," yet reversed himself once again and defended congressional cuts in public housing against criticism by New York City construction coordinator, Robert Moses.

But perhaps the most serious Eisenhower backdown in the face of a fight with Congress was over the Bricker amendment, the attempt by old guard isolationists to tie the hands of the President in the making of treaties. Originally represented as "unalterably opposed" to the Bricker amendment, the White House was totally silent when Senate GOP Leader Knowland, who supposedly represents the White House on the Senate floor, pulled a last-minute switch and supported a modified version of the Bricker amendment.

Some of the Eisenhower backdowns have involved the abandonment of GOP campaign myths (some of which candidate Eisenhower had helped to perpetuate), in the light of what Adlai Stevenson has called the stark reality of responsibility.

One was the myth that the famous Yalta agreement had been a "sellout" of Eastern Europe to the Russians, and had to be repudiated. This, Mr. Eisenhower promised to do, not only during the 1952 campaign, but also in his first state of the Union message. Yet when the Yalta agreement was examined, it was found to pledge free elections for the peoples of Eastern Europe, and therefore the President was obliged to reverse his field and ask Congress to reaffirm rather than repudiate the agreement.

In that same state of the union message, the President announced he was unleashing Chiang Kai-shek's forces for attacks on the Chinese mainland from Formosa, implying that President Truman's placement of the 7th Fleet in the Straits of Formosa had been primarily for the protection of the Chinese Reds. Six months later, Marguerite Higgins of the New York Herald Tribune revealed that the administration, through a secret gentleman's agreement with Chiang, had effectively "re-leashed" him. This arrangement has recently been confirmed in public.

Also abandoned has been the GOP campaign line on liberation of the enslaved peoples behind the Iron Curtain and the inadequacy of the containment policy of the Truman administration. Today, the President talks of "no alternative to coexistence," which to most is a far cry from the liberation line, and akin to containment.

Eisenhower campaign talk about the moral bankruptcy of the Brannan plan has given way to the adoption of a wool-support program which the Omaha World-Herald has called the Brannan plan, lock, stock, and barrel.

The backdowns from other campaign pledges are a story in themselves. Abandoned, among other things, have been the golden promise of 90 percent parity price supports for farmers, a balanced budget, the fostering of REA, the operation of TVA at maximum efficiency, the speeding up of soil conservation, and the fostering of a merit system in Federal civil service, which was torpedoed when the President lent his own name and office to a scheme for Federal recruitment through the Republican National Committee.

One aspect of "government by backdown" that distresses those who have wanted to see this new administration succeed—and especially those who have hoped the administration would stand up to Senator McCarthy—

and his forces—has been the way in which the President has shifted his ground in such a way as to undercut his own Cabinet officers.

The placing of the Ladejinsky decision on the shoulders of Mr. Stassen is reminiscent of another incident, early in the administration, when Mr. Stassen asserted the rights of the executive branch in opposition to Senator McCarthy's private negotiations with Greek shippers, only to have the President slap him down publicly, and, in effect, side with McCarthy.

Soon thereafter, in a background meeting with reporters, Secretary of State Dulles discussed a tentative plan for the settlement of the Korean war. First to knock the props from under the Secretary the next morning was the White House.

More recently, when Labor Secretary Mitchell came out against the State "right to work laws," bitterly opposed by labor, the White House was quick to assert that the Secretary spoke only for himself, and not for the administration.

Instances such as these have given administration officials reason to believe that they can never be certain of topside support from their boss should they be caught in the midst of a hot controversy.

Some believe this to be the basis for the many administration compromises with the McCarthy forces; the retention of Scott McLeod as State Department Security Officer; the failure to clear former WAVE commander Mildred McAfee Horton as a delegate to the U. N. Commission; the firing of a Cohn-Schine target, Theodore Kagan, from his key United States Information post in Germany; the firing of Foreign Service Officer John Paton Davis, cleared on loyalty grounds by Dulles, but dismissed as a security risk merely for poor judgment (surrender to Asia Firsters?); and, of course, the abject surrender of Army Secretary Stevens to McCarthy at the famous chicken lunch—a humiliation which many believe might have been avoided had the Pentagon been able to count on firm White House support.

What is the explanation for "Government by backdown" and for the title, "The Man Who Wouldn't Stay Put"? One observer, in a recent discussion of this question, recalled the greatest Eisenhower backdown of all: Eisenhower's embracing, during the 1952 campaign, of Senators McCarthy and Jenner, the two men who had labeled his greatest friend and benefactor, George Marshall, a traitor and a living lie.

"When General Eisenhower agreed to cut out that praise of General Marshall from his Milwaukee campaign speech, in order to appease McCarthy," said this observer, "the pattern was set. Since then, one backdown has followed another. And more are likely to come."

A Paradox

SPEECH
OF

CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1955

Mr. HOFFMAN of Michigan. Mr. Speaker, it was very interesting a few moments ago to hear the gentlemen who represent districts where there is unemployment, state their opposition to the bill H. R. 1, on which we will be called to vote tomorrow.

They want protection for local industries and the employees of those industries.

Yet some of these same gentlemen have been consistent and ardent advocates of aid to other countries, the purpose of which was to train employees, finance industries, whose products are now in direct competition with those of our own industries, and whose protection they now seek.

To me it does not seem logical to tax our people, to send our dollars, our machinery, our technicians abroad to establish an industry and then, when that industry is born and has become efficient, deny it the right to sell its products in this country without restriction.

I shall be paired against the bill, because I believe that we should first consider the interests of our own people.

A Memorable Anniversary

EXTENSION OF REMARKS

OF

HON. FREDERICK G. PAYNE

OF MAINE

IN THE SENATE OF THE UNITED STATES

Friday, February 18, 1955

Mr. PAYNE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in this morning's issue of the New York Times.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A MEMORABLE ANNIVERSARY

In the closing days of the presidential campaign of 1952 General Eisenhower opened a broadside against the Truman administration for its refusal to come to grips with the problem of inflation and rising living costs. Speaking at Troy, N. Y., in late October, the Republican candidate not only charged the administration with failing to halt inflation; he charged that while identifying itself with the meaningless symbol of price controls the administration was actually pursuing inflationary policies on other fronts. In short, he declared, inflation was "no accident." It was deliberate administration policy.

Once installed in the White House Mr. Eisenhower lost little time in showing that what he had said at Troy was not mere campaign oratory. In his first state of the Union message the new President said, in effect, though not in these exact words:

"The American free-price system has already been kept in bed too long. Under the law as it now stands, it has until April 30 to get out of bed and out of the hospital. There is no reason whatsoever why that time limit should be extended. In fact, I plan to see that the patient begins to try out his legs right away, and that he gets a little more exercise each day. He should be back on the job well before April 30."

The President's blunt statement drew criticism not only from political critics but from price-control addicts in both parties. The holdover Price Administrator, Joseph H. Freehill, expressed the opinion that decontrol "would cost the economy of this country \$3 billion annually in higher prices." If these frightening prophecies disturbed Mr. Eisenhower in any way that fact was not visible in the events that ensued. On February 6, 4 days after he had briefed the Nation on his basic strategy with respect to prices, he had launched his offensive against price-wage controls. In an Executive order he ter-

minated wage and salary controls as of that date and struck the ceilings from a long list of consumer items. In the ensuing weeks six more package actions of the same kind followed. With the last of these, which came on March 17, the Nation found itself back on a free price economy for the first time since January 26, 1951.

This action demonstrated to the country that in professing his confidence in the free price system, Mr. Eisenhower was not indulging in empty rhetoric. But it would be a misinterpretation of this episode to assume that in thus staking his leadership on a program which (such was the state of mind into which the Nation had drifted by then) was thought by many to be fraught with serious danger Mr. Eisenhower was indulging in a blind gamble. If it could be said that a calculated risk was involved, then it would have to be added that before making his move against price controls the President had taken every precaution to see that that risk was reduced to a minimum. Mr. Eisenhower was fully aware, as he showed in his Troy speech that rising living costs had nothing to do with price-control legislation, but that they stemmed from inflationary fiscal and monetary policies. Therefore, one of his very first acts after he was elected was to pick for the key post in the Treasury and the Bureau of the Budget men who shared his own philosophy on this issue and would could be counted upon to work in harmony with the Federal Reserve Board in getting the Nation's monetary and fiscal policies back on a sound basis. The story of how these appointees have worked together as a team and the success they have achieved needs no retelling at this time. However, since it is now almost exactly 2 years since the President's program for dismantling the apparatus of price-wage controls it might be appropriate to conclude with a short statistical footnote.

In January 1953 the last month before the dismantling process began, the wholesale price index of the Bureau of Labor Statistics stood at 109.9. The corresponding figure for January 1955, which has just been reported, is 110.2. Thus the net change in the wholesale price level has been an increase of 0.3 point, or less than three-tenths of 1 percent. In January 1953 the Consumer Price Index (sometimes referred to as the Cost of Living Index) stood at 113.9. We do not yet have the corresponding figure for January 1955, but in December this index stood at 114.3. Which is to say consumer prices have risen over this 2-year period by exactly 0.4 point, or between three-tenths and four-tenths of 1 percent.

A Two-Party System in North Carolina

EXTENSION OF REMARKS

OF

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Friday, February 18, 1955

Mr. GOLDWATER. Mr. President, on February 5 it was my pleasure and honor to address the meeting of the North Carolina Young Republican Convention in Charlotte, N. C. During the course of the program, the winner of their annual declamation contest, Mr. David M. Foley, who is a National Director of the Democratic Youth of America, and who is a senior in the O'Donoghue High School, read the paper that won him this prize. Because Mr. Foley's remarks so thoroughly get at the root of the Republican

problem in all States where a true two-party system does not exist, and because these remarks should be read and understood by Republicans everywhere, I ask unanimous consent that this fine paper be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHAT CAN THE REPUBLICAN PARTY DO TO ESTABLISH A TWO-PARTY SYSTEM IN NORTH CAROLINA?

(By David M. Foley)

That is a good question. It has been asked by a great many people, mostly Republicans, for a long time. Since it is still being asked, I take it for granted that you are still looking for the answer. Now the people who have been answering this question are, for the most part, Republicans. Therefore, I have come to the conclusion that perhaps it is difficult for Republicans to look objectively at their problem. My views are those of one outside the Republican Party looking in somewhat critically. It is, I believe, a new slant, a new perspective. I hope you find something of value.

Walt Whitman once said, "Political democracy as it exists and practically works in America, with all its threatening evils, supplies a training school for making first-class men. It is life's gymnasium, not of good only, but of all."

Our political system is based on the two-party system. Politics cannot be the training school for first-class men without the two-party system, for the single party has become the symbol of dictatorship and anarchy.

At this time, North Carolina is a single-party State. This is not good for North Carolina or her people because competition leads to improvement of the product.

Before you can change this situation, you must look into its causes. Why is North Carolina a one-party State? Whose fault is it? There is only one conclusion we may draw. The Republican Party itself has made North Carolina a one-party State. Therefore it is up to the Republicans alone to rectify this situation. How did the GOP place North Carolina in the one-party class? The Republican State organization did not invite the participation of young people. Once young and enthusiastic party leaders became old, and yet they continued to rule the party. They became discouraged and did not offer Republican candidates on the ballot. What party machinery there was in North Carolina fell into decay. The Republican Party became stagnant.

Within the past 3 or 4 years, it has been evidenced that, at last the Republican Party is again becoming seriously interested in winning elections in North Carolina. The Republican Party is again testing the treacherous water of politics.

We all realize that it is impossible for the Republican Party to become active until North Carolina is a two-party State. Thus your question, How can that be done?

The answer is relatively simple because a standard formula may be followed. If the Republicans really desire a 2-party system in North Carolina they can have it. However, it is up to the Republicans alone. North Carolina will not become a 2-party State from mere wishful thinking. It will take action, direct action, to bring this about.

Of what does this action consist? What is this magic formula that can, and will, convert North Carolina into a 2-party State?

It is the building of an initial nucleus of common interest. Let me quote from a book by Dr. Clarence King. He writes, "If we can mentally recapture a skill which most of us possessed at the age of 12 it will help us to master the initial steps. Imagine that it is a winter morning after a fresh fall of snow. You step out of your door determined to

roll the largest snowball that ever was built. What do you do first? Do you take a shovel and mound the snow together and round it off? Of course, you don't. You begin by rolling a small snowball. All depends on that central, cohesive core. If the snow will not 'pack' you may have to go back in the house and await a better day. But once that small snowball begins to attract other particles and a steep enough slope, you could give it a push and it would go on without you, enlarging itself indefinitely. We can push the analogy of the snowball one step further. Have you ever seen a snowball in March, standing unmelted with green grass about it, when all the surrounding snow is gone? It lasts because of that hard cohesive center which was built so well. Many an aggregation of human beings melts away at the first discouragement because it was built hastily of a large number of members, all having an equally tepid enthusiasm without any firm central cohesive core?"

Logically it follows that without a hard core of loyal and enthusiastic Republicans, the GOP will never get out in the snow, let alone roll that snowball down the slope.

Where is this nucleus to be found? If it is to be found at all, it will be found among the young Republicans of the State. It is this group alone that cannot introduce the new, fresh, ideas that are necessary to rejuvenate an organization.

From this hard core, this inner circle, will come the second circle, members to serve on committees, friends to do the leg work. As members of your team, they will reach out and influence other citizens.

You must learn practical politics. You must leave your easy chairs and get out of your warm houses. In order to have a two-party system in North Carolina, you must toil, you must sweat, you must work. You must build a new organization. Once established, you must hold it.

Canvass your district systematically. Apportion precinct captains. Locate the vote. Get those votes to the polls. Get to know your community. Reach the public. All these are important steps in the establishment of an active Republican Party in North Carolina.

However, they will mean nothing unless and until they are put into practical use. You must decide. Do you desire a two-party system strongly enough to work for it? Make your decision and either go into action or lapse back into ineffectiveness and stagnation.

Whether your program is accepted or rejected by the people will depend on your effectiveness in selling your candidates and your platform. However, always remember that it is harder to fool the people than you think. At times your suave politicians with their booming greetings and hearty handshakes will win a battle. But it is the party of the people that will win the war.

Take your program to the people. Build a hard core of active young Republicans. Launch your snowball down the slope of North Carolina. Perhaps it will expand and grow until North Carolina will be a two-party State, and politics will, once again, be a training school for first class men, a gymnasium of life for all.

On Lithuanian Independence

EXTENSION OF REMARKS

OF

HON. ALBERT P. MORANO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. MORANO. Mr. Speaker, on February 16, Lithuanians throughout the

world observed the 37th anniversary of their homeland's independence.

Though burdened with grief over the oppression which has overtaken their country, Lithuanian people nevertheless demonstrate each year their undying will to be free.

It is such sustained spirit which 1 day will result in freedom for all peoples whose hearts cry for liberty.

The Lithuanian spirit may well be the beacon light to rally all of the temporarily oppressed, to lead the broken peoples on waves of hope to the self-government they so dearly cherish.

It is a courageous thing they do—celebrating an independence which exists only in their minds and hearts. But it is only by such zealous devotion to freedom that independence is achieved.

In this quest the Lithuanian people have our wholehearted support and admiration.

An Invitation To Participate in Lenten Services at Lutheran Church of the Reformation on Capitol Hill

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. WOLVERTON. Mr. Speaker, I am in receipt of the following letter from Rev. Lawrence D. Folkemer, pastor of the Lutheran Church of the Reformation, located on Capitol Hill at 212 East Capitol Street.

Dr. Folkemer, in his letter addressed to me, extends a cordial invitation to the Members of Congress to attend the service on Ash Wednesday, February 23, from 12:10 to 12:30 p. m., and as many of the other noonday Lenten services as will be convenient.

The letter of invitation from Dr. Folkemer reads as follows:

LUTHERAN CHURCH OF THE REFORMATION,

Washington, D. C., February 15, 1955.

The Honorable CHARLES A. WOLVERTON,

House Office Building, Washington, D. C.

DEAR MR. WOLVERTON: In a time when world events produce so much anxiety and uncertainty in the human heart, and when the human spirit must endure hardships too heavy to bear alone, it is a great source of strength and consolation to be able to turn aside for a few moments to worship God and replenish the spirit.

For many years on Capitol Hill, noonday Community Lenten Services have been conducted at the Church of the Reformation. These services have been a source of inspiration for thousands of men and women who have desired, during Lent, a short period each day for meditation, prayer, and rest. The season of Lent through the long centuries has given to Christians an opportunity to deepen their spiritual life and to face their daily tasks with renewed faith and devotion.

The services are interdenominational in nature. Guest clergymen of all denominations are invited to speak. Lent affords an opportunity for people of all churches to worship their common Lord.

It is our hope that Members of the Congress will be able to attend the first service on Ash Wednesday, February 23 from 12:10 to

12:30. It is the first day of the sacred Lenten season. Special prayers will be offered in behalf of our President and Members of Congress at this service.

Services will be held each day, Monday through Friday at the same hour.

May we respectfully and sincerely invite all the Members of the Congress together with their staff to the Lenten services.

Sincerely yours,

LAWRENCE D. FOLKEMER,
Pastor, Church of the Reformation.

The following is a list of the speakers who will address the Lenten Services and the days on which they will do so:

NOON-DAY LENTEN SPEAKERS

Ash Wednesday, February 23: Dr. Lawrence D. Folkemer, Church of the Reformation.

February 24: Rev. Donald W. Prigge, Church of the Reformation.

February 25: Rev. Otto Reimherr, Hope Lutheran Church.

February 28: Dr. Carl R. Simon, Keller Memorial Lutheran Church.

March 1, 2, 3, 4: Dr. Charles D. Kean, Church of the Epiphany (Episcopal).

March 7: Rev. Paul E. Horn, Memorial Evangelical United Brethren Church.

March 8, 9, 10, 11: Dr. Clarence W. Cranford, Calvary Baptist Church.

March 14: Rev. Robert E. Lee, St. Luke's Lutheran Church.

March 15, 16: Dr. Paul R. Schearrer, Takoma Park Presbyterian Church.

March 17, 18: Rev. P. Gordon Scott, Westmoreland Congregational Church.

March 21: Dr. Clarence E. Nelson, Augustana Lutheran Church.

March 22, 23—Dr. Edward L. R. Elson, National Presbyterian Church.

March 24: Dr. Robert E. Van Deusen, National Lutheran Council.

March 25: Dr. Edward B. Willingham, National Baptist Church.

March 28: Canon Theodore O. Wedel, Washington Cathedral.

March 29, 30: Dr. Albert P. Shirkey, Mount Vernon Methodist Church.

March 31, April 1: Dr. Carl Heath Kopf, First Congregational Church.

April 4: Dr. Walter B. Freed, Luther Place Memorial Church.

April 5: Dr. George M. Docherty, New York Avenue Presbyterian Church.

April 6: Dr. Hirl A. Kester, Waugh Methodist Church.

April 7: Dr. Lawrence D. Folkemer, Church of the Reformation.

April 8: 3-hour Good Friday service, 12 to 3 o'clock.

One Hundredth Anniversary of the Founding of Michigan State College

EXTENSION OF REMARKS

OF

HON. DON HAYWORTH

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. HAYWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by John A. Hannah, president, Michigan State College, at Centennial Founders' Day awards dinner, February 12, 1955:

This event has an importance far transcending that normally attached to the celebration of a university's centennial. Despite our pride in our institution, and much significance as we attach to this date, we

recognize that many of you were impelled to come to East Lansing and take part in today's events by emotions besides your respect for Michigan State College. We are trying to make this whole centennial year more than a prolonged celebration of an institutional centenary; we recognize that we are observing, not the 100th birthday of Michigan State alone, but the centennial of putting into practice of a great, a new, a revolutionary idea in higher education. We honor the pioneers of Michigan who conceived the idea of a new kind of education and founded this college in the woods, near the State Capitol, but at that time 27 miles from the nearest railroad as the working embodiment of their hopes and ambitions for a better tomorrow and a better world. We recognize that they were but the intellectual and spiritual heirs of hundreds and thousands of men and women who had been thinking and working over many decades to devise an effective educational instrument with which to accomplish widespread and increasing good for mankind.

We revere men like John C. Holmes, and Bela Hubbard, and Joseph Williams, and Kinsley S. Bingham, and the other stalwarts of early Michigan. An eternal debt of gratitude is owed to them for their courage and foresight in establishing the Michigan Agricultural College as the first of the people's colleges. But on this Founders' Day we honor a much larger company, including both men with names distinguished in English and American history, and men whose names are now forgotten.

Fortune chanced to favor Michigan as the place in which the seeds scattered so widely in the years before 1855 were to germinate and to take root first. Conditions were favorable in many other places as witness the number of basically similar colleges established elsewhere within a few short years. The best evidence is in the fact that only 7 years after the Michigan experiment has been undertaken the Morrill Act creating the national system of land-grant colleges was passed by a Congress preoccupied with the problems of a terrible Civil War, and signed by a President weighed down by burdens such as no other President has ever been called upon to bear.

On this occasion it seems appropriate to cite a few of those from whom our Michigan pioneers must certainly have acquired inspiration and encouragement—men like John Milton, who, writing about education more than three centuries ago, gave a definition of education which remains one of the best ever proposed. His definition, you will recall, was this:

"I call, therefore, a complete and generous education that which fits a man to perform justly, skillfully, and magnanimously all the offices, both private and public, of peace and war."

Modern educators—or some of them—might criticize education as Milton conceived of it because it would not be pupil-centered, but I think we must give credit to Milton as one of the founders because he was interested in preparing men for full participation in the society of which they lived, which certainly is a traditional objective of education at the land-grant colleges and universities.

There are many others deserving of mention: The leaders of the dissident religious sects in colonial days which looked upon widespread literacy as a barrier against retreat into narrow dogmatism; the founders of Harvard and other early universities, with their concern that the colonies have an educated clergy; Jefferson, with his broad liberal ideas of education and his labor of love in establishing the University of Virginia as an institution far advanced for its day; the unrecorded thinkers and doers who brought William E. Channing, an outstanding pulpit orator of his day, to declare in a sermon:

"The grand doctrine, that every human being should have the means of self-culture, of progress in knowledge and virtue, of health, of comfort and happiness, of exercising the powers and affections of a man, this is slowly taking place as the highest social truth."

Men such as these deserve to be honored as founders of the new kind of education which became practically available just a century ago. There are many others, including Justin Morrill, the son of a Vermont blacksmith, who was determined to make available to the children of other poor men the education he had been denied; Abraham Lincoln, the son of a restless backwoods farmer, who knew from his own bitter experience the shortcomings of our educational system from the viewpoint of the common people; these, and many more, deserve their place on the list of founders to whom we pay tribute tonight.

I am sure you agree that it is by the happiest of coincidences that the day of this celebration should fall upon the birthday of Abraham Lincoln, the man of the people, who must have taken deep personal satisfaction in setting his pen to the Morrill Act, knowing full well that he was performing a great act of emancipation for the common people from which he had come.

It is one of the strengths, and one of the glories, of the land-grant-college tradition that this new kind of education was developed and made available in response to a persistent public demand. We have in history no comparable example of an educational agency deliberately designed, created, and put into use specifically to do the will of the American people, to serve them as they wanted to be served. We in the land-grant colleges and universities would do well to remember that our institutions are the creatures of the people in the most specific sense, and I believe that history records that they have prospered and retained the affection of the people in direct proportion to their success in interpreting the changing needs of the common people of America and in serving those needs as the people themselves want them to be served.

The temptation on an occasion such as this is to recount the achievements of the century now passed into history, and to revel in the satisfaction which comes from association with a successful enterprise. But a prolonged review would be out of place to this audience which knows as well as, or better than I, the many magnificent accomplishments of higher education in America. But perhaps it would not be out of place to mention briefly some of the accomplishments of our society toward which higher education in general, and the land-grant colleges in particular, have contributed heavily in the century since 1855. We would not all agree in every particular in preparing such a list but I think we could single out at least three achievements upon which we would agree.

I am sure no one would quarrel with the first, which is the achievement of spectacular material gains, a higher standard of living than man has ever known. We would all agree that these spectacular gains came within our grasp as a people only when we decided to make the advantages of education available on the broadest possible scale. Thereby, we multiplied the native skills of the American people and made possible the miracles of invention and mass production with which we constantly astound the rest of the world. We could not have achieved these every-day miracles had we not opened the doors of educational opportunity wide, thereby creating not alone the trained working force required, but also the desire for the goods and services produced. This we have done by broadening perspectives and stimulating the ambitions of millions of people.

The application of science to the art of agriculture has been an underlying factor in

our industrial growth. As long as the great majority of our people had to be employed in the production of food and fiber we could spare few hands for the mills and shops. A century ago, something like 85 out of every 100 workers were necessarily engaged in agriculture, leaving only 15 to do the rest of the Nation's work. Today, thanks to the application of science, only 12 workers out of each 100 are needed on the farms to grow the food and fiber for the rest of our people. The other 88 are free to man the machine and sell the goods and provide the services which spell prosperity, comfort, and even luxury by standards elsewhere, for the people of the United States.

How great has been the contribution of the land-grant colleges, I leave to your own estimation. Certainly they deserve the bulk of the credit in the field of agriculture, and a good share in the field of engineering and the associated industrial arts.

A second achievement to be claimed for the century just ended is the achievement of a high degree of social mobility. In appraising this contribution of education, we must remember that, as President Conant pointed out this afternoon, an outstanding feature of the American system has been its insistence upon equality of opportunity. It was to achieve that equality that the founders established here the revolutionary college which was to grow into this university. They and others of like mind were determined that the sons and daughters of the well-to-do were not to have the advantages of higher education to themselves alone; they established as a major goal the affording of equal opportunities to the children of the industrial worker and the farmer as well.

As a result, for decade after decade, the children of the poor and the well-to-do have attended primary schools, secondary schools, and colleges and universities together; they have studied together, recited together, played together. Day after day, they have participated in repeated demonstrations that good marks and diplomas do not depend on wealth or social position, but depend upon the ability and the ambition of the individual. Generation after generation of young Americans have grown up with the certain knowledge that they need not remain in the economic or social classes to which they were born; they could climb upward as far as their intelligence and initiative could carry them, and by the same token could fall as far as their sloth and irresponsibility allowed. There has been no artificial traditional limit upon opportunity; the transition from rags to riches has long been commonplace in America.

In this healthy climate we Americans have nurtured and developed a unique way of life. Almost unnoticed either here or abroad, we have come closer to achieving the classless society of broad equality among people than have those nations which have sought to build such a society by law and dictatorial decree. For this magnificent achievement, the American system of education deserves much credit.

A companion achievement, closely associated with that of social mobility but deserving of mention as the third to be singled out this evening, is that of political stability. We have demonstrated, by millions of examples, that our political and social system does make it possible for a man or woman to achieve a full and happy life. We have examples by the millions that caste and class and sect are meaningless terms for those with intelligence and ambition, and in the fullness of time, we will be able to say with equal pride that color, too, has ceased to be an unfair handicap for the able man. This has kept us remarkably loyal to our basic political and economic system.

Here in these facts we have our strongest defense against the subversives of either ex-

treme who would pervert our system of living together to suit their twisted minds and unholy desires.

We dare not claim that more and more education is the only cure for the ills of the world. We can, however, say with pride that by our consistent efforts to insure equality through education, we have woven unequalled strength and stability into the fabric of American society.

But enough of looking to the past. It is all too easy to take too seriously the flattering things we say about ourselves, and about the accomplishments of education in general, and the land-grant philosophy in particular. The coins of yesterday will not pay the bills of tomorrow; indeed, we need to find out whether they will still be legal tender. It is in the future that we must do the unfinished work to which our centennial theme dedicates our efforts.

Peering as best we can into the cloudy future, what are likely to be the needs of the society which education is pledged to serve? Does the fundamental philosophy of the past as it has been molded and reshaped by events of a century still qualify as the rule by which to guide our actions?

In assaying the ability of our fundamental philosophy to meet the needs of the future, let us apply the tests suggested by the three major achievements we have claimed for higher education in America.

First, will we continue to need trained people, and an ever-increasing proportion of trained people in our population? The answer is most assuredly "yes." We are in a bitter struggle for survival with a political-economic system which has placed high stakes on education as a major device with which to gain its nefarious ends. We have been warned repeatedly that Communist Russia is training more scientists than we in the hope of eventually reversing our relative positions in the scientific fields, and thus gaining mastery over us through utilization of horrible engines of war. Our very will to survive dictates that we keep the lead in this nightmarish race until such time as mankind's good sense works out a scheme to outlaw aggression, war, and this constant flirting with mass destruction.

Moreover, our society grows steadily more complex and complicated. There have never been too many educated people; now we face the challenge to train enough merely to keep this ponderous and complicated machine moving efficiently. Certain our expanding economy, judging from past experience, will impose a demand for increasing numbers of young people trained in the traditional professions and vocations, and in many of which we do not even dream today.

Yes, we certainly can expect that the future will find use for the young people trained by our colleges and universities to serve in a wide variety of fields; here we are on sure ground.

Next, will we need to continue to strengthen our social structure to give it still more mobility and adaptability to meet changing conditions? Here there is much to be done; not yet have we achieved all that we should achieve, not so long as we have a single person in need of medical care beyond his resources, a single mistreated child, a single family deprived of the heritage of hope. As yet, equality of opportunity is still no more than the goal toward which we have taken tremendous strides. As yet, too many qualified young men and women find educations and the choice of life work beyond the possibility of realization; too many barriers of race and creed remain; intolerance and bigotry have not been banished from the land. Here, there is much for education to do; it is for us to hope that the record of the past will persuade the future to entrust to our institutions the responsibility of completing the work thus far advanced.

It is essential that the movement go forward, for now not our eyes alone are focused on our work; throughout the world, eyes are turned upon America to see if she is qualified for the role of leadership to which she has fallen heir. Alien eyes watch closely to see whether we make steady progress in solving our own social problems. What other nations see will go far in determining whether they finally accept our leadership, or reject the philosophy of freedom and opportunity we offer to them, and turn elsewhere for leadership. Only people with an educated understanding of our strengths and weaknesses, and with a will to make the improvements we need, can guide America through this critical period. I am sure you agree that such people can best be produced in large numbers in our colleges and universities; the question for us is whether we can produce them in the numbers required.

In the area of political stability, we are not as sure of our position. We must honestly face up to the fact that there has been some loss of confidence in colleges and universities in recent years. I feel that this results in part from our colleges and universities losing confidence in themselves, in their fundamental aims and purposes. If this were not true, we would not hear so much talk about the climate of fear in which some faculty members profess to find themselves. From my observation, this condition about which they complain has been grossly exaggerated. True, there have been attempts at political intimidation. But on the other hand, there have been some embarrassing examples of bad judgment and headstrong insistence on academic rights without much thought about academic responsibility, and the two have just about balanced each other, the only net result being that there has been planted in the public mind some suspicion about the essential integrity of colleges and universities.

Actually, this suspicion, if it does exist, might be attributed in part to a misguided attempt to blame someone for the feeling of insecurity which seems to be widely prevalent. The psychologists may not agree, but it appears to me that American people have been caught up in a net of frustration out of which they cannot find their way easily. Perhaps hurt bewilderment would be a more accurate description of their emotional condition. At any rate, they look at the tremendous expenditures in blood and treasure in two world wars and a localized but bitter war in Korea, at the billions they have sent overseas to help friendly and erstwhile enemy countries alike restore their economies, at the experts they have commissioned to help other countries move a little faster along the road to the good society, and what do they have to show for their efforts?

After making all of these expenditures, what do they see in return? The avowed enmity of a large portion of the world, the reluctant friendship of a much smaller portion, the close alliance of a still smaller portion, and the true understanding friendship of only a very few of the world's people. Knowing their own motives to be primarily altruistic, no wonder the American people are frustrated or bewildered. To be hated, pitied, tolerated—this, for Americans, is poor return on a colossal investment.

They have found, in short, that our wonderful shiny machines have not won for us the respect and affection of the world. They have learned that all of our wealth cannot buy us the peace and security we crave. Having devoted so much of our time and energy to the development of our great industrial system and the improvement of our standard of living, it is no wonder that we feel insecure when we find that we cannot depend on material possessions alone to give us our hearts' fondest desires.

Who is to blame if Americans have been led to place too much importance on material possessions, to depend too much upon science to solve all the problems of the world? This is not the time or place to assess blame, except to say that colleges and universities, as the source of many of our scientific miracles, and as pretenders to intellectual leadership, must accept their share. It is axiomatic that he who claims the credit for a particular plan or process is liable for blame if the plan fails or the process goes awry. It should not surprise us when those who sang the praises of the scientists for making all of our industrial and agricultural wonders possible are quick to say that those same scientists are to blame when they find that with all our worldly goods, we are still discontented and insecure.

The national malady of insecurity should be a matter of concern for our colleges and universities. We have as our responsibility the training of the leaders of this country; it is we who have encouraged them to take the materialistic view of life. As an example, it is we who have countenanced the stripping of the cultural subjects from the scientific curricula and graduated engineers who knew engineering and little else, biologists who knew biology and little else, chemists who knew chemistry and little else, and narrow specialists in many fields. The land-grant colleges, with their strong technological traditions, have been as guilty as any in this distortion of education.

If our national feeling of insecurity can be attributed to a slackening of national reliance upon material things, then there is great hope for America, because our churches and our educational system can do something to remedy the situation. In these times when we find that material advantages do not automatically bring peace and security in their wake, perhaps we can bring the American people to agree with Emerson that "a rush of thoughts is the only conceivable prosperity that can come to us."

In view of the conditions of the day and the prospects for the future we are forced to the conclusion that a considerable re-vamping of our educational machinery and a revision of our attitudes are desirable if we are to meet successfully the challenges that press upon us. We must come back to the realization that colleges and universities, public and private alike, are operated and supported, not alone for the benefit of the students, as individuals, but for the good society will reap from having those students trained for lives of greater usefulness.

To accomplish this end, it is essential that the devotees of the liberal arts tradition and the protagonists of the practical compose their differences once and for all, each conceding that the other has something good to offer, and that education cannot be complete without both.

My plea is for a definition of education to fit the times. Let me suggest that an educated man in today's world is one who is trained and conditioned to be an effective citizen. He need not necessarily be a man who has attained wealth, or outstanding professional distinction, or high public office. Indeed, he may not be known beyond the borders of his own community.

But he will have been educated to contribute to the economic well-being to the limit of his creative and productive skills; he will have been educated to contribute to social stability by his understanding of the world around him, and by his tolerance for the rights and opinions of others; he will have been educated to contribute to the moral stability of his Nation by his acceptance and practice of such fundamental principles as personal honor and integrity, belief in a good God, and government by law instead of by men; and he will have been educated to contribute to the political sta-

bility by his reasoned, thinking approach to public issues, his rejection of demagogic appeals, and his ability to lead or to follow with equal intelligence.

If we keep some such definition in mind, we as educators will not think so much in terms of graduating engineers, or accountants, or doctors, or agriculturists, or lawyers, or teachers, as of graduating educated men and women, trained to be effective citizens of our democracy and of the world, men and women ready and willing to assume leadership in a Nation crying for more intelligent direction and guidance in a world full of confusion, insecurity, and doubt.

It is both disconcerting and humbling to realize that the Founders we honor on this occasion saw clearly the need for education of this kind, and spoke plainly to those who would heed. From the numberless pages of reference, I draw but three abbreviated examples of their wisdom in charting the course of American education.

The first is the familiar injunction from the Ordinance of 1787 establishing the Northwest Territory of which Michigan was once a part:

"Schools and the means of education shall forever be encouraged" as a means of preserving the lasting values on which successful popular government are built.

The second is the equally-familiar statement from the Morrill Act providing for the liberal and practical education of the common people in the several pursuits and professions of life.

The third is from a source less familiar to most of you. It comes from the writings of Bela Hubbard, one of the Michigan farmers who worked successfully to establish the first agricultural college here just 100 years ago. After describing the technical courses which should be offered in this new kind of college, that backwoods farmer added this significant word of caution: "Nor should the claims of literature and the fine arts be wholly neglected, as tending to polish the mind and manner, and add greater luster and dignity to life."

How wisely they thought. How plainly they spoke. How well advised we of this sophisticated modern age would be to take their counsel as we move into the second century of service to the American people. We could pay these Founding Fathers no greater honor than to acknowledge the wisdom of their words, the clarity of their vision. Armed with such wisdom, warmed by such understanding, we can march unafraid to meet the challenges of the unknown future, sustained by the faith that as we serve God's children, we perform the will of God.

Proposed Increase in Salaries of Members of Congress

EXTENSION OF REMARKS OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Friday, February 18, 1955

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Pay Hike for Congress," published in the Washington Daily News of February 17, 1955, pointing out the unsoundness of salary increases financed by borrowing by our Government, which is already living off the taxable income of future generations.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

PAY HIKE FOR CONGRESS

By the overwhelming vote of 283 to 118, the House of Representatives has voted to raise the salaries of its own Members, and those of the Senate and Federal judges.

There are many ways to justify higher salaries for Congressmen. Statistics, such as figures on the rise in the cost of living since the last pay raise, can be found which may even support the 66½ percent raise the House favors.

We have no idea that the House honestly expects such a big raise. The \$10,000 increase was voted for bargaining purposes with the more conservative Senate.

But whatever may be the proper salary boost for Members of Congress, we think the public has a right to expect that they will show the same enthusiasm in finding the money to pay for the raise—either by taxation or spending economies. And definitely not thru more borrowing by a Government already living off the taxable incomes of future generations.

Urey Denounces Atom Spy's Trial

EXTENSION OF REMARKS OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Friday, February 18, 1955

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Urey Denounces Atom Spy's Trial," which was published in the New York Times on Sunday, February 13, 1955. In that connection I also ask to have printed in the Appendix of the Record a letter in answer to the article, the letter having been written by Herbert Bayard Swope, under date of February 14, 1955, addressed to the New York Times, and published in its issue of February 16; and also an editorial entitled "Where To Employ an Expert," the editorial being in regard to the same matter.

There being no objection, the article, letter, and editorial were ordered to be printed in the Record, as follows:

[From the New York Times of February 13, 1955]

UREY DENOUNCES ATOM SPY'S TRIAL—CHARGES SOBELL WAS NOT JUSTIFIED—HE ALSO DEFENDS ROSENBERGS

CHICAGO, February 12.—Dr. Harold C. Urey, Nobel Prize winner and professor of chemistry and nuclear studies at the University of Chicago, charged here tonight that:

Morton Sobell, who was convicted with Julius and Ethel Rosenberg, the atom spies, "was not properly tried," and that "the verdict and sentence were not justified."

The Rosenbergs were not proved guilty of the crime for which they were executed.

Warning that the integrity of justice as administered in the United States was at stake, Dr. Urey said:

"If proper trials cannot be secured for unpopular people—and it is evident from the publicity of this trial that all those charged with crimes were unpopular—then it will become impossible to secure justice for other somewhat less unpopular people and so on until no justice is possible at all."

Dr. Urey spoke at a testimonial dinner given him by the Chicago Sobell committee. The Chicago group is a unit of the National Committee to Secure Justice for Morton Sobell.

A spokesman said the group was attempting to secure a new trial for Sobell. It also is seeking to have Sobell removed from Alcatraz, where he is serving a 30-year prison term, to another penitentiary.

Dr. Urey was among prominent Americans who joined in a "friends of the court" brief submitted January 28 to the Chief Clerk of the Supreme Court. The brief asked for a new trial for Sobell. The appeal is based on the ground of new evidence that major prosecution witnesses had committed perjury.

At the dinner, Dr. Urey made his charges after he had been presented with a bound volume of scrolls. They were signed by 5,000 persons throughout the world in tribute to him as a scientist and for his achievements as a citizen.

The volume of scrolls, which was presented by Mrs. Sobell, read in part:

"In your protests in the Rosenberg and Sobell case, even to those who may disagree with your evaluation of the case itself, you have exemplified the vital principle of seeking out firmly and courageously when one deeply feels an injustice has taken place."

Dr. Urey criticized the use of the professional informer by the Department of Justice and congressional committees. He cited recent statements of Harvey Matusow that he had given false testimony in trials of Communists. He also said that Roy M. Cohn, former counsel for the Senate Permanent Subcommittee on Investigations, then headed by Senator JOSEPH R. McCARTHY, Republican, of Wisconsin, had been involved by Matusow.

Dr. Urey said that Mr. Cohn was assistant prosecutor against Sobell and the Rosenbergs. The scientist stressed that Sobell had been convicted on the word of an admitted perjurer.

He also asserted that a well-justified concern for our security on a modern, dangerous world has led us to do things which will undermine our life, our form of Government, and our freedoms.

Defending his right to voice his views, Dr. Urey said, "I am exercising certain rights that were mine at birth and I wish to keep them until death."

Following is a list of some who signed the scrolls:

Dr. James Franck and Linus Pauling, Nobel prize-winning scientists; Dr. Henry Steele Commager, Columbia University; Van Wyck Brooks, author; Dr. Mary McLeod Bethune, president emerita of Bethune-Cookman College; Roger Baldwin, national chairman of the American Civil Liberties Union; Dr. Percy Julian, of Oak Park, Ill., president of Suburban Chemical Co., Franklin Park, Ill.; Prof. Fowler Harper, Yale Law School; A. Phillip Randolph, president of Brotherhood of Sleeping Car Porters, A. F. of L.; Dr. Robert Strozzi, dean of students, University of Chicago; Rabbi Abraham Cronbach, of Cincinnati.

Also Alexander Meikeljohn, former president of Amherst College; Prof. Kirtley Mather, Harvard; Prof. Ernest W. Burgess, University of Chicago; Prof. Philip Morrison, scientist, Ithaca, N. Y.; Prof. Mark De Wolfe Howe, Harvard Law School; Prof. Robert S. Lynd, Columbia University; Judge George Quillie, Chicago; Dr. George Sarton, Harvard; Justice James A. Wolfe, of Utah, retired.

Also Charles A. Coulson, professor of mathematics, Oxford, England; Lord Chorley, Middlesex, England; Waldo Frank, author; Prof. Dorothy Brewster, retired, Columbia University; John K. Holm, scientist, Pittsburgh; Serge Hovv, composer, New York City; Prof. Anton J. Carlson, University of Chicago; Dr. Alexander S. Langsdorf, dean

emeritus, Washington University; Robert Morris Lovett, former Governor of the Virgin Islands; Dr. Isaac Kolthoff, scientist, University of Minnesota; the Reverend John Howland Lathrop, the Reverend John Paul Jones, and Dr. W. E. B. Du Bois, educator, all of New York.

Also the Reverend John Howard Melish, the Reverend William Howard Melish, and Rabbi Max Felshin, all of New York; Prof. H. H. Wilson, Princeton University, and Royal Wilbur France, attorney, New York.

Also Robert M. Hutchins, former president of the University of Chicago, now head of Fund for the Republic, Inc., an offshoot of the Ford Foundation, and Arnold Toynbee, British historian.

[From the New York Times of February 16, 1955]

SCIENTIST'S STAND OPPOSED—DISSERVICE TO OUR JUDICIAL SYSTEM IS SEEN IN DR. UREY'S STATEMENT

TO THE EDITOR OF THE NEW YORK TIMES:

Once more the question of government by law or government by scientists has come to the fore. Prof. Harold C. Urey, at a dinner in Chicago February 12 reported by the Times on February 13, is quoted as being convinced that a grave injustice has been done the Rosenbergs and Morton Sobell, who were convicted in connection with treason to the United States in revealing secrets of the atomic bomb to Russia.

It is every man's right to adjourn to the nearest tavern and revile the court which may have rendered an adverse decision, but when it comes to a question of standardizing justice, how can one better the process of assuming that truth has been served by the hands of the United States district court (in which Judge Irving R. Kaufman did a palpably honest job), the circuit court of appeals, and the United States Supreme Court, which had the Rosenberg case before it three times.

How is our thinking to be formulated? Is it to be based upon the convictions of an individual or the concerted efforts of the courts, acting on a verdict of our fellow citizens sitting as a jury—a method that represents the highest form of public opinion?

DEFENSE METHODS

Professor Urey is undoubtedly a scientist of high order, but does that fact equip him to hold an opinion better than the rest of us who may not know how to make heavy water, but who know and feel the claims of justice? The explanation does not lie in the superiority of his opinion nor that of his fellows. It lies in the curious belief that certain types of scientists are laws unto themselves. They have not yet become certain that, for better or for worse, nationalism is still prevalent. Accordingly, self-protection of a country requires an immediate and an adequate defense against any form of security violations.

Perhaps in the future we will have outgrown nationalism. Personally, I doubt it. But until that time comes I do not see that the attitude of men like Urey or J. Robert Oppenheimer, for whom I hold in other matters a good opinion, should be permitted to destroy the methods of defense through our courts that have been so laboriously built up since Magna Carta.

I think that Dr. Urey's utterance was incendiary. He has a right to an opinion, but I submit that, airing it in the manner in which he did, supported by a galaxy of names, it is not inclined to strengthen our judicial system.

Mind this: I am not one of those who demand conformity. Hitler made "Gleichformigkeit" an abhorrence. To me, democracy is defined best as dissent. But dissent can be expressed in a less arrogant and provocative manner than Professor Urey em-

ployed. I would not stop him from a free expression of opinion, but I ask that the forces of those who do not agree with his views become articulate so that their silence will not be taken to mean their assent.

SCIENCE OF LAW

Let them believe that the science of law, even though it be occasionally in error, is as important to us—even more important—than the nuclear sciences. We live under the first every day, but the second, praise be, is one that touches us only occasionally and up to now it has done us no good except in the increase of knowledge.

And knowledge, too, is restricted. Not long ago a distinguished scholar, Dr. Grayson Kirk, who is doing so well at Columbia University, used a slogan for the university's bicentennial celebration, "Man's Right to Knowledge and the Free Use Thereof." The first part of the statement, "Man's Right to Knowledge," is sound; but the second part—"and the Free Use Thereof"—is not true. There is much knowledge that we dare not employ freely; for example, the use of knowledge that has to do with our defense.

Much that I have said about Professor Urey applies to other scientists; and I would not exclude Professor Einstein from that group.

The Times, always seeking to be scrupulously fair, printed Urey's statement at length. It owes at least one dissent to the opposition. This, then, is an effort to express that right.

HERBERT BAYARD SWOPE,

New York, February 14, 1955.

[From the Newark Star-Ledger of February 7, 1955]

WHERE TO EMPLOY AN EXPERT

The very heart of the most dangerous problem of this democratic age was reached in a speech before the Edison Pioneers by Senator BAICKEK, of Ohio, when he questioned the competence of great scientists in specialized fields to lead society in political and moral fields.

This is a most dangerous problem because the scientist today is a great hero who has accomplished breathtaking wonders and overshadowed all the heroes of bygone ages.

The scientists have given us wonder drugs, radio, television, a greatly lengthened life span, a myriad of labor-saving devices—and now the awesome atomic bomb. The scientist has, indeed, a great deal of prestige weight to throw around, and he seems, in some instances, determined to do the throwing.

This democratic age is innately dangerous because it gives everyone an equal voice in public affairs, but fails to give everyone an equal sense of responsibility. There is no way, of course, of conferring equal understanding upon all the people.

This equality of power against a background of unequal knowledge and competence creates the greatest danger of self-destruction that any society has ever faced.

Self-discipline is the only hope of a democratic society, the self-discipline that compels the average man to restrain the exercise of his power in fields in which he lacks knowledge and competence, while impelling him to seek knowledge and competence.

The average man, however, is less dangerous to society in this respect than the great expert who, still human despite his specialized brilliance, partakes of the sin of assuming his own infallibility.

The adulation of the world is a heady thing, and it is entirely understandable that a man who has wrought great miracles in science should come to value his opinions even in fields unrelated to his specialty.

To make matters worse, the glamorous scientist finds his modesty, even when he

strives to retain it, attacked and besieged by his idolatrous admirers. He is constantly importuned to identify his name with seemingly noble causes and to strike a lance for advanced ideas in politics and morality.

Only an uncommonly wise man could resist the idolatrous pressures of the mob. Senator BURCKE in his speech the other night said that the late Thomas A. Edison was such an uncommonly wise man, having refused to throw his great weight around in the area of public affairs.

There may be other such men in science today who possess an equal share of the wisdom of modesty, but they are far less known and numerous than the many experts in specialized fields who allow their fame and prestige to be exploited for propaganda.

Some liberal intellectuals have expressed great alarm over what they believe to be a wave of anti-intellectualism that threatens to destroy all knowledge.

They should worry more about the danger of deification and self-deification of the experts, and be thankful that there is some resistance in our society to this madness.

An expert, no matter how brilliant in his field, does not necessarily have a more valuable opinion on matters of public affairs than a nonexpert. The nonexpert is less likely to throw his weight around and, in any event, has little potential for misleading others. But the famed expert becomes a danger when he so forgets himself to address his vast audience on matters of which he is ignorant.

Democracy is in far greater danger from the trespassing expert than from its avowed enemies.

Benefits for Dependent Parents of Old Age Insurance Beneficiaries

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. KEATING. Mr. Speaker, it is my desire to call attention to a bill, H. R. 4072, which will provide monthly benefits, under the Social Security Act, for the dependent parents of individuals receiving old-age insurance benefits.

The problem which this bill is designed to meet was called to my attention by a constituent who is over 65 and is supporting his 91-year-old mother. At first blush, I thought it was a very unusual problem. But when I began to check into it, I was astonished to discover that there are many similar cases.

What this gentleman pointed out to me, in effect, was that under the present social security laws, if he were supporting a wife or dependent children, he would be entitled to additional benefits. Supporting his own parents, however, he receives no such benefit. That seemed obviously unfair and improper to him, and it does to me. The income-tax laws, by way of contrast, permit the same deduction for any person, young or old, who is living in the taxpayer's household and receiving more than half his support from the taxpayer.

My bill would only add dependent parents on an equal footing with other dependents of the recipient of old-age

insurance benefits. It does not put them in any special class.

The entire social-security program might well be subjected to a study and reexamination with respect to its benefits for elderly people. I think it is quite likely that other provisions in the law may be similarly discriminatory with respect to people of advanced years.

The life expectancy of our people is increasing so rapidly that we have not kept pace with it. Today thousands live comfortably and happily into their nineties. On the basis of 1950 figures, our average life expectancy is now 68 years, a gain of something like 21 years since 1900. Among people who have now reached the age of 65, the men have an average expectancy of 13 more years, while the women have 15 years. And the span is increasing further all the time.

This longer life that has been given us is a wonderful thing, and I am sure that Congress will not lose sight of the legislative problems it creates. I hope I shall be around to introduce a measure for dependent grandparents when that becomes necessary.

Address of Welcome by Merton B. Tice, Commander in Chief of the Veterans of Foreign Wars of the United States, at Dinner Honoring Members of Congress Who Have Served in the Armed Forces, Statler Hotel, February 15, 1955

EXTENSION OF REMARKS

OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1955

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the RECORD, I include an address given by Merton B. Tice, commander in chief of the Veterans of Foreign Wars of the United States, before the annual VFW dinner held in Washington, D. C., at the Statler Hotel, on February 15, 1955. This dinner is an annual occasion by the Veterans of Foreign Wars honoring Members of Congress who have served in the Armed Forces.

The address follows:

Honored Members of the Congress of the United States, distinguished civil and military officials, and my comrades of the Veterans of Foreign Wars, welcome.

I know that I speak for our 1,250,000 members when I say that we are exceptionally proud of our guests who have honored us by their presence tonight.

We profoundly appreciate that at a time of great international crisis, you to whom the guidance of public affairs is entrusted, have taken time from your important duties to break bread with us.

May I say, at the very outset, that although I am keenly aware that we are in a city that is, both by custom and necessity, uncommonly vocal—a city where speeches, good, bad, and indifferent, may be heard

daily—I promise there will absolutely be no long speeches tonight.

I am glad that so many of our VFW officers and members have come from our various States to meet their legislators; some have come from long distances. Many have called upon you, and a number have requested that I thank you publicly for the very cordial reception you accorded to them.

Primarily this traditional annual dinner of tonight is a sincere gesture on our part to honor the Members of Congress who have served in the Armed Forces. However, for those here who did not have the opportunity to serve, we also extend a very hearty welcome.

As an organization of overseas veterans, we shall ever think that the dangers and sacrifices of active duty creates a definite bond between all who defended our country. And now that you have, in a time of uneasy peace, the high duty of preserving the basic objectives of the American system—which includes legislating for the veterans of past wars, and determining the size of the forces that may have to fight another—God forbid—all of these responsibilities taken together makes all of us deeply conscious of your importance as representatives of the people—our people.

We of the Veterans of Foreign Wars have an unshakable confidence in representative government, and although we may not always agree with you on some phases of legislation—for what we deem valid considerations—we shall ever stand beside and behind you in resisting any and all who try to subvert or dynamite our way of life.

For example, in the matter of national security, we may want to go a little farther than some of you in determining the size of our Armed Forces. We would prefer to be wrong on the side of safety. When there are international stresses that make the world tremble—as of the present—we are reminded of some sad days in our history when it was too little and too late. We all can recall tortured periods when time had to be bought by the sacrifice of precious lives. That, we do not want to happen again. The stakes are too great to hazard long-shot gambles for the purpose of economy. There is no second money in modern war and little first. Nevertheless, the stakes are all or nothing.

We are confident that you will give a most realistic and objective consideration to the military budget, not only with a view to its overall defensive aspects but particularly to its offensive aspects. I am sure that you will all agree that wars are won by speedy, adequate, hard-hitting offense.

Every intelligent American knows that the threat of force is all that counts in the sinister policies of those men in the Kremlin who now pull the strings of 800 million subjugated people. May we show no weakness at this crucial period of civilization, no whitening away at the size of that splendid body of men that as a force in being protects us all tonight. We of the VFW salute them—the men and women of the Armed Forces.

A number of our most distinguished civil and military leaders are our welcome guests tonight. We thank their spokesman for briefing us while here. As an organization, we commend their patriotism and devotion to duty as they make plans and train officers and men for only one purpose—the security of our country. To those dedicated to that task, goes our heartfelt gratitude.

Again we thank our distinguished guests of the Congress for coming. May you preserve the peace, but about the only way we know how you can do it is to be ready for any eventuality.

And as we—Americans all—do our part to counter the Godless philosophy of communism, I know of no finer advice for all of us than:

"Watch ye, stand fast in the faith, quit ye like men, be strong."

Chinese Can Be Led To Win Own Freedom From Red Communist Masters

EXTENSION OF REMARKS OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. McDONOUGH. Mr. Speaker, in an article published in many newspapers in the United States, Mr. Vicente Villamin, distinguished Filipino economist and writer, presents a new approach to the Communist problem in China which is worth the attention of our Government.

He starts with the premise that the Chinese Communist regime has an economic program similar to, and an improvement on, the program that built Soviet Russia into a formidable industrial nation and military power.

Then he proceeds to say that in less number of years than it took Soviet Russia to develop, Communist China would become a much stronger nation than she is today, and that as a result the two nations combined would be a tremendously threatening menace to the free world.

Mr. Villamin proposes an economic program for the Chinese people that is better in every respect than the Communist program. Such program should be offered as an incentive for them to cooperate actively with Nationalist China to overthrow the Communist regime. By its very nature and purpose, it is conditional on the Chinese people putting down that regime first.

The 13 million Chinese who live abroad will be the sponsors of such a program. The free world, especially the United States, could help. These Chinese, particularly the 12 million who live in southeast Asia, know, or must know, that if the countries in which they reside should go Communist their businesses and holdings will be confiscated by the Communist government. It is, therefore, to their best interest to invest a part of their vast holdings to stop the Communists in China, for in stopping them there they are stopped in other parts of Asia.

I wish to make a part of my remarks the following article of Mr. Villamin as it appeared in the Pasadena (Calif.) Star-News:

MEETING THE COMMUNISTS IN CHINA WITH AN ECONOMIC PROGRAM FOR THE PEOPLE (By Vicente Villamin)

The Communists everywhere are on the offensive. They have their militant mission to perform. The best the Europeans can do is to organize an effective defense. The chief function of the Americans is to deter the Communists from aggression and to help those who are resisting and fighting the Communists. Averse to initiating aggression, the free world is indeed on the defensive.

The Communists are gaining in number, prestige, and territory. How and where to stop them is the free world's most serious and urgent concern. It is in China where they can be stopped and communism overcome. And that can be done if the Chinese people should give their complete cooperation in overthrowing the Communist regime.

The formula of victory is this: To convert China from an enemy under the Communists to a friend and ally under the Nationalists. If that is accomplished, China will become an enemy instead of an ally of Soviet Russia as she is now. And that the basic transposition would be a lethal blow to Russia and might well start the weakening and disintegration of communism in the world.

The danger of the free world from the combination of Soviet Russia and Communist China is clear and formidable. All free men should know it by heart.

Associated with Soviet Russia, China increases tremendously and aggressively the communist menace to the free world and makes it irresistible even now to many free countries or a combination of them. That will be more so as China becomes stronger every year, industrially and militarily.

Pitted against Russia, China, collaborating with the free world would greatly debilitate that country, upset her plans of world conquest and thereby initiate the beginning of the end of communism in the world.

On the one hand, with China's enormous manpower and natural resources utilized with her own, Russia could overwhelm Western Europe. When Europe realizes that possibility, it would perforce quit considering Asia as but an inconsequential, subordinate element to Europe in the global struggle against the Communists.

On the other hand, with the aid of Russia's industrial and military potentials, China could dominate east and south Asia and the island countries of Japan, the Philippines, Indonesia, Australia, New Zealand, and the United States fortified islands in the western Pacific.

Then their next target would be the Western Hemisphere, North and South America, with China approaching on the Pacific side and Russia on the Atlantic.

On April 19, 1951, Gen. Douglas MacArthur stirred the United States Congress with these words: "I have strongly recommended in the past as a matter of military urgency that under no circumstances must Formosa (the seat of the Nationalist government) fall under Communist control [applause]. Such eventually would at once threaten the freedom of the Philippines and the loss of Japan, and might well force our western frontier back to the coast of California, Oregon and Washington."

Contemporary events—Hainan, Korea, Indochina, Quemoy—show that the Russo-Chinese combination is moving forward according to a blueprint and is succeeding. This must be stopped before its momentum acquires irresistibility, which, unfortunately to the free world, it is acquiring every day.

It cannot be stopped simply by the United States recognizing Communist China and approving her admission to membership in the United Nations. Like Soviet Russia, which has that recognition and membership in the world organization, Communist China will continue to be an enemy and tormentor of the United States.

It certainly cannot be stopped by continuing to be on the defensive, or by being indecisive, or by believing that the Communists are people whose practice of right and wrong is the same as that of the rest of the world. Peaceful coexistence (love and help each other) is the mandate of God, but the Communists do not believe in God and His mandates.

The Russo-Chinese combination can be stopped and destroyed in China and nowhere else because of the special conditions prevailing in that country of more than 500 million people. The cooperation of the Chinese people in this work is the categorical and imperative essential. That cooperation could be expected for at least three reasons: Firstly, they have found communism wicked and unbearable. Secondly, they are not yet so shackled by the Communist iron discipl-

pline as the Russian people already are, as to prevent them from planning and acting together and rising in revolt against the Communist regime. And, thirdly, they have seen Nationalist China improve and strengthen herself for the reoccupation of the mainland and earning the respect and support of the United States and the rest of the free world.

But the Chinese people must have a spearhead and a rallying point. And they must be inspired and induced by something at once vital and concrete to fight for besides the beatitudes of freedom and democracy. For, after all, they are of blood and flesh and need the things that sustain mortal life and make it worth living.

The libertarian army of Nationalist China under President Chiang Kai-shek provides the spearhead and rallying point when it lands on the mainland. It should have on hand for distribution, as surely it would, an adequate supply of arms and ammunition. President Chiang has already many extra trained officers to command the people's fighting contingents. And he has the model government on Formosa, honest, free, economical and effective, that will be established on the mainland over the ruins of the Communist dictatorial and conspiratorial government.

What is that vital and concrete inducement that would make the Chinese people more ready to risk their lives and join the libertarian army? The answer is an economic aid program to improve the living condition of the Chinese people, promote social justice, ensure freedom, and create a good government according to the native genius and noble aspirations of those ancient people.

Here is a specific suggestion advanced for what it is worth. Let the United States and other free countries, which are able and willing, endorsed by the 13 million Chinese who live outside of China, announce that if and after the Chinese people have overthrown the Communist regime they will finance a 5-year economic aid program costing, say, \$2 billion a year for the benefit of the Chinese people.

That program should be conceived by Chinese and be a Chinese program and not any other people's program. They would have the assistance of their friends all over the world if they ask for it, as surely they would, in the program's preparation, implementation and execution. They would want especially the close collaboration of the United States, which would furnish in the beginning the greater portion of its financial support.

From the Chinese living overseas could be expected contributions of brains, experience, work, and money. The loyalty of the overwhelming majority of them is to Nationalist, not Communist, China. Among them are many successful businessmen, bankers, industrialists, engineers, chemists, farmers, shippers, educators, scientists, and other professions and occupations. They must know, or be made to know, that if the countries where they live go Communist their property would be confiscated and their freedom restricted. Patriotism and self-interest would lead them to give the economic aid program their full approval and support.

It is absolutely necessary to have this program, not only to encourage the people but also to take the place of the Communist program which is now in operation. To be attractive and powerful, it will have to be much better than the one it will displace. From what is known of the Communist program, the new one could be made easily more advantageous and acceptable to the Chinese people.

In advancing this program, the free world is not taking a military offensive but one to liberate the people from the Communist economic machine that makes them robots and slaves. It would be exerting its eco-

conomic power for good. As to the United States, she would be simply continuing her work of assistance and cooperation for the welfare of the Chinese people that had been going on for 100 years until rudely stopped by the Communists. It is the Chinese people themselves led by the Nationalist government that will have to exert whatever effort is required to eliminate the Communist regime, so the economic aid program could be put into operation.

The cost of the program is little, considered in the light of relevant comparative statistics, as follows:

The amount of \$2 billion, the annual investment on the program, is roughly one-half of 1 percent of the annual income of the American people. It is about 3 percent of the annual budget of the Federal Government.

The 3-year inconclusive war in Korea had cost the United States alone \$15 billion and 142,000 human casualties. And hundreds of millions of dollars more are being spent for Korea's rehabilitation and aid to the government.

The United States Government spends approximately \$50 billion a year for defense and security. This is largely the result of Russian pressure, direct and indirect. When, say, 10 years from now Communist China becomes stronger, industrially and militarily, as she is bound to be, the defense and security expenditures of the United States would surely be much greater.

If the economic program succeeds, as it should, apart from the abolishment of the menace of communism, it would bring tremendous economies to the United States Government and peace of mind to the American people and the rest of mankind. It would bring progress and prosperity to China as well as to other countries in Asia. Defeatism, neutralism and fear will disappear. It would truly lead to universal tranquility. Thus the investment in the economic aid program would prove to be the best investment conceivable from every standpoint of the world's well-being.

The author was in Formosa early this year when the last batch of the 14,000 war prisoners from the Chinese Communist army arrived from Korea. Asking hundreds of them with the aid of an interpreter what was the first reason why they, their relatives and neighbors in China did not like communism, he received the significant answer that under communism the Chinese family was being broken up to make the individual's loyalty and allegiance to the state total and overpowering in his life. They all said they would fight to the death to prevent such unspeakable outrage.

That voluntary act of those men to choose Nationalist over Communist China leads to two fundamental conclusions: (1) that the Chinese people are definitely against the Communist regime for good and sufficient reasons, and (2) that substantial segments of the Communist army could be expected to defect to the Nationalist army to which most of them formerly belonged. A welcome message from Generalissimo Chiang Kai-shek would be a potent call to them to return to their old fatherland cleansed of godless communism and brutalitarian Russianism.

Of course, there are other reasons that make the Chinese people thoroughly disgusted with the Communist regime. For instance, on mere suspicion of disloyalty or lack of enthusiasm for the regime, after a mock trial and defying all human sensibilities, millions of people have been worked to death, maltreated, humiliated, hounded, imprisoned, or liquidated outright. No people on earth would stand that for long. The Chinese people have already had enough of that merciless terrorism.

What if Russia should go to the aid of China in the event of the Chinese people siding with the Nationalists to liquidate the

Communist regime? If Russia did that, it would unite the Chinese people and reinforce their determination to do away with that regime and its Russian malodorous influence. If the Chinese people detest the Chinese Communists, they intensely hate the Russian Communists who are trying to run and ruin their country. They will assert themselves as Chinese, and they will prove invincible.

Resolutely facing the urgent and challenging realities of the present, let the free world now recognize the dynamic and decisive role that China could play today in annihilating communism in Asia first and then starting its discrediting and disintegration in the whole world.

If communism is not defeated in China soon, then woe to the free world. Marching together for power and loot, China and Russia will stalk arrogantly upon the entire face of the earth and cover it with the bones of the free peoples who resisted them and lost.

Congress' Pay and Integrity

EXTENSION OF REMARKS

OF

HON. MARTIN DIES

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. DIES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence:

CONGRESS PAY AND INTEGRITY—\$25,000 IS NOT TOO MUCH SALARY FOR A LAWMAKER IF HE IS TO SERVE HIS CONSTITUENCY HONORABLY

(By David Lawrence)

If the conscience of any Member of Congress hurts him about voting for that pay raise of \$10,000 a year, there is an easy way out—to give back to the Treasury as much as he likes.

There's precedent for such a gift. Herbert Hoover gave back most of the presidential salary he received while in the White House. He himself never revealed that fact but his friends have told about it. Maybe there are other public servants who have done the same thing and kept it secret.

What a proper salary for Members of Congress should be is a very serious matter and goes to the heart of the question of integrity in government.

Many of those in the House of Representatives who voted against the proposed increase—which has yet to pass the Senate—did so because of a conscientious belief that the voters wouldn't approve of it. But it is important that the voters should know all the facts. For many Members who voted against the increase really deserve to have the higher salary to cover those expenses they have been trying to meet out of their own pockets. Likewise, some who voted for the increase did so out of consideration for the plight of their colleagues, though they themselves didn't need the extra money.

It all comes down to a simple proposition—the American people certainly don't want only rich men in Congress, nor do they want to see Members accepting gratuities from constituents or big campaign contributions in appreciation of service they may have rendered.

Members of the House come up for election every 2 years, so they are constantly in need of campaign money. Many of them supply it out of their own pockets rather than solicit gifts from constituents who seek special privileges. But the worst phase of the

matter is the drain on the funds of a Member of Congress by residents of his district or State who feel their Congressman or Senator is something of an errand boy or personal representative in Washington.

Lots of the things done by Members of Congress for people back home are worth thousands of dollars to those who are benefited, yet there is no such thing as a "service charge" or "fee" to be paid. Indeed, it would be highly improper for any such payment to be made.

If, for example, a new post office building or a defense installation or some other Federal project involving huge sums of money is brought to an area as a result of the efforts of a Member of either House, there are citizens who profit by the rise in real estate values and in other ways. They cannot and should not pay for that service. Yet, in the doing of that chore for the people, various expenses are often incurred and in many instances it is the Member of Congress who foots the bill rather than become involved in some transaction which a political opponent could some day uncover and use as a smear.

It is odd, but members of national legislatures the world over have trouble about the size of their salaries. In Britain the Churchill government almost was overthrown last spring because the Labor Party insisted on a pay raise and the Conservatives opposed it. Many of them are wealthy and carry on extensive business interests. Only after some Conservatives deserted their leadership was the issue compromised. Today the pay of a member of the House of Commons is the equivalent of about \$2,800 a year, with an extra allowance they may request for each day the House sits. This amounts approximately to about an extra \$740 a year. Curiously enough, the House members in London have no private offices or staffs provided by the government.

In France, the pay is equivalent to about \$5,000 a year and the 100 Communist deputies contribute about \$3,000 apiece directly to the party fund, or approximately \$300,000 a year, which is quite a sizable help in carrying on Communist propaganda.

In the State legislatures in this country members are poorly paid and it is a scandal that corporations with business before these bodies often retain as counsel for other services members who are lawyers. The labor unions do the same thing.

Many Members of Congress have outside incomes. Some earn it by getting large fees for speaking before labor unions and trade bodies of various kinds. Others still practice law before State courts. Some have large business interest, or derive big income from investments.

The raise in pay is needed in order to permit the election to Congress of citizens irrespective of their income status. A total of \$25,000 a year, out of which comes \$4,500 for taxes, or a net of \$20,500, is not too much for a Member of either the House or the Senate to receive if he is honorably to serve his constituency.

Thirty-fourth Anniversary of the Temporary Establishment of Freedom in the Armenian Republic

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 10, 1955

Mr. BENTLEY. Mr. Speaker, I understand that today, Friday the 18th,

marks the 34th anniversary of the temporary establishment of freedom in the Armenian Republic, a freedom which only lasted a few months and was then overthrown by the dictatorship of the Soviet Union.

I am pleased to call the attention of the House to this anniversary in view of the often-expressed hope of the administration and the Congress that the day will soon come when all subjugated peoples now behind the Iron Curtain will again enjoy the right of self-determination and a government of their own choice. I, therefore, trust that the Armenian people will continue to keep alive the spirit of hope for the time when they, too, will once again breathe the air of freedom which they enjoyed so briefly 34 years ago.

A Memorial to the Late E. B. Aldrich, of Pendleton, Oreg.

EXTENSION OF REMARKS

OF

HON. SAM COON

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. COON. Mr. Speaker, on April 30, 1953, I introduced a joint resolution entitled, "To Designate the Lake To Be Formed by the McNary Lock and Dam in the Columbia River, Oreg., and Wash., as Lake Umatilla"; however this bill was not acted upon. Today I am introducing a bill asking that this body of water be named Lake Aldrich as a memorial to the late E. B. Aldrich, of Pendleton, Oreg. This action is taken after a great deal of thought on my part. The Umatilla Indians have been immortalized in our State, as well they should be, and it is unnecessary to name anything more for them in order to accomplish this. The Umatilla Indians can never be forgotten in eastern Oregon.

The West is loaded with Indian names, practically every State has counties, lakes, and rivers named after the Indians but very few counties, lakes, or rivers are named after our pioneers. Those men and women who had the fortitude to make this wilderness and sagebrush country into one of the most productive areas in the world. I think it is high time that we publicly recognize these fine men and women who made the West what it is today.

The lake which I am asking be named for Mr. Aldrich came into existence largely because of his efforts. Ed Aldrich was untiring in his work for the civic welfare. He has left in the Northwest, monuments as great as the pyramids. It was he who was head of the organization that made the first survey of the Columbia River for its potential powers. It was Ed Aldrich who went to Washington and lobbied a few hundred thousand dollars for the first Army engineers' survey. As a result of that survey numerous locations were found along the river for damsites. The final result of that survey is Grand Coulee and Bon-

neville, and now McNary Dam. Ed was the man who turned the first spade in these gigantic enterprises.

Mr. Aldrich was a staunch, energetic, and active Democrat all of his life. I was born, have lived, and will always be a Republican. Therefore it may appear strange to some people that I would sponsor legislation to immortalize this man's name. Politics has nothing to do with it. Mr. Aldrich loved eastern Oregon just as I do, and no one man has done more for his community than he did during his lifetime. He and I may have differed often as to what we thought was good for our people, but I never doubted his sincerity, his loyalty to country, or his integrity, and I am certain that he never doubted mine. I believe that the vast majority of the people who benefit from this lake, and the project which formed it, will subscribe wholeheartedly to the sentiments which I have expressed today, and will be with me in asking Congress to make into law the bill which I am now introducing.

Government Competition With Industry

EXTENSION OF REMARKS

OF

HON. JOHN E. HENDERSON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. HENDERSON. Mr. Speaker, Government competition with business enterprises has in the past two decades reached alarming proportions both in its volume and the variety of activities which Federal agencies have entered. This has had increasingly adverse effects on many of our industrial producers who have found themselves confronted with competition from high-cost Government plants supported with their tax dollars. I commend to the House the following editorial which appeared in the *Daily Times of Marietta, Ohio*, on February 16, which addresses itself to this problem:

DON'T STOP WITH COFFEE

Former GI's who believed the black brew served at Army mess halls was something distinctive, not to be found anywhere in the civilian world, were absolutely right. The United States military services have long been in the business of roasting and grinding their own coffee to supply their farflung posts and ships. Now they are going to get out of that business, as soon as they have liquidated—or liquefied—the beans on hand.

The Army has announced decision for closing coffee processing centers in Atlanta, Ga., and Seattle, Wash. The Navy is closing down similar centers in Brooklyn, N. Y., and Oakland, Calif. Officials say the decision is in line with Defense Department policy to get the military services out of competition with private enterprise and to save money.

Coffee processing, of course, is just one of many lines of business in which the military services are engaged. And such businesses under the Defense Department are just a portion of the overall Federal competition with private industry. Taxpayers are supplying funds for such Government enterprises as manufacture of rum, fertilizer,

spectacles, sleeping bags. They have supplied the capital to make Uncle Sam the Nation's largest electric-power producer; largest lender; largest insurer, landlord, and tenant; largest warehouse operator, shipowner, and truck fleet operator. In short, government is big business operating in unbusinesslike manner.

Efforts are being renewed in various quarters to get Uncle Sam out of some of his diversified fields of business. Democratic Senator McCLELLAN, of Arkansas, has introduced a bill with provisions for aiding industries suffering from bureaucratic competition. Practically the same legislation has been introduced in the House by two Republicans, FRANK C. OSWERS, JR., of New Jersey, and CLARE E. HOFFMAN, of Michigan.

Senator McCLELLAN says it is all right for the Federal Government to engage in such businesses as running the post office, operating navy yards, and producing electricity through TVA. But when Government agencies make helium, false teeth, paint, and furniture; sell insurance, operate hotels and laundries, retread tires, or hunt fur-bearing seals, it's a "matter of serious congressional concern," he says.

It is about time legislators on both sides of the aisle in both Houses of Congress showed such concern. The House passed something similar to the McClellan bill last year but it died on the Senate Calendar.

A Tribute to Lithuania

EXTENSION OF REMARKS

OF

HON. IVOR D. FENTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. FENTON. Mr. Speaker, under leave to extend my remarks, I include in the CONGRESSIONAL RECORD the following editorial entitled "A Tribute to Lithuania," published in the February 16 edition of the *Evening Herald, Shennandoah, Pa.*:

A TRIBUTE TO LITHUANIA

Although its status as a free republic was relatively brief, spanning the period between February 1918, and May 1940, Communist-enslaved Lithuania today nevertheless is mindful of the 37th anniversary of its independence.

There are no public demonstrations in that unfortunate country on what would otherwise be a joyous national holiday. Any such exercises would be immediately halted with force and result in additional harsh punitive measures on the suffering populace by the Red tyrants. No matter how gallant the spirit of a people may be, it is suicidal to take issue with firing squads.

Consequently, this 37th commemoration of Lithuania's Independence Day by its sons and daughters at home is necessarily highly secretive; only behind locked doors, and then in whispers, is there recognition of a sacred date.

Americans, however, along with those exiles who have found haven in countries making up the free world, and other admiring friends, are happily in a position to salute the fortitude of the millions of Lithuanians held in bondage by the Communist dictators.

It comes as solace to these unfortunates to know that their great national holiday is perpetuated elsewhere in the world. Our messages of encouragement cannot fail to buoy the spirits of the enslaved. Their hopes for future deliverance are nourished

by the knowledge that they have not been forsaken outside the grim and brutal Iron Curtain. Our prayers for an eventual restoration of their precious liberties surely provide heartening consolation.

In a historical sense, it would be difficult to match Lithuania's tribulations with any other country on earth. Despite foreign domination and oppression for a full 125 years, exclusive of that brief period of respite from 1918 to 1940, the Lithuanian spirit remains unbroken.

Over the long years of Czarist Russian rule, when relegated to an inferior status and deprived of true freedom, gallant little Lithuania managed to survive. Then, when its national status was ruthlessly wiped out by Communist Russia, Lithuania has endured horrors almost to exceed the imagination. These fearful conditions have not diminished; the deportations to Siberia go on daily and the wanton slaughter of those who resist has not lessened.

Yet in the face of this devilish Red plan to eradicate Lithuanian nationality, how remarkable it is to comprehend that the brave people have managed to secretly keep aflame that precious light of liberty.

Plainly the Lithuanian nation is indestructible; its people remember with pride a great historical past. The Reds have never eliminated the inner sense of national destiny, handed down from father to son over succeeding generations.

If Lithuania's modern ordeal teaches anything it is that the liberty of a people cannot be stamped out by the tyrant.

Hence, on his 37th anniversary of Lithuania's independence, Voice of America broadcasts penetrate the Iron Curtain, to bring messages of hope and future salvation.

Sooner or later, the Lithuanian people shall again enjoy the God-given and natural right of every country to be free, to resume the happiness once enjoyed, and to once more proudly take their rightful position among the sovereign powers of the world.

Impact of Foreign Trade on the Rochester (N. Y.) Area

EXTENSION OF REMARKS

OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. OSTERTAG. Mr. Speaker, in order to determine the impact of foreign trade on the Rochester, New York, area, much of which lies within my district, I have requested the Legislative Reference Service of the Library of Congress to conduct a survey which will highlight the extent of exports and imports in the area. The survey is being directed by Dr. Howard S. Piquet, senior economic analyst of the Library.

In addition to questions covering the type and volume of business in the area, the questionnaire sent out in connection with the survey was designed to determine the extent to which Rochester industries rely upon raw materials from abroad; the extent of their imports and/or exports; the degree to which their business is affected by imports; the amount of export business which results from United States foreign economic and military aid programs; the effect of a 15-percent reduction in tariffs over the

next 3 years; and, finally, the anticipated effect on business in the Rochester area of the St. Lawrence seaway.

The survey has not yet been completed, but it has gone far enough to indicate certain significant factors and trends.

As of February 16, 130 firms, with a total of 74,306 workers had responded to the survey. Of that total, about one-third of the firms, employing about one-fourth of the workers, have an interest and a stake in exports. One-fifth of the firms are dependent upon imported raw materials. Seven firms, with 2,830 workers have no interest in imports, insofar as dependence on raw materials goes, or in exports, insofar as selling their products abroad is concerned, but foreign imports are making substantial inroads on their markets.

A dozen large firms in the area have mixed interests in the foreign trade program: That is, they have foreign markets, but they are also confronted by competition from imports, and thus, in some measure, there is a dichotomy in their interests.

Finally, and perhaps most significantly, the preponderant number of firms—although they cover only a minority of the workers—expressed no interest in either imports or exports, their businesses being wholly concerned with the domestic market.

Tenth Anniversary of the Yalta Agreements

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, February 18, 1955

Mr. DIRKSEN. Mr. President, inasmuch as February 11 marked the 10th anniversary of the completion of the Yalta agreements, it is rather interesting to journey back into the past and note how accurately this situation was assessed at the time by those who had intimate information of what was happening.

I have particular reference to two columns which were written by Constantine Brown, of the Washington Star, one of which appeared on January 30, 1945, under the title "This Changing World," and the other of which appeared on February 11, 1945, under the title "Japanese May Seek Peace To Avoid War With Russia."

Here then was an accurate indication of what was in the wind and what might happen, and history vindicates the opinions and conclusions expressed by Mr. Brown 10 years ago.

How strange that the whole story has not been officially verified since those who participated in the conference in some degree are still available and in a position to do so. Former Senator Byrnes, of South Carolina, could provide some interesting footnotes to history. Averill Harriman, who drew up the

China agreement with Malenkov, is the Governor of New York. Mr. Charles E. Bohlen is our Ambassador to Moscow. Even Alger Hiss is alive and free from prison and would be able to talk.

The history of that period will not have been completed and properly documented until those who were a part of the Yalta undertaking oblige the American people with the whole story.

I ask unanimous consent that the articles by Mr. Brown be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of January 30, 1945]

THIS CHANGING WORLD

(By Constantine Brown)

A definite agreement for Russia to join the United States and Britain in the war against Japan is expected to be one of the results of the next conference of the big three. Usually well-informed military quarters here believe the Russians will move against the Japs as soon as they can open a second front without fear of weakening their position and jeopardizing the victory against Germany, and after the necessary political arrangements have been made between President Roosevelt and Premier Stalin.

According to various hints received from Japanese sources, it appears there has been suspicious activity at Vladivostok and on the Siberian-Manchurian border. The Red Army is reported strengthened in the last few months.

Earlier in the war, when the Germans were driving toward the Volga River, a large part of the forces in Siberia had been sent to fight the Germans. Since surrender at Stalingrad and the resumption of the offensive of the Red Armies, the Siberian forces were sent back to their old stations. Today, according to some reports, about 500,000 men comprise the forces.

Much lease-lend and Siberian manufactured war material has been gathered in the area. The Siberian railroads have been improved and extended. New factories have been created to serve, at the time of their erection, as an additional feeder to the supplies received from the United States and Great Britain. Many of the war plants which had been evacuated from the areas invaded by the Germans were set up in various parts of Siberia.

The population of Siberia was substantially increased by the addition of millions evacuated by force or otherwise from Poland, the Baltic States, occupied Russia, and more recently from Rumania and Bulgaria. While no statistics are available, it is generally believed that this gigantic migration has added at least 6,000,000 to the former population figures.

Siberia, once described as a wasteland, is teeming with activity. Thus, while the Russians were anxious not to provoke the Japanese at a time when they were fighting desperate defensive battles in European Russia and their huge Asiatic territory had to rely principally on supplies from Europe, they are no longer under the same handicap and can decide at will whether and when they wish to attack the Japs.

According to some observers, the whole matter will depend on the conversations of the big three. While there is no definite information, it is generally assumed that the Soviet leader will require a certain price for intervention against the Japanese. Russia is likely to require the restoration of her power in the East to the position it held before the Russo-Japanese War of 1904 and possibly a little more. In diplomatic quarters which have followed Moscow's policies closely

it is believed that Premier Stalin will require that Manchuria, a border state of Siberia, be taken from Japanese tutelage and made into an independent republic with a government friendly to the U. S. S. R.

The same request is expected to be made in regard to Korea, with Port Arthur, which until 1905 was the foremost Russian military naval base in the Far East, restored to the Russian control. Representatives of the United States Government, including Ambassador Patrick Hurley, already are attempting to bring about a better understanding between the Chungking government of Generalissimo Chiang Kai-shek and the Communist government in Sinkiang Province, which is on the borders of Moscow-controlled Outer Mongolia.

Should such an attempt prove successful, a reshuffled Chungking government would become more Moscow-minded than the present government.

Under these circumstances Premier Stalin will be able to breathe easier, since he will have only "friendly governments" along the entire border of his huge empire. Manchurian and Korean problems might thus be solved to the satisfaction of the U. S. S. R. without giving offense either to the Chinese Government or to the Korean people. Manchuria and Korea would become independent entities under the unofficial protectorate of the strong neighbor in the north.

[From the Washington Star of February 11, 1945]

JAPANESE MAY SEEK PEACE TO AVOID WAR WITH RUSSIA—ONE GROUP REPORTED ASKING NEGOTIATED UNCONDITIONAL SURRENDER FEARING DEFEAT OF NAZIS MAY ADD TO PACIFIC BELLIGERENTS

(By Constantine Brown)

The war is rapidly coming to an end. In Europe, the organized resistance of the German forces is likely to be terminated within the next 2 months.

A major sea battle may soon take place in the Pacific. American high officials do not question its outcome, and it may be the Japs' last major naval effort of the war.

The Tokyo Government may be forced into surrender sooner than most optimistic observers believed possible. Within a short time Japan's home islands are expected to be the daily targets of American land-based aviation.

The establishment of American naval bases in the Philippines and other places will sever the lines of communication between the Japanese homeland and the rich islands in the South Pacific which since the end of 1942 have been providing the Japanese factories with vital raw materials.

The probable intervention of Russia in the war against Japan will further tax the defensive ability of the Japanese land forces in Asia. But even without that intervention, most military observers who have returned from the Pacific and have leaned toward optimistic estimates in the past, feel that the Japanese resistance is rapidly dwindling.

HOPE TO SAVE SOMETHING

This unexpected turn is not due so much to the exhaustion of Japan's ability to continue to fight as to the desire of a large and heretofore unheard group of Japanese who want to save something out of the wreck. This group believes the American Government is understanding and that the overthrow of the clique which has developed the idea of Greater East Asia under the domination of Japan might be accepted as unconditional surrender in the United States.

According to reports which appear reliable, the Japanese believe the American people would not be opposed to the maintenance of the dynasty. The Emperor of Japan would form a government, choosing as his advisers those remaining liberals who have not been

purged but have gone underground since the outbreak of the war. Such a government would agree to a withdrawal from all the ill-gained possessions in China and the South Pacific, agree to whatever military terms might be exacted by the United States, and throw Japan at the mercy of this country.

Little has been revealed about the devious approaches of some of the Japanese liberals who have suggested that America's own future defenses in the Far East will have to depend on a friendly Japan in the same way Russia's security and power in Europe depends on friendly border governments in Poland, the Balkans, and, in all likelihood, Germany. In plain English, some of the Japanese liberals who did their utmost to avoid war with America suggest that Japan become a puppet of the United States. And they argue that in self-defense America should accept this suggestion, particularly if it is clothed in humility.

ADMIT JAPAN VULNERABLE

This will be still easier if Russia, after the collapse of Japan, is successful in forming "friendly" governments in Korea, Manchuria, and northwestern Chinese provinces.

Does America want to see totalitarian government in Asia as well as Europe? Ask those who are making approaches with a view to America's accepting surrender from Hirohito on "equitable terms." They admit that Japan can be crushed forever. But they ask, How will the American people who must think in long-range political terms benefit by the total destruction of the Japanese Empire?

The Japanese, we are being told, no longer have any illusions that they can ingratiate themselves with the 480 million Chinese. Their policies in occupied China have been so stupid and ruthless, it is admitted, that the Chinese will never agree to cooperate with the present oppressors.

The Chinese will certainly accept the outstretched hand of the United States. But will America have a free hand to help China in the manner she desires if Chiang Kai-shek is compelled to knuckle down to his communist opponents and they have a free reign throughout that vast country?

FEAR RUSSIA MOST

America does not intend to settle on the Chinese mainland with important forces. Russia will be the strongest power in Asia and will be in a position to help not only "friendly" governments but also will see that its pupils trained in Moscow remain in the saddle throughout the vast Chinese areas. Under these circumstances, there is little that America can expect in the future from China either politically or economically.

In order to offset these future problems, the spokesmen of Japan advance the suggestion that the American Government should not cast aside the proposal for a "negotiated unconditional surrender."

These suggestions are reaching Washington in a roundabout way and are interpreted to mean not only that the Japanese leaders have come to realize that the war is being lost but also that they are more afraid of the consequences of Russia's entering the war against them than to surrender to their present enemies.

WANT TERMS LIKE ITALY'S

The form of this humility would be the acceptance of all the unconditional surrender demands with the tacit understanding that they will be no harsher than those imposed on Italy. The Japs indirect efforts are concentrated particularly on the United States since already there is a fairly strong group which is advocating an early peace with Japan. The possibility that Russia soon may enter the far eastern arena with a strong force from Siberia has hastened the efforts of "negotiators." These men are not necessarily

Japanese but they claim to speak for Emperor Hirohito and the few remaining political leaders who opposed the war against America because they realized it would end in a disaster for Japan.

The reported approaches started about 3 months ago when the Japanese gained the definite impression that as soon as the Germans were defeated the Russians would turn their forces to the Far East. Recent dispatches from Moscow which described the Japanese as aggressors were only the outward signs of what Premier Stalin had in mind. The Japanese became fearful of Russia's intervention when their agents in Siberia began to report a significant concentration of Russian troops, planes, and war material at strategic points north of Manchukuo. They were equally suspicious of Russia's intentions when a little publicized Free Korean government was organized in Siberia.

In a nutshell, the individuals who say they are speaking with the consent of Emperor Hirohito assert that Russia's intervention in the far eastern war will result in the establishment of a free Korea and Manchuria and the setting up of a "friendly" government dominated by the Communists in northwestern China. They point out that the free Korean and Manchurian governments will be equally dominated by individuals who have been coached recently in Moscow and will direct their activities toward a full political cooperation with the U. S. S. R. They admit that under such circumstances Japan will perish or—under the best circumstances—will become a 10th-rate power such as Thailand.

STALIN DOESN'T FORGET

The old antagonism between Czarist Russia and Japan which was climaxed by the defeat of imperial Russia in 1905 has never been healed in spite of the apparent improved relations between Russia and Japan in the last few years. In spite of his apparent friendliness toward Tokyo immediately after the outbreak of the war, Stalin has never forgotten that Japan joined the anti-Communist Axis on the side of Germany and Italy of its own volition. He also remembers that after the world war Japan did her utmost to oust Russia from Asia.

In fact, the Japanese-Russian conflict which started in 1904 has never really ended. This the emissaries of Hirohito frankly admit and say that the fear of Russia becoming the dominating power in Asia, is prompting the Emperor to seek an understanding with the English-speaking nations.

But these intermediaries, whose names and nationality are only known to a very few, are willing to interpret our own position in the world today and draw the conclusion that it would be to the advantage of the United States to accept a negotiated unconditional surrender from Japan, possibly before Russia became a cobelligerent.

Most of the hatred of the American people for Japan is directed at the military leaders who staged the sneak attack on Pearl Harbor and have been guilty of unbelievable cruelties against prisoners of war. We are being told that Japan is quite prepared to hand over all these war criminals, regardless of rank or position. Japan, we are told, would not quibble on this question in any way. Japan, we are also told is willing to accept the strictest American control over her armaments and industries. She proceeds on the theory that world politics is elastic and that the time may come in the distant future when the United States might be glad to have a potentially strong Japan in the Far East.

RUSSIAN STAR RISING

The unofficial spokesmen for the Japanese liberals make the following analysis of the world situation:

Russia they say, unquestionably will be the dominating power in Europe. In the

Middle East the British prestige and power are on the wane. The Moslem world, from Afghanistan to Arabia and Egypt and possibly even as far as Morocco on the shores of the Atlantic Ocean, now believe that the long pan-Islamic dream may come true, thanks to the support they expect to obtain from Russia.

In the Far East, the influence of Generalissimo Chiang Kai-shek hangs on a thin thread. The representatives of some 60 million Chinese Communists schooled in Moscow are now attempting to impose themselves on the Chungking government, and the American officials themselves are urging Chiang to reach a compromise. The generalissimo knows as well as any one else that a compromise with the Communists, even if they have no direct ties with Russia, will mean his eventual disappearance from China's political life. Any compromise with the Moscow-trained Communists must end in their dominating the political scene. Hence the United States, which is now gently pressing the generalissimo to cooperate with the Chinese Communists, must know that sooner or later it is this group which will take over the government of China.

Postal Salary Increases

EXTENSION OF REMARKS OF

HON. EARL CHUDOFF

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. CHUDOFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following statement submitted by me to the House Post Office and Civil Service Committee in support of an adequate and realistic salary increase for postal workers:

Mr. Chairman and ladies and gentlemen of the committee, I greatly appreciate this opportunity of presenting my views on pending legislation to provide much-needed and well-merited increases for employees in the field service of the Post Office Department.

I had the pleasure last year of supporting increases which, while admitted small, would have given at least some measure of relief to these employees and I regret that this legislation was given a pocket veto by the President.

I hope that this committee, after consideration of the bills before you, will find it possible to report the bill H. R. 1592, by Congressman MORRISON, of Louisiana, and I hope that action will be taken promptly so that, in the event a further veto results, the Congress may have the opportunity to override such veto.

I am sure I don't have to remind the members of this committee that it has been almost 4 long years since postal employees have received a salary increase. As I recall it, the last increase granted was effective July 1, 1951, and we now lack only 4 months of the complete 4 years during which time postal employees have received no increases whatsoever, while the salaries of those in private industry have been increased twice and in some cases three times during the same period.

I am sure I don't have to remind this committee that postal employees generally have earned an increase at this time. All of us that have had the opportunity to look at the budget for the fiscal year ending June 30, 1956, must have been impressed, as I was, with the story of efficiency which

is carried on page 885 of that weighty document. I note that mail volume is expected to increase another 3 percent in 1956 over the current year and this increased volume, like the increases which have preceded it, will be largely absorbed by the employees of the postal service. I don't think it is at all unreasonable that these employees expect to be paid for their increased efficiency. That is a standard operating procedure in private employment and might well be adopted by our Federal Government.

Last year in announcing the withholding of his approval of the postal and Federal employees' salary increase, the President stated in effect that his action was predicated upon the fact that no postal-rate increase was provided to pay for the salary increase and that the bill failed to contain provisions for a reclassification of postal positions. Insofar as a rate increase is concerned, I believe that the question of proper salaries for the employees of the postal service is a matter entirely independent of postal rates and that there is no justification whatever for tying these two questions together.

With respect to the need or desirability of a reclassification of postal positions, postal employees with whom I am familiar and who have an adequate knowledge of the problem have convinced me that the proposal of the Postmaster General as contained in the bill H. R. 2987 is at least as unsatisfactory as the proposal of last year and I cannot help but believe that the only way a solid reclassification of postal positions can be arrived at is to refer this matter to a joint committee composed of Members of both the House and the Senate, with representatives of the Post Office Department and the employee organizations. I am confident that such a committee would arrive at a solution which would do justice to the public, the Post Office Department, and the employees.

For these reasons, Mr. Chairman, I hope the committee will report the bill H. R. 1592 at an early date so that justice for postal employees may no longer be delayed.

United States Trade Policy

EXTENSION OF REMARKS OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, at its convention in Boston in December 1954 the American Veterans Committee adopted a resolution favoring extension of the reciprocal-trade program and endorsing the trade-adjustment bill which I originally introduced last year and which carries the number H. R. 229 in the 84th Congress. This bill has also been introduced in this House by Congressman EBERHARTER and others. I believe the Congress should be aware of the position of the American Veterans Committee on this question; and, therefore, under unanimous consent, I include their resolution in the RECORD, as follows:

RESOLUTION ON UNITED STATES TRADE POLICY

Whereas the reciprocal-trade program of the United States is a crucial part of United States efforts of free-world leadership; and

Whereas the Congress has failed to adopt a trade policy for 2 years while the Soviet Union and Communist China have nego-

tiated 36 trade agreements with the free world; and

Whereas the liberal trade policy as outlined in the Randall Commission report would not only permit the United States to assume trade-policy leadership but also benefit our domestic economy; and

Whereas the implementation of a liberal trade policy such as recommended in the Randall Commission report inevitably requires the United States Government to consider possible damage to a small number of affected United States industries; Therefore be it

Resolved, That the AVC supports the adoption of a reciprocal-trade policy based on the recommendation of the Randall Commission report and be it further resolved that the AVC endorses and supports positive governmental action to assist affected industries as proposed by the Kennedy-Williams bill; and be it further

Resolved, That the national AVC representative to the Committee for a National Trade Policy urge said committee to also endorse this bill as a method of accomplishing a positive trade policy.

Formosa: Risks and Strength

EXTENSION OF REMARKS OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

Speaking at the 25th anniversary of the Hoboken Club, Milford, yesterday, Congressman PHILIP J. PHILBIN, of Clinton, hailed the Formosa policy as a long-overdue favorable change in United States foreign policy.

"There are risks involved in the course we have selected," said PHILBIN. "In fact there are risks whatever course we may follow because we are living in a very dangerous world. But the alternative of appeasement and vacillation would constitute, in my opinion, a far greater risk. If we stand by, while world communism directed from Moscow conquers one nation after another by force and insidious conspiracy, the time would ultimately come when we would be outflanked militarily, economically, and in every other way. That would be a prospect of real peril.

The present situation is grave, but we are acting from a position of strength. Our own Armed Forces are in a high state of efficiency and the military and economic resources of the free world plus our power to strike, if attacked, with overwhelming nuclear force will continue to be the great deterrent to Soviet aggression. We must continue to build this great strength for the long haul. It will best guarantee the national security and the peace.

The Congressman also touched briefly on present immigration laws which he said were working great inequities upon many American families and veterans who, despite their fine citizenship and loyal service, are prevented by law from having their relatives join them in this country. "There should be a rule of reason in these matters. These laws should be liberalized," he said.

PHILBIN congratulated the members of the Hoboken Club who, he said, had conducted themselves in the best traditions of the Nation. "Your contributions to Milford and

to the Nation in war and in peace represent the highest type of citizenship. And your devotion to the cause of your own people has heightened your allegiance to this country. I wish you many more years of useful service and happiness," he concluded.

H. R. 1

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. MULTER. Mr. Speaker, I direct to the attention of our colleagues the following editorial which appeared in the New York Times of February 17, 1955:

H. R. 1

The House of Representatives begins 2 days of debate today on a bill that the chairman of the powerful Ways and Means Committee describes in these terms: "In my opinion, there is no one piece of legislation coming before the Congress this session which will contribute more to our own prosperity and at the same time to the solidarity and security of the free world." This bill is H. R. 1, which would extend for 3 years the reciprocal trade-agreements program and give the President moderate additional powers under it to make further tariff reductions.

Though it is confidently expected that the bill will pass in its present form, the opposition to it is considerable; and it is not confined to the Republicans. Contrary to tradition, there is such a thing as protectionism among Democrats, too. Where it exists it is frequently based on strictly local interests.

There is nothing disgraceful in this, but it ought to be recognized for what it is. The potters, the lacemakers, the candle-makers and many others may have a point when they say that they have been or will be injured by a liberal national trade policy. As a matter of fact, we would agree that the Government ought to give temporary help in cases where an industry that can no longer compete with foreign products is trying to switch to more profitable lines of manufacture.

But surely such situations must not interfere with the broad principles of competitive international trade which are necessary to our continued prosperity and our position of political leadership of the free world. We are a tremendous exporting as well as an importing nation, and we cannot continue to be one without being the other—unless, of course, we go on subsidizing the rest of the world forever, which we clearly don't intend to do. Furthermore, American trade policy needs a guaranteed stability that it has not had for some years and that the present bill would give it. Finally, if we do not insure a relatively liberal approach to trade, we are inviting—in fact we are practically forcing—our present friends of the free world to turn to the countries behind the Iron Curtain in search of commercial possibilities.

The pending bill is anything but an extreme or radical method of dealing with these matters. It is less courageous and far-reaching than a truly sound trade policy requires; but it does set this country's face firmly again in the direction charted by Cordell Hull 21 years ago. We hope it is passed by a strong bipartisan majority.

Let Us Protect American Industries

EXTENSION OF REMARKS

OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. BYRD. Mr. Speaker, it is imperative that this Congress take action to protect our domestic industries. I recently appeared before the House Ways and Means Committee and urged that H. R. 1 be properly amended to provide this needed protection. On Tuesday of this week, I appeared before the House Rules Committee and opposed the granting of a closed rule on this legislation, because a closed rule would not permit those of us who are Representatives from industrial areas to amend the bill so as to afford relief to the mining industry, the chemical industry, the glass industry, and others. Yesterday on the floor of this House, I again spoke in opposition to a closed rule. Our forces were outnumbered by a very narrow margin, and we lost the battle. I, therefore, hope that this House will take action today to retrieve that which we lost yesterday, and I urge the membership to support a motion to recommit the bill with instructions to the committee to bring the bill back out under amendments which will provide the kind of protection our industries need and deserve.

My district is the largest coal-producing district in America. The largest chemical plants in the Western Hemisphere are located in my district, as is one of the largest window-glass plants in the world. These industries are basic to the defense of this Nation, and they have suffered under the present law, largely because the escape clause is treated as a joke and trade agreements are used as pawns in the field of international diplomacy.

A case in point is the plight of the chemical industry, one of tremendous importance in both peace and war. It faces serious problems from foreign competition and many of its leaders have protested any reckless across-the-boards cut in tariff rates on chemical products. Because it is a very large industry which provides substantial payrolls and an important outlet for investment, its spokesmen deserve a hearing. I do not ask you to reject H. R. 1 in its entirety, but I do suggest that the chemical industry is typical of those groups in the country that are worried about foreign competition. An examination of their problems in specific form may well suggest that very specific answers to tariff problems are required, too. Generalizations are not enough basis to form a national policy. By this I mean that across-the-board cuts in tariffs represent a superficial approach. It would be more scientific and show better deliberation to study the needs of individual products and industries, adjusting each rate to specific requirements. This is not too much to ask in so important a matter.

The spokesmen of the chemical industry have come before the hearings of the Randall Commission and have released statements to the press which suggest in unmistakable form the problems they face as a result of foreign competition. They suggest that if the present uncertainty over possible reductions in tariffs continues, then the expansion of the industry at home will be threatened, and new investment important to the growth of the industry will be lost. Because the chemical industry has been growing at something like four times the national average of all industries, its continued progress is of concern. If its high growth rate is continued without interruption, some hundred thousand new jobs in this industry will be created during the next 10 years. If this kind of progress is threatened by foreign competition made possible by tariff cuts, it is important that these facts be given the same careful consideration as the proposals to create export trade and economic solvency abroad through our tariff reductions. Any one-sided review of all the aspects of trade policy is a guarantee that all of these problems will have to be reconsidered by every succeeding Congress. For fatal weaknesses written into our laws make themselves felt inexorably. Let the decision of this Congress be so carefully laid as to avoid at least the obvious flaws of past acts in foreign trade policy.

Can we afford to be without a strong chemical industry? That question answers itself in the negative, for a great country such as ours with its variety of needs for an advanced technological society and its grave responsibility for the defense of the free world must have an assured supply of a wide range of chemical products. Many of these are products whose very names seem strange to the layman, yet any engineer, chemist, or specialized consumer could explain to us how these seemingly obscure substances, processed and combined, give us dyes, drugs, plastics, fuels, and the advanced materials of military armaments, without which our high standard of living and military survival would be impossible.

It may seem a long way back in history to some of us, and yet it was not many years ago that the First World War ravaged Europe. One of its early effects, long before we became involved in the fighting, was to cut us off from a variety of essential supplies previously turned out by German industry. It was at great effort that we painfully constructed a chemical industry of our own and learned enough secrets of research to make it possible to fulfill our needs. It is indicative of the progressive nature of the chemical industry of America today that it spends \$200 million a year on research. This is obviously not the hallmark of a moribund segment of the economy. If it can continue to enrich American life with the marvels of the laboratories as it has in the past, its contribution will be one to recognize with pride.

Let us pause to consider the plight of the glass industry, and I would like to

direct your attention to the adverse effect upon one of the glass plants in West Virginia. The rapid increase in imports of European window glass made under low-wage conditions resulted in shutting down of a production furnace and an experimental furnace last year at the Charleston plant of Libbey-Owens-Ford Glass Co., and 240 employees lost their jobs as a consequence. This condition followed the closing down of 2 tanks at the end of 1953, and brought the total layoff to 500 seniority employees directly due to the increased glutting of the window-glass market by foreign glass.

Nineteen hundred and fifty-three imports of window glass totaled 100 million square feet of glass, as contrasted with imports of less than 1 million square feet in 1948. In other words, 1953 imports of window glass were equal to 1,020,000 man-hours of work in modern window-glass factories.

The average wages of the American window-glass industry run about \$2.40 an hour. European manufacturers pay from 37 cents to 45 cents an hour for the same type of work, and I am told that almost identical machines are used in European and American plants. Low-cost water transportation enables cheap European window glass to reach American cities on both the Atlantic and Pacific coasts with lower freight rates than those prevailing from Charleston, W. Va., to markets in this country. I am told that the freight weight from Charleston, W. Va., to Miami, Fla., is three times that from Antwerp, Belgium, to Miami. These figures should be enough to convince anyone that a further lowering of tariffs will be disastrous to our own industries, and that they cannot meet such competition without some reasonable protection.

Let me, in conclusion, make my position clear. We are engaged in an important review of our international trade policy. As previously on the floor of this House, I have made a strong plea for adequate protection of the coal and textile industries, I here state that the chemical industry is yet another of critical importance to the livelihood of the American worker and to the prosperity of the Nation. These important industries must not be destroyed nor can we afford to see them seriously injured. It is up to the Congress to prevent such a catastrophe.

I urge the Members of this House to support the motion to recommit. If we are successful in our efforts to recommit H. R. 1, it will be brought back with safeguards included, after which we can all conscientiously support the bill.

This, Kiwanians Believe

EXTENSION OF REMARKS OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me here-

tofore so to do, I have the privilege of presenting herewith the text of the wording of a beautifully colored and framed plaque containing said text which was presented to me as a former member of the Kiwanis Club and to each and every other Member of Congress who either is now an active Kiwanian, or is a "has been" Kiwanian. It was on the occasion of the biannual international Kiwanis banquet honoring Kiwanians at the Statler Hotel here in the Nation's Capital on February 17. On each such occasion there is always, in addition, the international president of this international service organization of almost 250,000 members and 4,000 units. Also in attendance is always the international board of trustees thereof.

We were last night informed that 1 out of every 5 Members of this great legislative body are in this Kiwanis family.

THIS, KIWANIANS BELIEVE

Kiwanis believes in the free man.

The free man is a free citizen. He is free to think, to learn, to speak, to worship, to meet with other free men, to elect his representatives, and to limit their power. He may be accused and tried only by the due and historic process of the law.

The free man is responsible. As he prizes his own freedoms, he jealously guards them for his fellow citizens. He studies the issues of his day and his community. He decides them on merit. He utters and votes these decisions. He is loyal to his country. He is loyal to the ideal of freedom for men in all countries.

The free man is a gentleman. He knows that democratic government operates by resolving controversies within the limits of law and mutual respect. He debates issues and not personalities. He respects the rights, customs, beliefs, and institutions of other men—requiring only the same of them.

The free man is a spiritual man. He ascribes all wisdom to the Creator and not to men. He believes he can earn his spiritual way only by service to others. He seeks blessings for all, and not credits for himself.

He is the man we Kiwanians pledge ourselves to try to be.

He is the man, who, one day, with God's help, will set our world firmly upon its spiritual axis.

He is the free man.

Address by Arthur B. Homer, President of Bethlehem Steel, Before Bethlehem Chamber of Commerce

EXTENSION OF REMARKS OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1955

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address of President Arthur B. Homer, of Bethlehem Steel, before the annual meeting of the Bethlehem Chamber of Commerce.

The text of his address follows:

Mr. Ecker, distinguished guests and members of the Bethlehem Chamber of Commerce, I am very happy to have the honor of speaking to you tonight. My pleasure comes not only because I am participating in a meeting of the members of such a worthwhile and

successful organization as the Bethlehem Chamber of Commerce, but also because I feel right at home when I see so many of my good friends and neighbors.

The good friends and neighbors are not only those here who live in Bethlehem. This occasion is designed to record and salute the achievements of the whole Lehigh Valley and I am fortunate in that I can claim acquaintanceship with a number of those who make the Valley what it is in the industrial life of our Nation. It is certainly not just steel. What the area has to offer covers textiles, electronics, cement, good farming, metals fabrication, superior retail distribution and a host of other activities. In short, ours is an area which more than pulls its own weight and I am proud to participate in its contribution and growth.

"BESSIE STEEL"

As I stand here, I am also not unmindful of the fact that the city of Bethlehem has played an important role in my life. Important because, among other things, my family history will record that on or about the year 1920 I made two discoveries here in Bethlehem which had a great influence on my life and career.

First, I discovered a Bethlehem girl who became my wife. Secondly, I discovered the great Bethlehem Steel Co. Ever since, I have been trying to solve the intricacies of both, but I can assure you that 35 years of devotion have brought no regrets, even though my wife may sometimes wonder whether I married her or the other girl—"Bessie Steel."

The demands of the latter have moved me about the country to a considerable extent, but now I am back again as a member of your community and I like it.

ABSENT 20 YEARS

As I did not live in Bethlehem for a period of about 20 years, the changes that have taken place in the city during my absence and since my return in 1945 are particularly impressive to me. The great strides that have been taken in matters such as slum clearance, water supply, and street improvement; developments such as the expansion of hospital facilities, the construction of a modern airport, and the new vocational high school speak very well indeed for the forward-looking spirit of the community as a whole and of its civic and political leaders.

I am aware of the outstanding work your organization has done in connection with such projects as the vocational school, rezoning, the development of a modern building code, and redevelopment in general. You are to be congratulated and so is the city administration.

Many of the steps which have been taken to make this a better area in which to live and work and raise children have been assisted by our company through direct contributions of money, time and services of personnel. This is as it should be. It is not only fitting but also imperative that our company with its general offices located in this community should play its part in local affairs and in maintaining the welfare and happiness of its citizens, so many of whom are employed in the steel plant and offices.

HOME OFFICE

We are fully aware of the effects on the community of both our size as an enterprise and of fluctuations in our business. Therefore it is my desire tonight to tell you a few things about how we function from general headquarters in this city and also to give you a brief story of what our company has accomplished in the last decade and hopes to accomplish in the near future.

I feel strongly that an understanding of some of these matters on the part of the community will bring us closer together in our mutual efforts to improve and grow.

We have all heard of communities which have been at bitter sword points with a great industrial concern in their midst, and there are communities which have been completely

dominated and controlled by their largest industry for its selfish interest. Either of these situations represents extremes which are not good for the success of the community or the industry involved.

We believe in the friendly and cooperative recognition of the problems, responsibilities and objectives of both the civic and the industrial organizations in a community. We believe in the maintenance of mutual respect between the company, its employees and the labor organizations representing any of them.

In brief, we believe that good relationship all around will accomplish more for the good of the whole than can be achieved by any other method. I assure you it is our policy to cooperate on a constructive basis with the communities in which we operate. That is simply good business and good citizenship combined.

While I do not wish to overemphasize the contributions of our company to the community, I would like to point out that when we make available upward of \$3 million to hospitals in the Bethlehem-Allentown-Easton area over the past 10 years; or share to the extent of \$800,000 toward a vocational school; or contribute \$150,000 to Bethlehem's recreational program we do so to the mutual advantage of company and community.

AMONG BIG 10

Furthermore, our employees are encouraged to participate as fully as they can in the life of the community as citizens, irrespective of their status with the company.

Now, as all of you know, Bethlehem Steel is ranked among the 10 largest industrial corporations in the United States, whether you figure in terms of total assets, dollar value of annual sales, or total employment. We are a national organization. Most other large industrial corporations have their general offices in major metropolitan centers. We have chosen to do things differently, and I think this has important implications for both the company and this community.

Today you will find that the responsible executives in charge of every aspect of this company's business live and work here in Bethlehem. The only exception to this is our shipbuilding division which heads up in New York.

CENTRAL CONTROL

I would point out that centralized control of a vast enterprise, such as we have here in Bethlehem, has its very distinct advantages. Our top officials have no other conflicting business interests. Every problem that arises for top-policy determination can be considered immediately by men who are friends and neighbors as well as fellow managers, and actually the noonday luncheon at the office becomes, in effect, a board meeting. Here in the city of Bethlehem we do not have that impersonality that is inescapable in a metropolis. Here the team lives, works, and plays together.

I mention this to emphasize the fact that here in Bethlehem we have more than just a large steel-making and related product operation. Bethlehem is also the brain and nerve center of our whole national and international enterprise. This is what makes necessary our elaborate physical setup in the home office building, which, incidentally, houses over 4,200 employees in working space which is larger than the United Nations building in New York.

A few statistics showing the magnitude of some of the various services at this office might interest you. For instance, our telephone system handles about 5,000 outside calls and the internal system completes about 24,000 dial calls daily. An average of 10,000 messages a day go over our telegraph lines, and our central mail division handles each working day an average of 98,000 pieces of mail.

COORDINATION

Thanks to the facilities which enable us to maintain communications of this scale, we can tie together and efficiently coordinate from one central location.

Today, I believe that people generally have a wider appreciation of the function of large, integrated corporations in our society. There appears to be a better understanding of the fact that big business increases the opportunities for new enterprises and greater employment. Also, it is increasingly recognized that large companies may provide diversified opportunities for individual employees to develop their capabilities.

We are all aware that big business and little business are mutually dependent. You cannot strengthen small business by weakening big business, or vice versa. Artificial restrictions on growth—as contrasted with necessary safeguards against monopoly—carry with them the threat of a stagnating economy rather than the dynamic, expanding economy which all of us want to see maintained in this country.

POLICY FORESIGHT

Companies grow because they successfully perform the job of producing and distributing products which the public wants. Public demand makes them successful when efficient operators can turn out reliable products of superior quality at lower prices. When this is being done, growth is inevitable, given courage and foresight at the policy level.

Because people in general today have a keener appreciation of the important part that large industrial enterprises play in our economy, it has become increasingly important that management live up to its responsibility for keeping the public informed on its policies and accomplishments.

Accordingly, I feel that all of you here and the people of Bethlehem would be interested in my telling you the extent and significance of some of the programs which the Bethlehem Steel Co. has planned and carried out since the end of the war. In addition, I'd like to give you some thoughts which we have for the future which may influence our planning in the years ahead.

LIGHT PRODUCTS GAIN

When I first came to Bethlehem we were primarily producers of structural steel, heavy forgings and castings, armor plate, and miscellaneous ordnance items. As we expanded in the twenties, through the acquisition of our Lackawanna and Johnstown plants and through the expansion of our Sparrows Point plant, our production began to become more and more diversified. This process of growth and change has been greatly accelerated following World War II.

During the 25-year period from 1930 to 1954, we have made many additions to our facilities, especially those for the production of the so-called light steel products such as sheets and strip, tin-mill products, bars, pipe, wire rods, and wire products. In 1930, of the steel products shipped by Bethlehem Steel, only one-third were light products, while two-thirds were in heavy products. Today, our situation in this respect has been practically reversed in that our light products represent two-thirds of our shipments, and our heavy products represent one-third. We have accomplished a change which greatly diversified our outlet for steel. This is especially important because light products constitute a large proportion of the steel requirements of such industries as automotive, container, and other consumable goods manufacturers.

LONG RANGE

While this change represents a significant accomplishment which occurred gradually over a considerable period of time, we faced certain specific problems at the close of

World War II. We had then a highly integrated operation—the second largest steel company and the largest shipbuilding company in the world. But after working under forced draft during the war years, we were faced with problems of depletion and obsolescence. Turning out steel and ships was our big job during World War II and we did this with all we had, day and night, 7 days a week. Time and material were at a premium or controlled by the Government and even ordinary replacements of worn-out facilities were difficult, while new facilities were out of the question.

You will recall the atmosphere of official and expert pessimism which prevailed in the immediate postwar period. Government economists, and others as well, regarded as inevitable the postwar slump. Our problem was—do we sit on our hands, hoarding our cash and fearing a crash? Or do we forge ahead, confident in the country's economic future and determined not to lag behind? These were the conditions and problems we faced in 1945, when I joined my associates in Bethlehem Steel as president under the guidance of our great chairman and chief executive officer, Mr. E. G. Grace.

Our decision, as you know, was to launch a two-phase campaign aimed at looking forward, not backward over our shoulders at past achievements. During the war especially, many advances were made in the technology of steelmaking which rendered obsolete some of our facilities and practices. Accordingly, we set out first to modernize our steel plants, our iron and coal mines, and our transportation services, so that we would be in a strong position for a return to highly competitive conditions in the industry. Secondly, we began to expand on a fully integrated basis—from raw materials to end products—our basic steelmaking and finishing capacities in line with our projections of the part Bethlehem should take in supplying the future national requirements for steel.

As to expansion, our view of the matter was that with the population growing, with the sum total of goods and services known as gross national product following its historical pattern of increase and with per capita consumption of steel rising every year, the long-term demand for steel simply had to go up. We couldn't afford to think in terms of the short-range possibilities of a postwar slump. And we couldn't afford to think in other than very large terms if we were to make up for time unavoidably lost during World War II.

BILLION PROGRAM

Accordingly, since December 1945 we have spent or authorized for expenditure more than \$1 billion in a carefully conceived program of expansion and modernization of which approximately 75 percent is for additions and improvements to steelmaking, fabricating, and other miscellaneous facilities, and the balance for mining, transportation, and shipbuilding facilities or properties. We have increased our annual ingot capacity almost 50 percent to a total of 19,100,000 tons as of the first of this year with a corresponding percentage increase taking place in our capacity to turn out rolled steel and other finished products. All of this has been financed out of earnings to date and it is not contemplated that outside financing will be required to complete the program.

Our answer to the expansion problem has been to add new and improved steelmaking and finishing facilities at our existing plants, where it can be done far more economically than by the creation of new plants. And we have good reason to believe that this approach is paying off handsomely, as evidenced by improved efficiency and earning power.

I should imagine that a fair number of you are Bethlehem stockholders. As such, you may have been framing some questions in your minds. You might be saying to yourselves, "To be sure, \$1 billion is a lot of money, and 19,100,000 net tons of ingot capacity is a lot of steel. But what does this mean in terms of the value of my investment?"

STOCK INVESTMENT

The question is pertinent and some of the answers I can give you should be quite reassuring. For instance, if you had bought one share of Bethlehem common stock at the end of 1945 for the then existing price of \$96, you would have received 3 shares for that 1 share in 1947, and today would be enjoying a market value of about \$115 per share on each of those 3 shares. In other words, your investment of \$96 would have grown to a market value of about \$345, and during that period of 9 years the dividends paid would have totaled \$91.95. You can draw your own conclusions as to whether or not the stockholders have benefited.

To be sure, these figures are expressed in terms of dollars and we have to make allowance for inflation. But discounting this factor there is a healthy gain in terms of increased efficiency and earning capacity. And for further proof of the pudding, there is the record of the year just past which has considerable significance because of reduced operations.

When demand for steel was high, we never were quite sure what the results would be when operations fell off. The period of reduced operations in 1954, from which we are now emerging, offered us an opportunity to get a good look at what Bethlehem Steel got for the money expended for modernization and expansion. The increased operating efficiency resulting from our outlays went a long way toward maintaining good costs in spite of reduced operating rates and helped materially toward showing a return in net income which was very nearly as good as that of the full operation year of 1953. This simply would not have been the case if we had not gone ahead with our postwar expenditures.

BUILD FOR FUTURE

Our stockholders, our customers, our employees, and the communities where we operate are the ultimate beneficiaries of this postwar program, which, though largely completed, is by no means at an end.

With specific reference to the Bethlehem plant, we are completing an extensive modernization program. We have rebuilt the blast furnace department and enlarged steel-ingot capacity. The 50-percent increase in structural mill capacity now being built will add 70,000 tons monthly to what was already by far the largest structural mill in the East, giving us a monthly total of 210,000 tons capacity.

Although we have had some layoffs locally because of the character of our operations here, our payroll for this area is running at the annual rate of some \$110 million. The development of the new Grace mine near Reading offers assurance, if any be needed, that, with this nearby ore supply, steelmaking on the banks of the Lehigh has a secure future.

CONFIDENCE KEYNOTE

Now, I have been talking almost exclusively about Bethlehem Steel. Before concluding, however, I would like to generalize briefly about the State of the economy as I see it. I have stressed the fact that our company's postwar expansion was predicated on our confidence in national growth in a dynamic economy. The results would indicate that the reasons for expansion were sound. I believe that fundamental factors can, within reason, be projected into the future for as far as it is practicable to go.

Let me say that we at Bethlehem Steel place little emphasis on short-term business forecasts. We prefer to be set to roll with the punch, or to land a good, hard one of our own. That is, we believe in staying financially strong as a protection against hard times and we believe in maintaining sufficient production capacity to take care of any reasonable commercial demand, plus a margin of safety for national security purposes.

Our planning is long range and our basic premises are three, namely, that—

1. This Nation of ours will continue to grow.
2. The steel industry must continue to keep pace with the growth of the Nation, because steel is a basic commodity with a growing per capita use.
3. Bethlehem Steel must be progressive in planning and courageous in decision, not only to maintain but to improve its position in the industry.

FACTS AND TRENDS

Now let us look at a few facts and trends which may guide us. For instance, how much growth in the economy and in the steel industry can we expect? Regarding the economy as a whole, our economists believe that we might expect a gross national product—that is, the sum of all the goods and services produced in the Nation—at perhaps \$425 billion annually for the 5-year period of 1958 to 1962 and an annual average gross national product at \$575 billion for the period 1968-72, say, 15 years from now.

Last year, as you know, the gross national product approximated \$356 billion, and most observers look for something in the neighborhood of \$365 billion this year. This would indicate a growth in gross national product of 60 percent in the next 15 years. The growth in the demand for steel in the past years has closely paralleled the growth in GNP.

If the projections for the economy as a whole are realized, then steel production should average around 118 million tons for the 1958-62 period and approximately 145 million tons in 15 years from now, as against an average figure of 92.4 million tons in the period 1948-52.

These projections have just recently been underscored by the President's Council of Economic Advisers. I am glad to find our economists in accord with those who have the job of peering into the crystal ball for President Eisenhower. What impressed me most about the President's message, however, was the underlying philosophy expressed, not just the predictions as to the Nation's economic potential.

I believe the President and his advisers hit upon something basic in compiling the economic message. They set forth an outline of the Government's proper role in our economic affairs which strikes me as being eminently sensible. In fact, the points made in that message are so fundamental that I would like to reiterate them before this audience. I am sure you are in accord with the philosophy they reflect.

The first of the basic propositions is that competitive markets, rather than governmental directives, are, as a rule, the most efficient instruments for organizing production and consumption. This is one of those obvious truths which unfortunately needs to be reemphasized time and time again. There just is no substitute for the free play of market factors in organizing production and distribution of goods—if we want to remain free as individuals.

EISENHOWER'S IDEAS

Secondly, the President noted that a free economy has great capacity to generate jobs and incomes if a feeling of confidence in the economic future is widely shared by investors, workers, businessmen, farmers, and

consumers. This may seem like a truism also, but we need to remind ourselves that our system is built upon faith in what free men can do. Ours is a confident Nation, which believes in rewarding achievement, and that is one of the secrets of its greatness.

Thirdly, as the message points out, the Federal Government creates an atmosphere favorable to economic activity when it encourages private initiative, curbs monopolistic tendencies, whether of business or labor, avoids competing with business and carries out as much of its own work as is practicable through private enterprise. I doubt if anyone in this room would disagree with these expressions.

President Eisenhower goes on to state that the Federal Government generates confidence when it restrains tendencies toward recession or inflation and does this by relying largely on indirect means of influencing private behavior rather than by direct controls over people, industries, and markets. This implies wise and courageous management of the national debt and monetary and credit policy in general. On the record to date we have reason to be thankful that Federal Reserve and Treasury officials give every evidence of being on top of the problem.

Taken together, as an expression of a philosophy of Government's proper role in the Nation's economic life, these principles can, as the President says, "continue the framework of an economic system that provides both greater material abundance and a better quality of living."

As I see it, the elements for steady economic growth are all at hand. We have a people enjoying the highest standard of living ever achieved in history. We have a system of business enterprise which offers the maximum rewards for successfully competing for the market place's favor. We have the skills and the wills.

Barring catastrophe of some sort, or major errors in national policy, the United States economy should continue to grow at an accelerating pace. We have the people, the tools, the desires and the raw materials. If we continue to keep the climate free so that the dynamic possibilities of our system can be realized, there is no limit to possible achievement. Let us hope that all of us will have the perception and judgment to use our blessings wisely.

With these remarks on the national picture, I would like to conclude by leaving with you a word of appreciation.

I have noticed that in its literature the Bethlehem Chamber of Commerce frequently refers to this general area as the Great Lehigh Valley. All of you will agree with me, I am sure, that it is a great place in which we live. We at Bethlehem Steel are proud of the part we have had in making it an outstanding industrial area, outranked in Pennsylvania only by Philadelphia and Pittsburgh.

LEHIGH VALLEY GREAT

Here in the Lehigh Valley are operations of many nationally prominent industries. Here is the center of the cement industry for the United States. Here, too, is the greatest concentration of the textile and garment trades outside of New York City. Here are manufactured transportation vehicles and component parts that are internationally known. Here is turned out fine woodwork. Food products from this area are famous for their quality. Keeping pace with the great technological advances of this age are vigorous and ever-growing chemical, electronics, and electrical industries. These are but a few of the hundreds of industrial establishments that stamp the Lehigh Valley as a most diversified manufacturing area, offering job opportunities in thousands of different occupations. In addition we en-

joy the advantages of the institutions which make the valley a great educational center.

Because Bethlehem Steel is the biggest single industry in the valley, people are sometimes not aware of how dependent we are upon you, our neighbors and friends. The great majority of you business people, whether large or small, are our customers or suppliers, either directly or indirectly. To you we owe much and if we work together and do business together, we both may look forward to even greater prosperity and economic growth.

That is why we at Bethlehem Steel are proud to join in this salute to our industrial neighbors, not only in Bethlehem, but throughout the entire Lehigh Valley which, to borrow from the slogan of the Commonwealth of Pennsylvania, "Truly has everything."

Unanimity on Delaware

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, the unanimity of view of the Pennsylvania, Delaware, and New York delegations with regard to the proposed legislation by Congressman FRANK THOMPSON to make the Delaware River an avenue of seaborne commerce is most rewarding. Commendation is certainly due Congressman THOMPSON in his spearheading of this far-sighted legislative effort, and I would like to call the attention of the Congress to the following editorial which appeared in the *Trentonian*, February 9, 1955:

UNANIMITY ON DELAWARE

Last week in Washington, New Jersey, Pennsylvania, and Delaware launched an all-out legislative battle to obtain the money to deepen the Delaware. Reporting on the moves made, Congressman FRANK THOMPSON, Jr., said in his column in the *Trentonian* Monday morning that the "unanimity among the Representatives of three States is almost unprecedented."

This is cheering news indeed for those who are interested in the Delaware as an avenue of seaborne commerce, as well as for those who believe that the city of Trenton can become the port of Trenton.

THOMPSON is spearheading the legislative machinery. He has introduced a bill calling for an immediate appropriation of \$25 million to get the project started. With Representative CHARLES A. WOLVERTON, he forms a bipartisan committee to represent the New Jersey congressional delegation in coordinating action with Pennsylvania's delegation.

The unanimity of which THOMPSON speaks should put tremendous weight behind the tritrate drive for a deeper Delaware. And it should be noted that both Governor Meyner, of New Jersey, and Governor Leader, of Pennsylvania, are playing leading roles. They were in Washington last Thursday and helped no little in forming the coalition. Although Governor Boggs, of Delaware, was not present, he sent assurance of his support and that of Delaware's congressional delegation.

Certainly we cannot say that our elected representatives are not doing their utmost to obtain an appropriation of sufficient funds to get the project underway. But they have to overcome a rather formidable hurdle, President Eisenhower's recommendation that

a portion of the overall cost be borne by "private interests."

Lurking in the background is some administrative thinking along the lines of making the Delaware a "toll" waterway. Neither device seems to possess merit.

The fact of the matter is that the Delaware, as a channel to the sea, would pay for itself many times over in years to come.

But more important is that it would open up the great Delaware Valley as a new industrial empire.

What that could mean to Trenton can be gleaned from the story of what has happened and what is still happening in Houston, Tex., as told in the *Trentonian* yesterday by Edmund Goodrich, editor and publisher. Houston, 50 miles from the sea, became a great port because a bayou was converted into a ship channel. And the Federal Government paid the entire bill.

As we stated above, our elected officials are carrying the ball. But they can't get it over the goal line unless they are assured of the united support of their constituents. Those of us who have the future welfare of Trenton and the Delaware Valley at heart, should lose no time in advising our members of Congress that we are backing their play.

The overall expenditure of 91 million dollars seems like a staggering sum. It really isn't. It's a good, sound investment in the future of this great segment of our country. The preliminary appropriation of 25 million should be voted by Congress without delay.

Need for Postal Service Pay Increase

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. FLOOD. Mr. Speaker, I am grateful for the opportunity to testify on behalf of the proposed increase in postal service pay. Such an increase is overdue not only in justice to the postal employees but also for the sake of long-range economy in the handling of mail.

Postal employees need a salary increase to give them as much real income as they received prior to World War II. Since 1939 such factors as the increased cost of living, higher income taxes, and larger deductions for retirement have combined to reduce the purchasing power of many classes of postal workers. In spite of a series of pay increases, the most recent of which took effect in July 1951, the average postal worker's take-home pay today buys less than it did 15 years ago. This is especially true for supervisors and other employees in the higher-income brackets.

In the past decade and a half the pay of the largest groups of postal workers has tended to increase less rapidly than the pay of production workers in private industry. A year ago the Postmaster General submitted to the Committee on Post Office and Civil Service information indicating that between 1939 and 1953 the average weekly earnings of all full- and part-time unskilled and skilled workers in manufacturing industries—up to and including lead foremen—rose at a considerably faster rate than the earnings of regular clerks and letter carriers. In addition, it is generally agreed

that the salaries of executive-level employees in the postal service have lagged behind the salaries of top-management staffs in private enterprise.

To the extent that differences between postal salaries and pay in private industry result from the fact that Federal Government employees cannot apply certain economic pressures—for example, strikes—available to workers in private industry, Congress has a special obligation to view generously the postal workers' needs.

Adequate postal service pay contributes to long-range economy in the handling of mail through attracting better employees, reducing turnover, and improving the efficiency of people on the job. Little question exists as to the value of increased pay in the recruitment and retention of qualified staff. Although salary constitute only one of several factors affecting whether or not a person takes a job, the Nation cannot reasonably expect good workers to accept or remain in positions in the Post Office if they can earn more money or have more opportunity for advancement in similar employment outside the Government. When postal salaries fall too low, the Post Office must employ less efficient workers and devote excessive time and energy to the training of replacements.

While we have yet to develop methods for measuring with precision the effects of pay levels on the efficiency of workers who remain on the job, commonsense suggests that services to the public will suffer when postal workers must secure additional part-time employment, put their wives to work, or borrow excessively to meet their normal living expenses. It is worth noting that of 800,000 postal and civil service employees surveyed by the executive council of the American Federation of Labor last year, about half had outside jobs; and about 40 percent of those who were married had wives who worked.

Last year Congress approved an adjustment in the salaries of postal employees, but the form of the adjustment failed to satisfy the President of the United States. This year no barrier must stand in the way of the needed increase in pay.

Value of Irrigation

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. MILLER of Nebraska. Mr. Speaker, under leave to revise and extend my remarks, I am calling to your attention the value of irrigation to the future growth of our country.

Last year a drought much worse than that which caused the Dust Bowl in the thirties parched the lands of Colorado and surrounding areas. Soil moisture content had shrunk to approximately 15 percent of normal; precipitation aver-

aged about 50 percent of normal; natural runoff from the usually abundant snow-pack in the mountains dwindled to 40 percent of normal, and the streams fed thereby became trickles. Crop failures and financial ruin seemed inevitable, and prayers for rainfall went unanswered.

Northern Colorado is normally a rich, fertile, and productive agriculture basin. Its economy and well-being depend almost entirely upon agricultural crops, which, in turn, depend upon the water supply from natural precipitation and from irrigation. To those farmers in this area who were not equipped to irrigate their croplands, this drought meant the loss of an entire year's work, the hardship and privation of at least a year with no income, the necessity of depleting their investment and retirement savings, and in some cases, complete failure. To those farmers in the 615,000 acre area served by the Colorado-Big Thompson project, the drought of 1954 was a challenge that could be met and beaten. Because this project water was available, nearly normal farm production was attained by these users. Had the project water not been available, less than one-half a crop would have been harvested; and translated into dollars and cents, the value of this project water was \$22 million.

Weather Bureau officials predict the record-breaking drought will continue throughout 1955, but the people within the area served by the Colorado-Big Thompson project know they will have over 300,000 acre-feet of water, brought from the other side of the Rocky Mountains, available to meet their needs.

SUCCESS AND FAILURE

The rich agricultural lands served by the Colorado-Big Thompson project, an area half as large as the State of Delaware, slope eastward from the foothills of the Rockies in the northeastern part of Colorado. Intensive irrigation development in this area during the half-century between 1860 and 1910 brought the inevitable over-appropriation of the available natural stream-flow, and growth of these facilities reached a stalemate. The Colorado-Big Thompson project was initiated in 1938 to overcome the problem.

This project is one of the most complex and spectacular the Bureau of Reclamation has ever undertaken. For many years, the 14,000-foot granite barrier of the Continental Divide presented an insurmountable obstacle to the dream of tapping the water-wealthy headwaters region of the Colorado River, which lay only a few miles to the westward. American ingenuity and energy went to work. The Divide was pierced by a tunnel 13.1 miles long, more than 9 feet in diameter, and sloping gradually from west to east in order to carry the diverted water by gravity flow from West Slope to East Slope.

After emerging from the east portal of the tunnel, the diverted waters drop nearly 3,000 feet down the mountain slopes, spinning the turbines of hydroelectric plants on their way into 2 major storage reservoirs to be held until needed on the farmlands below, and sending out 179,000 kilowatts of criti-

cally needed electric power to large areas in Colorado, Nebraska, Wyoming, and Kansas.

Although the project was not yet completed in 1954, the major portion of construction had been finished when the irrigation season began. The system was ready to serve some 400,000 of the 615,000 acres which ultimately will be served when construction is completed in 1956. Total cost of the finished project will be \$159.8 million.

Unlike flood-control projects of the Corps of Engineers and public works projects of other departments of the Government, irrigation and reclamation projects pay back the major share of their costs with revenues realized from the sale of water and hydroelectric power. In 1954 alone, sale of power from the Colorado-Big Thompson project brought in a gross revenue of \$2.8 million, and it is quite safe to assume that this annual income will increase yearly as the project is completed and the functions expand.

FAILURE AVERTED

This storage water meant the difference between success and failure to these Colorado farmers. What might have been in 1954 without project water at hand can best be appraised by comparing what did happen with the effects of the worst previous drought year in the same area, 1934. In most respects, 1954 presented greater handicaps to successful crop production than did the 1934 season, and estimates based on 1934 losses provide a conservative view of what might have happened in 1954.

In 1934 crop yields totaled approximately \$19 million.

In 1954 crop yields from lands irrigated under the project totaled \$41 million.

Translating this \$22 million differential into terms of buying power, multiplied by the number of similar irrigation projects sprinkled throughout the 17 reclamation States, and the impact upon our national economy is terrific. Practically all manufacturing, trade, and transportation involves agricultural commodities; an irrigation water shortage affects the entire economy.

BENEFITS UNLIMITED

Irrigation has contributed directly to the building of cities, to the development of fertile acres, to the homes of more than 35 million Americans who supply nearly half of the entire Nation's demand for choice vegetables and truck crops; to the development of a \$40 billion annual retail market, averaging \$1,139 per capita—retail sales for the Nation during the same year averaged \$1,023 per person—and to the development of a new outlet for the products manufactured in our bustling industrial areas of the East.

What has this new market, this new development, this growth of our dynamic country cost the American taxpayer?

Money spent by the Department of Defense during the month of January would pay for all reclamation since it was started in 1902.

Money spent to finance our foreign aid program for 6 months would pay for all reclamation since it was started in 1902.

On the other hand, money spent on reclamation during fiscal year 1953 would have financed the Department of Defense less than 3 days, or the foreign assistance program or the Veterans' Administration less than a month.

Actually, the cost to the Federal Government is negligible. Money appropriated for power aspects of the projects is paid back to the Treasury with interest. Money appropriated for irrigation aspects is paid back without interest. The only outlay from the Treasury is for non-reimbursable features, that is, flood control, stream-pollution abatement, recreation, and fish and wildlife propagation.

The cost of these nonreimbursables is more than compensated by the additional Federal tax revenue created by reclamation. Based on a sample study of 15 selected reclamation projects, individual income taxes paid directly by irrigation farmers and by persons directly affected by the project were estimated at \$800 million. Corporation and excise-tax revenues collected from the same area total nearly \$500 million. Cost of these projects totaled \$269 million. In other words, Federal taxes collected have exceeded the Federal investment in irrigation features in these projects by about five times.

Now let us take a look at irrigation and reclamation expenditures from the standpoint of their justification in our budget. Many billions of dollars have been spent for flood control, harbors and docks, and agriculture conservation payments. This money is not returned to the Federal Government. I have no arguments against these projects, for I feel they are an essential part in building a greater America for ourselves and our posterity.

However, the comparison should be drawn so that all will know that the biggest share of money appropriated for irrigation and reclamation projects is returned to the Federal Treasury.

The Corps of Engineers has spent, since its inception, more than \$7.245 billion on water-conservation and flood-control projects—nearly 4 times the total spent on irrigation and reclamation. Money spent by the Corps of Engineers is nonreimbursable.

Total Federal investment in irrigation and reclamation projects is about \$2.2 billion. It should not be forgotten, however, that local citizens have been active partners—paying partners—in each of the projects, and repayment contracts are negotiated before work on the project is started.

Reclamation is paying its own way.

The crops produced on these projects add very little to our present surpluses. We never seem to have enough vegetables and fresh fruit to meet our diet requirements. These products, together with alfalfa and sugarbeets, essential to the livestock industries, are the principal irrigated farm crops. They are not on the surplus list.

Our investment in irrigation and reclamation has paid special dividends. We should continue to invest in this field as long as there are feasible projects to be developed.

Pennsylvania State University, at State College, Pa., Will Observe Its 100th Birthday on February 22, 1955

**EXTENSION OF REMARKS
OF**

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. VAN ZANDT. Mr. Speaker, Tuesday, February 22, will be an important day in the history of the Pennsylvania State University when the centennial of the Nation's 11th largest university will be observed.

Established under an act of the General Assembly in 1855, the Pennsylvania State University this year celebrates its centennial with a program emphasizing its services to the Commonwealth during 100 years of educational advancement.

The movement for establishing the institution, first called the Farmers High School of Pennsylvania, was started by farm leaders who realized that progress in agriculture involved the application of scientific methods as well as labor and fertilizer.

Thus they planned a school that would give instruction in the sciences bearing on agriculture and that would operate an experimental farm on which the students would do all the labor.

At the time the project for combining practical and theoretical education was a startlingly new concept. Dr. Evan Pugh, the school's first president, described it in his inaugural address:

We are here for the avowed purpose of trying an experiment which has never been successfully performed in any country in the world.

Four years after the Governor signed the charter, the school opened its doors to 69 students in an incompleting building rising from the fields of Centre County.

Those 4 years had been marked by discouraging setbacks. The trustees had contracted for a 5-story building costing \$55,000 to accommodate 400 students.

In addition to a State appropriation of \$25,000, they had in cash \$10,000 received from the Pennsylvania State Agricultural Society, \$10,000 raised by Centre County residents, and \$5,000 willed by a Philadelphia benefactor. The school was located on 200 acres donated by James Irvin of Bellefonte.

The legislature promised an additional \$25,000 if the trustees could raise a matching sum by subscription throughout the State.

The building was costing more than expected and crop failures and a money panic prevented the raising of the money needed to get the second \$25,000 installment from the State.

The first students who arrived on February 16, 1859, found only one wing of the school building completed. Living conditions at first were crude: lighting was by lard-oil lamps and construction shacks converted into dining halls were cold and drafty.

There were few books in the library and apparatus for instruction in science

was negligible. Students worked 3 hours daily on the school farm and at such tasks as clearing stones from the campus and making the main building livable.

Pugh arrived to assume the duties of president 9 months after the school term opened. A native Pennsylvanian, he had conducted a boys' academy before deciding to go to Germany to study. At the time he was chosen to head the school, he was in England where he had spent 2 years in agricultural research.

Wholly dedicated to the idea of education of the founders of the school, Pugh worked without stint to put theory into practice, to win support from over the State, and to get money from the General Assembly.

In spite of the disruptions of the Civil War, Pugh graduated his first class of 11 students in 1861, won an appropriation from the General Assembly and completed the main building in 1863, and secured for the school recognition as the land-grant college of Pennsylvania under provisions of the Morrill Act signed by President Lincoln in 1862.

Pugh and the school's trustees were backers of Representative Justin S. MORRILL in his efforts to get Congress to pass his bill, and in anticipation of success changed the name of the Farmers High School to the Agricultural College of Pennsylvania early in 1862.

Weakened by overwork, worries and an injury suffered in an accident, Pugh died in 1864. The next 20 years were to be a period of drift and disillusionment during which the college had five presidents who put into effect different programs in futile attempts to stabilize the institution so precariously started in 1855.

The problem was developing a program that combined practical and theoretical training. Since this goal of education was almost entirely new, there were no models to go by. Pugh's early description of the school as an experiment was too true. A lot of experimenting had to be done before a successful formula could be evolved.

Pugh was followed as president by William H. Allen, head of Girard College. Allen fought off before the legislature efforts of other State schools to be named land-grant beneficiaries and obtained permission for an \$80,000 loan for the college to pay its debts.

Allen left to his faculty the job of working out an instructional program that, to comply with the Morrill Act, should include training in the "mechanic arts." But discouraged by the school's prospects, he resigned in 1866 and returned to Girard College.

His successor was John Fraser, who had headed the faculty committee working on the reorganization of the curriculum. The enrollment decline that had set in after the Civil War continued, dropping to 30 in 1868. Fraser, differing with the trustees on policy, resigned.

Fraser's innovations in starting courses in technical subjects as well as in agricultural science and in abandoning the requirement of student labor on the farm were dropped by his successor, Thomas Henry Burrowes.

Burrowes, making fun of the "parade of the long list of 'ologies,' 'onomies,' and

'ographies' which grace some catalogs," restored the emphasis on agriculture and turned his students out to work the farm as provided for in the college's charter.

A popular State figure and for years a leader in the establishment of the common-school system, Burrowes succeeded in checking the enrollment decline and in winning friends for the college. He talked up the college in speeches over the State and instituted a Harvest Home which in its second year in 1870 attracted more than 2,000 persons to the campus.

After Burrowes' death in 1871, the trustees brought in James Calder, of Hillsdale College in Michigan, as the new president. He remained 9 years.

In his first year Calder secured the permission of the trustees to open the doors of the college to both sexes without distinction as to qualifications or privileges, and six women attended classes in 1872.

Calder's administration also saw a change in name from the Agricultural College of Pennsylvania to the Pennsylvania State College, enlargement of the board of trustees to include representatives of the alumni and of the State's manufacturing industries, and amendment of the charter to drop the student-labor rule.

A growing emphasis on classical studies and neglect of the scientific, agricultural, and mechanical arts studied led to growing criticism that the college had lost sight of the goals of the founders and was not living up to the Morrill Act.

Calder resigned to be succeeded by Joseph Shortlidge, head of a boys' school at Concordville. Shortlidge did not get along with the trustees, his faculty, or students and resigned after 9 months.

Not since the school's beginnings had the fortunes of the school been at such a low ebb, Gov. Robert E. Pattison himself remarking that—

The past history of the State agricultural college is not such as to induce the belief that any practical good has or ever will come from it.

But though no one realized it at the time the college was at a turning point. The trustees chose as the new president George W. Atherton, head of the political science department at Rutgers University. He was to head the institution for 24 years of steady growth.

Against a proposal of the governor that the college's faculty be cut in half and that the course of study be made exclusively agricultural, Atherton was able to persuade the trustees that the school's future depended upon developing a program in the mechanic arts.

Within a few years the wisdom of his program was seen. The college's enrollment picked up, reaching 244 in 1892. In 1887 Atherton won a \$100,000 appropriation from the legislature for new buildings and by 1892 the State had spent \$305,500 for new buildings and \$102,000 for equipment.

A few years later, in 1896, fulfillment of the goals of the founders and of the Land-Grant Act was seen in the reorgan-

ization of the college into 7 schools—School of Agriculture, School of Natural Science, School of Mathematics and Physics, School of Engineering, School of Mines, School of Language and Literature, and School of History, Political Science and Philosophy.

A college spirit was also developing. School colors were chosen in 1887 and a school song in 1901, the first intercollegiate football game was played in 1887, a yearbook was begun in 1889, a student handbook appeared in 1895 and a weekly student newspaper was started in 1904.

Toward the close of Atherton's administration trustee Charles W. Schwab donated money for an auditorium and trustee Andrew Carnegie money for a library building. Other new buildings at this time included a men's dormitory, a dairy building and a main agricultural building.

When Atherton died in 1906, the president of the board of trustees, former Gov. James Addams Beaver was chosen acting president. Beaver saw the enrollment grow within 16 months from 800 to 1,151. Beaver turned over the administration of the college in 1906 to Dr. Edwin Erle Sparks, University of Chicago historian.

No advocate of the ivory-tower theory of education, Sparks embarked on a program of enlarging the college's services to make them statewide. His oft-repeated slogan was: "Let us carry the college to the people."

He fought for funds for setting up an extension division, getting his first appropriation for this purpose in 1913. Though a strong supporter of the college's practical education program in agriculture, engineering, and technology, Sparks urged more courses in the liberal arts. As a result of his efforts, the present School of Liberal Arts was formed in 1909.

The steady progress of the college educationally was disrupted by the entrance of the United States in World War I. It made major contributions to the war effort, training 1,500 Army and Navy trainees in the Students' Army Training Corps, in addition to regular students enrolled in military science and tactics; turning over laboratories and scientific equipment to wartime research; and dedicating other resources of the college to boosting civilian morale.

His health broken by his own war efforts Sparks resigned in 1920. His successor, Dr. John Martin Thomas, of Middlebury College in Vermont, launched an immediate program for more buildings desperately needed because of the cessation of construction during the war.

In a 2-year drive for building funds, the college secured \$1,727,272 in pledges by 17,000 alumni and friends of the college.

Besides the building program, the Thomas administration saw the establishment of a graduate school and a school of education, a reorganization of the school of agriculture and the formation of a school of chemistry and physics from the former school of natural science. When Thomas resigned in

1925, the college's enrollment had reached 3,854 students.

The new president, Dr. Ralph Dorn Hetzel of the University of New Hampshire, headed the institution during the boom days of the late 1920's, the depression of the 1930's and the war and post-war readjustments of the 1940's.

Two large-scale building programs took place during the Hetzel administration and a third was planned when he died in 1947. The first received its impetus from President Thomas' drive for funds. When it ended in 1932, the college had spent about \$5,500,000 for buildings. The second, from 1937 to 1939, involved the expenditure of about \$5 million by the general State authority.

The depression was a difficult period because of cuts in appropriations for maintenance and teaching, and World War II meant a greater tax on Hetzel's administrative and leadership powers.

Adopting a year-round schedule, the college trained thousands of soldiers, sailors, marines and aviators in special programs requested by the military services; put in special courses for training women for work in industry; gave instruction to more than 140,000 civilian workers in extension classes held over the State; and carried on extensive research to meet the needs of the war effort.

At the war's end the college was faced with a stack of 22,853 applications for admission to classes, most of them coming from veterans.

The need was met by utilizing every useful nook and cranny for class and laboratory space, by using war-surplus materials for emergency dormitories and classrooms, and by overloading professors with classes and students.

These devices were those adopted by all colleges and universities to handle swollen enrollments, but Penn State developed another that received nationwide attention.

This device was that of enrolling first- and second-year students at Penn State centers, at the State teachers colleges, and at private schools in order to make space available on the campus for upperclassmen studying professional and technical subjects. Twenty-two schools cooperated with Penn State in this program.

After Hetzel's death in 1947, James Milholland, president of the board of trustees, served as acting head of the college until the election of Dr. Milton S. Eisenhower as president in 1950.

Milholland started the long-range building program that was designed to meet the college's needs for the enrollment increases predicted for the post-war period. This was a \$10 million program to be carried on under the General State Authority.

Reporting on the campus plant in 1954, Eisenhower said that the buildings were valued at \$66 million, and that 58 percent, or \$38 million, was new construction since 1946. Seventy percent of the new construction was accomplished without the use of tax money.

For many years there had been a growing sentiment that since the Penn-

sylvania State College was a university in size and in the broad scope of its work the word "college" in the name should be replaced by the word "university." This was accomplished in the fall of 1953.

Under Dr. Eisenhower, the onetime Farmers' High School of Pennsylvania enters its second century as the Pennsylvania State University—the 11th largest institution of higher learning in the Nation.

In its 100-year span the institution has awarded 53,000 degrees, beginning with 11 granted in 1861. The institution now grants about 3,000 annually. It has seen its student body increase from 119 to 14,000 and its faculty from 4 to 1,400. Its research program has grown from a few dollars spent on nursery stock to one costing about \$6 million annually. Through its extension program, its instruction is now given on a campus that may be considered statewide.

The untried experiment of the founders of the institution in 1855 is now acclaimed a resounding success, as evidenced by the following accomplishments of which Penn State is proud:

Penn State is proud of—

The first use of the practicum method of instruction on a wide scale, 1866.

The first soil fertility experimental plots in the United States, 1881. The only prior fertility plots were in Rothamstead, England.

The first correspondence instruction in agriculture. Chautauqua home reading courses begun in 1892. Formal correspondence courses begun 1893.

The first organized extension instruction in mining in the United States 1893-94. First mining bulletin published January 1, 1894.

World's first respiration calorimeter for domestic animals, 1902. Prior ones were adapted for use with human beings only.

The first college forestry building in the United States—Fergie's woodshed, 1906.

The first formal training program in industrial engineering, 1908.

The first establishment of student gardens as regular practicum training 1909.

The first mineral industries experiment station, 1919.

The first organized curriculum in fuel technology, 1931.

The first institute of local government in the United States, 1935.

The first organized curriculums in meteorology, mineral economics, mineral preparation engineering, 1946.

The first climatometer for studies in dehumidification, 1948.

The first department of biochemistry accredited by American Chemical Society's committee on professional training, April 26, 1950.

The first establishment of a foreign training center by an American institution for industrial education, Formosa, June 1, 1953.

The first conference of insurance buyers held on a university campus, 1953.

Pioneer work in chemical engineering. A course in industrial chemistry was taught in 1890.

Pioneer work in safe-driving instruction. The first driver-training course for high-school students was taught in the State College High School in 1933. The first training course for teachers of safe driving was offered during the summer session of 1936.

Pioneer conference of dentists and oral surgeons, March 15-17, 1943, which led to the founding of the American Academy of Cleft-Palate Prosthesis, April 4, 1943, which in turn became the American Association for Cleft-Palate Rehabilitation.

Only mineral industries art gallery in the world, established 1930.

Only mineral industries museum in Pennsylvania, established 1930.

Only university in the world offering courses in Pennsylvania German language, culture and folklore, 1946.

Only institution in Pennsylvania giving work in home economics leading to the Ph.D. degree.

Only institution in Pennsylvania giving work in hotel administration.

Only home economics research center in Pennsylvania.

Largest enrollment in home economics in the State, at both undergraduate and graduate levels.

Largest enrollment of nonhome economics majors in any land-grant institution in the United States.

World's largest water tunnel—Garfield Thomas Memorial Water Tunnel, test chamber 14 feet long, 4 feet in diameter; dedicated October 7, 1949.

Largest engineering, science, and management defense and war training programs, 1940-45—155,000 enrolled.

One of the largest university film libraries in the East, established 1941.

Largest flower test gardens in the United States; first approved by All-America Selections Committee for testing of new flower varieties before they go on the market, spring 1941.

A low-temperature laboratory second only to that of the United States Bureau of Standards.

First Witness

EXTENSION OF REMARKS

OF

HON. LESTER HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 3, 1955

Mr. HOLTZMAN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include an editorial which was contained in the New York Times of January 18, 1955.

While the article, because of the date-line, might appear to be somewhat outdated, the subject is certainly of vital importance to us in the current consideration of the Trade Agreement Extension Act of 1955.

A liberal trade policy is the cornerstone of our foreign policy, and I believe that an extension of our trade agree-

ments program, as set forth in H. R. 1, will aid our economic growth in the future as it has in the past since its inception some 20 years ago.

The editorial follows:

FIRST WITNESS

The vigorous position taken by Secretary Dulles as the first witness has got the hearings on the 3-year reciprocal-trade bill off to a good start. It seems that the administration is determined to fight for this measure in a way that it was fought for only by the Democrats last year.

There will be serious opposition, especially on the part of representatives of specific interests that honestly feel they are endangered by extension or even continuation of the reciprocal trade system. Overconfidence on the part of proponents of the bill could be disastrous. Yet the broad welfare of the United States as an economic unit and the position of this country as leader of the free world combine to make the arguments in behalf of the reciprocal trade program so overwhelming that it is difficult to believe it can be defeated if the administration really puts its weight behind it.

Mr. Dulles based his argument for the bill squarely on its effect on the foreign relations of the United States. One of the major complaints of our friends abroad, to whom we ceaselessly lecture on the virtues of a liberal trade policy, is that they never know just what our own policy is going to be from one year to the next. The habit of extending our reciprocal trade bills for 1 year only, plus the occasional changes in policy that take place—as in the instance of Swiss watch imports or the earlier cheese amendment—leave foreign traders in an almost perpetual state of uncertainty and tend to discourage them from attempting to build up new long-range trading relationships with this country. The more basic fear that we might shift our general trade policy away from liberalism and toward protectionism must, as Secretary Dulles said, be stamped out unless we want the Soviet prediction of economic warfare among the free nations to come true.

This is no idle fear. There are very strong advocates of protectionism in all the leading manufacturing countries of the world. If the United States falls at this juncture to adopt even so moderate a bill as the pending one we have to face the possibility of a general free-for-all among all of our friends, with the most direct and serious consequences to our own economy as well as to theirs.

Our American Tradition

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. MULTER. Mr. Speaker, last week the Union of American Hebrew Congregations convened in Los Angeles, and in that connection I am pleased to direct to the attention of our colleagues the following words of Rabbi Samuel D. Soskin which appeared in the February 11, 1955, issue of the Truth, weekly publication of Temple Beth Emeth of Flatbush:

OUR AMERICAN TRADITION

(By Rabbi Samuel D. Soskin)

It is of deep significance that the Union of American Hebrew Congregations convenes

in the month of February. For during this month we are profoundly aware of the tradition symbolized in the birthday celebrations of two great Presidents. This tradition has endured hardship and struggle. Its destiny was hammered out on the burning anvils of war and bloodshed. Upon its survival depends the survival of mankind. At this very hour this tradition is endangered by the ominous threat of Atomic warfare. We cannot deny, therefore, that this is no ordinary moment in the dramatic story of American Jewry.

The very convening of this assembly, however, constitutes a promise and a challenge. By its very nature Reform Judaism commands its adherents to join the forces of liberalism and brotherhood. The inspiration for this duty stems from the doctrines expounded so nobly by the prophets of Israel. This prophetic idealism runs like a golden thread through our Bible and through the sacred documents of the Constitution and the Declaration of Independence.

As citizens of a free land we are pledged to uphold these documents and to fulfill the promise found therein, of a time when all men shall deem themselves equal in the sight of God. As Jews we are to drink deeply from the wells of Jewish learning that we may more faithfully serve our Nation and mankind. Emboldened by the example of great Americans and by the flaming fervor of our faith, let us work for the day when "nation shall not lift up sword against nation nor learn war any more." This is the purpose of the U. A. H. C. Convention. May its deliberations eventuate in success.

Billions, Blunders, and Baloney

EXTENSION OF REMARKS

OF

HON. GORDON H. SCHERER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. SCHERER. Mr. Speaker, in view of the fact that the Congress will shortly be required to vote on the extension of foreign aid, I would like to call to the attention of the Members a column by James Ratliff in the Cincinnati Inquirer, Sunday, February 13, 1955.

This splendid writer reviews Mr. Eugene Castle's new book, Billions, Blunders, and Baloney, which deals with our foreign aid and information programs.

The column follows:

HARD-HITTING FACTS

(By James Ratliff)

Like a rain shower to the dust bowl of America's international propaganda are the hard-hitting facts in the new book, Billions, Blunders, and Baloney. Its author, Eugene W. Castle, is no literary dilettante blindly convinced that any international giveaway is good just because our motives are decent. As a one-time reporter, Castle wanted the facts, and he got them—traveling 75,000 miles around the world at his own expense.

Mr. Castle found that, despite our giving away \$40 billion since 1948, along with a half billion more for propaganda, we have fewer international friends and sincere allies than in 1948 "and lots of people are beginning to ask why?"

Among those asking is Walter Lippmann, whom Castle quotes as saying recently " * * * what we call psychological warfare is, I am persuaded, doing more harm to the United States than it is to the Soviet Union. In the

near future we shall have to give it an agonizing reappraisal."

Mr. Castle begged a Senate committee last spring to give that "agonizing reappraisal" then and not vote (as they did) another \$77 million to the United States Information Agency to do "more harm to the United States."

What our allies think of our propagandists struck Mr. Castle bluntly in Turkey. He cooled his heels for 15 minutes beside the busy editor of Istanbul's largest newspaper. Asked his opinion about the USIA, the Turkish editor was brisk:

"There are no 'Yanks Go Home' signs in Turkey. Turks like Yanks. Yanks like Turks. The only Yanks Turks don't like are your propagandists all over our country. If they would go home it would be still better for Turkish-American relations." And the Turk shook hands abruptly, bowed, and that was that.

Who could ever have expected anything else after reading Castle's descriptions of USIA palaces like Baron de Rothschild's in Paris where a large number of non-French-speaking news amateurs spread bungling propaganda in the heart of a sophisticated foreign city?

Mr. Castle finds that the USIA has more than 10,000 employees to spread blatant, resented American propaganda in the faces of those who understand it and on the desert air of the countless millions who don't. And the crack Associated Press news service covers the entire world with factual, up-to-the-minute news with a few more than 3,000 persons.

When a Brooklyn Democrat, Congressman JOHN J. ROONEY, heard Director Theodore E. Streibert of the USIA ask in Washington for \$204,000 to propagandize the American people about how important the USIA's propaganda was, he exclaimed:

"Never in the balmy days of the New Deal did they attempt such a thing as this."

"The flow of American money abroad since 1945 has been a reckless and unregulated river . . . in astronomical sums that stagger the imagination," says Mr. Castle. And it isn't the money that appalls him as much as the realization of how much of it is actually working to our disadvantage, what with countries that are cynically "neutral" when we need help and treacherously playing the Soviet game diplomatically or by handing on our bounty in trade.

America appears hypnotized with the philosophy that somehow pouring endless billions will buy a solution to our troubles, for Mr. Castle notes the resolute and futile stands against it. Senator WALTER F. GEORGE told the Senate on July 1, 1953: "As far as I'm concerned Mutual Security is going into its last fiscal year beginning this morning."

Yet the desperately fighting, entrenched bureaucrats simply changed the name of foreign aid for the third time (it's now Foreign Operations Administration) and came up with more than \$3 billion more appropriations despite the fact that they had unspent billions still to play with from previous years. The recipients of aid have long since passed the goals we were to help them attain. It occurs to no one—not even the President—that the men pressing hardest for continued aid are those who would lose their jobs doing it out.

Mr. Castle's book is full of indignation, but also that rare, forgotten American virtue—commonsense. Witness the following truism:

"If we are to wage heated and continuous propaganda wars against the Soviet we must expect that Russia will wage retaliatory cold wars against us."

He notes that President Eisenhower and Mr. Dulles sounded off in major speeches about the Soviet menace 39 times in a period of 1 year and a half. Maybe Churchill and Eden did it only three times in that same pe-

riod, because they are aware that most people know Russia is a menace. Or maybe they realize wryly that Russia is where she is today because of the billions America gave to her, even to sending her postwar factories. More billions of the present aid will probably follow the same path, because wasn't that Tito tottering toward Moscow and neutral Nehru?

Mr. Castle, an expert on reaching people through his own one-time worldwide film service, implores us to turn our propaganda back into straight news releases directed by the State Department. How embarrassed our ambassadors must be with an independent propaganda agency speaking down the street from our own embassies.

Any remaining need for foreign aid should also be given to the State Department and handled properly through the Defense Department as military subsidies, Mr. Castle declares. And he closes with food for thought.

"Something has happened to the magic which once invested the name 'American' throughout the globe. We are dangerously alone in a world of envy and hostility. Our dollars have not been enough.

"The decline of American prestige overseas has gone hand in hand with the decline of American patriotism at home."

Federal Control of the Gathering and Sale of Natural Gas

EXTENSION OF REMARKS OF

HON. JOHN JARMAN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD the attached resolution of the annual membership meeting of the Mid-Continent Oil & Gas Association, Kansas-Oklahoma division. Because this Congress will deal with the problem set forth in the resolution, I respectfully call it to every Member's attention:

The Kansas-Oklahoma division, Mid-Continent Oil & Gas Association, invites public attention to the following:

The Supreme Court of the United States, in a recent decision, held that sales of natural gas by producers and gatherers to purchasers who transport the gas in interstate commerce for resale are subject to regulation by the Federal Power Commission under the terms of the Natural Gas Act.

The Federal Power Commission, as a result of such decision, has asserted control over the price at which natural gas subject to its jurisdiction may be sold by producers and gatherers, and over the production and gathering of natural gas in the field.

It was not the intent of Congress in enacting the Natural Gas Act in 1938 that the production and gathering of natural gas or the sale thereof by producers and gatherers should be regulated by the Federal Power Commission.

The production and gathering of natural gas, in contrast, with the interstate transportation and local distribution of natural gas, is not in fact a monopoly or a public utility operation, but, on the contrary, is a risk-taking, highly speculative and competitive business conducted by many thousand producers who compete with each other in acquiring and marketing natural gas which,

in turn, competes as a commodity with other fuels not regulated.

It is in the public interest and essential to the national security that the production and gathering of natural gas and the sale thereof should be left to the forces of supply and demand consistent with our Nation's fundamental philosophy of competitive free enterprise.

The Federal regulation of production and gathering of natural gas and the sale thereof will inevitably result in Federal regulation of the production of oil, in retarding exploration for and production of natural gas, in conflicts with State regulatory measures for the production and conservation of oil and natural gas and in a shortage of available supplies of natural gas for the consuming public, all contrary to the national interest: Now, therefore, be it

"Resolved by the Kansas-Oklahoma Division of the Mid-Continent Oil & Gas Association in annual meeting in Tulsa, Okla., December 15, 1954, That this association does hereby recommend and urge that the Congress of the United States enact at its next session appropriate legislation to clearly exempt production and gathering of natural gas and the sale thereof by producers and gatherers from regulation by the Federal Power Commission: Be it further

"Resolved, That a copy of this resolution be transmitted to the United States Senators from the States of Kansas and Oklahoma and all other States and the Members of the House of Representatives from the States of Kansas and Oklahoma and all other States."

Attest:

CLAREL B. MAPES,
Secretary-Treasurer.

Committee on Merchant Marine and Fisheries

EXTENSION OF REMARKS OF

HON. HERBERT C. BONNER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. BONNER. Mr. Speaker, under leave to extend my remarks with respect to the activities which I have planned for the Merchant Marine and Fisheries Committee during the present session of Congress, I wish to inform the House that I feel that the time is long overdue for some forceful action to bring together labor, management, and the Federal Government in a cooperative effort to work out the problems facing the American merchant marine today.

An excellent summary of our plans is contained in the following editorial in the New York Journal of Commerce of Friday, January 7, 1955:

SHIPPING OUTLOOK

(By Edward P. Tastrom)

The expressed intention of Representative HERBERT C. BONNER, new chairman of the House Merchant Marine and Fisheries Committee, to call top labor leaders in the maritime industry to Washington this session to get their views on the problems of American flag shipping opens a field of inquiry that holds substantial possibilities.

While union leaders have testified at past hearings by congressional committees, the burden of their statements has been to flay management for alleged shortcomings, without making any serious effort to indicate

how labor could assist in promoting a strong merchant marine.

If Representative BONNER's hearings are going to be used as a sounding board to publicize once more much that already is "old hat," then little in the way of constructive suggestions can be expected.

However, if the entire question of management-labor relations is brought under inquiry and the major labor contracts reviewed, as Representative BONNER stated he planned to do, we might get some surprising revelations respecting the built-in "make-work" clauses, special overtime requirements and premium allowances that have been placed into these pacts by seagoing unions over recent years. They all cost money, some of them big money. How and under what circumstances they have attained official status would make interesting reading.

It is, of course, no secret that high labor costs are the main handicap under which American flag shipping operates.

Numerous studies have been made on this subject, all of which show that on a comparative basis the labor cost of operating American shipping is fantastic as compared with most other maritime nations.

Now no one wants to see American seamen working for depressed wages. They are entitled to a good day's pay for a day of good work done. But many of the tasks they do now call for special premiums or allowances and these all add up to bring the average seaman's monthly check considerably above that of workers performing similar tasks ashore.

If the unions really want to aid American shipping they should be willing to sit down and seriously review some of these working conditions. And if Mr. BONNER wants to open an interesting field of inquiry, here is one phase of the national maritime problem that deserves review.

As he says, the taxpayer has spent considerable sums in aiding the merchant marine and deserves to know where it is going.

Why the percentage of our cargoes carried aboard American ships continues to steadily decline certainly merits serious study at this time. This is a broad subject but an important one, for unless we are able to reverse this trend and restore the ratio to a more equitable level our shipping is going to deteriorate regardless of the extent of Government operating and building aids.

The time, therefore, certainly has come to find out precisely why private cargo does not move in greater volume on American vessels, as Mr. BONNER purposes to do.

Lines of inquiry which the House committee might pursue include the following: How our share of trade breaks down as to exports, imports, specific commodities, big trade routes; what foreign regulations or trade practices exist that may result in diverting cargoes to certain national's vessels; to what extent terms of sale of imports and exports influence the manner of shipment; to what extent terms of sale of imports and exports influence the manner of shipment; to what extent currency restrictions serve to discourage use of American vessels. Also, are American-flag lines giving the type of service and frequency of sailings that make them highly competitive with foreign operators; amount of cargo that could be handled.

This, admittedly, is an involved problem, embracing world economics, national policies, and service considerations. It is a market research job that has been tackled piecemeal in the past, whereas an overall, penetrating analysis is needed.

When longshoremen last month turned down their new labor contract at the polls, we observed in this column on December 17, that failure to spell out in detail just what

the working conditions, clauses and the machinery for arbitration would mean aroused suspicion in the minds of many dockworkers that was fanned by opposition labor leaders.

It was suggested here that these two issues be clarified and explained to the men and the contract resubmitted to a vote. This is the procedure that was followed, it so happens, and the strong acceptance vote by the longshoremen yesterday confirms the wisdom of this move.

For the first time in many years, the port of New York now has reasonably good assurance of peaceful labor relations. We are confident that it will work out that way and that, once this is generally realized, much of the business that has abandoned this port will return here.

Tyranny or Law?

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 3, 1955

Mr. MULTER. Mr. Speaker, the following article which appeared in the February 1, 1955, issue of the National Voter, the publication of the League of Women Voters of the United States, is deserving of our attention:

TYRANNY OR LAW?

Few of us today who are in contact with reality, as the psychologists would say, fear an encounter with an Alice in Wonderland queen who shouts, "Off with his head." Nevertheless, this character symbolizes the tyranny of those days in history when dozens of real kings and queens ordered heads and ears and noses off on mere whim, without any kind of trial or any chance for the victim to prove his innocence.

Fortunately for us, our English forefathers gradually evolved a safeguard against arbitrary power—the idea of "due process of law." As Daniel Webster defined it in the famous Dartmouth College case: "Due process of law is that law which hears before it condemns, which proceeds upon inquiry, and renders judgment only after trial. Its meaning is that every citizen shall hold his life, liberty, property, and immunities under the protection of the general rules which govern society."

MORE THAN 7 CENTURIES AGO

Due process had its origins in the action of the English barons who in 1215 secured the Magna Carta, which guaranteed in writing that all the king's actions affecting private rights would be according to the law of the land. The idea of rule of law, as it came to be known in England, flourished in 18th century America and had great influence on the colonial pamphleteers. For example, the argument that taxation without representation is tyranny was simply an application of the basic idea of due process.

Due process was written into our Constitution in the 5th and later in the 14th amendments. It supplements a long list of specific guarantees of fair court procedures which appear in 4 of the 10 amendments in the Bill of Rights. Its application in this country, as in England, was originally against the arbitrary administrator or judge. However, since the latter part of the 19th century the courts have evolved substantive (in contrast to procedural) due process as a curb on legislators. Due process now requires not only that proper procedure be followed but that the law itself be reasonable.

Today due process in this country operates as a safeguard of individual rights against governmental authority at all levels (Federal, State, and local) and thus has an important role in support of individual liberties. Despite its great significance, it has never been fully and conclusively defined. Rather, it has gradually evolved as our courts have determined, in many different cases, what is, and what is not due process. This elasticity has given rise to a tremendous amount of litigation and judicial decisions, especially with regard to the police (public health, safety, morals, and general welfare) power of the States.

The guarantees of due process probably seem more remote than any other guarantees in the Bill of Rights. It is easy to imagine how distasteful it would be not to have free speech, but imagine for a moment that you did not have recourse to the usual protections of due process.

Out of the clear blue, you receive a notice from a State across the country that in 2 days you will stand trial for a crime (no further explanation). Fearful of not having a chance to be heard, you hop a plane and arrive just before the trial. Having spent all your money for the plane ticket, you can't afford a lawyer. Nor is there any time to prepare a defense (which seems rather fruitless since you don't really know what offense you're being charged with).

Under these unhappy circumstances the trial begins. Outwardly everything conforms to a fair trial. You soon find out that you've been accused of "possession of liquor" (this is a State where prohibition exists). Counsel is suddenly produced for you. Even a jury is provided. Your counsel soon whispers to you that you really haven't a chance because the judge gets an additional fee for each conviction, and the natives of this community who comprise the jury are very suspicious of outsiders. Also you are not given the opportunity to confront your accuser, nor are you even told who he is.

The trial lasts three-quarters of an hour, the jury deliberates your fate in less than 5 minutes. So, it's no surprise when the judge pronounces the sentence and you are severely fined and given a prison term.

This make-believe situation is a composite of actual cases which were appealed to higher courts to determine whether the accused had been denied due process. It illustrates some of the protections which the courts have determined fall under due process, as (1) the Government must have jurisdiction over the accused person; (2) the accused must be notified of time and place of trial and nature of charges; and (3) the accused must have an opportunity to be heard and to be tried before an impartial court (for example, the judge should have no financial interests in the case). Another important qualification of due process is that there be more than mere outward compliance to fair-trial guarantees. Actually, the specific forms of a fair trial are not as important as that the procedure suit the nature of the case and be sanctioned by established custom.

We chose for our example a criminal proceeding, although due process also applies to administrative proceedings. Federal procedures were very loosely defined until the Administrative Procedure Act was passed in 1946. This act requires ample notice and hearings, especially by the Government's regulatory agencies.

You might ask, Isn't due process safely imbedded in the Bill of Rights? Is it not the job of the courts in each instance to see that an individual's right to due process is protected? Why should I be concerned about such matters?

First of all, due process of law is much more than a mere legal-sounding term. In its broadest meaning, it implies an essential and fundamental fairness which should guide our daily relations with our fellow men.

Secondly, today's national security calls for further development of due process. For example, due process can serve as a yardstick for considering two current problems—congressional investigations and the Federal loyalty-security program.

Thirdly, through widespread thinking about applications of due process which will help safeguard individual liberties, citizens can influence its development, just as they did when the common law was evolving.

As Judge Curtis Bok said, "Custom should be the evolution of the law. * * * Custom is more efficient than law because it patrols itself."

Twelve Key Facts About H. R. 1

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. WOLVERTON. Mr. Speaker, on Wednesday next a bill (H. R. 1) to extend the Trade Agreements Act, and give the President power to lower United States tariffs, will be brought before the House for consideration.

This bill is of tremendous importance to the welfare of our Nation and its people. It should have the most careful consideration before enactment. There are rumors that the bill will be considered in the House under a closed rule that will not permit amendments, other than those offered by the Committee on Ways and Means of the House. The adoption of such a rule by the House would prevent Members of the House from offering any amendments that they may deem necessary to protect workers in many industries against competition with goods produced in foreign countries by cheap underpaid labor. Our workers should be protected against such unfair competition. If they are to be protected then Members of Congress should have the right to introduce the necessary amendments that would give protection to workers in their respective congressional districts. There is no justification for the adoption of a closed rule that would preclude the offering of amendments to the proposed bill by Members of the House.

In order that the seriousness of the situation can be fully understood, and, without accepting in every particular all that it contains, I am including as part of my remarks a strong and carefully considered statement that has been made by the American Tariff League, Inc., entitled "Twelve Key Facts About H. R. 1."

It reads as follows:

TWELVE KEY FACTS ABOUT H. R. 1.

H. R. 1, introduced by Representative JERE COOPER, Democrat, of Tennessee, proposes to extend the Trade Agreements Act. In the process it would grant the State Department, via the President, broad new powers for lowering United States tariffs and firmly committing the United States to GATT—the General Agreement on Tariffs and Trade.

This bill has unleashed an intense debate. For this debate to produce results in the national interest all the pertinent facts must

be squarely considered. Herewith are summarized 12 facts which are compellingly pertinent.

(NOTE.—The content of H. R. 1 may change or become entangled with other bills during the legislative process. The references here are current as of February 12, 1955.)

I. RIGHT NOW UNITED STATES TARIFFS ARE AMONG THE LOWEST IN THE WORLD

United States tariffs, now at their lowest in history, average only 5.1 percent of the value of imports. This represents sharper reductions than have been made by most other industrial nations; a 68-percent reduction of the 1937 average.

By comparison, Switzerland's tariffs average 8.1 percent of imports, and have been reduced only 47 percent since 1937; France averages 10.6 percent, 43 percent of 1937; and Great Britain averages 25.6 percent, which is 20 percent above 1937.

Among the industrialized nations of the West only Denmark, Sweden, and Western Germany have reduced their average tariff level since 1937 by as large a percentage as the United States. However, even in 1937 the United States had a lower average than Sweden and Germany. Denmark is the only one which was lower then and remains lower now.

N. B.: Tariff comparisons tell only half the story. Import quotas, currency restrictions, monopolies, Government trading, cartels, and other devices are far tighter barriers to free trade than tariffs. Because, except with respect to quotas on agricultural products subject to price supports, the United States does not engage in these practices it actually permits freer trade than any other industrialized country in the world.

II. THE FULL IMPACT OF THE RECENT UNITED STATES TARIFF DECLINE HAS NOT YET BEEN FELT

The first cuts, following the original Trade Agreements Act of 1934, came while the world was still struggling with the effects of a worldwide depression. Since then World War II, the fighting in Korea and Indochina, the continuing cold war and repeated injections of economic aid by the United States have distorted the historical patterns of trade. Only now are other nations approaching full production.

But even during this disturbed period United States imports reached a sustained level of nearly \$11 billion—four times prewar value, twice prewar volume.

III. TARIFFS AFFECT LESS THAN ONE-THIRD OUR TOTAL IMPORTS

Foreign countries earn dollars, and the United States buys its needed imports, for the most part, without any tariff interference at all. In considering the effect of tariffs on imports it must always be remembered that tariffs affect less than a third—\$3 billion out of the total import of \$10.8 billion. A pertinent section of the United States tariff policy statement by the Committee for Economic Development—November 1954—it follows:

"Only a part of our imports are subject to tariffs or other import restrictions. Of our total annual imports of approximately \$10.8 billion in 1951, some \$6 billion consisted of products which enter free of duty or quota restrictions. The rest—some \$4.8 billion annually—were subject to tariff duty or import quotas. This \$4.8 billion included some \$2.5 billion of finished and semifinished manufactures, \$1.8 billion of agricultural products, and \$500 million of metals and minerals. Of this \$4.8 billion of imports, however, only about \$3 billion were subject to import quotas or to tariffs sufficiently high to have an appreciable effect on the volume of import. This \$3 billion consisted for the most part of agricultural products and finished manufactures."

IV. OTHER COUNTRIES HAVE NOT RECIPROCATED

Though foreign countries have made some nominal concessions American exporters still face such barriers as:

Automobiles, charged 63 percent duty in India, 30 to 40 percent in Japan, 15 percent to 33½ percent in the United Kingdom, and 15 to 30 percent in France.

Machinery, charged 10 to 25 percent duty in Britain, 6 to 30 percent in France, 15 to 30 percent in Japan, 5 to 40 percent in Italy.

Synthetic textiles (including rayon), charged 20 to 35 percent in France, 25 to 27 percent in Italy, 22 percent in Norway, 17 to 24 percent in Belgium, and 50 percent in India.

Cotton manufacturers, charged 15 to 30 percent in the United Kingdom, 7 to 30 percent in Germany, 15 to 25 percent in Italy, 18 to 30 percent in Indonesia, and 15 to 27½ percent in Canada.

Grains, charged 15 to 30 percent in France, 15 to 20 percent in Germany, 25 to 30 percent in Italy, 10 to 15 percent in Sweden.

In addition, many countries employ side devices which effectively limit, or even ban, the import of United States goods into their markets.

These devices, perfected by the Nazi economist, Dr. Hjalmar Schacht, include: import quotas, currency restrictions, state trading, monopolies, barter deals, and cartels. The use of such devices has increased markedly during the so-called reciprocal trade period.

There has been much talk about relaxing such restrictions but little "do." For example, Great Britain has at last agreed to admit a few United States cars "on trial"—650 to be exact—but subject to duties and taxes which bring the price of an American made Chevrolet in the British market to about \$6,000.

France recently announced "liberalization" for certain selected items—e. g., cotton yarns (but not fabrics), threshing machines (but not tractors), and so on. But at the same moment France turned around and imposed a special import tax of 10 to 15 percent on the items thus "liberalized." And even these "concessions" did not apply to imports from the United States, only to imports from other European countries.

Although Great Britain employs such devices freely, and in addition maintains tariffs at a level 20 percent above 1937, the New York Herald Tribune for January 3, 1955, quoted R. A. Butler, British Chancellor of the Exchequer, as saying:

"We expect some improvement in their [United States] trade practices before there is any question of lowering our barriers any further or indulging in any further nondiscrimination."

V. OUR FREE WORLD ALLIES DO NOT NEED LOWER UNITED STATES TARIFFS TO PROSPER

Congress was told a year ago that further cuts in United States tariffs were needed then to foster world trade and bolster the economy of our allies.

Congress refused. Instead it obtained an agreement by the State Department to make no further cuts for a year.

Here are examples of what actually happened in 1954, without the benefit of additional tariff cuts by us:

1. Italy's national income rose 4 percent, and its exports 10 percent.

2. Austria's income rose 10 percent as a result of increased trade and production.

3. The Netherlands' prosperity lured capital from all over the world; securities on the Amsterdam Exchange are now at their highest point since World War II.

4. West Germany anticipates an 8 percent rise in the gross national product in 1955, and a continuing expansion of exports. Between 1949 and 1953 exports more than quadrupled, while imports doubled; credit

not tariffs has been the exporters' main problem.

5. "Britain Is Tasting New Prosperity as Exports Spurt," headline from New York Times, January 3, 1955.

6. "Persisting Boom Is Seen by Swiss—Prosperity Based on Demand for Manufactures, Credit and Domestic Building," headline from New York Times, January 9, 1955.

7. "Rise in Finn's Timber, Paper Exports Helps Puncture Pessimistic Forecast," headline from New York Times, January 9, 1955.

8. A flourishing export trade gave Portugal an exceptionally prosperous year; as expressed in a New York Times headline, January 4, 1955, "Nation Goes on Buying Spree."

In contrast, the United States experienced a temporary falling off in 1954.

VI. LABOR RATES IN OTHER COUNTRIES REMAIN AT ONE-THIRD TO ONE-TENTH UNITED STATES SCALE

Here are comparative average hourly earnings for industrial workers in the United States and other countries (1952-53 figures):

United States	\$1.79
Switzerland	.57
United Kingdom	.47
France	.43
West Germany	.44
Italy	.35
Japan	.19

N. B.: At one time better machines and more skilled workers enabled the United States to compete with low labor cost imports. Now—largely due to United States aid and assistance programs—other industrial nations have machines as modern and efficient as any we own, and for the most part their workers are as skilled as ours. A recent study by the National Industrial Conference Board indicates that at the same time the real wage gap is spreading, not narrowing.

VII. IMPORTS FROM CHEAP LABOR AREAS DO HURT

Industries already affected include coal, textiles, footwear, glass pottery and china, electrical equipment, lead and zinc, ship building, fishing, and dozens of others. In the textile industry alone, which has been severely affected by competition from Japan and other low wage countries, the number employed declined by 260,000 in 3 years. New England mills took the brunt of this loss; but even in the South, where the most modern mills are located, there was a loss of 40,000 jobs.

State Department negotiators not long ago cut the rate on watches. Last fall the President had to restore the old rate. Too many workers in the United States watch industry, whose precision skills are needed for defense, were losing their jobs—and skills—because of imports.

Workers in the following industries are also threatened: chemicals, radio and electronic equipment, machine tools, synthetic fibers, plastic materials, and—looking at the list proposed for the next round of negotiations by the State Department—literally hundreds of others.

N. B.: H. R. 1, in fact, excepts nothing. It invites a reduction of from 15 to 50 percent in every single rate now in effect, no matter how often or how deeply cut in the past.

VIII. THE PERIL POINT AND THE ESCAPE CLAUSE ARE VIRTUALLY MEANINGLESS

Under the peril point the United States Tariff Commission is required to determine whether or not a proposed cut will injure domestic industry. But such a finding does not bind State Department negotiators. In the past the Commission's findings have been ignored in favor of a hoped for and often meaningless concession from foreign governments. H. R. 1 would make possible the continuation of this practice.

Similarly, the much talked of "escape clause" is no sure remedy for injury to Amer-

ican producers and workers. The Tariff Commission's recommendations of relief can be, and usually are, rejected on advice of the State Department which fears the resentment of other countries.

IX. GOVERNMENT HANDOUTS ARE NO SUBSTITUTE FOR JOBS

Some H. R. 1 supporters have introduced bills to provide Government aid, at the expense of the general taxpayer, for workers thrown out of their jobs by import competition—after the injury has been done. Even the Randall Commission, which originated the H. R. 1 plan, could not go along with this idea. It substitutes a Government dole for a man's wage, or requires workers to move from their homes to strange areas—much as is done in totalitarian countries. There is no way to estimate the cost in advance—it could, and probably would, run into billions.

X. H. R. 1 WOULD ESTABLISH AN ENTIRELY NEW NATIONAL POLICY ON TRADE AGREEMENTS—THE UNITED STATES MAKES CONCESSIONS BUT GETS NONE IN RETURN

Heretofore our trade agreements have required foreign countries to make concessions to us, no matter how nominal, in return for any concessions we make. H. R. 1 abandons this principle.

Right now the State Department is rushing plans for round-robin negotiations with 33 other countries beginning in Geneva next month. It has openly announced its intention to offer wholesale concessions in United States tariffs as a means of inducing these other countries to open their markets to Japan. H. R. 1 expressly permits this one-sided deal.

XI. H. R. 1 CAN INVOLVE THE UNITED STATES IN GATT (GENERAL AGREEMENT ON TARIFFS AND TRADE) WHICH SUBJECTS THE TRADE OF MEMBER NATIONS TO INTERNATIONAL CONTROL, DESPITE OPPOSITION BY CONGRESS

The General Agreement on Tariffs and Trade provides for a new international organization empowered to sponsor and police a comprehensive code of trade practices among member nations. These rules would cover the whole range of trade, including farm products and minerals as well as manufactured goods.

The Constitution assigns responsibility for the regulation of foreign commerce to Congress. By previous Trade Agreements Acts Congress has delegated a large part of this responsibility, via the President, to the State Department. It has always refused, however, to allow the State Department to redelegate such power to an international body, in which we would have only one vote.

H. R. 1, although amended by committee to appear neutral on GATT, still contains language which permits the State Department to commit the United States to GATT without congressional knowledge of that agreement's changing provisions.

XII. UNITED STATES TARIFFS DO NOT CONTROL UNITED STATES IMPORTS

The policies of foreign producers, much more than present United States tariff rates, determine when, what, and how much they export to the United States. Since the war, for example, British manufacturers have sent most of their exports to countries in the sterling area, where they are protected from outside competition by tariffs, import licensing systems, and currency restrictions.

In 1952, however, when some of the sterling area markets closed up following collapse of the Korean war boom, the British quickly shifted. England's exports to the dollar area jumped 50 percent almost overnight—without any United States tariff changes.

United States tariffs, in fact, are now the least obstacle to world trade. Changeable policies of other countries, reflected in changeable import quotas, changeable cur-

rency restrictions and the like, are the real difficulty.

N. B.: More than a year ago Bernard Baruch said the agitation for lower tariffs in the United States is serving only to provide other nations "with an excuse for blaming their troubles on the United States and, by feeling sorry for themselves, to overlook what they must do on their own."

In his column on January 13, 1955, Walter Lippmann pointed out:

"I wonder whether this (the campaign for lower tariffs) puts the real problem in its proper focus. Perhaps we can reach a clearer definition of that problem by saying that the main trouble today is not the level of the tariff rates. In the United States they are by and large not exorbitantly high any longer."

"The real problem is economic warfare. All the governments have armed themselves with legal powers which they use to interfere with the international markets for goods. They use them offensively and they use them defensively to cut down, to cut off, to divert, to penalize, to subsidize buying and selling so that the pattern of transactions is different from what it would be under the free operation of supply and demand. . . ."

"The characteristic of these weapons of economic warfare is that they are not fixed rules and laws of trade but are operated by administrative decisions made, often under political pressure, by bureaucracies. . . ."

"The essential condition of economic peace is that trade among friendly nations should not be subject to the arbitrary acts of administrative and political officials, that trade should be subject to laws enacted deliberately and openly and after debate and not changeable except by equally careful deliberation."

American Federation of the Physically Handicapped Plaque of Honor Presented to Hon. John W. McCormack

EXTENSION OF REMARKS OF

HON. CARL ALBERT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. ALBERT. Mr. Speaker, under leave to extend my remarks in the Record, I include the following letter addressed to Speaker Rayburn:

AMERICAN FEDERATION OF THE
PHYSICALLY HANDICAPPED, INC.,
Washington, D. C., February 15, 1955.
Hon. SAM RAYBURN,
Speaker, United States House of Representatives, Washington, D. C.

DEAR Mr. SPEAKER: In recognition of the great humanitarian services of Majority Leader JOHN W. MCCORMACK, members of the National Council of the American Federation of the Physically Handicapped will present to him today the APFH plaque of honor, inscription of which is as follows:

"The Honorable JOHN W. MCCORMACK, of Massachusetts, during his entire public career has consistently fought to preserve the rights and advance the welfare of working people and the handicapped.

"Since being in Congress he has authored and fought for many worthy laws to benefit all citizens and particularly those who, because of physical disability, have been and are discriminated against in our economic and social life.

"The National Council of the American Federation of the Physically Handicapped,

Inc., in session in the city of Washington, D. C., on September 30 and October 1, 1954, does hereby heartily commend and thank the Honorable JOHN W. MCCORMACK for his brilliant and effective efforts in behalf of our millions of handicapped and, in recognition of this great service, proclaim him a life member of the American Federation of the Physically Handicapped, Inc., be it

Resolved, That copies of this resolution be sent to the Honorable JOHN W. MCCORMACK, the Speaker of the United States House of Representatives, the public press, and to all interested organizations."

PAUL A. STRACHAN,
President.

Foreign Operations Administration

EXTENSION OF REMARKS OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, I would like to call the attention of the Congress to a matter which I believe has extremely important ramifications.

Being a firm believer in a bipartisan foreign policy, I regret that the situation I describe below has arisen. The fact that issues in this field can be alleged to have acquired partisan overtones does not contribute to the building of unity in our Nation at this critical time. I have engaged in lengthy correspondence regarding the question of partisanship in FOA without bringing the matter to the attention of the Congress. Only because of the complete failure of the FOA to provide a satisfactory reply, do I now feel compelled to make the situation known.

As a member of the International Operations Subcommittee of the Government Operations Committee last year, numerous allegations of systematic patronage clearances in the Foreign Operations Administration were brought to my attention. As a result, I introduced an amendment to the Mutual Security Act prohibiting the application of political tests or criteria in the filling of non-policy positions in FOA. While my amendment barely failed in the House, a similarly worded amendment introduced by Senator HUMPHREY carried in the Senate and through conference and is now a part of Public Law 665, 83d Congress, 2d session.

At about the same time as I introduced my amendment, I wrote to the Director of FOA about a fellow New Jerseyite who had come to me and had called to my attention an example of what he felt was unwise and unjust personnel practice in FOA. I quote my letter to the Director. Incidentally, I have deleted the gentleman's name for obvious reasons:

I am writing you with respect to a fellow New Jerseyite, Mr. W., who was formerly in the employ of the Foreign Operations Administration. Mr. W. has business connections in my district and was in to see me with respect to a private matter. During the course of our conversation he relayed a story to me which sounds fantastic. It is as follows:

On December 12, 1952, Mr. W., left for The Hague, Netherlands, as a \$50-a-day consultant for the Foreign Operations Administration. The original arrangement was for 3 weeks' work as marketing consultant to the Dutch Government. At the conclusion of the 3 weeks, Mr. W.'s appointment was extended for a 3-month period, ending April 1, 1953. At the end of this period the appointment was renewed for 2 more months, to June 1, 1953; and then there was a third extension to July 1, 1953. At the conclusion of this time, Mr. W. returned to the United States. I understand that during his stay in the Netherlands Mr. W. worked 6 days a week and many more than 8 hours a day in his efforts to help the Dutch in improving their marketing techniques. I am enclosing mimeographed copies of the letters of commendation received from a few Dutch organizations which would indicate that Mr. W.'s stay in the Netherlands was highly successful.

Mr. W reports that sometime during July he was approached by an official of the Foreign Operations Administration and asked to take a job as marketing consultant to the Italian Government. He was personally interviewed by a staff member of the Rome mission who requested that the appointment be made immediately. During the course of waiting for this appointment, which to Mr. W appeared to be assured, he took the highly responsible step of attending a language school at his own expense to learn Italian. The contract between him and the Italian Government was prepared, salary was agreed upon, and the Italian Government and the American mission accepted his appointment—in fact, eagerly approved it. Mr. W further reports that his loyalty and security check came through. At the final moment when Mr. W was all prepared to leave, had obtained a passport and doctor's certificate, he was not appointed. He was informed that all the clearances necessary could not be obtained but was given no indication of which clearance was withheld.

I have suggested to him that perhaps another candidate with equal or higher qualifications may have been selected for the position and that this might have accounted for the last-minute decision by the Foreign Operations Administration. However, Mr. W insists that he was the only candidate for the job at the time, which was proven by the fact that no one was appointed to fill the position for several months after he was turned down.

Mr. W has submitted to me a statement of all his allegations regarding the facts of this case, and they go much further than I have done in this letter. However, the principal assertion he makes is that the sole reason he was not appointed to the technical assistance project was the fact that he is a member of the Democratic Party.

I am a very firm supporter of the technical cooperation and foreign-aid programs and believe they constitute one of our really positive answers to Communist propaganda. I believe that the technical assistance program is an outstanding example of America's free world leadership. It therefore disturbs me greatly that members of my party are apparently discriminated against in appointments to nonpolitical technical assistance projects. It is my recollection that under the previous Democratic administration, the first two Administrators of ECA were members of the Republican Party. It is my understanding that every Administrator from Mr. Hoffman to Mr. Harriman has conducted the technical assistance program free of partisan considerations in the appointment of personnel. I am absolutely convinced that this is the correct policy, not only because technical assistance should not be a partisan program but also because it seems to me to be the most efficient way to obtain top qualified personnel. If Mr. W's statement that systematic political tests are now conducted

as part of personnel practice in the Foreign Operations Administration, I believe we in the Congress should know about this fact. Such a practice would, of course, cut the recruiting potential for technical assistance projects in half and would, therefore, make for less efficient operation of the Administration.

I do not believe Mr. W desires the position mentioned above any longer. This letter, therefore, is not about his personal situation but rather about the general practices of your agency.

You will note that this letter stated that in this case all necessary clearances had been obtained for Mr. W's appointment, but that for unspecified reasons he was not appointed to a technical assistance job which had no political aspects. In response to the letter quoted above I received a letter from the Foreign Operations Administration which indirectly implied that Mr. W. was not appointed because the position for which he had applied had been abolished. I have strong reason to believe that was not the fact and that while the position was not filled, recruitment for it continued for many months after Mr. W. had been turned down. The question I raise is this: If Mr. W's allegation that he was not appointed because he is a Democrat is not true, why did the Administration find it necessary to deviate from fact in replying to me and to assert a position which has not been and probably cannot be substantiated?

I answered the letter I received from FOA and I quote my reply of August 5 below:

Thank you for your letter of August 3. I must say I was somewhat disturbed by the fact that my letter of July 6 remained unanswered and unacknowledged for almost a month.

Apparently there is some misinterpretation as to the questions I raised in my letter. I specifically said that Mr. W. was no longer interested in the position and, therefore, my question was whether or not his allegations were true. As you recall, he alleged that in technical assistance projects a systematic political patronage arrangement prevailed in FOA. My question was, am I supporting a program which systematically discriminates against people who are identified as Democrats in obtaining positions of nonpolicy levels as well as on purely technical jobs under the technical assistance program?

I did not receive a reply to the above letter. On December 28, 1954, I again wrote to the Foreign Operations Administration on this problem, as follows:

As you undoubtedly recall, Senator HUMPHREY and I sponsored an amendment to the Mutual Security Act of last year which made the provisions of section 1005 of the Foreign Service Act applicable to the overseas personnel practices of the Foreign Operations Administration. This amendment carried and is now part of Public Law 665, section 527, subsection C (1).

Would you please advise me of the administrative action you have taken to assure the implementation of this legal requirement of your personnel practices. I would appreciate copies of any amendments or additions to manual orders which may have ensued or administrative memoranda to operating personnel which assure the implementation of this amendment.

I have discussed this matter with Senator HUBERT HUMPHREY, and he is also vitally interested in the question and would ap-

prelate a copy of your response to me on this matter.

I received the following response from the FOA, under date of January 12, 1955:

In response to your inquiry as to what administrative action this agency has taken as a result of the application of section 1005 of the Foreign Service Act to our overseas personnel practices, we are pleased to inform you that we have not found it necessary to take any specific action by way of amendment or addition to existing manual orders.

Section 1005 of the Foreign Service Act provides in part that in the hiring of personnel for overseas assignments "no political test shall be required and none shall be taken into consideration." Since it is the practice of this agency to select applicants for overseas employment purely on the basis of professional qualifications, subject, of course, to necessary security clearances, it has been felt that specific administrative implementation of the prohibition in section 1005 against political discrimination was not required. Our key employment personnel, on the other hand, are fully conversant with the provisions of this section.

The implications of this exchange of correspondence are that if there were applications of political tests prior to the passage of the amendment I sponsored with Senator HUMPHREY last year, this practice still continues, since no steps have been taken to implement the non-political-tests amendment. I submit that political tests were applied to appointments before the passage of the amendment and that they have continued to be applied. Evidence of this, in addition to the above-cited case of Mr. Wilson—which, from the material I have at hand, appears to be clear-cut—is the report by the Republican National Committee quoted in the Congressional Quarterly of February 11 on page 132:

The largest number of placements (by the Republican National Committee) have been made in the FOA (79).

In a 6-month period, 79 people have been placed in the FOA by the Republican National Committee. The fact that a program exists to apply political tests to nonpolicy jobs is a violation of the amendment I sponsored. The additional fact that the FOA has been the most lucrative source of patronage positions is further evidence that laws are being violated in spirit, if not in letter.

I intend to present this material to the Committee on Foreign Affairs and have merely submitted the record here, since I feel that the answers I have received from the FOA have, through their deviousness, been insulting not only to me but to the Congress.

During my recent trip abroad I gathered a great deal of information which shows that the continuation of this patronage practice in FOA is having a serious impact not only on the morale of overseas personnel but on the ability to recruit technical experts for service overseas—a job which is very difficult even under the best of circumstances.

In the near future the Congress will be considering the continuation and, according to recent statements, the expansion of vital economic and technical assistance programs. I feel strongly that such programs are imperative to the

United States position in the free world and to the preservation of freedom and democracy in the face of the widespread and unabating Soviet imperialist menace.

But to be successful our economic aid and technical assistance programs must be administered with wisdom, courage, imagination, and complete integrity. Congressional action can make success possible but only the best type of administration will make it probable. And yet, as of this very moment there is within the FOA an office whose function it is to place Republican political nominees and to apply political tests and criteria to all proposed appointments and nominations. Such a breach of faith with the Congress certainly fails to ensure the kind of administration which is absolutely essential to the continuing success of our foreign aid programs and should no longer be tolerated.

Congressional Salary Adjustment Bill

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. SCHWENGEL. Mr. Speaker, since I was not privileged to be on the floor of the House during the debate on the bill to adjust the salaries of Congressmen, I avail myself of your leave to extend my remarks in the Record in favor of the \$10,000 increase.

Much has been written and said in these times about the advisability of Congressmen increasing their own salaries. It is unfortunate that we must be faced with the decision to enact legislation which on the surface seems to benefit only this body of legislators. Since it is our decision, I feel that we should face it as we do all other issues before us and judge it on the basis of the greatest good for the greatest number.

This precept has long been the foundation of our democracy. I am certain that it applies here as it does in other issues. Adequate pay for Congressmen is as much a part of good government as any of the other tenets to which we hold. It is a sound business principle, and the progress of this Nation is marked with the application of these principles.

Do my constituents benefit because I receive more money? Is the principle of the greatest good for the greatest number being served because I have a few more dollars added to my monthly paycheck? I am sure that it does.

True, I knew what the salary was when I ran for the office. I accepted that salary when I accepted the mandate of the people to serve them in the office. My will to serve is not affected by the amount of money I receive. It would not be less if the salary were less. I have an obligation to the people of my district, just as does every Representative here, and we put service above all else.

Why, then, do I favor an increase in congressional salaries in order to per-

petuate the greatest good for the greatest number? Because all of us believe in being fair. The American people are noted for their fairminded approach to problems that confront them. Our reputation for fairmindedness stands out in the day-to-day activity of the family of nations.

The people of my district are fair-minded Americans, too. They want their Congressman to receive adequate pay for what he does. It is part of their pride as Americans that in this country a man is worthy of his hire. They know that they will get better men as Congressmen. They know that they will be better served and that, in the long run, their country will be better served. When their lawmakers are paid on a basis commensurate with what their contemporaries receive in business and industry, the entire business of Government is on sound footing. The people of America know this and they will support that which is fair and just. For these reasons, my vote is in favor of the \$10,000 increase in congressional salaries.

The Regaining of Armenian Independence

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. RABAUT. Mr. Speaker, in 1918 when the Armenians had succeeded in regaining their national political independence after some 600 years of subjection to alien oppressors it was thought that they were destined to enjoy a measure of peace and freedom in their historic homeland. With great feelings of joy lovers of freedom throughout the world were glad to see long-oppressed Armenians win their independence. As it turned out, however, Armenians were not for long to have their national independence. During the short period of just a little over 2 years that Armenia possessed its freedom, its existence as an independent state was in constant jeopardy. The small and weak country had to fight for its life on many fronts. Finally in December of 1920 Armenia was overrun by its enemies and most of it fell to the Communist Russians. They had come as saviors and liberators, but immediately they established a despotic regime.

The people of Armenia were unwilling to accept this without a fight. In mid-February of 1921 an uprising was underway, and by the 18th it proved so successful that in a few days nearly all the unwanted invaders were expelled. For a brief period of only 6 weeks Armenians again enjoyed freedom.

This uprising is historically significant because it is an instance in which communism was successfully repelled and defeated, and the Armenians regained, even if only temporarily, their political liberty. That is the reason we celebrate this memorable day.

Oil Production in Kansas Expanding

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. HOPE. Mr. Speaker, oil producers in Kansas, as well as in other States, are understandably concerned about oil imports. Many independent oil producers from Kansas have urged that I either oppose the bill, H. R. 1, to extend the Reciprocal Trade Act, or support the provisions which would put limitations upon oil imports.

While Kansas is not the largest oil-producing State by any means, oil production is an important industry in Kansas and particularly in my own congressional district. It is important not only to producers themselves, but to landowners, farmers, businessmen, and workmen. I certainly feel that the views of those engaged in the industry should be most carefully considered, but for the present, at least, as well as the foreseeable future, it seems to me that these gentlemen are overconcerned. I do not pretend to be an oil expert, but I wish that every industry in my district were in as good condition as the oil industry. It is growing and expanding, and I am sure it will continue to do so.

Attached hereto is an article taken from the Hutchinson News-Herald for Wednesday, February 16, 1955, showing the oil- and gas-well completions for the previous week in Kansas. Some weeks, more new wells are brought in, and some weeks, less, but I am submitting this article because it covers the latest week available.

I believe that the oil industry in this country will prosper as the country prospers. I believe that a great producing nation like this one must expand its foreign trade if it is going to continue to make progress. I believe that the State of Kansas can only make progress if we expand our foreign trade because Kansas' most important product, wheat, is one which increasingly depends upon an export market for outlets. We cannot sell wheat unless other nations have dollars with which to buy it. Other nations can get dollars only through our purchases of imports in one form or another. Thus the amount of wheat we can export is directly tied in with the expansion of foreign trade.

The expansion of foreign trade offers our greatest hope of reducing and eventually terminating our expenditures for foreign aid.

The expansion of foreign trade will do more than any other one thing to bring about a better understanding between nations and eventually world peace.

For these reasons I am supporting H. R. 1 in the form in which it was reported by the committee and shall vote against the motion to recommit. In doing so, I feel that I am voting in the best interests of the people of my State and congressional district, including those engaged in oil-and-gas production.

The article from the Hutchinson News-Herald follows. It shows the completion of 72 wells last week. Practically all of them were oil wells. A few of them were dry holes. Some were large, and some were small wells, but the fact that 72 new wells were brought in last week in Kansas shows that our producers have faith in the oil business—that they are willing to invest their money in it, and that the oil industry is in a healthy state.

WICHITA.—Four new oil finds and three new gas discoveries for Kansas were reported by the nomenclature committee of the Kansas Geological Society Tuesday. They bring oil discoveries to 25 and gas finds to 7 to date, officially listed for 1955.

The committee, acting jointly for the Kansas-Oklahoma division, Mid-Continent Oil & Gas Association, listed as new oil finds:

Barton County: Claflin Northeast (Lansing) field; opened by Francis Raymon No. 1 Preager northeast corner section 3, township 18, range 11 west; in process of completion. Topped Lansing at 3,029 feet; pumped 85 barrels of oil daily through perforations at 3,040-3,051 and 3,058-3,061 feet, after acid.

Rice County: Windom (Pennsylvania conglomerate) pool; new pay horizon in field already producing from Mississippian; Petroleum Management No. 1 Swanson, northeast corner southeast quarter section 24, township 19, range 6 west; being completed; top 3,400; pumped 58 barrels oil plus 2 barrels water daily through perforations at 3,412-3,418 feet.

Stafford County: Kachelman (Arbuckle) pool, new horizon in field already producing from Lansing-Kansas City; Cooperative Refinery Association No. 1 O'Dell A, southwest quarter southeast quarter southeast quarter section 7, township 25, range 13 west; being completed; top 4,284 feet; swabbed 3 barrels oil hourly at 4,284-4,289 feet.

Sumner County: Padgett West (Mississippian) pool, second pay level in field already producing from Lansing-Kansas City; Ayesh No. 2 Tinsley-Nichols, southwest quarter northeast quarter northwest quarter section 28, township 34, range 2 east; being completed; top 3,491 feet; pumped 25 barrels oil daily plus trace water at 3,519-3,525½ feet.

The gas discoveries included:

Kingman County: Trenton (Mississippian) field; Cities Service No. 1 Voran, southeast quarter southwest quarter northeast quarter section 27, township 29, range 7 west; gauged 1,047,000 cubic feet daily from perforations at 4,117-4,123 feet; shut-in gas well.

Pratt County: Coats West (Lansing) field; Lario No. 1 Chastain, northwest quarter southwest quarter northwest quarter section 24, township 29, range 14 west; made 2,485,000 cubic feet daily through perforations at 4,141-4,148 feet; top 3,944; shut-in gas well.

Rush County: Rothe (Lansing) field; Morrison Drilling No. 1 Rother, southeast quarter northeast quarter, northwest quarter section 31, township 17, range 16 west; top 3,270; estimated at 4 to 5 million cubic feet daily through perforations at 3,448-3,452 feet; shut-in gas well.

Last week's completions:

Barber County: Continental Oil No. 14, W. A. Newkirk, southeast quarter northwest quarter northwest quarter section 20, township 33, range 11 west; 540 barrels in chat, 4,516 feet (Rhodes).

Continental No. 5, Rossell, south half south half northeast quarter section 29, township 33, range 11 west; 438 barrels in chat, 4,538 feet (Rhodes).

Graham-Miller No. 1, Lenkner "A" corner, southeast quarter section 24, township 33, range 14 west; 100 barrels oil in Marmaton, 4,666-4,674 feet (new pay in Medicine Lodge gas field).

Aurora Gasoline et al. No. 1, Washburn, northwest quarter northwest quarter southwest quarter section 10, township 35, range 11 west; dry wildcat in Arbuckle 5,495-5,535 feet.

Barton County: Imperial Drilling Co. No. 1, Hamilton, northwest quarter northeast quarter northwest quarter section 10, township 18, range 11 west; 15 barrels in Lansing, 3,089-3,092 feet (Ames-Northwest).

Petroleum Inc. No. 3, Hertach, southeast quarter northeast quarter northeast quarter section 24, township 18, range 11 west; 46 barrels in Arbuckle, 3,285 feet (Meadowsdale).

Sitrin & Sohlo No. 4 Yeakley northwest quarter northeast quarter northwest quarter section 17, township 18, range 13 west; 443 barrels in Arbuckle 3-316 feet (Boyd).

Duke & Wood No. 1 McMullen southwest quarter southwest quarter northeast quarter section 3, township 20, range 13 west; dry wildcat, Arbuckle 3,437-3,510 feet. Tested show. Mostly water.

Clark County: United Producing No. 13 Harper corner southwest quarter southwest quarter, section 34, township 33, range 21 west; 186 barrels in Morrow sand 5,420-5,428 feet (Harper ranch).

United Producing No. 4 M. C. Harper corner northeast quarter northeast quarter, section 4, township 34, range 21 west; 227 barrels in Morrow sand 5,420-5,425 feet (Harper ranch).

Ellis County: GMR Oil Co. No. 1 Walter A northwest quarter southwest quarter southeast quarter, section 4, township 13, range 17 west; 35 barrels in Lansing 3,409-3,413 feet (Catherine-Northwest).

Glenn Nye No. 4 Blessing west half northwest quarter northeast quarter, section 28, township 13, range 17 west; dry in Conglomerate 3,592 feet (Sugarloaf-Southeast).

Pam-Kar & NCRA No. 1 Zimmerman northwest quarter northwest quarter southeast quarter, section 12, township 14, range 20 west; dry in Arbuckle 3,862 feet.

Graham County: Francis Oil & Gas No. 6 Bragg east half northwest quarter northeast quarter section 33, township 9, range 21 west; 240 barrels in Arbuckle 3,879 feet (Cooper-North).

Petroleum Inc. No. 2 McCall B southeast southeast quarter northwest quarter section 25, township 10, range 23 west; 242 barrels in Lansing 3,559-3,605 feet (Prairie Glen).

Hull-Wickizer No. 2 Wickizer B northwest quarter northeast quarter northeast quarter section 28, township 10, range 23 west; dry at 4,088 feet below Kansas City lime (Happy).

Harper County: Texas Co. No. 1 Knowles northeast quarter southwest quarter northeast quarter section 23, township 31, range 6 west; oiler-gasser 5 million cubic feet and 30 barrels oil Simpson sand, 4,670-4,679 feet (Runnymede extension).

Harry Bass No. 6 Ryan southwest quarter northeast quarter southwest quarter, section 13, township 31, range 9 west; 79 barrels in chat 4,416-4,445 feet (Grabs-West).

Stanolind No. 2 Ison northwest quarter southwest quarter northwest quarter section 24, township 31, range 9 west; 258 barrels in chat 4,415-4,425 feet (Grabs).

Haskell County: William Graham No. 1 Huxman B south half section 1, township 30, range 32 west; gasser, 3½ million cubic feet. Hugoton zone (Hugoton).

Kingman County: Anschutz Drilling Co. No. 1 Goering northwest quarter northwest quarter northwest quarter section 18, township 27, range 5 west; dry wildcat in Arbuckle 4,295-4,336 feet.

Aurora Gasoline No. 1 Conrardy southwest quarter southeast quarter southeast quarter section 11, township 29, range 9 west; 406 barrels in Viola 4,488-4,490 feet (Willowdale).

Cities Service No. 4 Hagerman southwest quarter northeast quarter northeast quarter section 15, township 29, range 9 west; 282 barrels in Viola 4,495-98 feet (Willowdale).

Amerada Petroleum No. 1 Earl Johnson southeast quarter southeast quarter southwest quarter section 18, township 30, range 7 west; gasser 3 million cubic feet in chat 4,270-90 feet (Spivey).

El Dorado Refining Co. No. 1 Wells northeast quarter northeast quarter northeast quarter section 20, township 30, range 7 west; dry wildcat in chat 4,230-4,350 feet.

Marion County: Anderson Prichard No. 3 Youk center half southwest quarter section 20, township 18, range 2 east; 25 barrels in Viola 3,020 feet (Youk).

Beaumont Petroleum No. 4 Hawk northwest quarter southwest quarter northeast quarter section 31, township 22, range 4 east; 25 barrels in chat 2,441 feet (Edmonds).

McPherson County: George Hess No. 3 Akerson northwest quarter southwest quarter northeast quarter section 27, township 19, range 2 west; 32 barrels daily in chat, 2,957 feet (Lively).

George Hess No. 4 Akerson southwest quarter northwest quarter northeast quarter section 27, township 19, range 2 west; 33 barrels in chat, 2,963 feet (Lively).

Morton County: Colorado Oil & Gas No. 1-33 Dreyer corner southwest quarter, section 33, township 31, range 43 west, 5,870,000 cubic feet gas, Topeka lime (Dreyer).

Colorado Oil & Gas No. 1-3 Dreyer corner southwest quarter, section 33, township 32, range 43 west, 2,820,000 cubic feet gas, Topeka lime 3,144-3,153 feet (Greenwood).

J. M. Huber No. 3 USA "D" corner northwest quarter southeast quarter section 29, township 34, range 43 west, 669 barrels oil in Morrow sand 4,166-4,171 and 4,178-4,192 feet (Interstate).

Pawnee County: Cities Service No. 1 Franz southeast quarter southeast quarter southeast quarter section 2, township 20, range 19 west, dry wildcat in Arbuckle 4,194-4,260 feet.

GMR Oil No. 1 Sweeney "C" east-half southwest quarter southwest quarter section 5, township 21, range 15 west, 25 barrels in Arbuckle 3,839 feet (Sweeney).

GMR No. 1, Sweeney "B" west quarter southwest quarter southeast quarter section 8, township 21, range 15 west; 35 barrels oil and 1½ million cubic feet gas in Arbuckle, 3,841 feet (Sweeney).

Small-Business Needs Cited by Burger in Congress Plea

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. GAMBLE. Mr. Speaker, under leave granted by the House, I present for insertion in the CONGRESSIONAL RECORD an item from the Standard Star published at New Rochelle, N. Y., outlining the legislative program urged by the National Federation of Independent Business, of which Mr. George J. Burger, a resident of New Rochelle, is vice president:

SMALL-BUSINESS NEEDS CITED BY BURGER IN CONGRESS PLEA

WASHINGTON.—The National Federation of Independent Business will urge the current Congress to enact legislation making it mandatory to give small business producers a fair share in Government purchases, according to a statement by George J. Burger, 125 Clove Avenue, New Rochelle, vice president of the federation.

Mr. Burger, who says his organization numbers about 100,000 members throughout the country, also declared that a poll showed the majority of the membership expect tax relief legislation during the present Congress. This, he said, would enable small business and professional men to build up

reserves to meet "any and all economic trends."

Also being urged by the federation is continuation of the Small Business Administration which would be subject only to the control of Congress. . . . Small business committees of the Congress should be placed on a parity with all other standing committees and vested with "full legislative authority," the federation urges.

Commending Stanley Barnes, head of the Antitrust Division of the Justice Department, for his "vigorous enforcement of anti-trust laws," Burger asks for continuation of this practice.

"Needed appropriations for the Antitrust Division of the Justice Department must be supplied by the 84th Congress," Mr. Burger said.

Lithuanian Freedom

SPEECH

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. McDONOUGH. Mr. Speaker, on February 16, 1955, Lithuanians in all parts of the world observed the 37th anniversary of Lithuania's independence.

For Lithuania independence was short-lived. Lithuania gained freedom in 1918, and as a nation great strides were made to advance the standards of commerce, agriculture, and industry, and to improve the economic status and the physical welfare of Lithuanian citizens. As an honored member of the family of free nations, Lithuania fulfilled all of her obligations.

In 1940 tragedy struck the young nation, and the Red tide of communism swept across Lithuania wiping out the freedom and liberty so dear to the hearts of Lithuanians at home and abroad.

The people of Lithuania have not despaired, but look hopefully to the West trusting that the miracle of liberation will once more bring independence to their land.

All the people of the United States who cherish individual freedom and national liberty as their most priceless possession join with Lithuanian-Americans and Lithuanians in the homeland on the 37th anniversary of Lithuanian independence in the prayer that liberation may not be far off.

The Lithuanians have displayed courage and fortitude in their valiant and ceaseless fight against the enslavement of communism, and they have earned the admiration of the free world which joins them in the struggle to defeat the Communist aggressor everywhere.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the official reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentations be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix, but this rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD Appendix the full report or print of any committee or subcommittee when said report or print has been previously printed.

10. *Official reporters.*—The official reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this restriction shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. The Public Printer or the official reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Illustrations.*—Pursuant to section 182b, title 44, United States Code (as shown above), requests for authority to insert an illustration in the RECORD should be submitted to the Joint Committee on Printing through the chairman of the Committee on Printing of the respective House in which the speech desired to be illustrated may be delivered. Illustrations shall not exceed in size a page of the RECORD and shall be linecuts only. Copy for illustrations must be furnished to the Public Printer not later than 12:30 o'clock p. m. of the day preceding publication.

13. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

Appendix

Address by the Honorable Henry Cabot Lodge, Jr., at Dinner of Republican State Committee of Pennsylvania

EXTENSION OF REMARKS
OF

HON. JAMES H. DUFF

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1955

Mr. DUFF. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which was delivered by Henry Cabot Lodge, Jr., United States representative to the United Nations, at a dinner in Philadelphia, on Monday, February 14.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The size and importance of the State of Pennsylvania and of the city of Philadelphia are in themselves reason enough to make any man proud to be the speaker here tonight, particularly one who, like myself, has seen at firsthand what the influence of Pennsylvania can mean in national politics.

To this pleasure is added the gratification of speaking in a State which is represented in the United States Senate by two men with whom I have served.

The first is Senator EDWARD MARTIN, whose courtesy and patriotism and sincerity are well known to you. I have the finest recollections of my service with him.

And then, of course, it is a unique pleasure to take part in any affair in which JIM DUFF is interested, and JIM has told me of his interest in this dinner tonight. Knowing JIM as we all do, you will believe me when I say that he told me of this interest in no uncertain terms. JIM and I have not only been friends in the Senate, but the closest of fellow workers in the campaign to secure the Republican nomination for General Eisenhower. Without his brilliance and boldness, without his sure political instinct, and his vision, our campaign would not have gotten off the ground.

These then are some of my reasons for being glad to be in Pennsylvania. There is another one, and one which I think entitles all Pennsylvanians to congratulations, which is that our President is making a home for himself in this State in the historic town of Gettysburg.

Gettysburg not only suggests Pennsylvania; it not only suggests President Eisenhower; it also suggests Abraham Lincoln, the anniversary of whose birth we celebrate tonight. One of the things about Lincoln is that he is always up to date. He never grows old or stale. What he says is always modern and to the point.

He guided us through the worst tragedy in our history—for a civil war is the worst of all wars. He can help us today when the big fight in the world is not among ourselves but against the world menace of communism.

To appreciate Lincoln to the full we should realize some fine and unique things about our country—things which we should not take for granted—which were recently sum-

marized by Professor Commager as follows: That we are now the oldest republic, the oldest federal system with the oldest written constitution in the world; that we have avoided a violent revolution from the right or from the left; that we have developed majority rule without impairing the rights of minorities; that we have remained moral without a state church; that we have established a system of universal education without the vulgarization of culture; that we have become a world power without imposing our will on other people; and that we have remained a single nation under one flag instead of fragmenting into a multiplicity of separate—and quarreling—nationalisms.

None of these achievements would have been possible without the leadership of Abraham Lincoln. It is due to him that we are one country today under one flag. It is thus due to him—and to those who laid down their lives at his call—that our country is today the great hope of lovers of freedom all over the world. It is therefore our duty to remember that by our actions, in Lincoln's own words, "We shall nobly save or meanly lose the last, best hope of earth."

While Lincoln's wisdom and nobility of spirit are timeless and as fresh today as the day he expressed them, the march of science has not stood still. It was Lincoln who said that "all the armies of Europe, Asia and Africa combined, with all the treasure of the earth (our own excepted) in their military chest, with a Bonaparte for a commander, could not by force take a drink from the Ohio or make a track on the Blue Ridge in a trial of a thousand years."

That eventually today is fortunately still highly unlikely. But we must recognize what modern science means—that for the first time since the Civil War was fought, a future war would be brought to our own soil. Ever since the Civil War our wars were all fought outside of the United States. If the tragedy of another war should occur, we in the United States would be the prime target.

National defense and foreign policy have always been the prime responsibility of the President, and this has never been truer than it is today. In 2 years as a member of the President's Cabinet and as the United States representative to the United Nations, I have been able to see at first hand how the President has discharged this duty, and I would like tonight to review briefly with you just 20 of the most important things that have happened in that time.

1. Last spring, world communism, having moved in on Guatemala, was getting ready for aggression into other parts of Central America. We discovered a 2,000-ton shipload of Communist arms being sneaked into Guatemala from Communist Poland. Then anti-Communist Guatemalans, exiled in Honduras, started a revolt to free their country from Soviet Communist domination.

Immediately, Moscow went into action. They asked for a session of the United Nations Security Council. You could see the close teamwork between the Soviets and their Communist Guatemalan stooges. They tried to get the Security Council to send so-called peace observers to Guatemala—with Communists among them, of course—the idea being to stop the revolt and save the pro-Communist regime. This was a bold Soviet bid to torpedo the Monroe Doctrine, and gain a decisive foothold for communism in our

hemisphere. They wanted to make the United Nations Security Council an accessory to their crime.

But we met that challenge head-on in the Security Council in New York—and we defeated it. Communism in Guatemala, as a result, went down the drain. Today Guatemala is once again securely in the free world, once again a loyal member of the Inter-American system, and the Monroe Doctrine remains intact to shield our hemisphere against any outside aggressor.

2. At Caracas, Venezuela, last March, the American Republics agreed to act together against international Communist subversion in our hemisphere, just as they would against military aggression. Thus the Monroe Doctrine has not only been preserved—it has been applied to cope with the realities of our time.

3. In Costa Rica last month a living reality was made of the provisions of the Rio Pact, the purpose of which is to maintain peace in our hemisphere by common action.

4. Moving across the Atlantic to Europe, we see today a new hope for freedom in the London agreement, which has now been ratified by the French National Assembly, on the delicate and vital problem of rearming West Germany. When the old plan for a European Defense Community was defeated we didn't sulk or despair. We moved at once with the other nations most concerned to find a new way to put German military power on the side of freedom—and to end the Franco-German division which has been called the world's worst fire hazard.

The result is the London and Paris agreements, which will give back sovereignty to West Germany, give her an army to help defend Europe, and make her a member of the North Atlantic team. What an historic achievement it will be to get France and Germany solidly together as effective partners in defending Europe against communism. Now it looks more and more certain that a major start toward that goal has been made, in spite of increasingly frantic Communist maneuvers to stop it. The tact and initiative of Secretary Dulles deserve a large share of the credit for this.

5. Another happy development in Europe is the settlement at last of the quarrel between Italy and Yugoslavia over the port of Trieste—a quarrel in which at one time the troops of both sides were almost ready to march. Italy gets the port city and the two countries divide up the outlying districts. The end of that dispute means a much more solid front against Soviet pressure in the Mediterranean. It's a new element of strength for the free world, and American diplomacy had a big hand in bringing it to pass.

Let us move to the Middle East—a vital area in the struggle with communism. For one thing, it contains the world's biggest reserves of oil—which is vital in our strategy. For another thing, it consists mainly of young nations, most of them colonies of Europe not long ago, whose people are often suspicious of the Western World. Communism would dearly love to get a foothold there. In this area we have had a whole series of successes for the cause of freedom.

6. There is a new defense pact between Pakistan on the east and Turkey on the west. Other nations may join that soon, implementing what Secretary Dulles calls the

"northern tier" concept to shield the Middle East from Soviet aggression.

7. We have new agreements with Pakistan and Iraq to strengthen their defense.

8. The knotty problem of how Iran is to sell her oil in the world has at last been solved and thus a chance for Soviet pressure and manipulation has been removed.

9. Then in Egypt, with constant American encouragement, an agreement was reached with Britain last year on defense of the Suez Canal—which means an end to still another trouble spot where, only a short time ago, both sides were getting ready to fight it out if necessary.

10. And meanwhile, in the United Nations Security Council and elsewhere, we have worked successfully with both Israel and the Arab countries to see that the peace there is not broken, although all the problems have certainly not been solved. So in the Middle East, which was a dangerously weak link in our defense against communism 2 years ago, we have now a very promising sight—the growth of a strong international structure in which freedom can develop and defend itself.

In the Far East we must cope with an aggressive communism which is still pushing outward from the Soviet Union and Communist China and with the attitude of countries like India which insist that their foreign policy can be impartial between communism and freedom.

11. The first gain in the Orient came when we ended the Korean fighting and stopped communism dead in its tracks. We have as a result been able to take four American divisions out of Korea and put them in our strategic reserve for use wherever they may be needed.

12. We gave effect to the priceless principle that no Chinese or Korean prisoner of war would have to go back to communism against his will, as a result of which the overwhelming proportion of these prisoners, nearly 50,000 of them, are free men today.

13. There has been no final peace settlement in Korea, because the Communists don't want one, as they proved at Geneva this spring, where they frustrated all Korean proposals and vilified the United Nations at the same time. But we have kept the record straight, and in the United Nations we made sure that in any peace negotiations on Korea the Soviet Union would appear where it belongs—on the Communist side of the table and not as a neutral.

14. In Indochina settlement has been reached to end the bloodshed. It was a sad settlement in many ways, but it was certainly better than continuing a war which couldn't be won without American divisions doing the fighting—and we did not want to send our young manhood to fight in those mountains and rice paddies. The situation in that area is still perilous, and is one which cannot be successfully dealt with exclusively by military methods. We are not just standing by wringing our hands; we are over there helping free Vietnam, Laos, and Cambodia to get on their own feet and stay free.

15. For the first time we have the beginning of a strong free Asia organization in the Manila Pact, which was signed by eight nations last September. The area it defends stretches from Pakistan to the Philippines. This pact is directed against both armed attack and Communist subversion, and it contains an historic declaration for freedom for the peoples of the Asian and Pacific area.

United States leadership played a tremendous part in that historic Manila Pact. In this treaty plus the new defense treaties with free Korea and free China, we have an emerging pattern of real defense for freedom in Asia. But we have more than that. We have a new start toward a community of Asian nations which stand on their own feet. These nations are seeing more and more clearly that the old colonial-

ism to which they are accustomed is giving way to a new age of freedom, and that the great threat to that new age is not from Europe and the West but from the new Communist colonial system that seeks to enslave people under false banners of so-called liberation.

16. Communist China has been put on notice by the President, with the backing of the Congress, that we will not tolerate aggression against Formosa and the Pescadores. This courageous and timely move is our best insurance against a full-scale war in that area.

17. The United Nations General Assembly, by a vote of 47 to 5 last December, condemned Red China's imprisonment of 11 American fliers on false charges, and took the responsibility to seek release of all United Nations Command prisoners still held by the Communists in violation of the Korean armistice agreement. Thus the United Nations has shown that it believes in the elemental decencies and seeks to look after its own. I believe we will get our men back, and I believe that the General Assembly's action will have been a big step in that direction.

18. Communist China's attempts to get into various United Nations bodies have been voted down every time; a total of 25 times since I have been here.

19. Americans employed by the United Nations have been screened in accordance with FBI procedures for the good and sufficient reason that where there are so many good Americans to choose from, there is no excuse whatever for employing one single American Communist.

20. The high point at the United Nations was President Eisenhower's dramatic plan to set up a world pool of fissionable materials so that humanity may receive the great benefits of the peacetime uses of atomic energy. This plan had seized the imagination of the world so strongly that even the Soviet Union didn't dare vote "no"—and the resolution endorsing it passed the General Assembly by 60 to 0.

To sum up—in 2 years, faced with the unrelenting pressure of communism, we have had bold forward steps and great diplomatic successes for the cause of freedom in every quarter of the globe. We have seen success in Guatemala and Costa Rica, in getting a real start on bringing West Germany into the North Atlantic Organization, in settling the Trieste problem, in the defense pacts involving Pakistan, Turkey, and Iraq, in the Iranian oil settlement, in Egypt, in Korea, in the Southeast Asia pact, and at the United Nations—particularly in the world acclaim given to the President's proposal for the peacetime uses of atomic energy.

I often think that the ending of that dreadful war in Korea in itself is enough to cause us to be thankful—even if all these other good things had not been accomplished. Just the thought that our boys are not being killed any more makes me grateful.

It all adds up to this—that for the first time since World War II there is no large-scale fighting going on anywhere in the world. Of course the situation is precarious and peace is not established on a durable basis. But for the first time we and other nations, instead of rushing from one emergency to another, have begun to settle down confidently to the long haul to defend and strengthen peace and freedom.

It is curious in the face of this record to hear voices raised which complain that the United States world position has somehow weakened in the past 2 years. Hearing these voices calls to mind the fact that we have in the State Department and in the White House two Americans who, leaving out of account all their other qualifications, have been thinking about and dealing with America's relationship to the outside world all of their lives.

John Foster Dulles has been working actively in the foreign affairs field since he was a very young man. From the time he was in college his ambition was to become Secretary of State and he has trained himself deliberately for this work. As one of his close associates, I appreciate this opportunity to pay tribute to his wisdom, his cleverness, his patience, and the deep-seated goodness of his nature.

Dwight D. Eisenhower, as a young Army officer in the Philippines, was dealing at the very highest level with the Philippine leaders of those days and with others on matters which directly affected the United States world position. Later, in World War II and again in the NATO command, as Cardinal Spellman said recently, the American people entrusted him with our two most precious possessions—our liberties and our youth. His success in those great tasks depended directly on his understanding of foreign relations and his insight into the minds of foreign peoples.

Similar thoughts come to mind in connection with national defense. At the present time we have more air groups ready for action than we have ever had before in time of peace—real air groups, not paper ones. We have better than 121 combat-ready air groups today. In 1952 there were 103 groups, but many of them were not equipped with modern aircraft and would not have been effective in combat.

Thanks to the fact that the American people had the good judgment to put our foremost military expert in the White House, we have eliminated much waste from the armed services, yet we are actually getting more defense.

The newspaperman, Holmes Alexander, wrote some paragraphs recently about our President which I would like to quote:

"On a short-term, day-to-day basis, America's best natural resource for 1955 is Dwight David Eisenhower, the good gray rock to which, as it sometimes seems, the Nation's sanity is anchored."

"Only a moderate, as he calls himself politically, could have tapered us off the Fair Deal jag; only a public hero with a puritanical conscience would have accepted the popular power now in one man's hands without abusing it; only a five-star military officer would have the nerve and the knowledge to reduce the Armed Forces—as Ike intends to keep on doing—in the face of real danger and of phony danger—the latter raised like a goblin's head by certain Congress people, the military columnists, the munitions makers, and the Pentagon chiefs, who year after year lobby for more men and more armaments."

"But the vein of gold in this Eisenhower lode is not his politics, experience, or expert knowledge; it's his personal character."

Mr. Chairman, I conclude.

We believe in our wonderful two-party system because competition in politics makes for better politics just as competition in business makes for better business. We in particular are proud of the Republican record of service. But modern Americans do not believe that the party system should be carried to the point where it destroys the national unity.

The big fight today is not between Republicans and Democrats.

In this dangerous world the big fight is between us Americans with our allies who love freedom on the one side and, on the other side, the Communist rulers who would destroy us. This was true when Stalin ruled in Moscow; it was true when Malenkov succeeded him; it is true today; and prudence demands that we expect it to be true in the future.

This means unity at home.

But it does not mean monolithic uniformity. It does not mean the suppression of honest disagreement. It means that our disagreements must be sincere and not in-

spired by political motives. It means that our opinions, whether we agree or not, must be inspired by what Lincoln in his first inaugural address called "the better angels of our nature."

When we see the kind of administration which the President is giving this country—its enlightenment, its generosity, its fundamental decency, and its effectiveness in behalf of our people in our domestic affairs; when we consider its skill, its prudence, and its vision in leading us in the dreadful struggle brought on by world communism, it is natural for us to exclaim that we would like to see Dwight D. Eisenhower as our President without any limit as to time. I predict that the people will not allow him to retire and will surely insist on his serving for another 4 years. In bringing about peace and at the same time preserving prosperity, he has already done what many thought was impossible. The American people know when they have something good, and they have that something good in Dwight Eisenhower.

Just as Lincoln, whose name we revere tonight, was the right man for the tragic crisis of the Civil War, so is President Eisenhower the man to lead us in this perilous struggle with world communism.

The Role of the Military in American Foreign Policy

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1955

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech which I delivered at the commissioning exercises of the 12th officer candidate class, United States Marine Corps, Quantico, Va., on February 19, 1955. The address is entitled "The Role of the Military in American Foreign Policy."

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

THE ROLE OF THE MILITARY IN AMERICAN FOREIGN POLICY

(Address of Senator MIKE MANSFIELD, of Montana)

An elected official can hardly expect universal approval of his position on every issue. Almost invariably some people will agree with him and others will disagree, sometimes very vehemently. And I must say that a Member of Congress pricked by public criticism bleeds at least as profusely as any other human being.

In a decade and a half of service in Congress, I have been on sick call for this reason on a number of occasions. I have learned to accept occasional wounds as a part of my job, as an occupational hazard.

There is one issue, however, which I have repeatedly tackled in Congress and have repeatedly come out, not licking my wounds but miraculously unscathed. That issue is the preservation of the integrity of the Marine Corps.

While Members of Congress must out of conviction sometimes run counter to the immediate flow of public opinion, it is not a very pleasant experience. It is always preferable, if you can do so honestly, to find yourself flowing downstream with public sentiment rather than struggling upstream, half-drowned, against it.

Beyond the natural gratification which comes to an elected official when he finds his own heart and the public pulse beating in perfect unison—beyond that, I have a special pleasure in fighting for the integrity of the corps. As a marine, I take personal pride in the marines. Of course, I also take personal pride in the Army and the Navy, as an ex-member of each of those services. But I think I may be pardoned if I tend to be a little prouder of my marine background. I was only a private in the Army. I was only a seaman, second class, in the Navy. But with that same perceptiveness which prompted the Marine Corps to recognize your qualities of leadership the corps also recognized mine. I emerged from my hitch in the Marines as a Pfc.

That distinction, I realize, does not, in itself, qualify me to speak to you on the Role of the Military in American Foreign Policy. Nevertheless, I feel that the subject is of such great importance that it should be considered not only by privates—buck or first class—and Senators, but by thoughtful Americans throughout the Nation. I think it is an especially pertinent one for you men who are graduating today into command positions in the corps. The Marines have traditionally operated with high effectiveness as a principal military instrument of this Nation's foreign policy during peacetime just as they have more than once proved their tremendous capabilities when the peace has been violated.

One explanation for this outstanding service may well be that the corps has always maintained a strict professional regard for the American principle of civilian control of military power. That principle, as I am sure you have been taught, is absolutely essential for the proper functioning of our system of government. It is not enough that Congress determines appropriations and organizational arrangements, and that the President and his civilian assistants direct the administrative management of the military. The American concept goes further. It requires that the military shall only be used whenever, wherever, and in whatever manner the politically responsible civilian leadership shall determine, because only that leadership, through elections, can be held accountable to the people of the Nation.

In the present state of world affairs, a system of civilian control is not easily maintained. It is subject to all the stresses and strains that arise from the tense international situation. In a crisis, with the threat of world conflict ever present, it is not unnatural to turn to distinguished military leaders for guidance, to rely heavily on their judgment, and sometimes it is profitable to the nation to do so. Nevertheless, the principle of civilian control remains essential to democratic government as we know it.

Primary responsibility for the preservation of this principle rests with our civilian leadership; that leadership must be willing to assume the heavy responsibilities of decision in this dangerous world. But I think you will agree that considerable responsibility also rests with the military. They must understand and accept the limits as well as the challenges of their profession in the conduct of the Nation's affairs, particularly its foreign affairs.

Perhaps I can illustrate this point with an anecdote. During the Civil War, the story goes, certain Members of Congress left their desks in Washington and went to the battlefields in Virginia. There they insisted upon assuming the tactical command of the Union forces. After having thrown the campaign into confusion they beat a hasty retreat to Washington where they arrived mud-spattered, trembling, and presumably chastised.

If the story is amusing, it is because it is easy to recognize the absurdity of this escapade. These Congressmen apparently assumed that their training in politics

equipped them to run the Army. They also distorted and distended the functions of their office out of all true proportion.

The moral of the story is simple enough: Congressmen ought not to assume that political training provides an automatic background for military leadership and, in military affairs, their role ought not to exceed the constitutional powers of their office.

Let us put the shoe on the other foot. The moral is now this: Military leaders ought not to assume that military training provides an automatic background for politics, whether national or international, and they ought not in the formulation and conduct of foreign policy exceed the powers of their appointive office.

Just as the distorted behavior of the Congressmen in the Civil War could have produced tragic results as easily as humorous, so too can the distorted behavior of military leaders.

It has never been easy to draw a clear line as to the area of competence and authority of the armed services in foreign policy. Events of the past 15 years have made it even more difficult. First of all, during this period, some among us, civilian and military alike, have developed a distorted sense of the nature of what this country is trying to do in its relations with other nations and how it can most effectively go about doing it. Foreign policy is simply the course by which we attempt to provide for the safety of the Nation and the advancement of its interests in a complex and dangerous world. That is its only reason for being. To carry out our policy we require military strength but we must also bring into play nonmilitary instruments and measures to influence conditions throughout the world. Possibly it is because these nonmilitary measures are less dramatic, less newsworthy, and tend to affect us and our families less directly, that we sometimes lose our perspective and regard them as less important than military actions. Sometimes there is a tendency to view nonmilitary measures merely as supplements of our military policy, when in fact the reverse is closer to the truth.

You men need hardly be reminded of this fact. If you know the history of the corps, you know that the marines have been sent to foreign territories and to overseas bases only from time to time and only after the failure of other methods to protect American citizens and interests. In countless day-to-day situations arising in our foreign relations throughout the world the military instruments is in no way involved.

As for any large scale use of force, it is only when nonmilitary measures fail to produce situations favorable to the vital security interests of the United States, that such use may become necessary. Even then we have invoked military force only in response to aggression. That we have waited for our enemy to show beyond all shadow of doubt that he intends to strike us, rather than strike the first blow ourselves, does not mean that we are slow-witted or even patient. It means simply that we are following a fundamental American principle: that force is the final, not the first arbiter in the affairs of men and nations. Nothing has done more to toughen the moral fiber of this country than that principle. No other single factor has served to sustain our morale during the long and grueling wars which we have had to fight. Nothing has done more to turn the hearts and hopes of mankind to this Nation. And I hope the day never comes when this Nation shall use its might in any way other than for protection against the arrogant, the aggressive, and the ruthless.

The role of the military in foreign policy, then, is to provide a reserve of power to support negotiations concerning our just interests in the world and to defend those interests if they are attacked. I want to under-

line the words "reserve and support." Responsibility for determining what our interests are and when and how they are to be defended is vested in the President and his Secretary of State. The Department of Defense and other agencies of the Government, in the performance of their duties have an influence in this determination, but final responsibility cannot rest in any body other than the Department of State or the President himself.

Since the beginning of World War II, however, the role of the military in American foreign policy has assumed proportions of great magnitude. During the war the armed services inevitably became the foremost element in carrying our American policy. Since the close of those hostilities the services have continued to serve prominently in this connection, due to the nature of postwar diplomacy and developments.

The occupation of Germany and Japan, and the control of trust territories, among other things, has brought the armed services directly into foreign policy to a degree unprecedented in peacetime. To some extent, the same was true of the so-called Truman doctrine of 1947. Under the Truman Doctrine, the Armed Forces not only ran military training missions to strengthen the security of Greece and Turkey against Communist aggression, but of necessity played a significant role in the formulation of policy with respect to those countries. Subsequently, they have had an enormous influence in foreign policy in connection with NATO, mutual aid and military assistance missions in numerous countries, the Korean war, overseas bases, and treaties with nations in the western Pacific.

I think that one of the chief problems emanating from this chain of developments is that in many instances there has been a tendency to treat individual military programs and policies as separate and distinct military affairs, whereas they actually are parts of the totality of American foreign policy. Responsibility for decision making has at times been vested in military officials rather than in foreign-policy officials. In other instances there has been a failure to define and clarify lines of responsibility for policy formulation. I say this, not so much in criticism as in recognition of the fact. It is unlikely that anyone planned it that way; it has simply happened—perhaps largely because it was not planned.

The obscuring of the lines of responsibility and authority is perhaps best illustrated in the issuance of public statements by leaders of the armed services. Such statements are usually expressed in military terminology. Often, however, much of their substance is of a foreign-policy nature. Perhaps this is unavoidable in view of the complexity of the matters with which they frequently deal. One cannot always draw a clear-cut line between military and political and other factors in a given situation.

The question of rearming Germany will serve to illustrate this point, and this example finds a counterpart in practically every other major foreign policy issue with which we are confronted. There are strong military reasons for urging the rearmament of Germany and it is natural for military personnel to see the need in terms of added divisions of manpower, bases, etc. But Germany cannot be rearmed in a vacuum. Rearmament cannot be divorced from a whole range of problems concerning European unity, the fears of France, the role of Britain on the Continent, the reunification of Germany, and the maintenance of the western alliance. It seems to me, therefore, that official statements on this subject under our system of government emanate best from our foreign policy officials. They are presumably kept well informed by the Joint Chiefs of Staff with respect to the military considerations involved and they in turn are best

equipped to view such considerations and to express them publicly in terms of the totality of American interests.

I cite this example merely to illustrate the problem of defining the role of the military in American foreign policy. It is not difficult to see the principal reason for the expansion of military participation in foreign policymaking. As I mentioned earlier, the nature of wartime and postwar developments and diplomacy has required a vastly increased use of the military as an instrument of policy.

There is, however, still another factor. The military emerged from the war with great prestige, both at home and abroad, and this prestige has carried over into the postwar period. On the international scene this has led to widespread use of prominent military leaders in diplomatic capacities. At various periods since the close of World War II three of our foremost military leaders during the war have served in positions which were more political than military and which roughly corresponded to their wartime military roles—General Eisenhower as NATO commander, General MacArthur in charge of the occupation of Japan, and General Marshall as Secretary of State. Each of these distinguished military leaders had earned the respect of foreign nations, as well as the American people, through their outstanding military service. Each made an exceptional contribution in their postwar assignments.

Other military leaders have also been called upon for diplomatic or political services—Gen. Walter Bedell Smith, who served as Ambassador to the Soviet Union, Director of the Central Intelligence Agency, and Under Secretary of State, and Adm. Alan Kirk, who served as Ambassador to Belgium and Ambassador to the Soviet Union, are two leading examples. I could name two dozen other former generals and admirals now holding civilian positions in the Federal Government. Countless others of field grade are scattered through the civilian bureaucracies of the Federal Government concerned with foreign affairs and international organizations.

This increased use of military leaders in position of a diplomatic or political nature, of course, has often been due not only to carryover of the military prestige of these men but also to their demonstrated ability as well as their availability for such service.

Without in any way reflecting on the capacity of any individual, I do think that the vast expansion in the employment of military personnel in both the making and carrying out of foreign policy is something to which we should give some serious thought. It raises questions not only with respect to our basic values but also with respect to our basic foreign-policy objectives, including our military security.

First, let me say something about the question which I think this trend poses concerning our basic values.

Military officers are not different from anyone else in this country. They come from representative families all over the Nation; they go to the same grade schools and high schools; they hold the same social and religious values. But the military profession exacts from those who pursue it a higher measure of self-sacrifice in the public interest than most other professions. The military as a group must accept a higher degree of training, conditioning, and disciplining toward one objective—to provide military protection for the Nation. That is as it should be and those who enter the profession, like you men today, understand these conditions.

Like any other professional group the military in their dedication to their primary objective may tend to lose sight of other national objectives. It appears to me, consequently, that when the military in fact make policy decisions or when military tech-

niques are excessively applied to carry out policies which can be more appropriately handled by civilian techniques, we are in danger of having military objectives and values emphasized at the expense of other, broader national objectives and values.

With respect to our basic foreign policy objectives, including military security itself, the expansion of the military role in foreign policy poses some more immediate dangers. Responsibility for our entire foreign policy, which is concerned with international economic, cultural, and political relations, as well as with military affairs, is vested in our Secretary of State. Our military objectives have no meaning in themselves except as they tend to further our nonmilitary objectives. If they are given an independent meaning, if they become ends in themselves, we could easily be led into costly adventures which would only add to the financial and human burdens of the American people and which might ultimately result in widespread public reaction against the military. The best way to avoid a distorted emphasis on military objectives, the way that is provided under our constitutional system, is to require that final authority in foreign policy decision making remain unequivocally with the Secretary of State under the President of the United States.

In terms of our military security specifically, as distinguished from the wider range of foreign policy, it appears to me that a further danger exists. Our military experts may weaken their professional stature through overanxious acceptance of an increased role in policy matters.

In recent years military leaders have been brought into the limelight of public discussions of foreign policy largely as a result of their well-earned public prestige. Civilian political leaders have tended to rely heavily on this prestige gained through military accomplishments in order to support policies affecting our foreign policy. Generals and admirals have been called upon or sent to testify regularly before congressional committees, not only in connection with military appropriations and matters affecting the individual services, but also in connection with broad issues of policy, such as economic assistance programs and international alliances. Military officials, moreover, frequently discuss political issues—not necessarily partisan political issues, but issues of a political nature—at public appearances and press conferences. I may say at this point that the Marine Corps has been singularly free of this type of affliction. To the best of my knowledge, the leadership of the corps has successfully resisted the temptation to assert its expertise verbally and publicly not only in military matters but over the whole range of human affairs. Only an elected official, constantly beckoned by the siren call of the press, radio, and television, can appreciate the extraordinary degree of self-control that this represents. It is one more reason for me to be proud of my personal connection with the corps.

Now what is the danger to our security inherent in the exposure of military leaders—whether sought or unsought—to the political conflicts of the day? It is this: Military leaders who are so exposed will find themselves in agreement with one side of a political issue and at odds with the other. They will be applauded by political leaders whose position they uphold and looked upon with suspicion by their opponents. When military officers become subjects of partisan politics they are no longer viewed as unbiased, objective career servants, nor will their military judgments be accepted as those of politically disinterested professional experts. From that, it is only one step to the loss of confidence in the military judgment of our military leaders.

This central problem was clearly illustrated prior to the last presidential election

when a Senator publicly called for a change in the membership of the Joint Chiefs of Staff. He had, he said lost confidence in their judgment. The new administration, moreover, subsequently did appoint new Joint Chiefs of Staff to take a new look at the military program. Surely we cannot have Republican generals and admirals for one administration and Democratic generals and admirals for the next without danger to the national security.

Now, possibly as never before, we cannot afford to play politics with our security. No political party, and no faction of a party, stands in the long run to benefit from military insecurity in this country. Certainly, the armed services as a whole do not.

In mentioning this tendency of some military officers to slip into or to be drawn into the political orbit of our system of government, I do not wish to imply that the military experts should have no contact with Congress. Certainly Congress has a right to know what our military experts think about military matters under consideration in Congress. The danger lies, not in this, but in military officers being employed as experts outside the area of their special competence in support of or in opposition to policy matters concerning which political and not military decision must be made.

There is no easy solution to this problem. Part of the answer lies in the restraint which civilian leaders must exercise to avoid placing military officials on the spot in political issues. Part of the answer must also lie in the fortitude with which military leaders resist the temptation to project themselves into nonmilitary questions.

This problem may seem remote to you men now, but within a short span of years as your careers unfold it may well become for some of you a most pressing and difficult one.

As I mentioned earlier, responsibility for maintaining the proper civilian-military balance in our system of government must be shared by both our military leaders and our civilian political leadership. The military must exercise the utmost restraint in policy matters, and our civilian leadership must be willing to take full responsibility for political decisions.

In foreign relations we need constantly to keep in mind the essential relationship of military force to total foreign policy. Military leaders as well as civilian foreign-policy officials must understand the supporting role of military force. Military resources, like other tools of foreign policy, must be available to our politically accountable civilian policymakers when, where, and under conditions prescribed by those policymakers. It is incumbent upon our policymakers that they should take full advantage of military advice; but when the time for decision-making comes, the civilian policymaker must make the choice and take full responsibility for that choice.

How can we preserve this principle and at the same time provide for our own military security? There are no hard and fast rules. There is only commonsense and a few guidelines appropriate to the present state of world affairs.

First, it is essential that we maintain the necessary military strength to meet the threat of Communist aggression.

At the same time, however, every effort should be made to use nonmilitary measures to conduct foreign policy wherever possible. They are less costly and often they can produce beneficial results that are more lasting in their effects. If we are to pursue them successfully, however, we must learn that every nonmilitary action in foreign policy is not an act of appeasement.

I would also suggest that if it becomes clear that we are tending away, rather than toward, a general war, we profit from long

years of experience and place greater reliance on the Marine Corps as the military force to support our diplomacy in foreign policy. In saying this I am fully aware of the basic need for a multiservice fighting force in modern warfare. We share, I know, a great pride in the Marines and believe them capable of extraordinary feats. But we must admit that the corps has not yet rendered the Army, Navy, and Air Force obsolete.

Nevertheless, I still believe that the proper way to fight "brush fires" in various parts of the world is not with the forces trained for general warfare, but with the specially trained self-sustaining, combat-ready forces of the Marine Corps. No other military group is so well suited to immediate service in any part of the world. No other group is more competent to keep the expenditure of force close to the requirements for achieving limited objectives.

Finally, I want to say that the most important element in the preservation of the principle of civilian control of American foreign policy is to require that our civilian foreign-policy officials take full responsibility for decisions affecting foreign policy.

Your share in maintaining the proper role of the military in foreign policy is, it seems to me, to keep in mind that every action you take in your official capacities has a bearing on the foreign relations of the Nation. You will either contribute to the safety and well-being of the United States or you will detract from it; you cannot be neutral. And if you would contribute to it, as I know you wish to do, then you will maintain always a high sense of patriotic and professional responsibility in the fulfillment of your duties. You will find your personal satisfactions in your profession by understanding your part in the perspective of the corps, in the larger perspective of the armed services, and in the perspective of the total interests of our country.

The Decade Since Yalta

EXTENSION OF REMARKS OF

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1955

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered before the Western States Meat Packers Association in San Francisco on Friday last, February 18, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR WILLIAM F. KNOWLAND BEFORE THE WESTERN STATES MEAT PACKERS ASSOCIATION, SAN FRANCISCO, FEBRUARY 18, 1955

THE DECADE SINCE YALTA

Mr. Chairman, fellow Americans, 10 years ago 2 conferences of far-reaching significance took place. The first was Yalta held from February 4 to 11, 1945. Its locale was the Crimean Peninsula within the Soviet Union.

Three great powers were represented. These were the United States of America, Great Britain, and the Soviet Union.

The second one was the United Nations Conference held in San Francisco from April 25 to June 26, 1945. At that time 50 nations signed the charter and since then 10 additional nations have done so bringing the total membership to 60.

In that same 10-year period of time to which I have referred, international communism has increased its power, its area and its population. Ten years ago at this time there were less than 200 million people behind the Communist Iron Curtain. Today over 800 million people live under the most ruthless, godless tyranny the world has ever known.

The world balance of power has been so upset that no prudent person can ignore the realities of the situation. Not only the future of this Republic but the hope for a free world of free men largely depends upon the policies that we follow and the firmness with which we and the free nations deal with future Communist aggression or threat of aggression.

Recognizing the inherent danger in further Communist conquest, the Government of the United States has undertaken a series of commitments under the North Atlantic Alliance, the ANZUS (Australia, New Zealand, United States) mutual-defense pact and mutual-defense pacts with the Republic of the Philippines, the Republic of Korea, Japan, southeast Asia, and the Republic of China.

The last two treaties were overwhelmingly ratified by the Senate this month.

The Manila pact covering southeast Asia was ratified on Tuesday, February 1, by a vote of 82 to 1, and the one with the Republic of China on Wednesday, February 9, by a vote of 64 to 6. These two ratifications were preceded by congressional action in support of the joint resolution recommended by the President authorizing him to use the Armed Forces of the United States in defense of Formosa, the Pescadores, and additional areas now in friendly hands that might be deemed important for the proper defense of the main bastion of Formosa.

In a display of national unity that should have encouraged our friends abroad, given courage to the neutrals and opened the eyes of the would-be aggressor, the House of Representatives passed the resolution by a vote of 409 to 3 and the Senate by a vote of 85 to 3.

This action had no sooner been taken and the two treaties ratified than diplomatic moves started on the part of certain Asian and European powers to bend the line of defense in the Pacific and lay the groundwork for a conference which would have all the unfortunate results of a Munich, a Yalta or a Geneva wherein the aggressor gains his objectives at the conference table.

Unfortunately, the history of these conferences has been that it is always the free world that gives up territory and surrenders human beings to the control of the Communists. It is never the other way around wherein the enslaved people gain their freedom.

It becomes pertinent, therefore, to examine the various proposals that have been made and what their implications are.

In order to deal with these matters, however, let us first examine the Yalta conference and the significance it had in the events which followed.

At Yalta without the knowledge or consent of the American people or the American Congress, an agreement was entered into which on its face violated the Atlantic Charter declaration and was fatally damaging to our friend and ally, the Republic of China.

Years later, in testimony, Alger Hiss, who had been one of the members of the American delegation stated:

"It is an accurate and not immodest statement to say that I helped formulate the Yalta agreement to some extent."

1. The agreement undercut the free Polish Government in exile and resulted in solidifying the power of the Lublin Communist Polish Government.

2. It carved out of Poland a slice of territory and gave the blessing of Great Britain

and the United States this territorial addition to the Soviet Union.

3. It provided for the use of German labor in the Soviet Union and under Kremlin practices this is closely akin to slave labor.

4. It laid the foundation for the turning over of large numbers of non-Communist Russians to the Soviet Union. Vast numbers of these were executed or sent to slave labor camps in Siberia.

5. It provided that certain areas within the Republic of China should be turned over to the Soviet Union as part of a deal to bring them into the Japanese war though they had twice before promised to come in prior to the Crimean Conference. These included the ports of Dairen and Port Arthur; gave the Soviet Union its former economic rights in the China Eastern Railroad and South Manchuria Railroad; guaranteed the status quo in outer Mongolia (the Mongolian People's Republic) and pledged that President Roosevelt "will take measures to obtain this concurrence on advice from Marshal Stalin." It did this without the knowledge or consent of the Government of the Republic of China or its President Chiang Kai-shek. It further pledged "the heads of the three great powers have agreed that these claims of the Soviet Union shall be unquestionably fulfilled after Japan had been defeated."

With sort of a grim humor the Yalta agreement protocol regarding the Far East concluded by stating:

"For its part the Soviet Union expresses its readiness to conclude with the Nationalist Government of China a pact of friendship and alliance. * * *

It was not until many months later that either the Government of China or the Congress of the United States found out the terms of this agreement. The foundation laid by this agreement has contributed greatly to the loss of freedom in Eastern Europe and in China.

Under the terms of the Yalta agreement the Soviet Union did come into the war against Japan. They came in 5 days before the Japanese surrendered and occupied Manchuria and North Korea. In North Korea they promptly laid the groundwork for a divided country and the ultimate events leading to the outbreak of the Korean war which was precipitated by their satellite North Korean Communist government.

In China, despite the Soviet pledges regarding its dealings with the Republic of China, the Soviet Union proceeded to arm and equip the Chinese Communists under the leadership of Chou En-lai and Mao Tse Tung by allowing them to take over the stocks of captured Japanese equipment estimated to have been sufficient to arm and equip 1 million men for 5 years.

While much more could be said, the sorry story of Yalta gives a clear understanding of why the Communist world wants to get us involved in another conference through which they can gain their objectives.

Now let us turn to the San Francisco United Nations conference of 10 years ago.

World War II had not yet terminated. The people of the world did not know that we were on the threshold of the atomic age though those high in government had reason to believe a vast new power that ultimately could be used for destructive or constructive purposes was soon to be unveiled.

Hopes were high everywhere that the Soviet Union, though a dictatorship, had learned the folly of aggression and of war and because of the vast help given by the free world to them they would be willing to help establish a system of international law and order to preserve the peace of the world for ourselves and our children.

Unfortunately, both during the San Francisco Conference and in the 10 years that

have followed, a vast propaganda effort has taken place to build the United Nations into something which its charter provisions could not or did not permit it to become. In the United Nations different people envisioned different things.

Some envisioned it as a mighty force of collective security that would rally most of the nations of the world to resist aggression and preserve the peace. In moments of oratorical fancy some even suggested that the fact the United Nations was in being would warrant free nations to scrap most, if not all, of their armed forces and place their reliance upon the police power of the United Nations and the collective moral persuasion of that organization. On June 25, 1950, this concept was shattered shortly after it appeared to be confirmed.

When the Communist forces crossed the 38th parallel, the United Nations Security Council promptly acted and first called upon the Communist aggressor to cease the aggression. The Communists, of course, forthwith showed they were not impressed by a United Nations resolution or the adverse moral reaction of that organization. The Security Council next called on the 60 members of that organization to give aid and support to the victim of the aggression, the Republic of Korea.

What is the record on this? After 3 years of the Korean war, of the 60 members of the United Nations, only 17 contributed a single soldier, sailor, or airman to the resistance of aggression. Outside of the United States of America, the other 16 contributed armed forces in the amount of 45,000. The United States of America alone contributed more than 450,000 and we rotated more than 1 million men through the Korean theater of war. The little Republic of Korea, which was the victim of the aggression, supplied over 600,000.

This means that of the United Nations members the United States of America supplied more than 90 percent of the manpower and better than 90 percent of the resources.

When the forces of the Republic of Korea, not being a member of the United Nations (having been kept out by a Soviet veto), are added to those of the United States, it means that our two nations alone supplied better than 95 percent of the manpower.

Does this indicate that the United Nations is an effective instrument of collective security? The answer must come back in the negative.

With that example are you prepared to risk the future of our Nation and the safety of our people upon the collective ability of the United Nations to function in the event of aggression? The answer likewise must be in the negative.

Has the time not come for a realistic appraisal of just what part the United Nations is qualified to play and to stop kidding ourselves into believing it is something it is not, and in my judgment, cannot be?

There are some who have envisioned the United Nations as a world state to which openly or clandestinely, individual nations would surrender their sovereignty. Some of the more enthusiastic proponents of this type of superstate compared the San Francisco meeting with that of our own Constitutional convention at Philadelphia. Of course, the two gatherings are not comparable for the building of a government upon which man might depend for the protection of his life, his liberty, his economic, and his intellectual freedom.

In the first place, those who met at Philadelphia spoke a common language and had a common heritage. True, they had come from different areas of the world, but they or their predecessors had come seeking a new way of life, freedom from old-world tyranny or a desire to worship God according to the dictates of their own consciences.

They had fought a common battle against the mightiest empire of that time. They had carried over from the old country the background of the Magna Carta and of representative government. They had had experience, some of it not too satisfactory, under the Articles of Confederation, and with that background, under what I believe was divine inspiration, drafted the greatest document produced by the mind and hand of man for his self-government and protection of his rights. A little more realistic understanding of the history of the nations gathered in San Francisco should have made it clear that the organization could not be and should not be considered a basis for world government.

There is no common language or common heritage. Nations which have had no experience with representative constitutional government sit on equal terms with those that have had long experience. Nations of less than 1 million have equal representation with those of over 300 million. The Soviet Union, which is perhaps the most tyrannical government since western civilization entered the modern era, sits as an equal partner with nations with long-established constitutions of law, order, and a respect of the rights of man. Now, there are those who urge the admission of Communist China which was the aggressor in the Korean war. This, together with the other Communist states, would give that system of tyranny over 800 million people that they claim to speak for.

As for me, as long as I have a voice or a vote in the Senate of the United States, I shall never consent to permitting the guarantee of freedom under our Constitution being diluted or modified directly or indirectly by any organization having in powerful policy positions nations which have no appreciation of or respect for free institutions.

Lest we be gradually edged into such a world state before we learn too late wherein we have been taken, I believe that every candidate for public office—executive, legislative, or judicial—should be asked to give a forthright view upon this great public issue.

The United Nations, if it does not destroy its moral position by actions which I shall mention, does have a function it could perform. It could be a forum wherein the views of the free world and the Communist world might be aired to the benefit of the peoples of the world, provided that there was assurance the debates in the General Assembly or the Security Council were receiving as widespread coverage behind the Iron Curtain as they do in the free nations of the world. Otherwise it becomes a vast propaganda forum for the Communist world wherein the point of view of the West does not have the equal opportunity to get to the people in the Soviet Union and its satellites because of the strict censorship those governments exercise.

Even in regard to its position of moral leadership, the United Nations has allowed itself to become seriously compromised.

Following the intervention of Communist China into the Korean war, the United Nations, after great hesitation, declared Communist China the aggressor. There had been no such hesitation when the small aggressor Communist Korea crossed the 38th parallel in June of 1950.

To close observers this seemed to indicate that there would be alacrity to pass a resolution and to act against a small aggressor, but there would be procrastination and delay in acting against a large aggressor. This seemed to be an abandonment of principle for expediency.

Later, when the evidence was conclusive that the Soviet Union was not only giving moral support to Communist aggression in Korea but was supplying MIG planes, tanks,

artillery, ammunition, and other weapons in clear violation of the United Nations resolution and the charter of the organization no steps were taken to expel the Soviet Union from the United Nations.

Later on, the official representative of the Soviet Union baldly and boldly admitted the fact that such support had been given and in effect defied the United Nations to do anything about it. They did nothing.

Every member of the United Nations knows that the terms of the Korean armistice have been violated on numerous occasions. The Neutral Nations Commission is not allowed to function in Communist North Korea as it was intended though they have complete freedom in the area of the free Republic of Korea. In violation of the terms of the armistice the Communists have brought in equipment and built military air fields.

The most flagrant violation has been the admitted holding of 15 members of the American Air Force, 11 of whom have been sentenced to prison terms of from 4 to 10 years. Under the terms of the armistice it was required that all prisoners of war who wanted to be returned should be allowed to do so.

There is strong reason to believe that there are at least several hundred additional United Nations and United States prisoners of war being held in violation of the terms of the armistice.

United Nations passed a resolution expressing its concern in this matter. The Secretary General, Mr. Hammarskjöld, made a special trip to Peking. He returned without the release of the prisoners and without any date upon which they might be expected to be returned in the future. It is apparent that they are being held for the purposes of international blackmail on the part of the Chinese Communists.

Impotent and paralyzed, the United Nations Security Council and General Assembly has taken no effective steps to enforce compliance in accordance with terms of the Korean armistice.

In the matter of the Chinese Communist aggression against the Republic of China which is a charter member of the United Nations, that Organization invited the Chinese Communists to come to New York to discuss a cease-fire.

Arrogantly, the Chinese Communists laid down terms that a victor would be expected to lay down to the vanquished—namely, that the Republic of China should be removed from the Security Council and that the Soviet Union resolution condemning the United States should be made the order of business rather than the New Zealand resolution relative to a cease-fire.

When this message was received, the United Nations again demonstrated its ineffectiveness by postponing the whole situation while some of the neutralist friends of the Soviet Union and Red China are trying through diplomatic channels to provide for a far-eastern Munich whereby the Chinese Communists will be given the key coastal islands of Quemoy and Matsu. This, of course, would be another defeat for the free world and throughout all of Asia looked upon as another victory for the Communists, comparable to that growing out of the Geneva conference wherein the Communists gained control of northern Vietnam and 15 million more human beings.

These are not pleasant facts, and there are many in this country and elsewhere who, because of the vast amount of publicity and propaganda, have gotten a distorted view of the capabilities of the United Nations Organization.

Certainly in this day and age of the airplane and the atomic weapon, a nation can no more return to isolationism than an adult can return to childhood.

It is important that we have a system of effective collective security and to demonstrate to the Communist world that there

will be no further retreats or the abandonment of free people into Communist hands.

This Nation will live up to all of its treaty obligations, and we have the right to expect that our allies will do likewise.

I have a deep conviction that the American people and those throughout the free world who understand the dangers facing us, will never again pay the price of another Yalta or another Geneva in order to buy a temporary respite from the insatiable appetite of international Communists to destroy human freedom.

The Tariff on Watches

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1955

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article in the form of an open letter, written by General of the Army Omar N. Bradley, and published in the Washington Post and Times Herald of February 15, 1955.

I believe this outstanding citizen-soldier performed an excellent piece of work in bringing to the attention of the public the raising of the tariff on watches by the President a few months ago.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MAY I SPEAK UP?

I. In a democracy, every citizen has the right to speak up and be counted. I should like to exercise this right. I have a simple reason: the belief that many people in the United States and in Switzerland largely misunderstand the defense characteristics of the crucially important watch manufacturing industry in the United States.

President Eisenhower last July announced an upward adjustment of tariffs on certain imported watch movements. Many people on both sides of the Atlantic have wondered what the United States really had in mind when this action was taken. What the Government had in mind, I suggest, was national defense and the defense of the free world—nothing more.

You should know that the President made the adjustment after two things happened: the Tariff Commission itself twice recommended the step; a special committee set up by the Office of Defense Mobilization said that the watch industry was vital and had to be preserved for defense purposes.

II. If I were speaking only as a watch company stockholder, I would encourage my company to import an even greater percentage of its watch movements from Switzerland. It can make more profit on these than it can on domestically produced watches.

But I have spent most of my life as a soldier. It is because of my lifetime interest in national defense that I am making this statement. During the two world wars we fought to preserve freedom in the Western World, I saw at first hand how vital were precision devices and precision weapons. Later, as head of the Veterans' Administration, I became more intimately aware of the precision skills required of watchmakers, through training programs which were being conducted at that time. I cannot forget that the instrumentation in a single heavy bomber require over 3,000 jeweled bearings, and that these can only be made by companies possessing watchmaking skills.

No other industry has these skills organized for production. No other industry is prepared to work to tolerances as low as millionths of an inch. No other industry can mass-produce devices sensitive to temperature variations of millionths of a degree.

Some other industry might, of course, "tool up" and train personnel for such precision work. That would take years. And that might be too long.

Only 4,000 precision watchmakers are left in America. There were 10,000 in 1948.

III. Concerned by such facts, the Office of Defense Mobilization (through its Director, Dr. Arthur S. Flemming), told its Interdepartmental Committee to make another special study. The committee was not concerned with questions of commercial competition, but with matters of defense. Among its findings were:

1. The number of workers in watchmaking plants in the United States had fallen below the level required for defense purposes.

2. Watchmaking skills cannot be stockpiled or put on a standby basis.

3. The only way to preserve such skills is to keep the watchmakers busy manufacturing watch movements.

Other committees had reached the same conclusions.

IV. Just recently, confusion has also arisen because the Treasury Department, through the Bureau of Customs, has proposed a ruling to stop the practice of "upjeweling." United States tariff on a watch movement is based on number of jewels or substitute jewels it contains; as jewel count increases, tariff rate increases. "Upjeweling" is a system by which imported watch movements, once through customs on a low-jewel low-tariff basis, can be easily and cheaply "upgraded" by the addition of more jewels—put into conveniently provided places.

Plainly this practice has the effect of evading the intent of United States Government regulations, and the President's decision. The Government simply closed this loophole. Its ruling applied to all imported watch movements—regardless of the country of origin.

This new action on upjeweling does nothing more than give effect to the President's previous conclusion that it was essential, solely for reasons of defense, to preserve a hard core of watchmaking skills in this country.

V. The Swiss are excellent watchmakers. This is demonstrated by the fact that they already have 85 percent of the United States market and 90 percent of the world market. It is relevant that last year, 1954, American production of jeweled watches shrank to 1,700,000 units (down from over 3 million in 1948), although United States citizens last year bought approximately 10,200,000 jeweled watches.

As one who believes in the principles of world trade, I applaud this. Nations which can make good products at low prices ought to have access to the world market. The world will prosper as a result. This is the basic principle behind the Government's reciprocal trade program, in which I deeply believe.

But let us also keep in mind that when Cordell Hull enunciated the principles of the reciprocal trade program more than 20 years ago, neither he nor President Roosevelt was seeking the instant abolition of all tariffs. On the contrary, the idea was that trading nations could negotiate tariffs one with another, to the mutual advantage of the nations involved. It was Cordell Hull's concept that free trade is as strong as its exceptions, and defense industries are the exception which give sense and flexibility to any reciprocal trade program.

Thus it is wholly consistent that President Eisenhower should currently be advocating extension of the reciprocal trade agreements program and, at the same time, should be mindful that watchmaking skills in this

country are vital and must be preserved for the protection of this country and our allies. In case of war, Swiss production facilities might not be available to us.

VI. In a democratic society every principle has its limitations which strengthen it. We believe in free speech, yet we limit it by our libel laws. We believe in freedom of assembly, yet we limit it by laws against riot. We believe in freedom of information, yet we guard our atomic secrets. We believe in free trade, yet we preserve our defense industries.

All Americans who value the friendship of the Swiss, and who understand also the vital nature of the United States watch industry, have reason to hope that our Government's action in this matter will be clearly understood for what it is—an action designed to preserve a crucially important defense industry and thus contribute to the defense of the free world.

OMAR N. BRADLEY.

Importance of Avoiding Waste of Manpower

EXTENSION OF REMARKS OF

HON. JAMES H. DUFF

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1955

Mr. DUFF. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two articles to do with the waste of manpower in the case of those over 40 years of age who are unable to obtain jobs, after losing their current employment. The articles appeared in the Penn Progress of January 20 and 27, 1955.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Penn Progress of January 20, 1955]

NATIONAL EQUAL EMPLOYMENT PLAN (NEEP)—WASTE OF MANPOWER SEEN IN PRESENT EMPLOYMENT PRACTICES

EDITOR'S NOTE.—The news herewith presents the first of two articles dealing with a problem which should be generally recognized as having a tremendous effect on the national economy. Though its scope extends far beyond our own limited sphere, it, nevertheless, is important to us, since it affects every individual in the so-called middle age and retirement age brackets. A Penn Township resident, who prefers to remain anonymous at this time, has thought through the problem and has come up with what we believe to be a logical, workable, solution. His plan is worth the attention and thought of every adult person in the valley, and, further, is worthy of being publicized nationally and being considered at top levels. We present first the Problem; next week, the Solution. We urge you to read both, then invite your comments.)

THE PROBLEM

For the past several decades except for the period of World War II, the economic trend in the national labor employment field has been the gradual reduction of maximum employable age limits until the situation has developed to the point where many companies will not employ any person over the age of 35, and the great majority of companies will not employ anyone over the age of 45.

This is primarily due to several factors, chief among them being the cost of com-

pany insurance and pension plans and other benefits. It has come to the point where even fiscal officers and other officials of high position are likewise forced to retire from active business life at the age of 65 regardless of their personal wishes and desires, or company need of their services. The fact that some men are old and physically infirm at 50 while others are alert, vigorous and mentally fit at 75 is completely ignored.

The average worker living in a metropolitan industrial area earning the average of \$400 to \$500 per month must, upon reaching the age of 65, retire on a pension income of approximately \$165 per month or less, depending on his marital status. In order to remain living in his home and his neighborhood among friends and relatives and retain the social and fraternal relationships of a lifetime, he is forced to seek any type of menial job to augment his income to the point where he can meet his daily living expense. If unsuccessful in obtaining such employment, he must uproot his family and move to some remote rural area where he can manage to eke out the remaining years of his life which may be many if he is vigorous and healthy.

If a worker over 40 years of age becomes unemployed, he cannot normally find employment in the field in which he is both able and experienced but must take any type of employment obtainable at a greatly reduced wage in order to exist. If unable to find such employment, he will be eventually forced to apply for relief after his life savings, insurance, and home are gone. In a relatively short period of time the one-time up-right hardworking citizen and taxpayer has become an embittered object of charity subject to ill health and mental collapse. If he can find some means of keeping alive until the age of 65 he will then become eligible for a social-security pension generally inadequate to meet his living expenses.

Government recognizes need

Government has recognized the need for social reform only to the extent of providing for those over 65. It has failed to recognize the serious weakness existing in our economic structure due to the failure to provide legislative measures which would encourage industry to ignore age in providing employment for those workers from 40 to 65. Industry cannot be forced legislatively to provide gainful employment to workers in this age bracket, but Government can by legislative means create a system of tax-credit incentives for industry whereby workers from 40 to 65 can be employed by industry solely on the basis of ability, training, experience, and physical fitness without increased cost to industry for high insurance or pension rates over that involved in hiring a younger worker for the same job. For every worker so employed, the Government stands to receive taxes from that worker, tax revenues which are not created under the present system.

When a worker becomes unemployed, the Government loses income-tax revenue based on the worker's earnings. In addition, the worker goes on unemployment compensation for a period of 26 weeks. If unemployment continues, the worker goes on relief indefinitely. If reemployed in some menial capacity, the earnings are too small to be subject to income tax and the job is generally of a temporary nature which means the worker will time and time again be on unemployment compensation and relief rolls. Every worker over 40 who becomes unemployed becomes at the same time a costly liability to the Government and his community. He becomes a burden to the younger employed workers in his immediate family who must contribute to his support. He also becomes a total loss to industry which is not only deprived of his skill, knowledge, and experience, but of his purchasing power as well which has been abruptly terminated by loss of earnings.

Destroys morale

The existing order is responsible for the damage to morale on a nationwide scale through fear—the fear of unemployment after 40 in the mind of every worker. The fear that weds every worker to his job no matter how distasteful and disliked, that creates nervous strain and tension and gradually changes a satisfied worker into an anti-social character who becomes unbearable to those around him both at work and at home and whose work suffers to the extent that it invariably leads to the disaster so greatly feared—unemployment.

The citing of an individual case means little, but multiplied by the hundreds of thousands and more constantly unemployed within the 40-to-65-year bracket, with those added who are employed on temporary or permanent low-paid jobs due to being within this age bracket spells the difference between a constantly maintained high level of employment and one subject to the greatly fluctuating peaks and valleys created through unnatural and abnormal periods of depression, recovery, inflation, and boom aggravated by war and threats of war. Through national indifference and Government failure to act, we suffer the latter.

It is evident the entire approach to national economic studies in the past has been made with too great attention given to factors other than cause and effect. In order for this Nation to achieve the goal of full employment, all employables within all age groups must be equally gainfully employed either in production or rendering necessary services. This goal cannot be attained until the 40-to-65-year groups of employables are proportionately integrated into the national economy as employed workers. This step can be taken by Government through legislative means without disruption of the orderly processes of the economic life of the Nation.

[From the Penn Progress of January 27, 1955]
MAXIMUM PROSPERITY SEEN IF MANPOWER IS STOPPED

(EDITOR'S NOTE.—Following is the second and concluding article dealing with the problem of present manpower wastes caused by current employment practices. Last week's article dealt with the problem, namely, that of the person in the 40-65 age group, and this week the author discusses a solution to the problem. Written by a township resident who prefers to remain anonymous at present, the national equal employment plan (NEEP) studies an American problem that is becoming more acute with each passing year, and the suggested solution is, we believe, both logical and workable. The plan is worthy of the attention of every township adult and readers' comments are invited.)

THE SOLUTION

This plan is based on the economic theory that to create and maintain a constant maximum high degree of national prosperity the following basic conditions must be met:

1. Every worker must be equally considered for employment principally on the basis of ability, training, experience, and physical fitness to perform required duties.
2. Every worker must be permitted to continue working until the age of 75 if he is physically able and mentally competent and desires to do so, instead of being compelled to retire at the age of 65.
3. Every worker must be able to obtain reemployment in his chosen trade or profession regardless of age.
4. Every worker must be engaged in the production of goods or the performance of necessary services, subject only to control of the natural law of supply and demand.
5. No artificial controls shall be applied to the national economy which tend to limit, unnaturally inflate, or otherwise disturb public purchasing-power volume.

These basic conditions are the only firm foundation upon which a rich and full na-

tional economy can be developed. The elimination of older workers by making reemployment difficult if not impossible for them has been tried, and it has not worked. Compulsory retirement for workers at the age of 65 has been tried—and it has not worked. We have tried reducing purchasing power volume by forcing workers from an income of \$400 to \$165 per month—and it has not worked. We forced out older workers to make room for younger workers and incidentally reducing purchasing power at the same time, and then wondered why jobs dropped off. We have tried reducing each worker's output while raising costs of his production, and it still does not work. We hear mention of lower retirement age, next 60, then 55, eventually 50, or less. Mention has also been made of a 35-hour week, and of a 30-hour week. The course of this line of reasoning has been run. It is time to re-examine our economic position, then do something about it. The purpose of this plan is to do something about it.

Legislative changes are necessary which would be relatively simple to put into effect. Their purpose would be to provide tax credit incentives to industry which would be determined on the basis of a percentage of the annual wages of all workers hired in the age bracket from 40 to 65, such percentages to be on a graduated scale sufficient to meet all expense incurred by employers over and above that which would have been incurred in employment of workers under 40.

By this means equalization of employment between age groups will have been accomplished without undue advantage to any particular group, full employment of all age groups will eventually be accomplished, Government will benefit by the income-tax revenue received over and above the tax credits allowed while at the same time saving large sums which otherwise would have been expended for relief, welfare, and other forms of public aid. All industry will benefit from a greatly increased and constant purchase power volume and the elimination of difficulties in the employment of skilled and experienced workers needing little if any job training.

The necessary changes are as follows:

1. Voluntary retirement at 65 with compulsory retirement at the age of 75.
2. Federal and State income-tax statutes to be amended to provide a graduated percentage table based on the employable worker's age when hired within the 40 to 65 age bracket which when used in multiplying the worker's total annual wages will provide a tax credit equal to the excess costs incurred by the employer as a result of hiring a worker in that age bracket over the cost incurred in hiring a younger worker.
3. Adequate safeguards to be provided whereby the number of employees hired within the 40-to-65-year-age bracket could not exceed a proportionate percentage of the total employees of any employer with furloughs and layoffs governed by present seniority rules and long-established practices.
4. All Government contracts to be let to contractors on the basis of adherence to this plan.

Based on an annual average wage of \$4,000, the following graduated percentage table is shown to illustrate the increasing percentages for each year of employment of a worker hired after the age of 40.

This table is shown for illustrative purposes only. The proper percentage table to be devised should provide tax credits to the employer that would offset all excess costs over the cost of employing workers under 40, with all tax credit cost to the Government absorbed by the income-tax revenues created from the wages of workers employed under this plan. As the average worker with 2 dependents earning an annual wage of \$4,000 will pay about 10 percent or \$400 in income tax, the Government would receive

income tax in excess of tax credits allowed for those workers from 41 to 55 years of age, which excess would apply against the excess of tax credits over income tax received for those workers 58 to 75 years of age.

According to the Census Bureau, the number of persons 45 or over in 1953 was approximately 45 million, or approximately 29 percent of the total population of the country. It is estimated this total will increase to 63 million in 1975 and will then constitute one-half of the total population over 20 years of age. Estimated on the most conservative basis, of the more than 45 million persons now 45 or over, more than 45 percent are workers and of the workers at least 10 percent or approximately 2 million are either constantly unemployed, retired but willing and able to work, or employed on low-paying jobs of menial nature. If by means of this plan, the latter could be returned to productive employment in a freely competitive labor market uninhibited by an age complex, they would earn in excess of 8 billion based on an average annual wage of \$4,000. These wages would create over \$800 million in income-tax revenues and over \$7 billion would flow into purchasing power. The savings to the Government in unemployment, welfare, and public-relief costs would be huge, as well as the large reduction in old-age and survivors insurance payments under the social security system due to workers continuing to work after reaching the age of 65. Large savings would accrue to the employers pension funds due to workers continuing to work after reaching 65.

The effect of this plan would not limit job opportunities for workers under the age of 40 but would tend to create more jobs, both for trained and semi-trained workers seeking reemployment or advancement as well as young untrained workers entering industry, through the constantly increasing volume of purchasing power created by full employment of all workers.

The goal of this proposal is to arouse public interest, discussion and debate, and concerted action in the effort to better an economic condition dangerous to our national welfare and detrimental to the mental happiness and physical and financial well-being of a large and important section of our entire population.

It is realized that giving voice to these thoughts is like the small weak voice of one crying out in the wilderness, but in the knowledge that all things spring from humble beginnings, the belief that if brought to public notice remedial action will inevitably result, and the hope others will join in this service in the public interest—these words are written.

Worker's age	Percent	Tax credit
41	2	\$80
42	2½	100
43	3	120

Training a Modern Army

EXTENSION OF REMARKS OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1955

Mr. MARTIN of Pennsylvania. Mr. President, we want to keep America strong. We must be able to defend against its enemies, both foreign and domestic.

An adequate Navy, Air Force, and Army, are necessary for our defense. We must maintain our Armed Forces economically, but consistent with adequate protection.

The training of a soldier, by reason of mechanization, has become very complex, and requires much training of the individual. It is expensive to train men, and, therefore, they should remain in the service as long as possible.

Men should be encouraged to stay in the Army by adequate pay and other perquisites. We must have a competent Organized Reserve. To be effective, the reserve must have personnel. In order that we may have a proper defense, universal military training should be immediately put into effect.

Gen. L. V. Hightower, on February 5, at the Shoreham Hotel, delivered a most comprehensive address to the Pennsylvania College Alumni Association on the training of a modern army. It should be read by every American. I ask unanimous consent that his address be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the Record, as follows:

TRAINING A MODERN ARMY

(Address by Brig. Gen. L. V. Hightower before the All-Pennsylvania College Alumni Association of Washington, D. C., February 5, 1955)

Training the modern Army is a complex job. It is growing more complex as the machines of war become more technical because machines must be man's servants, not his masters. There will never be a machine that has courage, or that understands why it is fighting. The machine with torn innards cannot, like wounded men, give forth that last ton of energy, that determination to fight and to carry on against all odds. The machine cannot provide inspiring leadership. The Army trains men as warriors, warrior-technicians, and leaders. Modern warfare requires that fighting men be better trained in many more skills than has obtained in the past. Beyond the physical, technical, and manual aspects of training there lies the urgent and continuing need to train and steel men's minds for the potential impact of enemy atomic weapons and enemy psychological methods so that fighting men, and not mere survivors, will emerge. The Army now trains for two types of warfare—the atomic and the nonatomic. This training effort is multisided and it must be geared to constantly changing military needs. It must also be maintained in proper balance. The system must train men to meet all possible conditions and environments of man—and man's greatest test—war itself.

FACTORS

But there are obstacles and limitations. The Army acknowledges them as factors to be reckoned with and overcome.

First there is time. This is a factor that money cannot purchase. For example, the Army's task is magnified under present conditions where our citizen soldiers are inducted for a 2-year period. Approximately 25 percent of the enlisted strength of the Army on 30 June 1955 will terminate their service in the fiscal year to follow. Replacements for total enlisted losses through the year will be about 367,400 of which 240,000 will be untrained input, representing approximately 26 percent of the end enlisted strength authorized the Army for the end of fiscal year 1956. Inasmuch as the technical requirements of the Army are greater than ever before, and the time factor is a pressing one—the Army must select its men for the various career fields in terms of educational qualifications for certain tasks that require rapid absorption and application of knowledge and skills. The Army must utilize the men available, to the best possible advantage. Measured in broad terms in 1954, slightly less than one quarter of all enlisted men were eighth grade level or below. Another quarter had some high school training. Thus 50 percent were below high school graduate level in educational background. Some 35 percent were high school graduates, but only 5 percent were college graduates, the remaining 10 percent having had some college training.

FIGHTER AND WARRIOR-TECHNICIAN

The task is first to train all of these men as fighting soldiers. This is done in 8 weeks of concentrated, rugged training. Following this, every soldier is given another 8 weeks of training designed to fit him for a specific role such as infantryman, tank crew member, radio operator, artillery gunner, clerk, or cook.

Here many men are selected for training in the more specialized skills and techniques. The bulk of the men join various type units after 16 weeks of individual training. However, this 16 weeks of training only qualifies the soldier to join a unit as a team member, but the team or unit has then to be trained. Thus the soldier enters the unit to join in unit training which has two categories: basic unit and advanced unit. Only upon completion of the latter phase, and subsequent field tests and maneuvers under simulated combat conditions, is the unit deemed ready for combat. It is in the category of unit training, or on-the-job training, that the Army finally qualifies the bulk of its men. This requires positive leadership day in and day out. The specialists may be troop trained or school trained only after they have qualified as basic soldiers.

There is a multiplicity of jobs for which men must be trained. This is no longer the army of riflemen, cannoners, cooks, and clerks alone. The artillery gunner of World War II, while he might have served any one of several caliber weapons, must now specialize to serve the 280-millimeter atomic cannon, the Honest John rocket, the Nike guided missile, the Skysweeper antiaircraft gun, the Corporal guided missile, or any one of several types of self-propelled artillery weapons. Even the mortar battalion now embraces its own radar.

The turret of an M48 tank is almost as laden with dials, instruments, devices, and switches as the fighter plane.

The front driver of the 280-millimeter atomic cannon communicates with the rear driver over an intercom set for the simple purposes of transport and directional coordination alone.

MULTIPLICITY OF OCCUPATIONAL TASKS

Within the Army there are, for enlisted men alone, 60 occupational groups within which there are 350 occupational tasks and specialties. This has numbered as high as 570 military occupational specialties under a less simplified occupational designation

(MOS) system. These occupational groups cover such functions as ammunition, armaments maintenance, tanks, artillery, automotive maintenance, chemical, communications, electronics, engineering finance, infantry mapping, medical, military intelligence, personnel and administration, quartermaster scientific services, supply, motor transport, etc. The occupational specialties begin with such combat tasks as tank gunner, infantry leader, and they range through cartographer, mess steward, helicopter mechanic, rocket artillery chief, parachute packer, radar chief, cryptographic supervisor, guided-missile specialists, and atomic-weapons specialists.

It is in the latter fields of endeavor that school training reaches its greatest length. For a guided-missile fire-control maintenance specialist for NIKE it requires 38 weeks of school training alone. To enter this training a soldier must be at least a high-school graduate. A guided-missile electronics maintenance specialist for the same weapon requires better than one-half year of school training. In the field of guided missiles a soldier can spend up to 1 year in training before he joins his unit. The Army constantly seeks to shorten these training periods, but as weapons advance so does their complexity and machinery. The Army must gain return in on-the-job performance from its training investment in each soldier.

However, the soldier is enlisted for a definite period, be he Regular or non-Regular, and at the expiration of his service he can exercise his option to remain in or leave the Army.

EXTREME LENGTHS OF TRAINING

This introduces another factor that must be seriously considered. Many soldiers trained as specialists become highly qualified in a skill or task that often has a counterpart in civil life. This is particularly true in many of those fields which require lengthy periods of training, such as electronics. Accordingly, the Army comes in competition with industry and, as a matter of fact, solves to a degree some of its personnel problems. Inasmuch as civilian jobs pay better than the military, many men in whom the Army has invested great time, money, and training do leave the Army, and replacements must be retrained to fill the vacancies. This requires detailed advanced planning based on experienced attrition rates to insure that the projected specialist requirements of the Army are met.

THE ARMY METHOD OF TRAINING

What then are the Army's training methods to meet its requirements? Our training is based essentially on the explanation, demonstration, application, test and critique methods—given in that sequence. We place a great deal of reliance on the demonstration—followed immediately by student application. The soldier is obliged to work and to concentrate physically and mentally on the radio, machine, weapon, or materiel at hand. He does receive adequate instruction in theory, complemented by application of the theory to practice. In view of the importance which the Army attaches to the demonstration and application phases of instruction, we require training aids in great abundance—both the device and graphics type.

Tank turrets, motors, missiles, and other materiel must be cut apart to permit the maximum number to gain intimate knowledge of the complex parts to facilitate the accomplishment of training in the minimum practicable period of time.

The ratio of men per piece of equipment is carefully measured to insure adequate active student participation.

THE ARMY SCHOOL SYSTEM

To train its leaders and its specialists the Army has four categories of schools: (1) The specialist schools; (2) the Army general

school; (3) the branch schools; (4) the service colleges.

An officer who attends all career schools spends a total of 3.2 years of a 30-year career in school. However, the average officer education is limited to graduation from the basic and the advanced classes of his branch school and the General Staff College—a total of from 1 to 2 years. During fiscal year 1955 a total of 199,316 officers and enlisted men will receive resident training under this system (including training at civilian facilities). They will average 13 weeks instruction per individual. An additional 100,000 will participate in the Army extension course program. As of August 1954 the Army's school system utilized 64,669 supporting personnel including 15,304 school troops. A total of over 500 school courses are taught under this school system which embraces 34 schools.

As the confusion of World War II cleared, those who had been most closely involved in its conduct, again found time for reflective inventory of the actual accomplishments. The United States Army's astounding contribution to the Allied cause probably was summarized best by Winston Churchill who in 1946 paid the following tribute to the preparedness and the flexibility of the United States system of training:

"There have been many occasions when a powerful state has wished to raise great armies, and with money and time, and discipline and loyalty that can be accomplished. Nevertheless, the rate at which the small American Army of only a few hundred thousand men, not long before the war, created the mighty force of millions of soldiers, is a wonder of military history.

"To create great armies is one thing; to lead them and to handle them is another. It remains to me a mystery as yet unexplained how the very small staffs which the United States kept during the years of peace were able not only to build up the Army and the Air Force units, but also to find the leaders and vast staffs capable of handling enormous masses and of moving them faster and farther than masses have ever been moved in war before."

As if in direct reply to Mr. Churchill's mystery, two Chiefs of Staff gave due credit to the Army school system for its role in the achievement.

The Army school system represents the educational progress of over 150 years of constructive evolution. Today the system provides an educational device sufficiently flexible to meet the changing technologies of warfare and world power relationships while at the same time maintaining emphasis on timeless principles of individual competence, leadership, and related soldierly qualities which must always form the ultimate resource in our national defense. As now organized, the system constitutes a vital element of the United States Army mobilization base.

TRAINING OF FOREIGN MILITARY

As a sidelight, it should be noted that since the inception of mutual defense assistance program in fiscal year 1950 over 12,000 foreign nationals have been trained in United States Army service schools and installations. During this year 40 countries will participate. In addition to the MDAP training program, the Army is training about 700 personnel of other friendly foreign countries. The Army also maintains an exchange system with the armies of several foreign nations.

EDUCATIONAL TRAINING OFFERED BY THE ARMY

Outside of military training, the Army's educational services provide mandatory grade-school education for all enlisted men who lack fourth grade level training. Last year an Army course of 8 weeks of English language training was instituted for Puerto Ricans upon induction. Off-duty educa-

tional training is provided from fifth grade to college graduation. In addition, the United States Armed Forces Institute provides civil education extension courses and self study facilities for all enlisted men and officers.

The Army enjoys a close relationship with civil educational institutions and derives much assistance from them in many fields of mutual endeavor and interest.

SUMMARY

The Army seeks to do more than just train a fighter, it endeavors to train Americans as better citizens to acquaint the soldier with the democracy which he represents. This is the purpose of the troop information and education program which is regularly conducted and is successful. Over the years the Army found that a great many Americans still need elementary education concerning their own country—the principles for which it stands and the position it occupies in world affairs. We would like to see this objective better accomplished before an individual enters the Army.

The potential enemies we face have shown that war can be waged not only by fighting and destroying men's bodies, but by destroying the liberty of men's minds.

The Army recognizes with serious thought and effort the growing battle for the minds of men. It is reckoning with the brutal fact that its soldiers can be subjected to inhumane and unorthodox treatment if captured. The United States armed services have studied this matter and they continue to take steps in training to strengthen the individual American in uniform and the military body to which he belongs. It must be recognized, however, that the military has but a short space of time to prepare and train these men for the ordeals of war and its aftermath. By the time an American youth puts on a uniform he is in large part formed by his environment, background, church, and education. Therefore it is first incumbent upon the family, the community, the church, the teachers, and the educators to provide the Nation's youth with mental, moral, and religious strength and foundation to fit him for the age he faces.

The decisive element of victory in war is still the trained fighting man who defeats the enemy's ground fighters, seizes land and holds it. These are the climactic actions that cause the enemy as a national entity to decide resistance cannot continue.

Is Ike Popular Enough To Save the GOP?

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1955

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Is Ike Popular Enough To Save the GOP?" published in the March 1955 issue of the Democratic Digest.

There being no objection, the article was ordered to be printed in the Record, as follows:

Is Ike Popular Enough To Save the GOP?

Is President Eisenhower as popular as ever?

This question is asked frequently these days. It can be answered in any number of ways, depending upon one's outlook, prejudice, wish, or hope. But in Washington many are impressed by the observation of one veteran political writer who says:

"In 1952 most everybody liked Ike. The American people had a great regard for him as a general. In addition, a majority of the people not only liked him but were ready to take a chance on him as Chief Executive, despite their well-founded misgivings about military Presidents.

"Today most people still like Eisenhower and still admire him for his military contributions, but it is more and more apparent that a large number of fair-minded people—Republicans as well as Democrats—have come to the reluctant realization that a great general has not turned into a great President."

Generally speaking, this observation is concurred in by Democratic leaders, but it is not shared by Republican spokesmen. The difference comes down to this:

The Democrats believe that popular esteem for Eisenhower the hero and war leader will not blind the public to his failures as a civil and political leader. The Democrats believe the public is mature enough to make the vital distinction.

On the other hand, the Republicans are betting that Ike can win on personal popularity alone, without regard to his record in the White House. In short, they do not think the average citizen is well informed enough to make the distinction.

There is at least some factual support for the Democratic belief, judging from recent public opinion polls. Certainly in Ike's case, popularity has not equaled voting pull. The proportion of people who tell the pollsters that the President is doing a good job consistently stands well above the percentage who say they would vote for him.

In 1952, for example, he pulled 55 percent of the vote. There was little reason to expect any material change in sentiment by February 1953, when he had been in office 1 month, yet by then some 68 percent of the people thought he was doing a good job.

In September 1954, only 53 percent of the persons polled said they would then vote for Ike, but in the same month his popularity rating stood at 65 percent.

This difference is accounted for by people who think Eisenhower is doing well enough, but who, at the same time, apparently think someone else could do better.

The polls show that public approval of Eisenhower between his first month in office and the time of the 1954 elections declined by over 15 percent. If a decline of similar proportions were to take place in the actual vote for General Eisenhower in 1956, he would now receive only 46 percent of the vote in an election, which would amount to a severe defeat.

The same conclusion is shown by a December poll of Minnesota voters published by the Minneapolis Tribune. It also shows only a 46 percent vote for Ike (in this case as of December). Minnesota, incidentally, also cast about 55 percent of its vote for Ike in 1952. An even larger proportion of Minnesotans, some 66 percent, thought in December that an election at that time would turn the White House over to the Democrats.

Independent Senator Monse, once an Ike man himself, seems to agree. He told a TV audience in December that Democrats could take the White House in 1956.

If the Democratic view is right, and Eisenhower is defeated in 1956, it will not be the first time that the public, either here or abroad, has retired a very popular public figure when it felt he was no longer the man for the job.

After the last war, for instance, the world was surprised when England voted Prime Minister Churchill out of office. But this was not a case of a hero suddenly losing his popularity. Not at all. The English voters simply decided their war leader was not the best man to lead them through the postwar transition period, and they so voted. Even

after the election, however, Churchill continued to enjoy the affections of his people, and he still does today. Indeed, when conditions changed, he was returned to office.

Another example is offered by genial President William Howard Taft. He was a popular man in and out of office. But he was not a strong executive. He was unable to unite his party either while he was in office or at election time. The voters never stopped liking him, but they did not vote for him for reelection in 1912. He got less than 25 percent of the popular vote, a poor showing for the regular Republican candidate even when the vote was split with both the Democratic and the Bull Moose Parties.

Pollsters' figures are not to be taken too seriously, but most political writers do agree that the drop in Eisenhower's public approval seems to stem from a growing feeling that Ike does not have the gift for political leadership, even to leading his own party resolutely.

That is painfully evident to Republican politicians who sense the void in which they are operating, a kind of free-wheeling atmosphere which gives them the leeway to feud more with each other between elections than they do with Democrats.

The depth of dissident Republican feeling against Eisenhower is made plain almost daily by the Old Guard columnists. George Sokolsky, for one, has written at length about the "many dissatisfied Republicans" seeking a conservative party. They are "that large element of the American people which has never become accustomed to the New Deal now pervading both parties."

Sokolsky is convinced that Democrats won the Congress in November only because large numbers of these people refused to vote for Republican New Deal candidates and thereby cut into Republican strength.

"How large that conservative element is numerically, no one can say," Sokolsky complained recently, "because it has never had the opportunity to register its strength in a presidential election since 1932."

David Lawrence's fault finding with the administration is equally outspoken. During last fall's campaign he criticized the Eisenhower managers who thought they could win while alienating many of the members of the Republican Party. There seems to be little thought about how to unite the party and considerable thought on how to keep it disunited.

The group for whom these men are speaking are at odds with the so-called moderate progressive Republicans on almost every issue facing the country, and the rift, instead of healing, is getting deeper all the time.

The McCarthy censure vote split the party down the middle, 24 for McCarthy, 22 against. In other words, had only Republicans voted, McCarthy would not have been censured.

Later McCarthy took exception to the President's call for a progressive moderate policy. "Just what did the President mean?" he asked. "I think he has in mind the re-making of the Republican Party. I am not going to discuss at this time the form of the mold he is proposing for the Republican Party, but I do not believe it is shaped in accord with the policies and objectives which have long guided followers of Republican Party principles."

What will all this mean in 1956, when it is time to choose a President?

According to Republican Congressman PETER FREELINGHUYSEN, extreme right-wing forces in the Republican Party will actually try to defeat Eisenhower in 1956. A New Jerseyite himself, FREELINGHUYSEN was led to this conclusion by right-wing efforts to sabotage Republican Senator CASE's election in New Jersey last November. FREELINGHUYSEN called the anti-Case movement a disguised attack on President Eisenhower and the tip-off to probable old-guard tactics in 1956.

The New York Times seconded this when it reported that there were those who believed that Senator McCARTHY and some of his followers would prefer defeat in 1956 to a victory with Eisenhower, for the reason that the most likely survivors of the defeat would be the rightwing, which would then control the party.

The New Republic summed up the party's problem this way:

"The Republican Party," it said, "is composed of a group on the right which appears to have no interest in giving it majority appeal, and of a man in the White House who wants to give it majority appeal but has few helpers, few techniques, and few opportunities. He survived handsomely, in 1952, the allegation that he could not rise above his party. Next time around, the question will be when are they going to get together, and, politically, where."

A practical politician posed the dilemma in less elegant terms. "It's all very well," he said, "for the Republicans to talk of Ike's popularity rubbing off on the rest of the party in 1956, but maybe it will work out just the other way; in short, maybe the party's unpopularity will rub off on Eisenhower."

For a Second Term: Dwight Eisenhower

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1955

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "For a Second Term: Dwight Eisenhower," which was published in the Philadelphia Inquirer of February 20, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOR A SECOND TERM: DWIGHT EISENHOWER

Dwight D. Eisenhower for a second term as President of the United States.

That, we are sure, is the fervent desire not only of the great majority of the members of Mr. Eisenhower's own party, but of the great majority of the American people, regardless of party affiliations.

The President has as yet made no announcement of his political plans. Many considerations, for and against seeking re-nomination and reelection next year, have doubtless weighed upon his mind.

The rigorous demands of the President's Office take a toll of the sturdiest physique. Mr. Eisenhower is not one to love power for its own sake or to crave the perpetuation of power gained in high office. It would unquestionably be a vast relief to him to lay aside the huge burdens of his position and take up with his wife the private life of a farmer in the quiet of the Gettysburg countryside.

He has served his Nation continuously and in posts of steadily increasing responsibility ever since he graduated from the Military Academy in 1915. As supreme commander of the Allied forces that swept to victory in Europe in the Second World War, as head of United States occupation forces in Germany, as the postwar Army Chief of Staff, as Supreme Commander of the European Defense Force, as President of the United States, his is a record of distinguished service to this country that has few parallels since the days of the founders.

That he is entitled at least to the award of his remaining years to spend in peace and privacy may surely be granted. But the public servant has a demanding master. The American public is not yet prepared to retire Dwight Eisenhower from duty. And as a soldier, and a good one, Mr. Eisenhower is not the type to run away when duty calls.

He has fulfilled, as President, the expectations of those millions who called him to that post with their votes in 1952. He has placed their Government on a firm course of honesty, integrity and sound efficiency. His objectives as the head of state have been in the best traditions of American constitutional Government.

He has been unwaveringly a man dedicated to the cause of peace, while staunchly upholding the cause of freedom.

But his work is unfinished. It would be a grievous blow to America, and to the realistic policy of seeking an enduring world peace which he has pressed, should Mr. Eisenhower step aside and refuse to run for a second term.

That the Republican Party would proudly renominate him by acclamation at next year's national convention has been indicated on all sides. Lacking definite word from the President on the matter, movements to draft him for the nomination have been set in motion in many parts of the country.

At its recent meeting in Washington, where it selected San Francisco as site for the 1956 convention, the Republican National Committee adopted without a dissenting vote a resolution declaring faith in the President's continuing leadership of the party and the Nation.

There is no figure in the Republican Party today remotely approaching the stature of Mr. Eisenhower as a candidate for the presidency. The small group of grumblers and grippers, centering in the Midwest isolationist sector, who have been critical of the President, have no candidate worth the name to rally around. Their opposition movement would shrivel at the first announcement by the President that he will run again.

Outside the Republican Party, Mr. Eisenhower's personal popularity and voting strength seem undiminished. He is the one figure universally dreaded by the Democratic leaders as a candidate next year.

This newspaper was glad to support Dwight Eisenhower for President in 1952. We hope wholeheartedly that he will consent to run again next year to round out his service in the White House with a second term.

Relations With Red China

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an advertisement inserted in a newspaper by the Laguna Beach Lumber Co. The advertisement was written by Hemlow Harris.

There being no objection, the advertisement was ordered to be printed in the RECORD, as follows:

WE INVITE THE PIGS TO OUR TABLE

We are not particularly interested in England's wishes to maintain trade with Red China when it involves Red Chinese trespassing on clean American ground.

We have little respect for a crew of diplomats who can apparently overlook American prisoners doomed by fiends to jail for a crime they did not commit but who invite their jailers to sit with them.

To us it seems an all too flimsy excuse to once more temporize with common decency. Freeman cannot do this.

Why the Security Council of the United Nations should suddenly become alerted to the sputtering fuse in the Far East and presume to meddle in an affair that is not theirs is a bit beyond comprehension. The Council was not invited to be an arbiter by either Red China or Nationalist China, and it has no business so doing.

The United States for the first time in years has recently shown signs of again becoming the kind of a nation that once made it respected around the world. It has drawn the line at last. It has shown unlimited patience, a patience bordering on timidity. It has pointed to Red China a way in which an uneasy peace can be kept. This should be sufficient.

If not, it is time that Red China be wiped from the map and if Red Russia cannot see the danger signal then it too should have the same treatment.

Decent God-fearing mankind cannot go on compromising its standards, retreating in the face of threats, backing away from bluster. It must stop somewhere and if the line from Japan to the Philippines is it, then even if the whole world turns against the United States—let us maintain it.

Who carries the banner of a Christian civilization these days? Sometimes we wonder when we see alleged men of honor breaking bread with murderers.

Let the pigs be invited by the Security Council to discuss their pigsty tactics—but let it be in Geneva where the rape of French Indochina occurred.

Diplomacy and world politics is beyond the ken of simple decent people and the further such corrupting influences are kept from our shores, the safer America will be.

As it looks to us we have more to fear from United Nations meddling than from what we may or may not do on our own in the South China Sea.

It is indecent and humiliating that Red China should be implored to please come and be seated. It is an insult to every American that the place of their visit be on our shores, even though it be under the guise of peace as guests of the Security Council.

Most Americans are ashamed of such gutless acts. God Almighty must be a bit ashamed of us also.

LAGUNA BEACH LUMBER CO.

Thirty-seventh Anniversary of the Independence of Lithuania

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1955

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I have prepared in commemoration of the 37th anniversary of the independence of Lithuania, which was observed on Wednesday, February 16.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR JOHN MARSHALL BUTLER, OF MARYLAND, IN COMMEMORATION OF THE 37TH ANNIVERSARY OF LITHUANIAN INDEPENDENCE

Today, February 16, is the 37th anniversary of the independence of Lithuania, and the free people of the world pause to do honor to these indomitable people who, despite the engulfment of their land by the atheistic forces of world communism, nevertheless, retain their great spirit of freedom and independence.

As one of the earliest independent states in Europe, Lithuania flourished and prospered as a nation of peaceful and freedom-loving people for several hundred years. Yet, in the 18th century the greed of large and powerful neighbors, in a struggle for the control of Europe, eventually resulted in the enslavement of this small country by Czarist Russia. Though these powerful forces erased the nation of Lithuania from the map of Europe, they could not extinguish the spirit of the people of Lithuania and their strong love of freedom. During the years to follow, the desire for liberty and the constant quest to regain the independence of their nation continued unabated, to be fulfilled after World War I by the establishment of the Lithuanian Republic.

For almost a quarter of a century Lithuania thrived as a nation of free and independent people, only to be overcome by the forces of communism at the outbreak of World War II. As in the past, the Lithuanian people are determined to withstand the forces of slavery and subjugation, and to assume again their rightful place among the people of the free world.

They continue to disregard the atheistic teachings of the Communist dictators. They strive to instill in their youth the great love of liberty, the way of life which recognizes the inalienable rights of man as an individual, and the teachings of God that nourish the spirit of all freedom loving people. Irrespective of what further adversity the future may hold, the Lithuanian people will continue to meet their responsibilities. The flame of liberty will continue to burn in their hearts. The soul of this brave nation will be true to the cause of the free world and, eventually, as in 1918, the independence of the Lithuanian nation will again become a reality.

Until that eventful day, these brave people can be assured of the continued steadfastness of their millions of friends in America. We will never forget the importance of this gallant nation to the economy of Europe, or of its many contributions to the culture of the Western World. Furthermore, the courage and the fortitude of these gallant people will continue to inspire us in our struggle to set men free; to make the world a better place in which to live and where future generations of all nations can live in harmony, peace, and freedom in accordance with God's principles.

Pay Increases for Members of Congress

EXTENSION OF REMARKS OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1955

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Worthy of His Hire," together with an article written by David Lawrence, columnist, in reference to increased pay for Senators and Representatives.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

WORTHY OF HIS HIRE

Congress is supposed to be embarrassed by one of its current activities. We don't think it should be. For the Constitution says that Congressmen "shall receive a compensation for their services, to be ascertained by law." They are the lawmakers. And most Congressmen should be able honestly to say that they are worth more than they are now getting.

Compared with the billions they can save or waste, their \$15,000 salaries are small. They are small in comparison with the earnings of a multitude of business and professional men. They are small also in relation to increased living costs and taxes.

Nowadays, too, Congressmen are busy in Washington a far larger part of the year than formerly. They have less time to earn other income. It would be better if they were even more closely restricted as to outside earnings. If Uncle Sam pays more, he might reasonably require their full services. And if the servant is worthy of his hire, the public servant may well be more worthy if his hire is made more worthy. Perhaps an increase of \$5,000 would be enough, but an increase there should be.

The Congressmen's task is made less embarrassing by the fact that their pay bill is combined with one to boost Federal judges' salaries. These raises are at least as well merited. Municipal judges in New York City now receive more than Justices of the United States Supreme Court. Any lawyer of judicial caliber is almost bound to make a financial sacrifice in accepting a Federal judgeship. The sacrifice should be reduced.

SAYS MEMBERS OF CONGRESS CAN RETURN PART OF PAY IF THEY DO NOT NEED IT (By David Lawrence)

WASHINGTON, February 17.—If the conscience of any Member of Congress hurts him about voting for that pay raise of \$10,000 a year, there is an easy way out—to give back to the Treasury as much as he likes.

There's precedent for such a gift. Herbert Hoover gave back most of the Presidential salary he received while in the White House. He, himself, never revealed that fact but his friends have told about it. Maybe there are other public servants who have done the same thing and kept it secret.

What a proper salary for Members of Congress should be is a very serious matter and goes to the heart of the question of integrity in government.

Many of those in the House of Representatives who voted against the proposed increase—which has yet to pass the Senate—did so because of a conscientious belief that the voters wouldn't approve of it. But it is important that the voters should know all the facts. For many Members who voted against the increase really deserve to have the higher salary to cover those expenses they have been trying to meet out of their own pockets. Likewise, some who voted for the increase did so out of consideration for the plight of their colleagues, though they themselves didn't need the extra money.

It all comes down to a simple proposition—the American people certainly don't want only rich men in Congress, nor do they want to see Members accepting gratuities from constituents or big campaign contributions in appreciation of service they may have rendered.

Members of the House come up for election every 2 years, so they are constantly in need of campaign funds. Many of them supply it out of their own pockets rather than solicit gifts from constituents who seek special privileges. But the worst phase of the matter is the drain on the funds of a

Member of Congress by residents of his district or State who feel their Congressman or Senator is something of an errand boy or personal representative in Washington.

Lots of the things done by Members of Congress for people back home are worth thousands of dollars to those who are benefited, yet there is no such thing as a "service charge" or "fee" to be paid. Indeed, it would be highly improper for any such payment to be made.

If, for example, a new post office building or a defense installation or some other Federal project involving huge sums of money is brought to an area as a result of the efforts of a Member of either House, there are citizens who profit by the rise in real-estate values and in other ways. They cannot and should not pay for that service. Yet, in the doing of that chore for the people, various expenses are often incurred and in many instances it is the Member of Congress who foots the bill rather than become involved in some transaction which a political opponent could some day uncover and use as a smear.

It is odd, but members of national legislatures the world over have trouble about the size of their salaries. In Britain the Churchill government almost was overthrown last spring because the Labor Party insisted on a pay raise and the Conservatives opposed it. Many of them are wealthy and carry on extensive business interests. Only after some Conservatives deserted their leadership was the issue compromised. Today the pay of a member of the House of Commons is the equivalent of about \$2,800 a year, with an extra allowance they may request for each day the House sits. This amounts approximately to about an extra \$740 a year. Curiously enough, the House members in London have no private offices or staffs provided by the Government.

In France, the pay is equivalent to about \$5,000 a year, and the 100 Communist deputies contribute about \$3,000 apiece directly to the party fund or approximately \$300,000 a year, which is quite a sizable help in carrying on Communist propaganda.

In the State legislatures in this country members are poorly paid and it is a scandal that corporations with business before these bodies often retain as counsel for other services members who are lawyers. The labor unions do the same thing.

Many Members of Congress have outside income. Some earn it by getting large fees for speaking before labor unions and trade bodies of various kinds. Others still practice law before State courts. Some have large business interests or derive a big income from investments.

The raise in pay is needed in order to permit the election to Congress of citizens irrespective of their income status. A total of \$25,000 a year, out of which comes \$4,500 for taxes, or a net of \$20,500, is not too much for a Member of either the House or the Senate to receive if he is honorably to serve his constituency.

Democracy Out Loud

EXTENSION OF REMARKS OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1955

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Democracy Out Loud," which was written by Rev. George W. Casey, and was published in the Febru-

ary 5, 1955, issue of the Pilot. Copies of the editorial have been sent to me by a number of Massachusetts citizens.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DEMOCRACY OUT LOUD

(By Rev. George W. Casey)

Al Smith, who, in his day, possessed the minds of American Catholics more completely than Father Coughlin or Senator McCARTHY in their respective days, used to say that the cure for the ills of democracy was more democracy. It sounded grand away back there in the confident twenties, like everything else Al said, I know that I regarded it as little more than divine revelation.

Now I wonder. One day years ago, when I was, 'alas, less experienced with Sippl powders than I now am, I felt poorly. Since I felt that my health depended on those powders, and that if one was good, two were better, I took an extra one. I felt worse, so I took another. This went on until the situation got desperate and I called the doctor. When I told him the measures I had taken, he could not keep from laughing. I had almost killed myself with the cure. I am beginning to feel that way now about Al Smith's cure, wondering if we have not taken a little too much democracy, here in America, and in other of the world's republics.

Take that Roman holiday at the State prison 2 weeks ago, the people really barged in there didn't they? Everybody, his mother and his brother, got in on the act. The frustrated convicts appointed their own committee, which appeared duly grateful for the honor. The press hung from buckets and helicopters, peered through every crack, explored every mind, pictured every expression. A bath of bathos.

The politicians rushed in with a whoop. Wherever people appear in the raw, that's for them. The Boston City Council came in with a unanimous recommendation for a pay raise for all prison guards in county employ. More power to the guards. Theirs is a dreary job with few compensations but the pay checks. But why now? Have the guards around here done anything lately that is heroic and over and above the call of duty, anything that calls for the gratitude of the community? Anything that should make us all sleep better in our beds at night? Did we miss something?

The fact of the matter is that the people, as people, as a mass, are not equipped or disciplined for such difficult business as prison control, police work, and public safety. Nor for most of the tasks of Government and administration in our complex civilization. They cannot just pour in off the streets and do the jobs of specialists and professionals. Jobs that require training, experience, and the sense of responsibility. Jobs that require sound knowledge of psychology, sociology, anthropology, history, economics, geopolitics, military science, logistics, pedagogy, education, and so on ad infinitum. Jobs that require poise, detachment, and broad concern for people who are not around, people who are not represented, for people who may not yet be born.

The people as such, the people in the mass, even the people gathered in town meetings, that classic symbol of democracy at work, cannot, or at least do not, rise above local and personal self-interest. When the east-west toll road through Massachusetts was being laid out every town and city in its way rushed into popular assembly, and availing themselves of the great American democratic right of free speech, furiously demanded that the road go through the next town instead. If there was not some authority to beat the people down you would have to hang the road on the moon.

France is just about as sick as any of the great republics are at this point in history,

and I think that it is fair to say that its trouble is rather too much than too little democracy. Its Chamber of Deputies is so responsive to the popular opinion and will that it is almost incapable of decision. Its splinter parties represent every shade of opinion and political theory, every clique and special interest. Unless the political genius and energies of Mendes-France can lift it above the sectional, class, business, industrial, and agricultural absorption in selfish privilege and advantage there is little hope for it to regain its former greatness. France has proven that the voice of the people, at least as it is voiced there, is not the voice of God, nor even of reason.

Maybe if the people, all the people of France, the dispossessed as well as the propertied, the soldier as well as the parliamentarian, the people of the past, and of the future, as well as of the present, the non-voters as well as the voters, could be apprised of the issues and polled as to the answers, true and glorious direction might emerge. What has happened in France, and elsewhere in the great democracies, is that fragments of the people, the most voluble, the most self-interested, the most susceptible to prejudice and demagogues, have called themselves the people and have sought to govern all.

People in the plural are not much of an improvement over people in the singular. They can be just as selfish, cruel, opinionated, fickle, and tyrannical as kings and emperors at times. It is hard to tell from this far away just how representative those People's Courts are of the common people of China, but they do not seem to show a lot of enthusiasm for the unjust and savage punishments they inflict upon non-Communists, both native and foreign.

Should we say then, that the democratic dream is over, that the dreadful wars of our century and the current retreat of the democracies have dispelled it? That what is left is to go back to the most benevolent form of authoritarianism we can set up?

By no means. Our democracies have given us the most just and equitable government humanity has known. Or at least knows about now. They have secured for the common man the widest diffusion of prosperity, opportunity, and dignity he has yet had. But democracy must be chastened; must recognize the ills and errors that this century has revealed, and it must move to mitigate them. It must admit that the majority of the voters at a given time are not always right, that they can indeed be very wrong. They must restrain their nationalism. Especially here in America we must not proceed on the fallacy that what is good for America is necessarily good for the world, and all who do not follow American policy are ingrates and weaklings, or worse.

Probably most of all we must restore respect for government, as something above and apart from contemporary voters, responsible ultimately to the people, but as an institution ordained by the nature and needs of man and the will of God. St. Paul speaks of the powers of authority deriving from above. We must desist from pressurizing legislatures and congresses by organized campaigns and from intimidating presidents, governors, and mayors and forcing them to our way of thinking and acting. We must resist the sweep of passion and the sway of demagogues, and serve our laws and traditions, or change them.

Just as we choose doctors, lawyers, and plumbers, and then let them do the job, unless it is clear beyond peradventure of doubt that they are failing, so we should let government and administration do its job, while it has it. For we, the people, are not all equipped to administer jails, dispense justice, carry on foreign affairs or wage wars any more than we are severally equipped to take out tonsils or repair the kitchen sink.

Movement of Relief Shipments in American-Flag Ships

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1955

MR. BEALL. Mr. President, one of the vital accomplishments of the 83d Congress was the passage of the 50-50 cargo-preference law under which at least one-half of all cargo financed by the United States Government for relief and rehabilitation shipments must move in American-flag ships.

Under date of February 16 the New York Journal of Commerce, which specializes in marine news, published a searching editorial on this important subject which I believe my congressional colleagues will find very interesting. In brief space, the editor summarizes the practical benefits to United States shipping which devolve from Public Law 664, known as the Butler-Tollefson Act.

At the same time the friendly nations of the world are benefiting from the sales of these surplus commodities received from us. They are not only getting these goods for relief and rehabilitation, but the proceeds are reverting back to them for additional internal development. Thus, these surplus commodities they receive from us are not only helping our own agricultural economy but benefiting the friendly recipients not only by making these goods available to them but they can also utilize the proceeds turned back to them as well.

The introduction and passage of this legislation was a real tribute to our distinguished colleague the senior Senator from Maryland [Mr. BUTLER], whose able efforts on behalf of a strong American merchant marine have attracted national attention.

I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IT DOESN'T COME FREE

There have been indications from Washington recently that some Congressmen—primarily those from the farm States—want to take another look at the so-called cargo-preference law, under which at least one-half of all cargoes financed by the United States Government—whether inbound or outbound—must move in American-flag ships.

This policy, applied to all relief and rehabilitation shipments since the war, on a temporary basis, became the law of the land last year with the enactment of the Butler-Tollefson Act. More recently lingering doubts as to its applicability this side of the Federal courts were cleared up when Attorney General Brownell gave it as his considered opinion that the act applies to surplus farm commodities exported by the Government under Public Law 480.

The reason for renewed congressional interest in the issue is obvious. Some foreign countries are reluctant to negotiate purchases of United States surplus farm stocks if one-half the shipment must be carried in American vessels, and at least one of these

nations is understood to have turned down such an agreement entirely. In the eyes of some farm State legislators, therefore, the Cargo Preference Act is beginning to look like an obstacle to the administration's farm-surplus-disposal program.

This newspaper has supported the 50-50 principle from the outset, although with misgivings.

We supported it originally because, while realizing it was an extraordinary measure for a great creditor nation to undertake, the circumstances were also extraordinary. UNRRA, the Marshall plan, NATO, and point 4 were all unprecedented programs.

The United States had just emerged from a war which showed clearly that a strong merchant fleet was essential to its mere survival in a clash of great powers. If this merchant fleet were itself to survive, it would have to find work; and if it were not given a half share in these great programs, where, indeed, would it have found it in view of its high operating costs and the worldwide scarcity of dollars to buy its services? Subsidies, paid to a relatively few shipowners, provided only part of the answer.

The cargo-preference policy could not be judged by normal commercial standards because there was nothing either normal or commercial about the programs under which it was adopted. If it prevented foreign owners from earning some dollars they would otherwise have earned, their loss was nothing compared with the gain these programs brought to their national economies, and the policy literally kept American shipping afloat.

So far as Government aid programs are concerned, stockpiling and the like, we see no reason for modifying this policy.

The misgivings we held at the outset we still retain, however. We retain them because we know that nothing comes free. The 50-50 rule has established a precedent which is not in all respects pleasant. What one nation can do to protect its shipping, another nation can also do. And if one such act detonates others, the outlook for a reasonably free market in shipping—shaped by the old laws of supply and demand—is poor indeed, and so are the prospects of nations which depend heavily on shipping earnings.

The Onassis agreement with Saudi Arabia was one of these portents, but not by any means the only one. There is a danger inherent in going too far—and we believe the United States went as far as it ever should go when it arranged the recent sale of coal to England for sterling on condition that half the cargoes move in American ships.

The deal was advantageous to the British, for it saved them dollars, but the transaction came close to being of a straight commercial type, and the attachment of the 50-50 cargo preference principle left a burning question in the air as to whether there would be more of the same. Thus far there has not been.

The farm surplus export program is not of this variety, however.

It is a Government operation, and, while we have had as many misgivings about it as about the 50-50 rule, we accept the assurances of President Eisenhower and Secretary Benson that sales will be handled in such a way that they do not disturb ordinary commercial marketings, either of United States citizens or those of friendly foreign countries.

If one accepts those assurances, this program cannot be considered a commercial venture and there should be no question as to the applicability of the Cargo Preference Act to shipments made under it. The Attorney General is on firm ground in taking this position.

It would be a little ironic, however, if farm interests should take the stand that the Cargo Preference Act should go because it seems to interfere with sales of Govern-

ment-owned agricultural surpluses. They would be skating on thin ice indeed.

Let there be no mistake about it: Both the crop-support program, and the cargo-preference policy are, in one way or another, forms of subsidy, and there is no occasion whatever for the recipients of either to take a holier-than-thou attitude toward the other.

Both bear the seeds of possible future trouble. It is safe to use them only so long as their potential dangers are kept in mind, and those who administer them do so with restraint.

The National Reserve Plan

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1955

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Burgess Calls Reserve Plan Boon to Service, Individual," written by Steve Tillman and published in the Army Times of February 12, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BURGESS CALLS RESERVE PLAN BOON TO SERVICES, INDIVIDUAL (By Steve Tillman)

WASHINGTON.—Assistant Secretary of Defense Carter L. Burgess said last week that failure to recognize equitable features of the National Reserve plan "will work to the detriment of all it seeks to help." The manpower and personnel chief told this writer in a special interview that such a failure could result in "imposition of far less desirable solutions than are provided within the plan's framework."

Burgess repeated his earlier declaration, made at the plan's unveiling last December, that NRP provides the maximum equity feasible for both the services and affected individuals.

Pointing out that the plan was arrived at after more than a year's intensive study, he said it was formulated after achieving agreement on various active service viewpoints and after exhaustive efforts toward reaching fair and workable solutions to the complex manpower problems.

The plan recognizes the primary fact, Burgess said, that it takes time to train men in the techniques of modern warfare, and that without a large number of men at least partially trained and organized at the outbreak of a war the military establishment would have great difficulty assembling them.

The assistant secretary said NRP "offers what a nation occupying our position in world affairs really needs—a mandatory program under which the defense requirements essential to our security are maintained at safe and ready levels."

By use of trained reservists, Burgess said, we can more than double our active military, naval and air forces in the event of a sudden emergency without the necessity or expense of maintaining large active forces in the meantime.

"Broadly speaking," he said, "the National Reserve plan is a continuation of the existing Reserve program, but incorporating a number of additional features."

He went on to name expansion of the Ready Reserve, emphasis on an effective

screening process in building the Standby Reserve, the service "choice" features for obligated men, improved training and other features previously disclosed.

Burgess, a man who will exert considerable influence over the Nation's young men, has come up fast in Government.

A native of Roanoke, Va., he has been adopted as a "native son" by South Carolina. He was assistant to the president of the University of South Carolina before coming to Washington to take the defense job formerly held by Michigan's Dr. Joseph A. Hannah.

Burgess's military career began in 1941, when he became a lieutenant in the Military Police Corps. At the end of the war he was secretary of the SHAEF general staff as a "bird" colonel, and thereafter held several Government jobs in Washington before going to South Carolina.

The Budget Can Be Balanced

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a bulletin entitled "The Budget Can Be Balanced," which I received from the Southern States Industrial Council. I ask that only the front page of the bulletin be printed.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

THE BUDGET CAN BE BALANCED

Some of us have difficulty in understanding the failure of the Federal Government to balance the budget when there is really no secret about the cause for this failure. The budget can be balanced if there is an honest effort to determine the money that will be available for spending and to keep expenses within this amount. But we don't do it that way. Spending is attractive, so we have adopted the custom of estimating our wants and then trying to raise money enough to cover the cost. In short, it has become a habit for us to spend more than we have, and in the past 22 out of 25 years annual deficits have increased the national debt from \$16 billion to \$280 billion.

A long step toward balancing the budget depends on whether the Congress will stand by the position taken when it appropriated funds for foreign aid in 1955. The Mutual Security Authorization Act for 1954, Public Law 665, set up 1955 funds and provided that economic aid to foreign nations should end June 30, 1955, and FOA was terminated as of the same date. This feature was not mentioned in the appropriations act.

The President's recent budget message completely ignored the termination provision in Public Law 665 and asked for \$4.7 billion to be spent in 1956, compared with the \$4.3 billion asked for 1955. Of this new asking \$1 billion is earmarked for economic aid and \$3.7 billion is marked for military aid. The Budget Bureau estimates that \$7.9 billion of funds already authorized for foreign aid will be unspent and carried over into 1956—even if the Congress votes no new money. Senator BYRD, chairman of the Senate Finance Committee, says this carry-over is about \$10 billion, and even if \$7 billion of this amount has been obligated, but unspent, as claimed by agencies handling the

funds, there would still remain about \$3 billion unobligated and unspent.

The estimated deficit for fiscal 1955 is \$4.7 billion, and the predicted deficit for 1956 is \$2.4 billion.

If the foreign economic relief program is to end on June 30, 1955, then the \$1 billion earmarked for that purpose in the recent budget message would not be needed. A credit of this amount would reduce the predicted 1956 deficit to \$1.4 billion. Just what amount is marked for economic aid in the unspent funds constituting the foreign aid carryover is unknown, but even if all of this should be marked for military aid it is obvious that whether the carryover be \$10 billion or \$7.9 billion, a serious question arises about the advisability of appropriating the full \$3.7 billion asked in the budget message for military aid.

Will the Congress take advantage of this opportunity to relieve the Nation of at least a small part of the burden it is now bearing? The attitude of our citizens toward this foreign relief program is evidenced by the termination provision of the 1954 Authorization Act. If the Congress will give the people an opportunity to vote for a constitutional amendment limiting congressional appropriations to a sum no greater than estimated Federal revenues, except in time of war or national emergency, the response for the amendment will be overwhelming.

Sincerely yours,

PAUL A. REDMOND,
President.

Christ, the Way

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. REES of Kansas. Mr. Speaker, under unanimous consent, I am including a impressive sermon delivered at the National Presbyterian Church, Washington, D. C., on August 1, 1954, by Louis Evans, D. D., LL. D., former pastor of the Hollywood Presbyterian Church and presently representing the Presbyterian Church on a nationwide basis. I believe Members of Congress and others who read the CONGRESSIONAL RECORD will be deeply impressed by this splendid message:

These are arresting words for any man to say. In fact, no man can speak them truthfully. These are glorious words even for a God to speak. It would be quite interesting to know which of these three pictures of Christ you hold most closely to your heart—as the Way, as the Truth, or as the Light.

All three are necessary: He is Truth and you must learn of Him; He is Life and you must live Him; and when we take this Truth and live it, then you are "on the way"—this is the Way. Someone has said that what we need today is men and women of "conviction"—men and women who are "convicts of this great ideal"—powerless but to follow Him at any cost, at any time, and in any place.

Of course, we start with Christ as Truth. We begin with our Christology—our science of Christ. Here we must first draw a mental picture of what He is, who He is, and what He desires us to be. Prithe, the great artist, said that he never splashed any paint on canvas until first he had completed the picture in his mind's eye. Before we can begin

to splash Christ with the brushes of life we must first picture Him in truth; as we grow in knowledge, He becomes more and more our intelligent way of action.

The Greeks helped us here. They worshipped an intellectual god. Aristotle in his "Metaphysics" pictures the Grecian god as the "Eternal Thinker." The Greek god spent his time ruminating, contemplating, thinking—almost to the exclusion of action. The Greeks were wiser here but they also failed here. Truth lacked the realism of life. They spoke words but they did not put the words to work. They had an ideal, to be sure. Infinite, D-duty; E-each; AL-to all. "Infinite duty of each to all." But they wanted to keep their slaves and here the truth broke down and Greece died.

There have been periods in the history of the church when the church has given itself to mysticism altogether; when there has been truth unmarried to life. Monks ran into monasteries and divorced themselves from living. Men in the pulpit attempted to become mystics and they mere became misty. Theology was confined to the brain and had nothing to do with brotherhood or the problems of the day. Love became a sentimental something that was altogether divorced from wages, living conditions, the diseases, the comforts, the sorrows of men. The parable of the Good Samaritan was perfectly characteristic of some of the church eras—when the priest and the Levite, religious leaders, felt no compunction of conscience as they passed by on the other side and allowed the man to perish from his wounds without giving aid.

Then there came two forces that shocked us awake.

First of all, there was youth who insisted that we marry our words to works, and our faith to action. One day, the statue called the Thinker, the form of a man in meditation with his chin cupped in his hand, suddenly disappeared from the home mantel. At the dinner table, the father asked the question, "What became of the Thinker?" The college junior of the family very frankly pleaded guilty in these words, "I put the Thinker up in the attic. I'm sick and tired of this family doing nothing but thinking—it's time we gave ourselves to action." These young people realize we live in a pragmatic and experiential age when contemporary psychology is always studying the effect of belief on behavior. They insist that we marry truth to life—that this is the only way.

Then came communism. Mr. J. Middleton Murry in his work on communism said, "communism is the one living religion in the Western World today." I contest that and yet it seems at times that they are striving to live their diabolical creed more than other people. Karl Marx took God as a person and destroyed Him and made a god out of a program. The mental denial of God was displaced by a program. They adopted a way without the truth.

They scoffed at our "other-worldliness" and boasted of their "this-worldliness." They said that they desired to salvage this present day and to make it without hunger, without war, without class, and without sorrow. They scoffed at us, saying "You Christians say that you will have pie in the sky, by and by." But there is Bob Ingersoll, the agnostic, laying in his casket as immaculately dressed in death as he had always been in life. One acquaintance stopping at the casket and gazing at him for a moment passed on with the words, "Poor Bob, all dressed up and no place to go." That is tragic. What do men do without a "by and by"—with "no place to go"—with no future?

But our answer is that Christianity also has it today. We not only desire someday to pass from earth to heaven, we desire to bring heaven down to earth now and pray "Thy will be done on earth as it is in heaven." Communism has now become a diabolical

challenge to the Christian to make his religion work now.

Of course our answer to communism is that the Kingdom of God is realism.

We Christians do not wish to escape the obligation of the belief in the "law of embodiment." God was embodied in Christ and when Philip said "Show us the Father and it sufficeth us," Jesus replied, "He that has seen Me has seen the Father." God was in Christ; Christ was God in the flesh—this was the incarnation. When He gave us a sacrament, He gave us a realistic sacrament. The bread and the cup representing the body and the blood; there was reality. When He taught us to pray, He said, "Give us this day our daily bread"—there is something edible and practical.

We are told that "if any man be in Christ, he is a new creature"—that is the new birth and that is spiritual regeneration. The verse goes on to say that then "Old things are passed away and all things become new"—the new man changes things. When they saw the Christians entering the city of Thessalonica, those watching from the ramparts cried, "These that have turned the world upside down have come hither unto us also." You can expect that of the Christians—when things are wrong side up they will turn things upside down. It's said that Christ went into Galilee preaching the gospel of the kingdom and healing all manner of diseases. Christ was interested in the human being as a dichotomy—both body and soul. There was realism in His ministry. When the church is described for us it is described as a building with Christ as the chief cornerstone. And you and I, Peter reminds us, are all lively stones built up into an eternal temple. There it is—the church is solid as cement, functioning in an outward organization as well as a spiritual organism.

The answer of Christianity to communism is this: Christ has taken the truth and married it to life and this is our way.

Now if we have found this way it will evidence itself first of all in Christian character; it will add conduct to creed.

Sitting in the church does not make you a Christian any more than sitting in a henhouse makes you a hen, or sitting in a classroom makes you a scholar. "The redeemed of the Lord must walk redeemedly," wrote a sage.

The Church of Jesus Christ must never lose its power of differentism. Nothing worse could be said of the church in this day of a demand for a realism in life than that it had lost its sense of having a way about it.

It was not easy to walk in the Christian way in that early Roman society, any more than it is easy today. That, too, was a society that built on the mudsills of the sensate. The Christian life was no more honored then than it is now. The problem does not change. Society will always try to grind the Christian down to its size on the lathe of its brutal compromise.

Nor do our characters change. The story is told of a young woman who was going out for an evening of pleasure with a young man, and her mother called after them from the porch, "Goodnight, dear, be good and have a good time." To this her daughter called back, "Oh, Mother, why don't you make up your mind?" Yes, there are some that feel that being good and having a good time are the enemies of each other. There is nothing better that you can do, mother, than to live such a life that your daughter will think "it's fun to be faithful," and you, father, living such a life that your son will think it is "great to be good."

Of course, in this sense we all "preach." Preaching is truth through a personality. If you should write "mene, mene, tekel, upharsin," on the wall, that would not be

preaching; it would be the truth, but it is not delivered through a personality. If you could teach a parrot to say the Twenty-third Psalm, he would not be preaching, because he would be powerless to live it. Francis of Assisi invited a young monk to go with him into the city and preach. They walked up and down the crowded streets for an hour; folks curtsied to them, listened to their conversation, and watched them. They returned to the monastery in an hour. The young monk remonstrated, saying, "I thought we were going to preach a sermon today." To this Assisi replied, "We did preach our sermon today. Everybody was watching us as we walked, everybody was listening to us as we talked; that was our sermon for today." So you laymen are also the priesthood of the laity. You, too, preach for Christianity, after all, is something demonstrated more than it is debated; it is something practiced even more than it is preached. The word "Christian" is made by taking the word "Christ" and adding the letters "i-a-n" to it; this suffix meaning "a little model of the big thing." This carries with it a tremendous sense of obligation. To belong to Christ is to be like Christ.

Alexander the Great once espied one of his soldiers in the uniform of his army in a drunken stupor. He said, "Stop there, what is your name?" To this the soldier replied, "My name is Alexander, sir." The emperor said, "Do not jest with me. I say, what is your name?" Again the soldier replied, "My name is Alexander, sir." Alexander the Great took him by the nape of the neck and hurled him sprawling on the sand with the words, "Either change your conduct or change your name." We who bear the name of Jesus Christ upon our foreheads are either His labels or His libels.

In the second place this Christian way is an unusual way. They said of the early Christians they were drunk with a new wine. If there is anything of which we are afraid today, it is of being considered abnormal. But many folks have been abnormal who have been leaders in history. Susan B. Anthony, when she took her courageous stand, was considered so; when Martin Luther stood alone against kings, prelates, and cardinals, he said "I can do naught else, so help me God." They thought him mad. When Sally Butler, of Seneca, stood up a hundred years ago and began to challenge our modern philosophy of war they said the same of her. When Florence Nightingale was able to stand the licking fires of gossip and go on with her nursing in the Crimean War, it was because Christ had commanded her to do so. When Carey Nation took her axe and demolished a score of bars, people thought her a little pilled, but if we had a few more like her, America would perhaps not sorrowfully be infected with about 5 million alcoholics a year. When Mary McLeod Bethune began to contest that colored people should have their place in this world, and that no one plays a rich piano forte leaving out the black keys, they thought she lacked balance. When Abraham Lincoln said, "If there's a place for me to be offered, I am ready now, for I know equality is right, for Christ teaches it and Christ is God" they thought him beside himself.

But you noticed this, that only those people have stood out in history who have stood up for something. The trouble with us Americans is that more and more are we standing for less and less, and if we do not stand for something we shall fall for everything. A subnormal world will always think a person of normal temperature abnormal and a subnormal world in ethics will always think a normal ethic of the Christian is a high fever.

The Christ way is also the way of patience and courage. Oliver Cromwell's mother once warned him by asking him if he were counting the cost of standing up to the

tyrannical Charles. To this he replied, "Mother, there are times when we may not count the cost."

Christ said, "If they persecuted me, they will persecute you." It has always been true. The Christian way has been one or more or less protracted pain. "The moment you take the church down from one cross, they are setting up another for her." Three things were said of the early Christians. First of all they always paid their taxes; second, they were ecstatically happy; and third, they were always getting into trouble. Christians always will. There are three classes of citizens. There are the "sublegal." If you are below the law, they will put you in jail. There are the "superlegal"—if you are above the common herd they will burn you at the stake of ridicule or fasten you to the block of torture. The only people that seem to get along easily in this world are the "legal" folk who do what the law requires, no more, no less. They are the people of the "cheap average"—these are the "escapists" of society.

It is much easier to accept Christianity as a way of death than as a way of life, for it takes more courage to live for Christ than even to die for Christ. Now these few lines of a poem:

"So he died for his faith, that is fine.
More than most of us do,
But say, can you add to that line
That he lived for it too?"

"It is easy to die—men have died
For a wish or a whim
From bravado or passion or pride,
Was it harder for him?"

The Christ way is also the way of love. If God is love, then to act with God is to act like God—lovingly. As one writer said, "Karl Marx scoffed at love as mere sentimentalism. He threw out love and put in force." * * * Men first became animals and then the animals became cogs of the great machine. Then came their loveless parade of pretended love. To hear them talk you would have supposed that they had great wounded feeling and pity for those who had been the victims of industrial injustice, but as a writer said, "In one century communism gave birth to the worst slavery man has known." They offered the finely woven shawl of liberty for chilling shoulders but when men began to wear that shawl it proved to be a net of chains. I think it was Dr. Lowry in his splendid book on communism, Communism and Christ, who said, "Communism is become the inhumanity against which it protested." All communism did in China was to change hatreds. Czarism hated the poor and loved the rich; communism came in and loved the poor and hated the rich. This was just simply a change of hatreds and this is not progress at all.

But Christianity came along and demonstrated a way of love.

In the early church men with their masculine traits suddenly added pity to their power, purpose to their purse, and mercy to their might, and they formed the first board of deacons in the great triumph of masculine tenderness.

The women looked about and their needles were married to needs, seen for the first time. I do not know what the I. Q. of these early churchwomen might have been, but Helen Jackson once said of a woman, "She was not a brilliant woman but there is such a thing as genius for affection and she has it." These early Christians had it. They had a genius for affection and even old age knew how to handle the problem of service.

Then there grew up this Christian program of benevolence and philanthropy. * * * There came nursing, invented by the women of patrician Rome; then came hospitals, as inseparable from the churches as an apple from the tree; then came homes for the aged,

as men became mindful of others; and slavery had to go because love was becoming realistically belligerent; child labor was abolished and missions began to sweep the world. These Christians had a way with them—it was the way of love.

It was also a family way. God made of "one blood all the nations of the earth" and the early Christians could not forget it.

When the Holy Spirit came at Pentecost every man "heard the Gospel in his own tongue." This Gospel was for every man. On the cross the words "Jesus of Nazareth, King" were written in Hebrew, Greek, and Latin, for all men must read it—He died for all.

You remember Paul and Barnabas took the problem of their missionary journey to a court of authority. In Acts 13 you are told of the nature of that group—"Now there were in Antioch, in that church that was there, prophets and teachers; Barnabas and Symeon that was called Niger, and Lucius of Cyrene, and Manaen, the foster brother of Herod, and Saul." Notice in that church court the various racial backgrounds: Barnabas, either a Jew or a Greek. Symeon that was called Niger and that word "Niger" means Negro; and Lucius of Cyrene—probably another of dusky countenance; and Manaen, the foster brother of Herod—with royal blood in his veins; and then Saul—Roman and freeborn, and Hebrew in his blood. There you had the great races of the world represented in this common Christian family.

To this sense of oneness the Holy Spirit must lead us and in this sense we must solve our problems of today. Mary had her arms around her father's neck telling him how much she loved him, but at the same time, over his shoulder unseen of him, she was sticking out her tongue at her brother Tom. Her mother saw this and came over and said, "Mary, take your arms down from around your father's neck. Your father loves Tom, too. And you cannot love your father and stick out your tongue at Tom." And if we are sticking out our tongues at any of the Toms of other races, let us take down our arms from around our Father's neck. The Christian way is a family way.

Finally, this Christ way was a way of confidence. An uncanny sense of pessimism has been getting hold of the press, the platform, the pulpit, and our personal attitudes of late and we must stop it. We Christians, too, have our dream—"Jesus shall reign where'er the sun doth its successive journeys run." Whatever school of prophecy it might be to which you belong, Christ ends up at the end, King of Kings and Lord of Lords. Someone has said, "The operational code of the Communist Politburo will never be a match for the operational code of the Kingdom of Christ."

The statue of Christ is not carved out of the soap of the sentimental. * * * We have carved Him out of the rock marble of an eternal Divinity. Christ has conquered every dictator that ever ruled against Him. God's Kingdom has outlived Pharaohism, Babylonism, Caesarism, Napoleonism, fascism, nazism, and it will outlive communism.

There may be times when you Christian women feel that apart from the pageantry permitted to men there is little that you can do to change this world, but you have tremendous power and courage when properly expressed.

And yours is the "only way." You have the dream and you must teach it and live it by the crib, in the house, in the kitchen, in the club, society, factory, office, and everywhere—Jesus is the way.

You men, too, must march on with a masculine confidence.

It has looked bad for the church before. There was a time in the history of Rome

when Julian, the Apostate Emperor, thought he had completely destroyed Christianity as he closed the churches, but one day he was riding along on his steed and he heard an aged Christian singing a Christian hymn. He called, "Stop there." Then he said, scoffingly, "Well, what is your Jesus Christ doing now?" The aged Christian drew himself up to his full height and said proudly, "Just now, sir, Jesus of Nazareth is busy making a coffin for the Roman Empire." And you remember it was not long before Rome used it, when Julian the Apostate Emperor in an act of suicide drew the sword from his side and, cupping his lifeblood in his hand, threw it to the winds and shouted, "Galileo, Galileo, viciati, viciati—Galilean, Galilean, thou hast conquered." And Christ will, again, and again, and again.

Remember what John Foster Dulles said—that "faith is as contagious as fear." God give us faith in this eternal way.

Let us pray:

"It is hard to work for Thee, O God,
To rise and take Thy part,
Upon this battlefield of life
And not sometimes lose heart.

"Thou hid'st Thyself so wondrously
As though there were no god;
Thou art least seen when all the powers
Of ill are most abroad.

"Thou doest desert us at the hour
The fight is all but lost;
And seem'st to leave us to ourselves
Just when we need Thee most.

"But mighty God! We'll not lose heart;
But learn that Thou art like
And in the darkest battlefield
We shall know where to strike.

"Thrice blest are we to whom is given
The instinct that can tell
That Thou art on the battlefield
When most invisible.

"For right is right, since Thou art God
And right today will win;
To doubt would be disloyalty
To falter would be sin."

Monopoly in the Power Industry

EXTENSION OF REMARKS OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter dated February 19, 1955, which I received from the Osage Valley Electric Cooperative Association, dealing with REA.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

OSAGE VALLEY ELECTRIC
COOPERATIVE ASSOCIATION,
Butler, Mo., February 19, 1955.

The Honorable WILLIAM LANGER,
United States Senator,
Washington, D. C.

DEAR SIR: This is to extend to you our thanks for the interim report on monopoly in the power industry furnished with yours of January 31, 1955, and to request that you furnish us with 10 additional copies. You may feel free to render us statement for any costs involved therefor.

We take this opportunity to express our deep appreciation of the fine work you and

your committee have been doing and we trust that you will continue in this endeavor. It is very gratifying to know that we do have in our Congress, men who have such a sincere interest in public welfare and who are willing to put forth an effort on behalf of the individual citizen and his inherent rights by virtue of living in a democracy.

If we can be of any assistance, please feel free to call on us.

Very truly yours,
OSAGE VALLEY ELECTRIC COOPERATIVE
ASSOCIATION,

By J. F. LAUDERBACK, Manager.

Do Not Discount Grandpa—This Country Must Stop Wasting the Brains and Skills of Mature People, Says the Forty Plus Club

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. DOYLE. Mr. Speaker, by unanimous consent heretofore granted me so to do, I present a letter recently received by me from Paul Bussard, Catholic Digest, 44 East 53d Street, New York, N. Y. With said letter was enclosed the article by J. L. Rawlinson which Mr. Bussard's letter called my attention to.

Also, I just wish to briefly remind you and all my colleagues of this great legislative body that on frequent occasions during these 8 years I have already been a Member of this House I have called attention to the problem of the elder citizens. Therefore, I am pleased to present the letter from Mr. Bussard and the article to which he calls my attention:

DEAR SIR: One of the greatest problems facing our economy today is that of the average worker. Forty has become the arbitrary gateway beyond which a man shall not pass if he is unemployed and seeks a new connection. Even women of 30, especially in business offices, are daily confronted with the same age barrier.

The story of the Forty Plus Club and its fight against this age discrimination is told by J. B. Rawlinson in the March Catholic Digest, a copy of which is enclosed.

Age discrimination, Rawlinson warns, has resulted in dumping on the labor scrap heap of thousands of healthy, active men at the height of their skills. This discrimination will be disastrous to our economy if nothing is done.

I believe this article will be of interest to you. If there is any additional information you would like to have, I shall be happy to send it to you.

Very truly yours,

PAUL BUSSARD.

DON'T DISCOUNT GRANDPA—THIS COUNTRY
MUST STOP WASTING THE BRAINS AND SKILLS
OF MATURE PEOPLE, SAYS THE FORTY PLUS
CLUB

(By J. L. Rawlinson)

The Forty Plus Club is a cooperative, non-profit organization of mature men who work without compensation for one another. Their greatest reward, next to getting jobs for themselves, lies in helping to get a job for the other fellow. They share the expense of maintaining and promoting club activi-

ties. Every working day in the year they are in the field, at their own expense, calling on employers to show that there is no substitute for the experience and know-how of older workers.

Other club members are in the office, where they serve on committees preparing and placing advertisements, writing radio or television scripts, and securing, whenever possible, free time on the air. Others make up and mail pamphlets, brochures, and news articles. Still others address business and civic group meetings. The average number of men in the Forty Plus Club is 80, the average age 55. As some find jobs, others who are trained for the work immediately take their places.

But why, in these prosperous times, is all this work necessary? There are two big reasons. First, prejudice against the aged in business and industry is still widespread. In this, the greatest country on earth, opportunities which are pressed upon young people are denied to their elders. Forty has become the arbitrary gateway beyond which a man shall not pass if he is unemployed and seeks a new connection. Many women of 30, especially in business offices, are daily confronted with the same cruel age barrier.

Pension plans, too, are formidable obstacles for older workers, especially executives. The premium paid by the employer to an insurance company to enable an employee of 50 to receive a pension at 65 is much higher than for a man of 30. When a job seeker offers to waive all pension payments and other rights, the answer, all too often, is that this would involve too much bookkeeping. And so the upgrading of youth and the downgrading of age continues, year after year, a shameful waste of brains and manual skill.

A number of retired Army and Navy officers, including a rear admiral, have joined the civilians who have passed through the Forty Plus Club at 220 Broadway, New York City. Many of them take an active and continuing interest in its activities by turning in job leads.

The club solicits no donations and has no endowments; it is entirely supported by active and associate members. These men are justly proud of its continuing success. Now in its 16th year, the club has found jobs for 3,500 men. In the files of the club are many heartening stories of members who nearly broke under the shock of finding themselves out of jobs they had ably filled for years. Laid off because of a merger, a reorganization, the closing of a branch, or any one of a dozen reasons, they came broken in spirit. In the cheerful, optimistic atmosphere of the club, their confidence was restored, their self-esteem was rebuilt.

A distinguished-looking gentleman of 72, once retired but now sadly in need of employment because of unfortunate investments, was accepted as a member. He had been seeking work for 2 years and had begun to feel that opportunity had passed him by for the last time.

Association with club members, observing their ways, listening to their talks, gave him new courage. He was assured that somewhere a good place awaited him. Today he is vice president of a bank, earning a high salary.

An unemployed engineer of 45 had tried everything he could think of to make a new connection. He had paid \$300 for employment counsel and \$100 for a résumé, and had answered scores of help-wanted ads. Fighting alone, he got nowhere. At the suggestion of a friend, he applied for membership in the Forty Plus Club, and was accepted.

Immediately he went to work, not on a payroll but as a volunteer. No salaried, he went through an intensive 3-day indoctrination course, during which he was trained to go out and sell the club to top-management executives. Amazingly soon, this engineer found that the work which he thought would

be distasteful and beyond his capabilities was just the work he could do well. Today he is a highly successful sales engineer.

Forty Plus-ers have proved so dependable that some employers, regrettably few, it is true, rely almost exclusively upon the club to fill their vacancies. At times, concerns that have tried all other sources without success turn to the club for help.

An amusing instance of this occurred some time ago. At 3 p. m. in the afternoon one of the phones of the placement committee rang, and a troubled voice said, "I wonder if you fellows could help us out of a jam. We're in the business of supplying special props for television shows, and we've had a call for a milking cow for a show tonight. The animal must be at the studio not later than 6:30. If you have a man there who can get a milking cow to the studio on time tonight, he can have a job, sight unseen, at seventy-five hundred a year."

Immediately, an unemployed salesman reached for his hat. "I'll get that cow," he declared with conviction.

Rushing to the subway, he took the first train to Long Island City, then a taxi to a large dairy concern. Using all his persuasive powers and supersalesmanship tactics, he talked the general manager into furnishing, free of charge, not only the cow but the truck to take it to the studio and back. The man from the Forty Plus Club, unemployed because of old age, got the cow to the television studio and the job. He still has the job.

All the known facts offer no justification whatever for age prejudice. Studies have been made by various organizations, including the New York State Joint Legislative Committee on Problems of Aging. The facts demonstrate that mature men and women are usually the most conscientious and dependable. At desk, shop, or store, such workers have learned not only what to do but what not to do, and can save their employers costly mistakes. They take pride and pleasure in doing an honest day's work for a day's pay; they rate higher in efficiency and productivity, and have lower absentee records. They do not jump from job to job.

Physical age—biological age—is what truly counts, not calendar age. Some men are young at 70, others old at 30. Then, too, life expectancy has grown by leaps and bounds, and it is still growing. At the turn of the century, it was about 45 years. There was then no old-age problem to speak of because so many people died before they became old. Today, life expectancy is over 65. Unprecedented advances in medical science, together with new discoveries in the art of living, have made older people of today as young in spirit, resourcefulness, and all-round good health as younger people of a few years back. In addition, they have the wisdom and experience that come only with age.

The heads of most large corporations are often well along in years, a vigorous 65 or 70. Not a few have even reached 80. Yet, often those very concerns follow a policy of not hiring people over 40. That is why the Forty Plus Club idea has spread and why there are now similar organizations in Philadelphia, Washington, D. C., Buffalo, Cleveland, Detroit, Los Angeles, and San Francisco.

The need is great, for thousands of healthy, active, middle-aged men at the very height of their professional or industrial skills are being thrown upon the scrap heap. Those men have been good citizens. They have educated their children, paid their taxes, contributed to the Red Cross, the church, and other worthy causes. Now they are cut off from the busy workaday world in which they spent so many years. Not infrequently an employer, unable to find the right younger man, will keep a place vacant for months rather than take one overaged.

The present do-nothing policy of the Government in the matter of older workers must not continue. We have outlawed racial and religious bias, but unjust age discrimination remains, an appalling waste of manpower and a reproach to our national leaders. A full-blown congressional probe is needed to uncover the extent to which older workers are discriminated against by reason of age and also by pension plans. Such an investigation would demonstrate that fair-employment-practices legislation is sorely needed. Such legislation is bound to come if the American way of life is to recognize the dignity of the individual and his right to earn a living as long as he is able and willing to work.

And It Could Be You

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

Mr. KLEIN. Mr. Speaker, the United States, and indeed the entire civilized world, will be eternally grateful for the life of Franklin D. Roosevelt, whose birthday was recently celebrated. The district that I represent in Congress has particular reason for depth of feeling about the unparalleled services of this great President of the United States and world leader. One of the ablest journalists from my district has written a tribute to him that was published recently in the East Side News that deserves to be widely known. Under leave to extend my remarks, I include herewith the editorial entitled "And It Could Be You," by Harry H. Schlacht:

AND IT COULD BE YOU

The 75th anniversary of the birth of Franklin D. Roosevelt will be observed throughout the country on Sunday, January 30. It was he who founded the National Foundation for Infantile Paralysis. It was he who mobilized the people for war on this dreaded disease. It was he who became the symbol of this crusade.

Polio has ravished mankind throughout the ages. It is written that Ruma in 1400 B. C. was the earliest victim of infantile paralysis. It is said in the Old Testament that Mephibosheth was "lame of feet." It is recorded in the Gospel, according to St. Mark, that Jesus cured an atrophied arm.

History abounds with famous men who were victims of polio. The great composers, Mozart and Chopin; Charles Darwin, the father of the theory of evolution; and Sir Walter Scott, the novelist, were among them.

Polio is as great a problem today as when the malady was first described. It must be our problem until science can proclaim its conquest of this crippling foe. It is no respecter of persons. It is the dreaded disease of childhood. It strikes swiftly and silently. It strikes without warning. It is the great crippler. Whose child will be next?

The national foundation does not recognize race, color, or creed. It seeks to help those who cannot help themselves. It seeks to strike back when the cripple strikes. It is a unique institution. It is the property of the American people. It must have the support of the American people.

Today, when a person is stricken with polio, a report is made out immediately to the nearest health center within 24 hours

after the physician has diagnosed the case as polio. The nearest chapter of the national foundation communicates with the parents of the patient and all arrangements are made for the victim. The foundation assumes all financial obligations, thus giving all an equal chance to fight this scourge.

There is no greater call to which we can rally than to free little children from a life sentence in a wheelchair. No writer, however talented, can adequately portray the joy of a little stricken girl when she shouts to her parents: "Look, I can walk again." Yes; that little sentence, that happy exclamation tells more strikingly and dynamically than any article could tell what the National Foundation has accomplished.

Why not give gladly and generously to the March of Dimes? You give so that the lame may walk again. You give so the healthy may be protected. Why not give until it heals?

Did you know, perhaps you may have forgotten, that a man is never so tall as when he stoops to help a child. May God hasten the day when "Look, I can walk again" becomes a willing cry of triumph in all afflicted homes—a triumph over the most crippling disease known to mankind.

Give to the March of Dimes. Give to stop the march of polio. For the child you help may be your very own.

New York Court in Historic Ruling on Communism—The Lightfoot Case

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent I present to you and my other distinguished colleagues the text of an article by Mr. Godfrey Sperling, Jr., appearing in the Christian Science Monitor on Thursday, February 17, 1955. In view of its pertinency and timeliness and in view of the present status of the subject discussed by Mr. Sperling in this Lightfoot case, I felt sure that the text thereof would be of special value and interest to all the Members of this great legislative body:

LIGHTFOOT CASE: COURT IN HISTORIC RULING ON COMMUNISM

(By Godfrey Sperling, Jr.)

CHICAGO.—A judge who said he was guided in his pronouncement of sentence by the punishment meted out to the 11 top Communists in New York has sentenced Communist Claude M. Lightfoot to 5 years' imprisonment and a \$5,000 fine.

Thus the defendant becomes not only the first Communist to be convicted under the membership provision of the Smith Act, but also the first Communist since the Medina trial to be judged, in terms of punishment, a revolutionary threat to the Nation.

As the historic landmark case heads toward the Supreme Court, it seems probable that the high court may again invoke the doctrine of "clear and present danger" as it did in the appeal of the top Communists case.

This time, however, the court will have to decide whether Lightfoot's admitted affiliation with the Communist Party is in itself sufficient to constitute a "clear and present danger" to the United States.

In the New York case, evidence was presented of overt conspiracy to overthrow the Government by force and violence. Then the defendant's acts were weighed against the clear and present danger doctrine.

Both the New York court and the Supreme Court decided that the American Government did not have to stand by quietly until a Communist revolution was launched before it could take measures to save itself.

PRESENT DANGER

"When does the conspiracy become a present danger?" the New York court asked. "The jury has found that the conspirators will strike as soon as success seems possible, and obviously no one in his senses would strike sooner."

The court decided that the Communist conspiracy is a clear and present danger.

Observed the Supreme Court, in agreeing with the lower court on the application of this danger doctrine:

"Obviously, the words cannot mean that before the Government may act, it must wait until the putsch is about to be executed, the plans have been laid, and the signal is awaited.

"If the Government is aware that a group aiming at its overthrow is attempting to indoctrinate its members, and to commit them to a course whereby they will strike when the leaders feel the circumstances permit, action by the Government is required."

Before handing down the sentence, District Judge Philip Sullivan commented that, from the documentary evidence and testimony, "the jury could hardly have found that the defendant did not have knowledge that the Communist Party advocates overthrow of the Government by force and violence."

POLICY OF OVERTHROW

Further, he said, the jury could reasonably infer "that the defendant intended to bring about the overthrow of the Government as speedily as circumstances would permit."

Under the heretofore untested provision of the Smith Act, membership in a group seeking to overthrow the Government is not quite enough to bring about a conviction. Also, the provision states, the defendant must have knowledge of the group's criminal objective.

During the trial, voluminous citations from Marx and Lenin were admitted in evidence, to show that Communist Party doctrine dictated overthrow of the government.

The Government also put witnesses on the stand to testify to the defendant's active role as executive chairman of the party in Illinois to show that, from his leadership and from his talking and teaching of communism, only one inference could be drawn: That Claude M. Lightfoot knew what the Communists were doing.

No evidence, however, pictured the defendant in the over act of trying to overthrow the Government. His objective was preconceived by the jury through inference, an inference which the judge has pronounced reasonable, in light of the entire evidence.

In deciding on the heavy sentence, the judge also said that he was considering the Smith Act revision which is now pending in Congress. This revision calls for a doubling of the maximum penalty for convicted Communists, to \$20,000 and 20 years.

The Lightfoot case has recalled to many observers here the closing hours of the last session of Congress, when a group of Senators almost stampeded the Congress into adopting new laws that would have punished membership in the Communist Party.

This effort to outlaw membership failed. "But how is this case to be distinguished from outlawing the party," some observers join the defense in inquiring. The prosecution answers, in effect: "There has been proof of knowledge of the purpose here."

River Basin Development in Turkey

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. MILLER of California. Mr. Speaker, Mr. Philip P. Dickinson, chief, United States reclamation advisory team in Turkey, is well known to all who are interested in western reclamation.

He is doing an excellent job in the Republic of Turkey in building up cordial relations with this country through the assistance program.

He recently addressed the Rotary Club of Ankara on the subject of river basin development in Turkey.

Here is the story that appeared in the Turkish-American News:

RIVER BASIN DEVELOPMENT IN TURKEY

(By Philip P. Dickinson, Chief, United States Reclamation Advisory Team)

I am a civil engineer, not a public speaker, but I do appreciate the honor to have been invited to address this distinguished group. I have found it a real pleasure to meet with you. I have a team of 10 American engineers and economists here in Ankara, working with the Ministry of Public Works and the Ministry of Agriculture on a long-range program of water and power development for Turkey. We believe our work is of mutual assistance. Our objective is not only to help Turkey, but equally, by doing that to help America.

Water is fundamental to life everywhere on earth, but in some places it is taken for granted. In the humid areas, like most of Europe and the eastern half of the United States, water comes free; the supply is virtually unlimited; abundant rainfall nourishes the land and the crops and provides drinking supplies for humans and animals. But in arid zones like Turkey, in most of the Middle East, as well as the Western States of America, no one takes water for granted. It is too precious for that. Here, water is treated like land, as a strictly limited natural resource, of equal or perhaps even greater value.

This eastern Mediterranean area is known as the cradle of western civilization. It also is the birthplace of irrigation. It was in the valleys of the Tigris, the Euphrates, and the Nile Rivers that man changed from a hunter to a herdsman, from a food gatherer to a food grower, and thereby started the processes from which our western civilization evolved. Man did this by learning to domesticate animals and by learning to use the floodwaters of the rivers to grow crops.

So, Turkey has been engaged in irrigation and flood control for a long time. But most of its projects, even in the present day, have been single, individual projects for small areas, not particularly connected one with the other. In my present work in Turkey we are giving special emphasis to a particular aspect of water and power development which we call river basin planning. This concept has been applied in the United States for some years now. You may have heard of it under names like the TVA (Tennessee Valley Authority), or the Columbia Basin development, or the Central Valley project. The basin concept is based on the simple fact that water, wherever it falls, flows downhill; in other words rivers follow natural rather than political laws, they flow unimpeded across State and provincial boundaries. For that reason, a geographical river basin, including every tributary from the

mountains to the sea, is the natural unit for planning and developing water and power projects.

We have selected one major river basin in northern Turkey as a model or training ground in which to work up a complete comprehensive multiple-purpose river basin plan. That is the basin of the Yesilirmak which flows into the Black Sea near Samsun. A river basin planning staff of Turkish engineers, economists, and technical aids has been established in Devlet Su Isleri (director of state hydraulic works) to do this job. We Americans from the United States Bureau of Reclamation are stationed with this staff in the same offices at Bakanliklar, all working intimately together.

I used the term multiple-purpose. By that I mean the planning and construction of water projects to serve more than one purpose—not just irrigation, not just flood control, not just electric power, but all of these together—plus, very often, other related purposes, such as furnishing water supplies for cities and villages, and for industries; improving river channels for navigation; draining swamps; controlling the salt or alkali content of water; improving conditions for fish life, and providing recreation opportunities on rivers and reservoirs. Almost all of our big water projects these days in both the United States and Turkey are multiple-purpose projects.

All of us are security conscious today. In the current struggle for world power much of our thinking and a large part of our energies are devoted to making our countries strong. We learned in World War II that to do that, to remain strong, and to preserve our democratic way of life we have to think of more than military strength; we also must press forward with continued development of our basic natural resources—our minerals, our forests, our lands, and our water. Most important of these, in my opinion, is water, especially in Turkey and the western part of the United States. Because without water none of the other resources would be any good to us.

This work is proceeding in Turkey. Before the Yesilirmak plan is completed, engineers of Devlet Su Isleri will be started on preparing a plan for the Kizilirmak Basin. The basins of the Tigris and Euphrates will follow in order. Attention also will be given to perfecting river basin plans where individual projects already are under construction such as on the Sakarya, the Seyhan, and the Gediz Rivers.

These projects have profound influence on Turkey's security. River basin development can and does contribute substantially to the productive strength of the nation.

School-Lunch Program

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a telegram I received from Mrs. A. A. Guastead, chairman of the hot-lunch program, North Dakota Congress of Parents and Teachers.

There being no objection, the telegram was ordered to be printed in the Record, as follows:

JAMESTOWN, N. DAK., February 21, 1955.
HON. WILLIAM LANGER,
Senate Office Building,
Washington, D. C.:

As State chairman of school-lunch program for North Dakota Congress of Parents and Teachers with 40,000 members and our association sponsoring 128 hot-lunch programs, I earnestly urge no reduction in funds and beg that section 6 covering canned fruits, canned vegetables, citrus products, and peanut butter be not eliminated. Letter following.

Mrs. A. A. GUASTAD,
Chairman, Hot-Lunch Program, North
Dakota Congress of Parents and
Teachers.

To Live in Peace

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 3, 1955

Mr. MULTER. Mr. Speaker, the following report from Israel, written by the Honorable Denis Healey, member of the British Parliament, is worthy of our attention. It appeared in the January 3, 1955, issue of the New Republic magazine.

REPORT FROM ISRAEL—TO LIVE IN PEACE
(By Denis Healey, Member of Parliament)

I do not think there is any historical precedent for Israel's extraordinary success in taking almost a million immigrants from all parts of the world and within a few years turning them into a nation. Where America was a melting pot, Israel is a pressure cooker.

Defying every law of economics, her trade gap is still more than \$200 million a year—a colossal sum for a country of only a million and a half inhabitants. For another 12 years or so, German reparations, American aid, and the contributions of Jews abroad will help to cover this. But then Israel will have to pay her own way, and it is an open question whether she will be able to do this while maintaining a West European standard of life.

Today the country is like a beleaguered garrison. On all sides press hostile Arab states, which refuse to recognize Israel's existence and whose leaders are always talking of the second round, in which they will avenge the humiliating defeat they suffered in 1948. The border settlers are living under almost intolerable moral and physical strain. More important still is the impact on the economy of the infant state. Defense takes an enormous toll of money and manpower. The Arab blockade cuts off all the most promising markets for Israel's export trade, in east Africa, southern Asia, and the Middle East itself.

In the long run Israel's very life will depend on achieving friendly cooperation with the Arabs for economic and political development throughout the Middle East. With nationalism raging like a fire throughout Africa and Asia it is inconceivable that Israel could hope to survive as a "white colony" in the Middle East, however strong her army or broad her frontiers. But Israel has very little scope for compromise. So long as the Arabs flaunt their intention of wiping her off the map Israel cannot be expected to throw away the few concessions she might ultimately afford for the sake of

minor agreements which leave the central issue untouched.

Everyone knows that Israel is tied to the West by both political principle and material interest. But the Arab leaders can flirt dangerously with Moscow in the knowledge that even if the worst happens they can fly to Monte Carlo or Buenos Aires and live the rest of their lives in luxury. So the Western powers concentrate on winning friends among the Arabs. Some of their advisers regard Israel simply as an obstacle to stability in the Middle East whose disappearance would have advantage. And Russia pursues a 100 percent pro-Arab policy.

In spite of some bitter memories, many Israelis are beginning to look on Britain as their best friend among the great powers—she is already their main market. But Britain is handing over her responsibilities in the Middle East to the United States. And, America, having played the central role in getting the state of Israel established, has moved to the other extreme. Her generals hope to train and equip strong Arab armies in the Middle East on the South Korean model—they have not yet learned from their more recent experience with Syngman Rhee. In any case, the Arab states have plenty of money to spend on arms so even if American policy changes, Arab armed strength will increase considerably in the next few years.

On the other hand the unity of the Arab world is under growing strain. Egypt may turn increasingly from the Middle East and seek her future in Africa. Iraq may desert the Arab League for the Turkey-Pakistan pact in the north. Jordan and the Lebanon for various reasons both distrust the remaining Arab powers. Before long the stage may be set for a real improvement in Israel's relations with her immediate neighbors.

The real question is whether she can get through the next year or two without a new flareup. At present Israel is feeling desperate. If the western powers do not show a more urgent and effective interest in Israel's survival, pressure inside Israel for a preventive war may mount dangerously. At the moment Israel's army is probably stronger than all the Arab armies put together. So there are already some Israelis who feel it would be better to have the second round now than wait until American aid and training tilts the balance of power toward the Arabs.

Israel's present leaders see clearly that such action would be ultimately suicidal. But unless she can be shown some peaceful way out of the present deadlock, desperation may produce a change in both opinion and leadership.

By now there is little chance of stopping the Arabs arming if they want to. So the immediate task is to see that Israel is able to keep pace with them. In the second place the west must make it much clearer to the Arabs that it would intervene to crush any Arab attack on Israel—and vice versa. Now that Israel has offered the Arabs a nonaggression pact, there is a strong case for some Locarno type arrangement in the Middle East to which the Western powers would also be a party. Words alone will not convince either Israel or the Arabs that the West means business unless Israel too can be associated in some way with the framework of Western defense. Direct military links with Britain or the United States are unlikely in the immediate future. But there may be some way of associating Israel with the new Balkan pact—incidentally Yugoslavia is now her closest friend after Burma.

Unless Israel's influence in the Western World can be increased in some such way, she will not feel any confidence in third-party mediation, and the Arabs will feel no incentive to make a settlement with her. I believe that a final settlement is unlikely to come about except through Western media-

tion—the scope for improving relations through direct talk is very limited. But in the right conditions outside intervention might help produce and guarantee a settlement. The recent agreement over Trieste is an example of what this kind of secret diplomacy can achieve. From such a start, positive cooperation could follow. And we might then see Israel lead the whole of the Middle East along the road to democracy and prosperity.

The Man Who Replaces McCarthy

EXTENSION OF REMARKS

OF

HON. EARLE C. CLEMENTS

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1955

Mr. CLEMENTS. Mr. President, in the New York Times Magazine of Sunday, February 20, 1955, there was published a fine article entitled "The Man Who Replaces McCarthy," written by Allen Drury. It is an interesting article about the senior Senator from Arkansas [Mr. McCLELLAN], and I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE MAN WHO REPLACES MCCARTHY (By Allen Drury)

WASHINGTON.—Senator JOHN L. McCLELLAN is a man on a spot who thinks he knows how to get off. If past performance is any guide, he will manage. The Arkansas Democrat, successor to Senator JOSEPH R. MCCARTHY, of Wisconsin, as chairman of the Government Operations Committee and of its noisy stepchild, the Permanent Investigations Subcommittee, is under no illusions about the problems his job poses.

"I'm under the gun on this," he says, "but I'm not worried. The duty of the subcommittee is clear. We've shaken up the staff and we're going to go ahead and clean up the cases that are hanging fire. Then we'll go after the things that need going after, not just the Communists, who of course will remain a major concern, but corruption and inefficiency and waste and the general field of Government operations that is our chief responsibility. We'll try to do it without smearing anybody, and with a decent regard for the rights of American citizens and the dignity of the Senate."

Whether anyone, however well-meaning of purpose and firm of intention, can restore decorum and integrity to the conduct of the Senate's most notorious forum, after some of the things which happened under its former management, remains to be seen. But his colleagues are agreed that the senior Senator from Arkansas, on balance, probably has a better chance than most.

The authority of his committee is as broad as any on Capitol Hill. It covers budget and accounting measures, other than appropriations; reorganizations in the executive branch of the Government; and the study of intergovernmental relationships between the United States and the various States and municipalities, and between the United States and the international organizations to which it belongs.

In addition, it has the duty of "studying the operation of Government activities at all levels with a view to determining its economy and efficiency." It is from this au-

thority that most of the committee's activity and publicity have sprung.

In the Republican 83d Congress the phrase was seized upon by the then chairman to justify creation of a Permanent Investigations Subcommittee. Since the phrase was vague enough to include almost anything, the chairman turned it to his own purposes and declared that it covered the investigation of Communists in the Government.

There followed the series of sensational hearings with which the country became all too familiar. McCARTHY never lacked for targets; he could always find a suspect or suspects suitable for a well-publicized hearing, and he possessed the personal characteristic of being either hated or idolized with no inbetweens. The committee was entirely overshadowed by his flamboyant personality.

Such is the background of controversy that JOHN McCLELLAN inherited with his chairmanship. But most of his Senate colleagues look confidently to him to repair the subcommittee's reputation, while carrying on needed constructive work.

This confidence, which is general, save for the little band still clustering defensively around his predecessor, is based almost entirely on personal character and record of performance. McCLELLAN is not one whose adherents find their judgment of his ability affected by excessive personal attachment. A dark-visaged, seldom smiling, highly complex man who goes about the Capitol with an air of knowing exactly what he wants to do, he is much respected but little known by his colleagues. In a body where the easy joke and the casual manner are more often than not the surest passports to popularity, he slaps no backs, indulges in no marathon handshakes, keeps his own counsel, and goes his own way.

He does not discourage friendship, but he is not cordial to familiarity; and in the Senate, where the one frequently is used as the standard substitute for the other, he has many partisans but almost no real intimates.

It is through the highly publicized sessions of the subcommittee that McCLELLAN is best known to Americans and there are two characteristic glimpses of him there. The first appears after he has spent many long and patient minutes listening to some willfully recalcitrant witness duck and dodge and evade the subcommittee's questions. There comes a time when the Senator from Arkansas suddenly decides that he has had enough.

His face black and scowling, his eyes staring angrily, his voice rising to its full, impressive volume, he pounds at the witness with all the sledgehammer force and persistent skill he learned as a trial lawyer years ago in the back-country areas of his native State. While he does not always attain his objective, not even the most glib and hostile witness emerges unabashed from this ordeal.

The Senator from Arkansas speaks with a Puritan wrath on such occasions, and only the black, peaked hat is lacking to make the picture complete.

The second characteristic scene occurs at the end of a hearing, when Senators are emerging from the room to meet the waiting press. Somebody is always standing squarely in the glare of the television lights, giving forth with words of wisdom for the world to hear. Silent and almost unnoticed, JOHN McCLELLAN comes out, glances at what is going on, gives a dry and ironic little smile, shakes his head at the waiting reporters and glides quietly away down the hall. Although he is by no means inaccessible to the press, and has a reputation for dealing with its members fairly and frankly, he does not believe in the grandstand play.

The Senate's new chief investigator brings to the difficult task the personal expe-

rience of 4 years in the House, 12 in the Senate, and a youth and early legal career filled with the practical lessons of life among the "woolhats."

Born on a farm near Sheridan in Grant County, Ark., on February 25, 1896, McCLELLAN attended Sheridan public schools and then went directly into his father's law office, prompted by the dazzling example of a youthful barrister who helped his father collect a debt of \$200 owed him in a town some distance away. To obtain this sum, the lawyer took a train in the morning and returned in the same conveyance in the evening, receiving for his labors a fee of \$25 from the Senator's father. "When I saw that a lawyer could make \$25 and get to ride on a train, too, that was enough for me," the Senator says with a grin. "I made up my mind to be a lawyer right then and there."

He says that he became a candidate for Congress at the age of 8. That happened when the future Senator and a playmate got into a fight at school and wound up with a whipping from the teacher, who happened to be a Republican.

"There weren't many Republicans in Arkansas in those days," the Senator remarks thoughtfully, as though there were now, "and my father was so incensed at the thought of a Republican whipping his son that he had me memorize a Democratic speech to give at our class-day exercises. I remember it concluded, 'Vote for William Randolph Hearst, a great and noble man.'"

"Unfortunately, 3 days before I was scheduled to make it the Democratic convention decided it was going to nominate Judge Alton B. Parker instead of Mr. Hearst, so I had to revise it. But it was a great success. That fall our Congressman, John S. Little, wrote me a letter predicting that someday I would be a Congressman. I still have the letter."

As with so many people, the urge to be a lawyer and the urge to be a Congressman ultimately dovetailed into two phases of the same ambition. The Senator helped his father, studied and absorbed the law, and at the age of 17, 4 years under the legal minimum, was permitted to enter practice by special act of the State legislature. Shortly thereafter he moved out from under his father's wing and into the world of the Army, where he was on his own.

He says this of his experience in World War I: "The Army taught me self-reliance and it taught me that when the chips were down there wasn't anybody to depend on but myself. I've never forgotten that lesson. It taught me to make up my own mind. I don't think a fellow suffers as much from a wrong decision, if it's sincerely made on the facts as he believes them to be, as he does from not making a decision at all. There comes a time when decisions have to be made. I learned that in the Army."

Back from the war, where he served as a lieutenant in the Infantry and the aviation section of the Signal Corps, he spent a while trying cases in the county courthouse and then in 1928 ran for the job of prosecuting attorney for the seventh judicial district of Arkansas.

He held this post until 1930, when he returned again to private practice. In 1934 he ran for Congress from the Sixth Arkansas District, was elected, and in 1936 was re-elected. From 1939 to 1942 he was in practice. Then in November 1942 he was elected to the Senate. He has been reelected twice, having started his third 6-year term in January.

Although he made a speech condemning communism on March 4, 1936, in the House, it was not until 16 years later, as ranking Democrat on the Senate Investigations Subcommittee, that he was drawn directly into the vortex of that explosive issue. In the interim his concerns were those characteristic of his party in the Midsouth.

"I've always been called a conservative and I've never resented it," he once remarked. Another time he said: "I did not become a Senator to transfer the United States into a socialistic, paternalistic state."

Yet, like many southerners, while he was to be found always on the expected side of civil rights questions, he was also to be found supporting such progressive extensions of Federal authority as the soil conservation program, the national forestry program, the school lunch program, the vocational education program, social security, Federal aid to hospitals, agricultural research, and extension services, emergency drought relief, rural electrification, Federal aid to highways, and wildlife conservation. As with others from below the Mason-Dixon line, the harsh facts of an impoverished economy inspired a type of liberal conservatism.

Ultimately there came the reorganization of the legislative branch of the Government, and with it the creation of the Government Operations Committee of the Senate. The Senator from Arkansas was assigned to it, and in time, moving steadily up the ladder of seniority, he became the ranking Democrat. Approaching the same high status across the party aisle was the junior Senator from Wisconsin. In the 83d Congress the two men took over the committee and began a partnership which, at first harmonious, soon became uneasy and then explosive as McCARTHY created the Investigations Subcommittee and launched forth upon his hectic crusade.

For a time, the senior Senator from Arkansas regarded this spectacle with misgivings but without open protest. Fully as anxious to rid the Government of subversives as the chairman professed to be, he rode along, taking the snubs and the discourtesies and the deliberate exclusions from subcommittee business which were the lot of most members of the subcommittee. Behind the mask, however, one of the most powerful tempers in the Senate was slowly gathering steam; and when the activities of the chairman's two youthful assistants began to move out of the realm of cloak-room gossip into front-page notoriety, the Senator from Arkansas decided to act.

His first move was to approach the chairman privately, which led, characteristically, to many little jokes, many amiable half-commitments, many half-promises and tantalizing intimations that possibly changes might be made, so don't worry. When changes were not made—when, in fact, the situation was allowed to deteriorate even further—the McCLELLAN temper boiled over.

The occasion for giving it expression arose when the chairman abruptly hired J. B. Matthews as executive director of the subcommittee and then, under public pressure aroused by an article he had written on alleged Communist infiltration of the Protestant clergy, as abruptly fired him. Accompanied by his two Democratic colleagues, STUART SYMINGTON, of Missouri, and HENRY JACKSON, of Washington, JOHN McCLELLAN left the subcommittee with an angry blast against one-man rule. The event occurred in July 1953 and it was not until January 1954 that the three returned.

When they did, it was with an understanding with the chairman that things would be different in the future. But they did not become much different, and the central situation involving the chairman's young friends was still going on and getting worse. Before long John McClellan, Joe McCarthy, Roy Cohn, G. David Schine and the whole subcommittee were sitting in the glare of the spotlights, and one of the most fantastic proceedings in the history of the American Congress was under way.

After the Army-McCarthy hearings ended, and after the McCarthy censure hearings and the McCarthy censure debate were also concluded, the Democrats came to power on Capitol Hill and the Senator from Arkansas

assumed the chairmanship. He has proceeded so far with a calm determination to get the subcommittee back on the track and move ahead constructively with its business.

Already the Senator has indicated his intention to clean up once and for all the case of former Army dentist Irving Peress, called a Communist by the former chairman. He has indicated the same treatment for any other legitimate inquiries left over from the old regime. And he has restated a philosophy of investigative procedure which he deems worthy of the Senate and the task which needs to be done.

"When those who come before the committee resort to the fifth amendment," he says, "they command no respect from me, as individuals. I respect their right to resort to it if they feel they must, but it carries with it an implication I am compelled to consider, and not favorably. A man who cannot face competent authority and say he has no affiliations with any subversive organizations, has no right to employment with the Federal Government in a sensitive or any other position.

"At the same time, I don't believe in permitting smears and slanders which can't be answered before the same tribunal. Anyone named as subversive by another witness should have the right to present his side of it to us, and as long as I am chairman he will have the right, and he will be given the opportunity, to do so."

The senior Senator from Arkansas is embarking upon at least 2 years as the wielder of the Senate's best known weapon in the fight against Communist infiltration of the Government. The job is not easy, but for a man who understands that there comes a time when decisions have to be made, its difficulties do not promise to be insurmountable.

Lithuanian Declaration of Independence Day, February 16, 1918

EXTENSION OF REMARKS OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. WIGGLESWORTH. Mr. Speaker, all of us, I am sure, appreciate the fine contribution which a million or more Americans of Lithuanian descent are making to America.

All of us, I know, deeply sympathize with the 3 million or more Lithuanians in the homeland in the situation which confronts them as a country which has been forced behind the Iron Curtain.

We admire greatly the progress which Lithuania made during the period of her independence from 1918 to 1940.

We deplore the forceful termination of that independence.

We join in the hope that Lithuania may one day again play her part in the world as a member of the family of free nations.

In this connection, Mr. Speaker, I include as a part of my remarks a copy of a resolution unanimously adopted by the Lithuanians of the town of Norwood, Mass., at their observance of the 37th anniversary of the Declaration of Independence by the people of Lithuania:

Unanimously adopted, by the Lithuanian Americans of the town of Norwood, at the observance of the 37th anniversary of the

declaration of independence by the people of Lithuania held at St. George Hall on the 13th day of February 1955.

"Whereas Lithuania for almost 15 years has suffered under the yoke of slavery forced upon her through the brutal and unprovoked aggression by the Soviet Union;

"Whereas the plan of physical extermination of the Lithuanian Nation has been carried out by the Kremlin on a scale unheard of heretofore;

"Whereas the Kremlin by nature is totalitarian and global in its politics, lasting peace and security in the world are impossible;

"Whereas the line of peaceful coexistence proffered by the Kremlin masters is merely a subterfuge to gain time for the purposes of destroying the alliances existing among the nations of the free world and thus leaving the way open to subsequent world conquest; Therefore be it

"Resolved, That this gathering of loyal Americans of Lithuanian descent of the town of Norwood fully aware of the gravity of the present international situation and deeply concerned over the fate of the Lithuanian Nation, pledge their wholehearted support of this great country's genuine quest for lasting peace and justice in the world, and urge the Federal Government of the United States to continue to respond with a dynamic and positive program against the threatening Communist conspiracy; be it further

"Resolved, That in the opinion of the Lithuanian-Americans of this town, in any program with respect to enslaved nations, the following steps should be undertaken:

"That special stress be given to the necessity of hastening the liberation of the captive people and all acts or omissions confirming their enslavement be rejected.

"That Congress encourage and support through authorized funds the resistance movements of the enslaved nations.

"That Congress continue to investigate the facts and techniques of Communist aggression through proper committees.

"That the United States Government sponsor a resolution in the United Nations supported by the findings and conclusions of said investigation, denouncing the Soviet Union as an aggressor against all the Communist-enslaved nations.

"That the Genocide Convention be immediately ratified by the United States Senate so that the Soviet Union may be held criminally responsible for the genocide perpetrated in the Baltic States and other countries behind the Iron Curtain; be it finally

"Resolved, That this gathering express its deepest gratitude and appreciation to the Federal Government and Congress of the United States for their sympathetic and unwavering stand and attitude toward the eventual restoration of independence of Lithuania."

LITHUANIAN ROMAN CATHOLIC FED-

ERATION OF AMERICA, No. 10.

WILLIAM KUDICKA, President.

ANDREW T. VENSUKS, Secretary.

Resolution on Communist Control Act of 1954

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 3, 1955

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of my colleagues to the following resolution

adopted by the eighth annual convention of the American Veterans Committee at Boston, Mass., on December 4, 1954:

RESOLUTION ON COMMUNIST CONTROL ACT OF 1954

Whereas AVC believes that the Communist Party is in fact an instrumentality of a foreign-controlled conspiracy to overthrow the Government of the United States; and

Whereas the Congress of the United States in enacting the Communist Control Act of 1954 has made certain findings of fact as to the organization, purposes, and membership of the Communist Party of the United States of America, and has purported to outlaw the Communist Party of the United States of America and has imposed certain sanctions on membership or participation therein or in any other proscribed organization and on labor unions found to be Communist Party action, or Communist Party front, or Communist Party infiltrated organizations; and

Whereas the said act is loosely and badly drawn and was hastily adopted without hearings, adequate debate or deliberation, and sets up arbitrary and ill-considered standards for determining membership or participation in the Communist Party of the United States of America or other proscribed organizations and for determining whether a labor union is a Communist Party action, or Communist Party front, or Communist Party infiltrated organization, thus violating traditional American freedoms embodied in the Bill of Rights:

Now, therefore, the delegates to the 1954 national convention of the American Veterans Committee urge prompt reconsideration of the Communist Control Act of 1954 in the light of and together with preexisting laws so that well-conceived legislation may be adopted consistent with traditional American freedoms and due regard for the national security and welfare.

They Who Have Sown the Wind—An Editorial Naming Harvey Matusow

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me heretofore so to do, I present the text of an editorial printed in the Christian Science Monitor on Thursday, February 17, 1955.

In view of the fact that this editorial deals with Harvey Matusow, and with former Communist and self-styled witnesses, it would appear appropriate that I incorporate in these remarks part of a question and answer period on July 2, 1954, when Harvey Matusow, he being the same person as is identified in the editorial, testified before the House Committee on Un-American Activities in the 83d Congress.

Mr. DOYLE. You have enumerated some 7 or 8 boards or committees before which you have testified since February 1952. Before any of those boards or committees were you paid a professional fee for so testifying?

Mr. MATUSOW. Sir, yes; let me say 1, 2, 3, maybe 4, maybe 5 occasions, and that was the Subversive Activities Control Board, they gave me a fee of \$25 a day and once before an Immigration Service had me in New York and I don't remember the individual, but

they paid me a fee of \$25. On a number of occasions when I received that fee I turned it over to a charity of some sort.

Mr. WALTER. That is the usual fee provided for by law.

Mr. MATUSOW. As the per diem?

Mr. WALTER. That is provided by law.

At the time Mr. Matusow said "I turned it over to a charity of some sort," I regretted I did not have time to have him name the charity of some sort.

Also, his recent swearing that he lied and testified falsely before some Government committees, including the House Un-American Activities Committee, of which I am a member, further substantiates the position taken by me as a member of that committee; to wit, that said committee and all congressional committees must be increasingly on the alert to search and discover, so far as it is possible, the creditability of all witnesses before congressional committees. Certainly, Mr. Speaker, the earning of \$25 a day, as earned by Mr. Matusow before various Government boards and congressional committees, together with the fact that he, and also other similar witnesses, had recently testified that they had falsified in testimony before these boards and committees should make us all wary and most cautious about being placed in the position where we are expected to fully believe and give full face to their testimony.

The above-mentioned editorial follows:

THEY WHO HAVE SOWN THE WIND

Implications of the Harvey Matusow recantations continue to spread out like the ripples from a stone dropped into a pond.

The admitted former Communist and self-styled professional witness now declares under cross-examination that he was hired to prepare black lists by at least two big advertising agencies and as a consultant on subversion by New York City's superintendent of schools, and that he made false accusations. His testimony as a witness for the Department of Justice in several trials involving alleged Red activities he had previously sworn was false.

We cannot be sure that what he declares to be the truth now can be relied on any more than what he declares was false. That remains to be proved. Nor does the recantation of one ex-Communist prove that all the Red apostates have given false testimony. But dependence upon paid informers is a risky business under any circumstances; retention by congressional committees and the Department of Justice of a string of them for use on call in a semipolitical field has made many people, no friends of the Reds, uncomfortable.

Now to learn that at least one of them has been instrumental, presumably, in hazing, if not damaging, careers of actors, artists, and teachers confirms something we said over 3 years ago when the question was being asked, "Who's harmed except the Communists?"

"The fact is that we are all harmed. The virus of indiscriminate suspicion has made everyone pause before the costs of free discussion as Americans have known it. It has driven teachers to avoid classroom discussion of controversial subjects. . . . It has frightened legislators and other public officials. . . . It has so blurred crucial distinctions in the thinking of many people that real subversion is often confused with all sorts of useful leavening minority movements."

Those who have sown the wind may now be feeling but the first faint gusts of a whirlwind yet to be reaped.

Why Russia Should Be Expelled From the U. N.

EXTENSION OF REMARKS OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. FEIGHAN. Mr. Speaker, I would like to call attention to a thought-provoking editorial by David Lawrence, appearing in the U. S. News & World Report of February 25, entitled "Why Russia Should Be Expelled From the U. N." This editorial raises the following fundamental questions: What force prevents us from saving the U. N.? Is it appeasement? Is it Kennanism that stops our acting in accordance with moral principles? Our soldiers fight and die for moral principles. Should we expect less of our leaders, even though they are sitting behind desks in the U. N. and the Department of State. Under leave granted, I insert the editorial in the RECORD:

Much of the trouble in which the free governments of the world find themselves today is due to a failure to steer by the compass of moral principle.

Governments that appease the aggressor go from the frying pan into the fire as they build up complications for themselves by their successive retreats.

The indictment was summed up succinctly last week by Secretary of State Dulles when he said:

"The United Nations Charter of 1945 binds 60 nations to refrain in their international relations from the threat or use of force. But there has been armed aggression in Korea which was promoted by Soviet Russia, and later Communist China was found guilty of armed aggression there."

The world for some time has known about the repeated violations of the U. N. Charter by the Soviet Union. The principal evidence was furnished by its own representative, who publicly boasted to the U. N. in March 1953 that the Soviet Union had supplied armaments to the Red China government throughout the Korean war. In that war more than 33,500 American boys were killed and 103,000 wounded.

The Soviet Union, moreover, gave military assistance to Red China notwithstanding the fact that in February 1951 the Peiping government was formally declared by resolution of the U. N. to be an aggressor. The Moscow government ignored the U. N. warning that all members should refrain from rendering assistance to the aggressor.

The act of aggression is even more flagrant because it has been directed against the Armed Forces of the United Nations itself.

The United Nations is still in a state of war with both the Communist Chinese and the Communist government of North Korea. An armistice has been signed, but no treaty of peace has been consummated. Nevertheless military aid to the aggressors from Soviet Russia continues. Russian-built MIG's are commonplace in the skies of Korea.

This is in the face of the plain language of article 2 of the charter, which provides:

"All members shall give the United Nations every assistance in any action it takes in accordance with the present charter, and shall refrain from giving assistance to any state against which the United Nations is taking preventive or enforcement action."

The United Nations Charter specifies exactly how offenses of a traitorous member shall be dealt with by the other members. Article 6 reads as follows:

"A member of the United Nations which has persistently violated the principles contained in the present charter may be expelled from the organization by the General Assembly upon the recommendation of the Security Council."

It will be argued, of course, that the Security Council would not so recommend because the Soviet Union could block such a step by exercising her veto in the Council. The fact is, however, that the Soviet Union, being a party to the dispute, would have no right to vote at all. Article 27 of the charter covers that point by declaring that decisions of the Security Council shall be made by an affirmative vote of 7 members, including the concurring votes of the permanent members, provided, however, that a party to a dispute shall abstain from voting.

It has been contended that the Soviet Union had obligations under a treaty with China to come to the assistance of that country on the basis of an offensive and defensive alliance. But article 103 says:

"In the event of a conflict between the obligations of the members of the United Nations under the present charter and their obligations under any other international agreement, their obligations under the present charter shall prevail."

The charter declares that membership in the United Nations shall be open to peace-loving states willing to accept the obligations of membership. The Soviet Union, however, has disregarded its obligations to the U. N.

By aiding Red China and North Korea, which are at war with the United Nations, the Soviet Government has forfeited its seat in the U. N. That seat should be declared vacant by a formal resolution. It would constitute notification to the people of Soviet Russia that their government had demonstrated its incapacity to fulfill international obligations, and had become a menace to peace-loving nations. The kind of government a nation chooses is its own affair, but only up to the point where such a government does not become a threat to world peace.

Some day, when a free government arises in Russia, the seat in the U. N. declared vacant could be awarded to such a new government. But today the Moscow regime must be expelled if the United Nations is to retain the respect of the world as an organization obedient to law; the words of its own charter.

Fritz Kreisler at 80

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the Washington Star of February 6, 1955, entitled, "Fritz Kreisler at 80":

President Eisenhower spoke for thousands of his countrymen when he wrote to Fritz Kreisler: "Your musical artistry has become an unforgettable part of the experience of people the world over." The compliment has been justified by 80 years of living and working for the most popular of all the arts—the art of melody, the art of harmony. Nobody who ever has listened to the greatest of violinists can have failed to be grateful for his magic. He served not only the heart of music but also the heart of humanity. Fate cast his days in a time of trouble, and

he often must have been discouraged. Yet, like a good physician, he rose to minister to those in need of such healing as he could give. He carried his fiddle wherever suffering was. His philanthropies were numberless. One of them is the donation of his precious Guarnerius, the manuscripts of Brahms' violin concerto, Chausson's Poeme and more than 50 of his own works, plus his decorations, medals, and citations to the world's greatest library—the Library of Congress.

It seems too much to hope just now that Fritz Kreisler will live to see peace on earth again. The immediate outlook is, to say the least, bewildering. But how good it is that this good man should care so much and still strive so earnestly for brotherhood among men. As it was claimed long ago for the painter Raphael that he made humanity proud to be human, so it may be affirmed for the greatest of modern virtuosi that he helps us all to be our best, our noblest selves.

Two Lies Do Not Make a Truth

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. MILLER of California. Mr. Speaker, I commend the reading of the editorial entitled "Two Lies Don't Make a Truth," taken from the February 5, 1955 edition of the Morning News, of San Leandro, Calif., to my colleagues in the House of Representatives.

It is a hard hitting, timely editorial, and is as follows:

Harvey Matusow may be many things, but chief among them now is the fact that he is a liar.

Matusow says he was a Communist. Matusow says he stopped being a Communist. Matusow testified before many congressional subcommittees. Matusow testified against Owen Lattimore. Matusow testified against 13 men tried and convicted for being Communists. Matusow campaigned on behalf of Senator McCarthy and against such men as Senator Mansfield.

Matusow made his charges under oath. Now under oath, he says he lied under oath. There's no question that he is a liar—but which times did he lie? And what did he lie about?

It is rather important, that last question, What did he lie about?

Did he lie about overt actions, about specific criminal deeds, about tangible things? Or did he lie about ideas, thoughts, impressions, attitudes, beliefs?

The charge against Owen Lattimore was that some of his writings follow the Communist line. In other words, the charge is that Lattimore has advocated some of the same things which Communists advocate. Liar-witness Matusow testified against Lattimore. Even before Matusow recanted, a Federal judge threw the charges out as meaningless, because there is no way to interpret either Lattimore's mind or the Communist line.

Lattimore, and all others, should be judged by their acts, not by beliefs or advocacies.

William O. Douglas, Associate Justice of the United States Supreme Court, says this: "We have staked our security, our ability to survive on freedom of the mind and conscience. That conception of freedom is

the most novel principle that the world has known. It leaves political and religious discourse unlimited and unrestrained. It leaves the mind free to pursue every problem to the horizon, even though the pursuit may rile a neighbor or stir his ugly prejudices.

"History has recorded example after example of rulers who decreed what men must think, what cause they could espouse, what views they might embrace.

"Man's experience with those laws and practices was a bitter one. The persecutions and oppressions of those early days make up some of the blackest chapters of intolerance.

"History shows that the main architects of repressive laws were often men of good intentions. Their reasons sometimes had the ring of patriotism to them: protection of the safety of the state against subversive ideas. Their reasons often had overtones of religious fervor; the conviction that the soul of man needed but one faith and creed. . . .

"The Founding Fathers believed that the antidote to advocacy was counteradvocacy. They believed that if a subversive idea was presented from a platform or soap box, the remedy was not to jail the speaker, but to expose the fallacy or evil in his cause, to submit his ideas to pitiless analysis, to explode his thesis in rebuttal.

"The concept of our Bill of Rights is the concept of a politically mature people. It is the concept which makes the American way of life the ideal for every people. For its essence is tolerance for all shades of opinion, persecution for none. Under our way of life, a man should never go to jail for what he thinks or espouses. He can be punished only for his acts, never for his thoughts or beliefs or creed."

So says a Justice of the United States Supreme Court. So say many of us.

Yet the fact is that our laws now make certain beliefs a crime. And that is not all.

The prosecutors of Lattimore also attempt to make it a crime to believe any one thing which is also advocated by a person whose thoughts are labeled criminal.

And some of our Government (pretending lately to speak with sublime conceit as also the voice of God) go further. They say that to hold Government office is a "privilege"—that innocence is not enough—that one must not be accused, even by liars. A neighboring district attorney says the Constitution does not protect atheists.

To be accused, to be "controversial," has become a governmental sin. We are afraid of any clash of ideas, we are fearful of comparison, analysis, debate.

We are confounded when some informers confess to having lied to please us. We then tangle ourselves in mental confusion, some insisting that Matusow now says he is a liar, so he must be lying when he says he was a liar—therefore "two lies must make a truth."

What essential difference did it ever make what liar Matusow thinks of Lattimore's beliefs, or Mansfield's, or McCarthy's?

Let all ideas contend in the public forum. Let the false be exposed, so that the truth may be known. Let the courts judge only the acts, so that the mind can be free.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily Record at \$1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Record.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily Record, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

Simple, Direct, Federal Aid for Education

EXTENSION OF REMARKS OF

HON. ERRETT P. SCRIVNER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. SCRIVNER. Mr. Speaker, if you are looking for a simple, direct program for aid to education, free from Government controls, without costly administration, and devoid of any "share-the-wealth" attributes, the joint resolution I am introducing today deserves your consideration and support.

Although most State treasuries are in better shape financially than is the Federal Treasury, there is no doubt but that in many States the demands, especially for education, call for more finances than the States are able to raise to provide needed buildings, maintenance, improved equipment, increases in teachers' salaries, and other items. The combined debt of the 48 States is about \$20 billion. Uncle Sam owes over \$275 billion.

With the enormous increase in Federal expenditures over the past 25 years the Federal Government has tapped every practical possible source of tax revenue, with little consideration for the tax needs of State and municipal governments. The States are now dependent almost entirely upon direct taxes on real estate and personal property, duplicated income tax and sales taxes which fall heavily on persons of low income. In seeking new revenue the States find available sources already drained by Federal taxation—income taxes, admission taxes, beverage taxes, luxury taxes, transportation taxes, tobacco taxes, excise taxes, to name but a few. Enormous sums, billions of dollars annually, are siphoned out of the States in individual and corporate income taxes. The remaining revenue available to the States is inadequate to meet rising local costs of government and provide adequately for growing educational needs.

It is neither economical nor efficient to withdraw huge sums from the States and then have a portion of these funds trickle back under any of the proposed bureaucratic-administered programs of aid to education. If any of the presently proposed and pending programs are adopted, a large overhead for administration is unavoidable, and in some instances the only thing offered the State is an opportunity, lured on by Federal dollars in matching funds, to go into debt, and even this is prohibited by law in some States.

Under the best-intentioned Federal administration, there remains the well-founded objection that the compulsory requirement that each State meet conditions imposed by law and regulations of the administering bureau must be complied with to qualify for benefits. Furthermore, there is a deep-seated fear—also well founded—that with Government intervention in education programs, opportunity might well be found for channeling propaganda into our schools, along with Federal controls which naturally follow Federal dollars flowing from Washington.

With a modest beginning, these programs, with almost no exception, follow a pattern of growing and growing, until it is possible that the training of our youth throughout the Nation could some day be directed from one central Federal bureau, and that bureau would be headed by someone appointed, not elected, and thus not directly responsible to the taxpayers whose funds he was spending.

The prime responsibility for education programs is in the local community and the State. Conditions now existing are not emergency short-time situations, and can be expected to continue for the long indefinite future, as more children are born.

To easily, simply, cheaply, and efficiently provide the States with some financial aid for meeting their needs for the improvement of their respective educational programs, without increasing their debt, without building up a huge Federal bureaucracy, without fear of Federal controls, dictation, or propaganda, without the slightest element of distribution of wealth, I am proposing, by a joint resolution which I am today introducing, a simple, direct, unrestricted plan for aid to the States and the Territories to help them meet the educational demands within their respective borders.

House Joint Resolution —

Whereas the Government of the United States, through taxes, is siphoning a great part of the wealth of our Nation out of the several States and Territories into the Federal Treasury; and

Whereas the Government of the United States is collecting taxes from nearly all sources of revenue, including taxes on individual and corporate incomes, admissions, beverages, communications, gifts, luxuries, transportation, and from excises and other taxes, leaving to the States little but real and personal property and consumer sales as sources of tax revenue; and

Whereas at rates approaching confiscation of property, States are still not able to raise revenue sufficient to carry the rising costs of State and local governments, and especially not to meet the demands for needed improvements and higher salaries for the training of our youth; and

Whereas it has been proposed that the Federal Government grant aid to the States for educational purpose; and

Whereas it is neither economical nor efficient to withdraw huge sums out of the States and Territories and redistribute funds under bureaucratic regulation from the Federal Treasury, and

Whereas it is desirable that such aid be accomplished by a simple, easy, direct, and efficient method, not hampered with bureaucratic restrictions, directions, or distation: Therefore be it

Resolved, etc., That 1 percent of all income taxes collected on individual and corporate incomes under Federal statutes shall be deemed to be revenue for the State or Territory within which it is collected, for use, for educational purposes only, without any Federal direction, control, or interference.

SEC. 2. District directors of internal revenue are hereby authorized and directed to transfer to the treasurer, or corresponding official, of the State or Territory within which their respective internal revenue districts are situated, at the end of each quarter, an amount equal to 1 percent of the taxes from individual and corporate incomes collected within such State or Territory during said quarter.

SEC. 3. For purposes of information only, district directors of internal revenue shall report the amounts transferred to State treasurers, or corresponding officials, as authorized in section 2, to the Department of the Treasury, accompanying such report with receipts from the proper State officials verifying the amounts received by said State official.

Under this plan the handling of funds through Washington and back will be eliminated; the amounts available to each State will be determined annually by individual and corporate incomes within that State. The money will remain in the several States where it was collected. The total amount to be thus collected through Federal facilities for the States each year will be automatically geared to the national income for that year. There will be no danger or possibility of Federal control or dictation, and no opportunity for channelized propaganda. It will provide many States with a larger amount than would be available under many other plans which have been proposed. There would be no need for a growing bureaucratic horde with an insatiable hunger for power ready to consume ever-increasing amounts of taxes.

For example, in fiscal 1954 the district director for internal revenue for Kansas collected in individual and corporate income taxes approximately \$407,343,360. On this basis there would have gone to the State of Kansas under this plan, for the fiscal year 1954, \$4,073,433 every cent of which would be available for use within the State.

This is not a new proposal. I first presented it in 1949—H. R. 1582—at

which time several various proposals were pending.

In the 80th Congress—1946—the Senate passed S. 472. Under that measure, the only direct aid to education bill to pass in either House of the Congress, the estimated initial contribution Kansas would have been required to make to the Federal Treasury would have been \$2,552,000. From the benefits authorized by S. 472, Kansas could have received back as aid to education a total of \$1,960,000—a net loss of \$600,000. The other proposals so far advanced would operate to take out of most States more to support the proposed program than would be returned in benefits, and on the whole would provide less in effective aid than is offered by my proposal.

Certainly under the plan I propose, the States, generally, by having this 1 percent of the individual and corporate Federal income taxes paid by its citizens withheld for use within each of the respective States for educational purposes, would be much better able to cope directly, as they deemed best, with their educational problems than they would under any program directed from a Washington bureau.

This proposal will be a step toward retaining our constitutional Republic and a move away from centralized government.

Such legislation will be in keeping with suggestions made by the then Gen. Dwight D. Eisenhower, by keeping the control and responsibility local. He said:

When financing of schools is turned over to the Federal Government you get bureaucracy, and this is the approach to statism.

Every advocate of aid to education to whom I have talked insists he wants no Federal control, no bureaucracy. This resolution will meet that desire, for it need not add a single person to the Federal payroll and will certainly eliminate all possibility of Federal controls—even those found in most other proposals before the Congress.

From the table below based on tax collections for the fiscal year 1954—approximately—you can see the benefits for your own State. The logical appeal and the elimination of the danger of Federal bureaucratic controls under this plan would enable your State to provide more adequately and more efficiently for the needed enlargement of educational facilities and the necessary increase in salaries of teachers.

This direct use of income taxes is possible. It can be done. Precedent is established by Public Law 630 of the 81st Congress, where it is provided that all of the taxes of incomes earned by American citizens in Guam, while resident there, including stateside Americans, both civilians and military, should be turned over to the Government of Guam. Not just 1 percent, but all of the income tax collected from Americans there—and Guam is merely an unincorporated Territory.

TABLE I

	Income tax collections, fiscal year 1954 (including tax for old-age insurance)	1 percent of tax collected
Alabama.....	\$355,904,000	\$3,559,040
Arizona.....	153,119,000	1,531,190

Montana.....	109,285,000	1,092,850
Nebraska.....	320,620,000	3,206,200
Nevada.....	70,308,000	703,080
New Hampshire.....	118,150,000	1,181,500
New Jersey.....	1,745,232,000	17,452,320
New Mexico.....	99,351,000	993,510
New York.....	11,626,091,000	116,260,910
North Carolina.....	673,436,000	6,734,360
North Dakota.....	60,929,000	609,290
Ohio.....	4,147,301,000	41,473,010
Oklahoma.....	504,410,000	5,044,100
Oregon.....	403,821,000	4,038,210
Pennsylvania.....	4,531,795,000	45,317,950
Rhode Island.....	271,663,000	2,716,630
South Carolina.....	239,806,000	2,398,060
South Dakota.....	67,056,000	670,560
Tennessee.....	463,856,000	4,638,560
Texas.....	1,969,318,000	19,693,180
Utah.....	135,924,000	1,359,240
Vermont.....	70,790,000	707,900
Virginia.....	641,430,000	6,414,300
Washington.....	711,456,000	7,114,560
West Virginia.....	270,198,000	2,701,980
Wisconsin.....	1,121,973,000	11,219,730
Wyoming.....	51,761,000	517,610
Alaska.....	45,843,000	458,430
District of Columbia.....	707,455,000	7,074,550
Puerto Rico.....	(9,571,000)	(95,710)
Total.....	58,578,533,000	585,785,330

NOTE.—Because collections for old-age insurance are not shown separately in internal revenue reports, actual benefits would be somewhat less than shown here when adjustment made for that factor—an average of about 7.2 percent.

Time for Realistic Appraisal

EXTENSION OF REMARKS OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, February 22, 1955

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Time for Realistic Appraisal—KNOWLAND Asks: Just What Part Is U. N. Qualified To Play in the Future of United States and the Safety of Its People?" The article was written by David Lawrence, and was published in the Washington Evening Star of February 21, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TIME FOR REALISTIC APPRAISAL—KNOWLAND ASKS: JUST WHAT PART IS U. N. QUALIFIED TO PLAY IN THE FUTURE OF UNITED STATES AND THE SAFETY OF ITS PEOPLE?

(By David Lawrence)

For some unexplained reason a rather sensational speech delivered in San Francisco last Friday afternoon by Senator KNOWLAND was not widely reported in the press.

When the Republican leader of the United States Senate issues to all candidates in the 1956 election—both for the Presidency and for Congress—a challenge to make their position clear with respect to any future reliance on the United Nations by the American people, it would seem to be news of major importance.

After reviewing the facts about the Korean war wherein the United States "supplied 90 percent of the manpower and better than 90 percent of the resources," Senator KNOWLAND asks:

"Does this indicate that the United Nations is an effective instrument of collective security? The answer must come back in the negative.

"With that example, are you prepared to risk the future of our Nation and the safety of our people upon the collective ability of the United Nations to function in the event of aggression? The answer likewise must be in the negative. Has the time not come for a realistic appraisal of just what part the United Nations is qualified to play, and to stop kidding ourselves into believing it is something it is not, and in my judgment cannot be?"

Mr. KNOWLAND asserts that the United Nations "could not be and should not be considered a basis for world government" because its members have no common heritage, and because nations "which have had no experience with representative constitutional government sit on equal terms with those that have had long experience." He then says that there are those who now urge the "admission of Communist China which was the aggressor in the Korean War," and that "this, together with the other Communist states, would give that system of tyranny 800 million people that they claim to speak for." The California Senator thereupon proclaims his challenge as follows:

"As for me, as long as I have a voice or a vote in the Senate of the United States, I shall never consent to permitting the guarantees of freedom under our Constitution to be diluted or modified directly or indirectly by any organization having nations in powerful policy positions which have no appreciation of or respect for free institutions. "Lest we be gradually edged into such a world order before we learn too late wherein we have been taken, I believe that every candidate for public office, executive, legislative or judicial, should be asked to give a forthright view upon this great public issue."

Mr. KNOWLAND thinks the United Nations could perform useful service as "a forum wherein the views of the free world and the Communist world might be aired to the benefit of the people of the world, provided that there was assurance the debates in the General Assembly or the Security Council were receiving as widespread coverage behind the Iron Curtain as they do in the free nations of the world." The Senator adds:

"Otherwise it (the United Nations) becomes a vast propaganda forum for the Communist world wherein the point of view of the West does not have the equal opportunity to get to the people of the Soviet Union and its satellites because of the strict censorship those governments exercise."

Mr. KNOWLAND reminded his audience, moreover, that "the evidence was conclusive

that the Soviet Union was not only giving moral support to Communist aggression in Korea, but was supplying MIG planes, tanks, artillery, ammunition, and other weapons in equal violation of the U. N. resolution and the charter of the organization." Despite this, as he points out, "no steps were taken to expel the Soviet Union from the United Nations."

In the same speech the Republican leader draws attention to the arrogant boast by the Soviet Union that it had helped Red China, and he recalls that the Soviet representative in the U. N. "in effect defied the U. N. to do anything about it—and they did nothing."

The California Senator stressed that "every member of the United Nations knows that the terms of the Korean armistice have been violated on numerous occasions," and he cites examples, including the imprisonment of 11 members of the American Air Force. Then comes this startling declaration:

"There is strong reason to believe that there are at least several hundred additional U. N. and United States prisoners of war being held in violation of the terms of the armistice."

The foregoing would seem to be news of interest to the American people. Newspapers, which must depend daily on the selection of news made by the press associations at the point of origin, may well be curious as to why they didn't get a comprehensive report on it for either Saturday morning or afternoon editions, even though the speech was available in Washington in advance of delivery in San Francisco.

Official Briefings

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, February 22, 1955

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a very significant article entitled "Official Briefings," which was written by Mr. James Reston, of the staff of the New York Times, and was published in that great newspaper on February 16, 1955.

As one who has been a journalist all of his adult life, I share Mr. Reston's concern over the failure to provide the American people with adequate information on the most important matters affecting their lives and welfare.

There being no objection, the article was ordered to be printed in the Record, as follows:

OFFICIAL BRIEFINGS—BACKGROUND ON THE "BACKGROUND" CONFERENCE—ITS MERITS AND PITFALLS

(By James Reston)

WASHINGTON, February 15.—The Formosa controversy has produced a rash of dope stories, that purport to disclose the elusive official lowdown without disclosing the source of the information.

Thus, the readers of this morning's newspapers were told that the United States had not promised Generalissimo Chiang Kai-shek that it would defend Quemoy and Matsu, but that Washington might go to war if these islands were invaded.

Who says so? The reader is not told, but at least he is entitled to an explanation of how and why these mystifying clarifications suddenly appear on the front pages.

The truth of the matter is that the Government is faced with a dilemma. It wants to warn the Chinese Communists that an invasion of Quemoy and Matsu may mean war with the United States, but it does not want to commit itself in advance to go to war.

If Washington says officially it will defend Quemoy and Matsu, it pledges its honor and destroys its freedom of decision at the moment of attack. But if it says it will not defend Quemoy and Matsu, it encourages the Communists to attack, and at the same time lowers the morale of the Nationalists who must bear the brunt of the attack.

BACKGROUND DEVICE

The "background press conference" is the device used to avoid this dilemma. Some "unimpeachable source" or even some "well-informed circle" will give a luncheon or accept one, and explain the Government's position. But the reporters will not be permitted to quote him or even to attribute his remarks to Government sources.

This is the explanation of dispatches that undertake to inform the reader of policies that may involve war and peace, yet do not tell him the source of the information.

There is a great deal to be said for the conferences. They enable officials to inform the public of their policies, to warn the enemy, and—especially in the Formosa case—to put some of the claims of the Nationalists in better perspective. Yet there are some dangers in the system.

First, there is always the danger that the "unimpeachable source" may go "peachable" on you half way through and give you, not official policy, but his own interpretation of what it is or ought to be. After all, the reporter has to pass along the information on his own without authority and can always be repudiated.

AVOIDING RESPONSIBILITY

Second, there is a danger that officials may use the background-conference device as a safe way of avoiding responsibility for public information that could be and ought to be put out officially and publicly through the open press conference or the committees of Congress.

Third, there is a danger that the reporters may be used, not as a vehicle for passing accurate information to the American people, but as an instrument of the Government's diplomacy or propaganda in the "cold war."

For example, the Government's policy on whether or not it will defend Quemoy or Matsu is left on a maybe-we-will-and-maybe-we-won't basis. This is not an accident. The Government wants it this way and for good reasons.

Nobody can foresee the conditions in which the Communists might attack. They might come at Matsu and Quemoy and simultaneously launch a million men at our thinly defended lines in Korea. In this situation, is it reasonable to suppose the 7th Fleet would be permitted to defend Quemoy and Matsu when South Korea—and therefore Japan, the main Communist objective in the Far East—was in danger?

CREATE IMPRESSION

Nevertheless, just because the Government's policy is purposely left vague, those officials and politicians who want us to defend these islands at almost any cost can give the impression that this what we are "almost certainly" going to do.

There is a tendency on Capitol Hill now being scrutinized by the Rules and Administration Committee of the Senate, to have more and more of the testimony by top officials of the Government in secret.

All the testimony on the Formosa question in congressional committees, for example, except Secretary of State Dulles' formal statement, was undisclosed. In this case it may have been justified, but in many other cases, secrecy is involved merely for personal convenience.

The most striking case is that of Under Secretary of State Herbert Hoover, Jr. He was nominated for that post last August 17. The Foreign Relations Committee questioned him very briefly and secretly the following day and he was confirmed that night. He refused to see reporters before he was confirmed, and after he was confirmed, he still refused on the ground that his predecessor, Gen. Walter Bedell Smith, had not yet left office.

REFUSES TO SEE PRESS

When General Smith finally left, Mr. Hoover still refused to see reporters. Although he has been Under Secretary and even Acting Secretary since then, Mr. Hoover has seen the press only once, when he agreed to join Secretary of the Treasury George M. Humphrey in a conference limited to the recent economic conference at Rio de Janeiro.

This is convenient for Mr. Hoover. He is a sensitive man. He is afraid he will be asked to compare his views on foreign policy with his father's, a point on which nobody has much interest anyway. But the fact is that, for the first time in many years, we have an Under Secretary of State who insists on exercising authority without explaining publicly what he is doing.

Nor is he alone. Nelson Rockefeller, the new foreign affairs adviser to the President, is doing the same thing. Joseph M. Dodge, the new foreign economic policy adviser to the President, flatly refuses to discuss his job with anybody.

In short, important areas of policy are being pulled under the cloak of secrecy at the White House and even at the State Department. Ambassadorial appointees are now seldom questioned by congressional committees in the open, and the "background conference," which undoubtedly has important uses, is tending to replace open testimony.

Political Tax Cut

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Tuesday, February 22, 1955

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Political Tax Cut" which was published in the Washington Daily News of yesterday, Monday, February 21, 1955.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

POLITICAL TAX CUT

Democratic leaders in Congress are doing neither the taxpayers nor themselves any favor by proposing a new cut in income taxes at the beginning of 1956.

So long as the Government must borrow money to make up for the loss of revenue from tax cuts, the Democratic proposal is merely passing the debt buck on to taxpayers of the future.

Any tax cut which merely increases Government borrowing is a phony. In the end, the taxpayers will pay back more than they gain for the \$20 pittance the Democrats are proposing. For every \$20 the taxpayer doesn't pay next year, the Government will have to borrow another \$20, and pay interest on the borrowing.

All this taxpayers by now know well. So the proposal, concocted to lure votes to Democratic candidates, fools no one. And since it won't fool anybody, it has no political value, in the long run, to the Democrats. They simply are kidding themselves—

and at a serious risk to the financial stability of the Government and, indirectly, to the economic stability of the country.

The proposal doesn't gain in virtue, either, by the tricky way the Democrats plan to put it over.

They propose to tie it to the administration's bill for extending the present corporate income tax and a half dozen sales taxes at present rates. These taxes are due to be reduced April 1. President Eisenhower wants them extended another year, and Congress recognizes that need.

By tying the \$20 personal income tax reduction to this extension, the Democrats figure they can force the President to withhold his veto—since the extension means some \$3 billion in revenues for the debt-ridden Government.

The scheme is strictly political—and not very clever politics at that.

Opposition to H. R. 1

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1955

Mr. REED of New York. Mr. Speaker, under leave to extend heretofore granted, I am inserting in the Appendix of the RECORD the following statement:

STATEMENT OF D. G. ROGERS, PRESIDENT, NATIONAL ANILINE DIVISION, ALLIED CHEMICAL & DYE CORP., BEFORE HOUSE WAYS AND MEANS COMMITTEE ON H. R. 1, THURSDAY, JANUARY 27, 1955

My name is D. G. Rogers. I am president of National Aniline Division, Allied Chemical & Dye Corp. Allied was formed in 1920 because our experience in the First World War proved the folly of relying upon foreign sources of supply for many vital chemicals. It was nurtured and grew because a wise tariff policy adopted in 1922 equalized the great disparity between costs of production at home and abroad and enabled domestic chemical manufacturers to expand along with the rest of domestic industry.

Allied is both a pioneer and one of the largest domestic producers of intermediates. It has the know-how and enjoys whatever advantages accrue from large-scale production and integrated operations. Its predecessors, now its operating divisions, developed and operated the first coal-tar still in the United States in 1854, constructed the first byproduct coke ovens in the United States in 1892, and produced the first coal-tar intermediate ever made in the United States (aniline) in 1914. Allied has long been recognized as one of the leaders in the fractional distillation of coal-tar products, in the recovery of the valuable constituents of coal for use in making intermediates, and in the production of intermediates and thousands of organic end products.

During World War II, the company was able to fulfill the goal of its founders by responding to all the demands made upon it by the war production program. In addition to its all-out production of industrial war materials, intermediates, and dyestuffs for military uses, the company developed and produced highly essential military products and successfully completed a number of important research projects for various agencies of the Government, including the Ordnance Department, the Army Medical Corps, Chemical Warfare Service, Rubber Reserve Corporation, Army Surgeon General's Office, War Production Board, Office of Scientific Research and Development, and

Maritime Commission. These things the company was ready, willing, and able to do because it had an ample reservoir of skilled labor, technologists, and management actively working at their specialties.

Today, Allied makes over 3,000 different chemical products in 26 States. But I am going to direct my testimony primarily to the organic chemical field, with which I have been associated for over 39 years. National Aniline Division is a producer of over 2,000 distinct chemical compounds. It has plants in Buffalo, N. Y., Hopewell, Va., and Moundsville, W. Va., and employs over 2,500 employees.

We support the views expressed here by the Synthetic Organic Chemical Manufacturers Association, both for ourselves and for our fellow members in that association. We hope to help you understand the nature of the organic chemical industry's problem in relation to foreign competition and the reasons for its position on H. R. 1.

Our industry produces over 7,000 finished organic chemicals in commercial quantities. Amazingly, these all stem from a handful of crude organic chemicals which are the starting point of our manufacturing process. These crude materials, chiefly benzene, toluene and naphthalene, each duty-free, are used for their carbon content, the one common ingredient of all organic chemicals. By complicated processing steps, these crudes are combined with still other elements, such as oxygen, nitrogen, chlorine, or sulfur to make new and more complex compounds. Such compounds, known as intermediates, become in turn the starting materials or stepping stones to hundreds of other intermediates and ultimately to thousands of finished products, such as dyes, medicinals, pharmaceuticals, explosives, synthetic rubbers, plastics, resin materials, agricultural chemicals, detergents, flavor and perfume materials, and miscellaneous chemicals.

As you might imagine from the great variety of chemicals referred to, our operations quickly cease to bear any resemblance to mass-production methods. Most of our chemicals are made in relatively small quantities. Each finished chemical may require the prior and successive production of as many as 20 intermediates in its production. All but the few primary intermediates are made by batch processing. Each is produced in a series of processing steps in which the physical influences of heat, pressure and mixing are combined with the chemical reaction of oxidation, reduction, chlorination, hydrolysis, halogenation, caustic fusion, alkylation, carboxylation, nitration, sulfonation, condensation, liming, diazotizing and coupling. Close attention and expert manipulation by highly trained chemists, engineers, and skilled workmen are required. The processing involved in producing a particular finished chemical may take weeks or even months, and a final product may weigh as little as one-eightieth as much as the materials used in making it.

The synthesis of organic compounds inevitably yields isomers, coproducts and byproducts, in addition to the specific intermediate or finished chemical under production. It is therefore necessary for the organic chemical producer to give very careful consideration to the chemical he wishes to include in his product line. Unless the producer has a market or a use for each, his entire operation may prove uneconomical. For the most part, the 1,200 odd intermediates made commercially in this country are produced by dyestuff manufacturers in the course of making more than 2,000 dyes, colors and pigments which are needed by the textile, food, printing, and paint industries and the medical profession. For example, our own company makes more than 700 different dyes, each a distinct compound. We produce over 300 intermediates required in their

production—and, from them and their byproducts, co-products and isomers, make several hundred other products. Our dye manufacturing operations would be uneconomical if we were unable to sell or use all of them.

Because of the interdependence of the entire product line, foreign competition in respect of one of our products impinges not only on that product but on all related products as well. Of equal importance, if tariff reduction on finished products makes it uneconomical for a domestic producer using our intermediates to continue in their production, the effect would be felt in our entire product line.

The branching structure of the organic chemical industry, and the reciprocal relationship which nourishes it, is like that of a tree. The coal-tar crudes represent the roots, the simpler intermediates the trunk; the more complex intermediates, the main branches; the finished chemicals, the smaller branches and twigs; and the textiles, medicines, plastic products, etc., which consume our finished products, the leaves. Such an organic entity with all its parts interrelated is essentially inseparable; no part can be disturbed without affecting in some degree all other parts. Injury to the roots, trunk, or branches, or defoliation damage will damage the whole.

The manifold operations involved in civilian manufacture are, with slight variations, indispensable to national defense and the public welfare. The quick convertibility, abroad as well as at home, of the industry's plants, equipment, and technologies from the production of peacetime dyes and intermediates to those required in wartime, for drugs, explosives, synthetic rubber, etc., has been the major reason for the tariff protection (or other protective measures) provided for the industry by every major industrial nation in the world. Each has recognized the vital importance of fostering such an industry in the interest of its own national defense.

As a result of expansion to meet defense mobilization goals and other factors, overall capacity of the industry is today far in excess of present needs. As a result of this excess capacity and increased import competition, domestic producers have reported many plants have been operating as low as 50 to 70 percent of capacity and prices have been depressed. From August of 1953 to August of 1954, our industry experienced a decline in employment from 229,000 to 201,000 production workers. This loss of 28,000 workers represented a 12-percent reduction, exceeding the decline in the same period of all manufacturing (11.5 percent), the non-durable goods industries (6.2 percent), and the larger chemicals and allied products group (6.4 percent).

Today, substantial areas of our business are essentially at the crossroads. Many of our production facilities are old and will need substantial replacements in the next few years. Yet by any normal standard substantial segments of this business cannot be considered profitable, even under present tariff rates. The present outlook offers little inducement for management to invest additional large sums of money in plants and equipment, or for prospective employees to spend years in educational or training programs for work in this field.

Without adequate tariff protection our industry cannot successfully compete with the foreign producers. The batch processing methods required in our industry give our products a high labor content. These are the same methods which are used in the great chemical producing nations abroad. Average wages paid to chemical production workers abroad range from 26 to 52 cents an hour depending on the country, compared with an average of \$1.90 for employees in our industry.

The foreign chemical industry has more than recovered its prewar strength—in some instances production has doubled. The chemical industry in the United Kingdom, for example, is the strongest and most vigorous of British industries, having increased its production over 50 percent between 1948 and 1953.¹ West Germany has done even better. During 1953 it boosted its production of chemicals to 182 percent of its prewar output, and in 1954 it reached 215 percent. In 1953 West Germany increased her chemical exports by 31 percent, despite intense competition with the British. According to the OEEC's December 1954 report on economic conditions in Germany, expansion of production in the chemical industry is still proceeding rapidly (through the first 8 months of 1954).

The OEEC's November 1954 study of economic conditions in Italy reports that the greatest proportionate increase in chemical production of any of its member countries since 1950 occurred in Italy, with a 57 percent increase. This increase also exceeded the rate of increase in total industrial production in Italy.²

In France there has been a steady rise in production in the chemical industry since the war (except for 1952). Based on 1950 as 100 the index of production of the French chemical industry rose to 128 by January 1954, compared with 121 for all industrial production. The French have also developed a new organic chemical industry based on petrochemicals, and new plants have commenced operations in plastics production. The French dyestuffs industry is carrying out a large-scale mobilization program.

Between 1951 and 1953, the OEEC countries turned a deficit of 14 percent in chemical trade, with the so-called dollar area, into a surplus of 28 percent.

The ability of the foreign organic chemical industry to compete in the United States at existing tariff levels is shown by the steady increase of the value of United States imports postwar, from \$9 million in 1947 to nearly \$51 million in 1953 (table I).

The competitive advantage of foreign intermediates and dyes is illustrated by actual prices pertaining to recent transactions between foreign countries which have come to our attention. Of 52 intermediates and dyes for which actual prices were obtained, selling prices on 21 products was so low that their landed-cost duty paid in the United States would be below the domestic prices on comparable United States products. (See table II.)

The competitive impact of imported dyes at the present duty level is further illustrated by four military vat dyes, Golden Orange RRT, Brown AR, Brown AG, and Khaki 2G. The accompanying chart (following the tables) shows the scheme of chemical synthesis involved in and the many products entering into the batch production of these colors. Imports of these four military dyes increased from 263,000 pounds in 1952 to 531,000 pounds in 1953, over 100 percent. Domestic sales of these four dyes declined nearly 100 percent in the same period. (See table III.) Imports of vat dyes as a class

increased from 500,000 in 1952 to 1.2 million pounds in 1953—a 120 percent increase. This large line of vat dye imports is impairing the industry's capacity required for the production of defense colors in the event of mobilization.

The important position of anthraquinone (an intermediate) in the synthesis of the military dyes is also shown in the accompanying chart. The anthraquinone vat dye capacity prior to January 1951 was 37 million pounds per year. Under the mobilization program, this was expanded to 48 million pounds. Sales of domestic anthraquinone vat dyes in 1953 amounted to only 32.5 million pounds, leaving an indicated idle capacity of 15.5 million pounds. The sales trend for vat dyes was off somewhat in 1954, so that we estimate 1954 sales of anthraquinone vat dyes to be about 23 million pounds. On this basis, indicated idle capacity in 1954 was about 25 million pounds or 52 percent of the industrial capacity projected in new defense requirements.

It is, of course, obvious that imports are not responsible entirely, or even in major part, for this measure of idle capacity. Under existing policies of the Government, however, it is desired to keep mobilization capacity in readiness for instant use in the event of a full emergency. As the Joint Committee on Defense Production recently said:

"Adding new capacity (for mobilization) can be futile . . . unless the mobilization base, built at great cost, is maintained in the maximum possible state of readiness."

Idle chemical plant capacity does not remain in existence for long. It must be kept in use, or it rusts or will be diverted to other uses. National defense interests strongly suggest that imports should slacken off until domestic production at least reaches total mobilization needs.

As the committee knows, there is no existing procedure under which action can be taken to protect our mobilization base from idleness resulting in whole or in part from import injury. With any further extension of the trade agreement authority, there should be a suitable provision such as has been recommended by SOCMA to require that tariff policy be measured by proper Government agencies against our overriding national defense policy of maintaining total capacity in a state of readiness to meet a full mobilization emergency.

As I explained to you, import displacement of finished chemicals feeds back to displace intermediates used in making them. In the example of the four-vat defense chemicals, anthraquinone would be affected, and so it has been. One domestic producer has stated that mobilization capacity added by it during the Korean emergency in the amount of 792,000 pounds is now standing idle. In addition, imports of anthraquinone, under the existing duty, reached 730,000 pounds in 1953. This represented a 40-percent increase over 1952's imports of 511,949 pounds.

It took special tariff treatment to bring our industry into existence and foster its expansion. The Nation has been repaid many times over by the great contribution which the industry makes to the strength of the domestic economy, to better living through the products of our unparalleled research activities, and to the fiber and sinew it puts into our Nation's industrial might for defense. In nearly every State of the Union organic chemical plants and laboratories offer inspiration and opportunity for students who are attracted to the professions of chemistry and engineering. The race for technical manpower is in many ways as vital as that for industrial might itself, and our industry through its steady growth in professional and scientific opportunities makes a rich contribution to our national resources in scientific personnel.

Whatever course foreign economic policy is to take, it should be deeply concerned with maintaining a vital, dynamic, basic industry such as ours. America will lose far more than the payrolls of our plants, the taxes of our establishments, and the steady impetus we have been giving to our gross national product, if we allow the enthusiasm in certain quarters for leadership in lowering tariffs to sap the vitality of the synthetic organic chemical industry. We urge you to reexamine existing procedures; the protection they provide is too little and too late. The dynamic quality of our industry should be recognized and preserved for its present and potential contributions to our general welfare.

NOTE.—To protect the source of these data, product names have been omitted. If the committee desires this information we shall be happy to submit it in conference.

¹With 1948 as 100, the British chemical industry increased its production by 1953 to an index of 151, with the next closest industry, motor vehicles, at 138. The average for all British industry was 121. The British chemical industry was little harmed in the war, and the 1950 production was at least six times that of 1935. Nearly \$2,500,000,000 has been budgeted by the British industry for expansion since 1948.

²The report refers to Italy's "striking advances in the chemical industry due to petroleum refining and petrochemicals, fertilizers, explosives and synthetic fibres."

The Democrats Rescue Eisenhower

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. McCORMACK. Mr. Speaker, I include in my extension of remarks an interesting and objectively written article by Roscoe Drummond entitled "The Democrats Rescue Eisenhower," appearing in the New York Herald Tribune of February 21, 1955.

The article follows:

THE DEMOCRATS RESCUE EISENHOWER
(By Roscoe Drummond)

WASHINGTON.—On the most important piece of domestic legislation this year, the Democrats in the 84th Congress are today redeeming, to the brim and overflowing, their unorthodox campaign argument of last fall. The Democratic campaign appeal was: "Elect us and the President's program will be better off."

The Republican campaign appeal was: "If you want to support President Eisenhower, elect a Republican Congress."

As the result of the breathlessly close votes in the House of Representatives last week on the trade bill and Democratic Speaker SAM RAYBURN's powerful intervention in its behalf, the record now shows:

That the Democrats are making good on their pledge.

That the Republicans are making bad on theirs.

These contrasting facts are, I think, essential to appreciate the full scale of Democratic support of the White House on a measure which the President considers the very heart and core of his domestic program:

Four out of five votes against the trade bill in committee were Republican.

The Democrats voted 14 to 1 in committee in favor of the trade bill.

The initiative, the leadership, and the steam, which at times in the House came within one vote of defeating the President's measure, came from Republicans led by Representative DANIEL A. REED, of New York.

The initiative, the leadership, and most of the strategy essential to the President's success came from the Democrats, led by Speaker RAYBURN. Mr. RAYBURN, whose rare intervention in House debate is influential, took the floor personally to rally the Democrats more strongly behind the President. Single-handedly he rescued the bill from a Republican motion which at one time would have opened the way to a series of crippling amendments. The ultimate outcome was still uncertain, so the next morning Mr. RAYBURN entertained at breakfast some 20 freshman Democratic Congressmen and let them know that if they went along with the Demo-

cratic leadership, which was backing the President, they would likely get along better themselves.

This wasn't pro forma Democratic support of the White House. This was active, decisive Democratic support of the White House.

Mr. Eisenhower's willing ally was Republican leader, JOSEPH MARTIN. Mr. Eisenhower's effective ally was Democratic leader, SAM RAYBURN.

The House Republicans voted preponderantly against the President's position. The House Democrats voted preponderantly for the President's position.

On the 2 really critical test votes—1 on whether the measure could be riddled with amendments from the floor and the other on a DAN REED proposal which could bring about increased, not decreased, tariffs—the Republicans voted 106 to 62 against the President and 119 to 66 against the President.

If you add up the 4 principal votes taken on the bill during the 2 days of House action, you find that the Democrats provided 570 votes for the President, while the Republicans provided only 302 votes for the President.

On the trade bill it seems clear that if more Republicans had been elected to Congress last fall there would have been more votes cast against the President; that on this issue a higher percentage of Republican membership in the House would mean greater opposition to the President.

Can this Republican revolt against the President be written off as a passing political development or is it an ominous, deep division which the voters will weigh when it comes to deciding whom to elect in 1956? Mr. Eisenhower can hardly fail to feel or to admit that he has been grievously let down by his party. This trade bill wasn't just another piece of legislation. The President deemed it a cornerstone of administration policy and declared that "if we fail in our trade policy we may fail in all."

Thus far this cornerstone of administration policy has been kept in place only because of the Democratic leadership and the Democratic Members of the Congress.

Golden Anniversary of the United States Forestry Service

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. METCALF. Mr. Speaker, on February 4, 1955, the American Forestry Association sponsored a dinner in honor of the golden anniversary of the United

States Forest Service created February 1, 1905, when the Bureau of Forestry and the Forest Division of the General Land Office were merged under the supervision of the Department of Agriculture.

It was fitting that Mr. True D. Morse, Under Secretary of Agriculture, should be one of the principal speakers of the evening. His speech follows:

FOREST SERVICE FOR 50 YEARS

(By True D. Morse, Under Secretary of Agriculture and President, Commodity Credit Corporation)

Secretary of Agriculture Ezra Taft Benson has asked that I express his regret that he is not able to join in this golden anniversary dinner—commemorating the completion of 50 years by the United States Forest Service. He has constantly stressed the importance of forestry and conservation and recognizes the great works of the Forest Service. On various occasions he has made such statements as:

"Let us not forget that forestry is inseparable from agriculture. . . ."

"The soil, water, range, and forest resources of the United States are the natural foundation of our national economy. . . ."

"Adequate natural resources are indispensable to our security and welfare. . . ."

"Forests are composed of plants, and trees are a renewable crop. . . ."

"As basic policy, we want to continue the sound development of the national forests; . . . and we want to aid and encourage and cooperate in the development of State and private forestry. . . ."

"I am proud of the national forests and the many services they provide the American people."

"Under our administration the national forests will be carefully managed."

The entire United States Department of Agriculture joins with me in saluting the Forest Service as it rounds out 50 years of splendid service. We are proud of our Forest Service and its great accomplishments over half a century.

It has a reputation for integrity and square-dealing—through 50 years.

It has a reputation of getting work done—no matter how tough the job.

Its people have a strong devotion to public service.

The word "Service" is in the name—Forest Service. As we look back over the 50-year record at this golden anniversary—we can say it has been golden service.

The annual cut of timber under sustained yield management from the national forests has increased from about 2 million board feet in 1905—to more than 5 billion. Now it is not 2 million, but 5,000 million board-feet.

National forest receipts have increased from about \$73,000 in 1905 to as many million dollars today.

Watersheds are being protected. This will become increasingly important as man becomes more and more dependent on full use of water resources.

The forests have provided grazing and forage for a sizable part of the Nation's meat supply. The wise use for this purpose is a major asset.

This golden service can be measured in human values, too. Until 1912 Forest Service reports didn't even mention recreational use. In that year there were less than 1.5 million recreational visits to the national forests. Now there are 40 million visits a year.

There is more than an acre apiece of the national forests for every man, woman, and child in the United States. One of the national forests, and oftentimes several, can be reached from practically any locality in the Nation within a few hours, or, at most, a day's driving time. "The groves were God's first temples." There are human values in

our forests and timber lands as they invite more and more people for picnicking, camping, fishing, hunting, hiking, and motoring.

Through 50 years the Forest Service has helped inspire great advances in the work of the State forestry departments, in industrial and other private forestry enterprises, and in forestry research and education.

Through 50 years our Forest Service has built a foundation for even greater achievements for the future.

The national forests must be protected and much further developed.

Timber harvest is not yet up to allowable sustained-yield standards.

Facilities and services must be provided for the ever-increasing millions of recreational visitors.

Discovery and development of needed minerals must be encouraged. But there is concern over a situation where only 2 percent of an estimated 84,000 mining claims in the national forests are actually being commercially mined.

Multiple use of the national forests is essential to realize their full value.

President Eisenhower has said the Nation must adhere to the fundamental policy: "To develop, wisely use, and to conserve basic resources from generation to generation."

Further, he says, a main purpose of our Federal Government is "to keep our economy vigorous and expanding, thus sustaining our international strength and assuring better jobs, better living, better opportunities for every citizen. . . ."

"The wise course for Government in 1955 is to direct its program principally toward fostering long-term economic activity."

Forestry must be a sustained long-term development.

Our vast forests and timberlands have helped make the United States a great Nation. They will continue to help shape our destiny.

Such is the challenge to the Forest Service on its golden anniversary—as we together build through the years a stronger America.

Economic Isolationism

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks, I place in the Record the lead editorial of the Washington Post and Times Herald which appeared on Saturday, February 19, 1955.

It was most hardening to me that it did not escape the notice of the editorial press of the significance of the struggle that took place on this floor last week during the consideration of the reciprocal trade bill. I think it will that my able colleagues in the future consider seriously that the American public will no longer tolerate from their representatives delimited views that in the long run work to harm the best interests of our Nation.

The important thing is that this most needed legislation is passed, but the manner of its passage, I am sure, did not escape the attention of those people whose welfare depended greatly upon the liberalization of our trade laws. In our crucial struggle with world commu-

nism I am convinced that provincialism will reward us with disaster.

It is my sincere hope that the future finds us exerting our role of world leadership with a greater stature than was demonstrated here last week.

The article follows:

ECONOMIC ISOLATIONISM

The almost successful revolt of the House against the President's reciprocal trade program is deeply ironical. Mr. Eisenhower had pointedly asked Congress to give him authority to lower tariff rates moderately in agreements with other countries as a means of strengthening the free world and thus enhancing our security against Communist aggression. Yesterday he reiterated that plea in a letter to Minority Leader MARTIN. The underlying issue before the House was, therefore, the economic health of the free world. Yet 192 members (only two short of a majority) of that body on Thursday voted against a rule that was necessary to passage of the bill without destroying amendments. Again yesterday the bill escaped mutilation by a margin of only seven votes before it was passed. This near upset is a shock that the country ought to contemplate with the utmost seriousness.

To place this action in perspective one has to remember that only 3 weeks ago Congress was debating the President's resolution on the defense of Formosa. In effect, the President had asked that Congress rest the issue of war or peace in Formosa Strait with him. The House approved by a vote of 409 to 3 and the Senate by 85 to 3. Yet when the President asked continuation of a trade program to underwrite free-world solidarity in the interests of peace, more than half the House went against him on the first vote, including a large majority of the Members representing his own party. Only after Democratic Speaker RAYBURN pleaded with the House did it give the Ways and Means Committee rule for consideration of the trade bill a one-vote margin.

This is a deplorable state of affairs because it indicates that a large number of Congressmen are letting their judgments be warped by little facts. Many members were concerned about unemployment in their districts. Others seemed to be chiefly interested in preserving special privileges for some industry. Still others revolted against what they described as a "gag" rule. What they lost to sight was the larger vision of the national welfare in an age when international commerce is a vital part of our defense system.

Speaker RAYBURN had the proper answer to the legislators who were thinking about local interests in their home districts. Said he:

"Everybody want labor employed at good hours, at reasonable wages; but suppose we do not trade with the rest of the world. . . . We are no longer a debtor Nation; we are the great creditor Nation of the world. We are no longer a small producing Nation; we are the greatest surplus-producing Nation upon the face of the earth, and we have got to have it so that we can trade freely with the rest of the world, or our factories will close and more thousands upon thousands of laboring men will be turned out of their jobs just because we refused to trade goods for goods with them."

In our diplomatic relations with other countries we have thrown off the shackles of isolationism because a vast majority of the people are convinced that our national interests can be protected in no other way. Having made that decision, we cannot rationally undercut it by slipping back into economic isolationism. This is the basic consideration underlying the reciprocal trade bill, and it should have been in the mind of every legislator as he cast his vote. As matters stand,

it is difficult to avoid the conclusion that about half the Members of the House are willing to trust the President with the lives of their constituents but not with power to make minor adjustments in trade barriers.

Bankers' Bill

EXTENSION OF REMARKS

OF

HON. ANTONIO M. FERNANDEZ

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. FERNANDEZ. Mr. Speaker, under unanimous consent previously obtained to extend my remarks in the Record, I include the following editorial entitled "Bankers' Bill," published in the Washington Post and Times Herald on Tuesday, February 22, 1955:

BANKERS' BILL

The President's proposal for emergency school construction seems to have found pretty nearly universal disfavor among education experts and State school officials. Such unpopularity can hardly be altogether undeserved. The overwhelming view appears to be that the plan would provide too little help, would provide it much too late, and would hedge it about with crippling restrictions and controls.

President Eisenhower's preference for an emergency-aid measure which would lend Federal money to State public school systems instead of giving it to them directly is based on two expressed considerations: (1) That education is a local responsibility which should not be lifted from local shoulders; (2) that control of the public schools ought to be retained resolutely in local hands. These are, of course, valid considerations, and no program which ignored them would be consonant with the American system.

But so far as the first consideration is concerned, local school districts have already strained their capacities and would be required to strain them still further to meet the requirements of a direct Federal grant-in-aid program such as the bipartisan bill sponsored by Senators HUMPHREY and IVES and by Representatives BAILEY and KEARNS. Many of them have already reached the limits of their local revenue-raising ability as well as the limits of their capacity to borrow under restrictions imposed by State constitutions. The bipartisan proposal, which would require matching contributions by the States, would entail no sloughing off of local responsibility; it would make local efforts more effective by providing Federal aid to meet an emergency which has the gravest national implications and which the school districts cannot meet solely out of their own resources. As for the second consideration, it seems to us self-evident that there would be less danger of Federal control in an outright grant than in a loan which would keep the school districts long in debt to the Federal Government.

Behind the President's plan there appears to be a third unspoken consideration—to avoid a major addition to the Federal budget. This is thinly disguised by the argument that it is somehow nobler for the States "to help themselves," as Senator SMITH, sponsor of the President's plan, put it, than to "wait for a Federal handout." Senator McNAMARA punctured this argument. "There is no great stigma," he said, "in the taxpayers receiving their own money from the Government to build schools." One way or another, the cost of school construction must come out of tax

revenue and ultimately out of the same taxpayer pockets. The Smith bill aims to do it clumsily and by indirection. Dr. Edgar Fuller, executive secretary of the Council of Chief State School Officers, was quite right in calling it "a bankers' bill." The bipartisan bill's more direct, candid, and generous approach will meet the school emergency far more effectively and speedily.

Opposition to H. R. 1

EXTENSION OF REMARKS OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1955

Mr. REED of New York. Mr. Speaker, under leave to extend heretofore granted, I am inserting in the Appendix of the Record the following statement:

STATEMENT OF ERNEST M. MAY, PRESIDENT,
OTTO B. MAY, INC., BEFORE THE HOUSE
COMMITTEE ON WAYS AND MEANS, HOUSE OF
REPRESENTATIVES, ON H. R. 1

I am Ernest M. May, president of Otto B. May, Inc., dyestuff manufacturers of 52 Amsterdam Street, Newark, N. J. My family has been operating a dyestuff business at this location since 1919 when my father first started to manufacture coal-tar colors in response to the great demand after World War I. When he started he had a small factory of 5,000 square feet and employed approximately five persons. We now have approximately 100,000 square feet of space and employ 100 people. At the present time we are manufacturing dyestuffs for the textile industry.

I am completely in accord with the views expressed here today by the Synthetic Organic Chemical Manufacturers Association of which we are a member. More than half the members of SOCMA are small companies such as ours whose total annual payroll is less than half a million dollars.

Because of the nature of the production of organic chemicals, our industry is one in which there are unusual opportunities for small companies to exist and to prosper side by side with the giants of the industry. The larger companies produce many chemical by-products which they must find commercial outlets for in this country. A smaller company such as mine is well situated to secure a dependable supply of the chemicals which it needs in its production operations. Our existence and profitable operations are essential to the health of the industry as a whole. We are as important to the large companies as consumers of their byproducts as they are to us as dependable sources of raw materials in the competitive economy.

My company's specialty is a rather small line of dyes and color bases. We buy the basic intermediates from other companies in the industry and from them we make the more advanced intermediates which are required in the production of the dyes and color bases which make up our finished product line.

Since the smaller companies such as ours tend to concentrate on the production of those specialized or fine organic chemicals which are in relatively small demand on a nationwide basis, it doesn't take a very large volume of imports to interfere seriously with our operations. For example, we make 13 intermediates. Ten of these were imported in significant quantities in 1953. With only two exceptions, the volume of imports in 1953 was considerably greater than in 1952. This indicates to us that at

present tariff levels we can expect an increasing trend in imports of the intermediates which we produce. While these imports have not created any critical situation for us thus far, you can understand that with a small operation such as ours we feel some concern about a program of further tariff reduction under these circumstances.

There were significant imports in 19 of the 22 dyes in our product line in 1953. On 12 of these the volume of imports in 1953 exceeded those in 1952. Again the conclusion which I draw from these data is that at present duty levels there is ample opportunity for an expansion in imports of dyes competitive with those which we manufacture. Table 1 sets forth the identity of our intermediate and dye products which are affected by these imports together with the data on the volume of imports in 1952 and 1953.

Without laboring the point, I wish to call your attention to the fact that our plant is operated with equipment and technology basically similar to that used in the manufacture of a great variety of synthetic organic chemicals. Our firm during World War II produced dyes for uniforms, and again in the Korean emergency we converted our facilities to making entirely different dyes which were required at this time. This we did without coming to Washington for certificates of necessity since this would have delayed our program by months and we wished to be in production as soon as possible. These efforts of ours and other companies were responsible for the production of a rather great variety of urgently needed chemicals, including sulfa drugs and nerve gas components. The significance of the figures in table 1 is that they reflect imports of products which have come into the United States at landed, duty paid, delivered prices below the prices we must maintain to insure our staying in business.

I would like to cite the instance of another firm of approximately our own size which manufactures intermediates for the pigment and dye industry. This firm is a resourceful one like ours and when the emergency in World War II came, quickly converted from making these intermediates to the manufacture of napalm. As a matter of fact, it was 1 of the 3 firms in this country chosen to manufacture napalm and it manufactured 10 percent of the entire United States output. When the Korean emergency came, it again was pressed into service at the time when the Chinese crossed the Yalu River and we had to destroy our supplies. Large-scale production facilities in the United States were behind schedule and again this firm came through to produce much-needed napalm which was so urgently needed that it was flown to Korea. In 1951, the duties on the principal product which this firm manufactures were cut in half, from 40 percent to 20 percent, plus 3½ cents per pound. As a result of this cut, this firm is now manufacturing this intermediate with no profit. The price has dropped from \$1.46 per pound to \$1.18 per pound, and material of Italian origin is offered delivered, duty paid, in New York at \$1.05 per pound, which is below his cost of manufacture.

Because of our size we are vulnerable to shifts in Government policy which affects business operations. As the president of our company, I took particular comfort in the statement contained in President Eisenhower's economic report to the Congress just a week ago. In it he stated:

"The need of our times is for economic policies that, in the first place, recognize the proven sources of sustained economic growth and betterment, and in the second place, respect the need of people for a sense of security as well as opportunity in our complex, industrialized society."

There should be no doubt in your minds that the chemical industry is a proven source of sustained economic growth. You would

also agree, I am sure, that our industry plays a rather big role in providing opportunities to our young people for professional careers as chemists and engineers in our complex industrial society.

I would also like to point out respectfully to the committee that only in the United States is the climate such that small chemical firms can find a place in the sun. In every other principal manufacturing nation in the world the great bulk of chemical manufacturing is done by 1 or 2—at the most, 3—firms. Now the position of our firm today, competitively speaking, versus foreign imports is that the tariff protection which we enjoy at this moment enables us to compete. Should the envisaged tariff reduction program go through, we feel that we would be injured and, indeed, would finally be driven out of business because, gentlemen, there is no way in the world that we can compete with 50 cents an hour labor and \$2,500 a year doctors of philosophy, which is what the current scale in Europe is. We cannot do as some of our giant brothers do—set research programs in Belgium and other countries and actually set up manufacturing subsidiaries abroad as a hedge so that in case Congress and the President slash our tariffs to the bone, they will have foreign facilities and will be able to import chemicals into this country. We will simply have to shut our doors because we will be unable to compete. We do not have the power to set up our manufacturing facilities abroad, particularly since we do not believe the large cartelized firms which dominate the chemical manufacturing scene in Europe would ever allow us to have the chemicals which would be necessary to allow us to engage in competition with them.

We hear much about the need for further tariff reduction as a means of making our foreign friends feel more secure about their opportunities in the United States market. I have been unable to understand why the same concern is not felt for the need for American businessmen to receive some sense of security in anticipation of stable policies which affect their operations. We have the right, it seems to me, to expect the kind of security from stable policies which many are so anxious to extend to our foreign competitors. In this industry we are not advocating rolling back the tariff to pretrade agreement levels. We are calling attention to steadily increasing imports at present tariff levels and we are asking that you not authorize the Executive to embark on a new program of tariff cutting without insisting upon the adherence to dependable procedures which preserve the splendid vigor of our industry with its great importance to both our national security and the national welfare.

In this connection, a problem of particular importance to small producers such as our company is that the present escape-clause and peril-point procedure are keyed solely to the concept of serious injury to a domestic industry. A lot of producers such as my company could be seriously hurt before an industry as large as ours could be said to be seriously injured itself. Yet we have the right, it seems to me, to expect the Government's trade program to be carried out in such a way that our operations are not seriously injured. For this reason I believe that these trade-agreement procedures should be amended to make them apply whenever there is serious injury suffered or threatened by domestic producers or segments of an industry. We should not wait until the industry itself is seriously injured before making adjustments in our trade concessions.

Obviously I am not an expert on foreign-trade economics. Not many people are. As a businessman I have some definite views on what the foreign-trade policy of our country should be if we are going to adhere at all to the concept that our Government is obliged to work for the general welfare and not

merely the welfare of a particular group, such as export industries.

It seems to me that an important factor has been overlooked in most discussions of our tariff policy. Experience shows that with a 1-percent increase in our gross national product, the physical volume of finished manufactured imports increases by 1 percent. Many groups predict a doubling of our gross national product by 1975 compared with 1950. If this occurs as past trends seem to indicate, our imports of finished manufactures will double without any adjustment of the tariff while imports of raw materials increase in only a slightly smaller degree.

One needs only to glance at the text and tables in the President's economic report of a week ago to note that most of the countries of the free world continued to improve their financial position in 1954 for the third year in a row. Most of the countries of Western Europe experienced a decided improvement in the balance of payments situation last year, and the gold and dollar reserves of the free world continued their upward climb. Rather significantly, the industrial nations of Western Europe did not experience a recession during 1953-54 as we did here in the United States.

I think it a strange policy which fails to take account of the de facto strength and vigor of the economics of Western Europe, for example, in the consideration of any real need for further tariff reduction. If you are convinced that further gestures are needed to encourage our strong and prosperous allies, you should at least give equal deference to our home producers as you feel impelled to give the producers of other nations. If you would offer them encouragement, you should at a minimum offer equal encouragement to the producers in this country. Reduce tariffs further if you must, but require that the items subject to reduction be carefully selected so as to avoid injury to companies like mine who are doing their part in supporting the expanding economy of the locality and State and Nation.

Thank you for letting a small-business man present his views on the important topic which you have before you.

TABLE 1.—Imports of organic chemicals competitive with those produced by Otto B. May, Inc.

	Imports—	
	1953	1952
INTERMEDIATES		
1-aminanthraquinone	Pounds 18,725	Pounds 45,063
1-anthraquinonesulfonic acid	43,236	0

Men and Ships

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an editorial entitled "Men and Ships," appearing in the Boston Traveler of January 24, 1955, and a letter on the same subject written by John A. Gaffney, of Plymouth, Mass., appearing in the Boston Traveler of January 28, 1955.

It would be a mistake and false economy if through failure of appropriations the existing State maritime academies were compelled to close.

The failure of President Eisenhower to recommend the appropriation, about \$650,000 in his budget message is difficult to understand. The Congress should rectify his failure.

The article and letter follow:

[From the Boston Traveler of January 24, 1955]

MEN AND SHIPS

A nation's merchant marine, no matter how small or large, is no stronger than the men who run the ships.

You can have the biggest merchant fleet in the world, but it's no good unless you also have well-trained officers and men.

In view of this fact, then, it was not surprising that the part of President Eisenhower's budget message that dealt with the merchant marine caused some consternation.

This budget calls for \$103 million to help build up the merchant marine, and at the same time eliminate all Federal aid to State maritime academies.

The result, as we see it, will be some fine new ships and an eventual shortage of properly trained men to run them.

The argument that is used to justify the withdrawal of \$660,000 in aid for the maritime schools is economy. It looks very much like false economy.

The Massachusetts Maritime Academy, for instance, has been getting about 40 percent of its necessary operating revenue from the Federal Government and the rest from the State. This year's State appropriation is \$292,000.

The probable result of this slash, then, would be to cut the number of officers turned out by the school by at least 40 percent. It

should be turning out more marine officers, not fewer.

Fortunately, the objections in Congress to this cut were immediate. Senators LEHMAN and IVES, of New York, where the King's Point United States Merchant Marine Academy is located, registered strong protests and promised vigorous action to get the cut restored.

We can certainly expect the Members of our own congressional delegation to join in the protest.

But though the strongest protests will come from the States affected, this is really a national problem, and we hope Congress will see it that way.

The merchant marine has been dwindling for years. Now that the Federal Government is taking steps to build it up, it's no time to propose that we run more ships with less men.

[From the Boston Traveler of January 28, 1955]

TAX TRICKS

We should have an all-out investigation (with no whitewash) of American-owned merchant marine ships that are being registered under foreign flags to avoid heavy payments to the United States Government. An honest investigation would show that the loss to this country through this tax dodge is several times the amount of the President's budget item of \$103 million for an expanded merchant fleet. We could have one of the greatest merchant fleets afloat simply by checking the evaders of taxes and registration fees.

JOHN A. GAFFNEY.

PLYMOUTH.

A Warning Against Rigging Coffee Prices

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the Record, I include herewith the following telegram I have received from Joe G. Wick, president of the Old Judge Coffee Co., St. Louis, Mo., urging action by the Federal Government to keep coffee prices from advancing again:

St. Louis, Mo., February 17, 1955.

Representative MELVIN R. PRICE,
House Office Building,
Washington, D. C.:

Believe something should be done immediately to keep coffee from advancing again. Roasters have just declined and looks as if they are rigging it again making it necessary to advance roasted coffee. World's supply of coffee is greatest in a decade. Far more coffee available than before the phony freeze of a year ago. Vice President Nixon's good will tour? Producing countries minority few are rigging it again, making it necessary to advance coffee to the American public. Present prices of green coffee still over four times the 1945 ceiling and poor American public gets it again. Are we going to loan them more millions and have the American public pay for it by ridiculous prices?

JOE G. WICK,
President, Old Judge Coffee Co.

Trade Act Balloting Is Analyzed

EXTENSION OF REMARKS

OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. SADLAK. Mr. Speaker, Friday's House vote on H. R. 1, extension of the reciprocal trade agreements, has been variously diagnosed, interpreted, and analyzed for purposes of trends, cooperation, or opposition to President Eisenhower and his administration on legislation to come to the House for consideration and action in the 84th Congress.

Different from others that I have read and differing, too, with conclusions heard on Capitol Hill since Friday is the detailed survey of Robert D. Byrnes, veteran correspondent now in Washington for the Hartford (Conn.) Courant.

This compilation will interest our affable Speaker as much as it will, I feel, arouse the speculation of all Members.

This article as it appeared in yesterday's issue of the Hartford Courant follows:

TRADE ACT BALLOTTING IS ANALYZED

(By Robert D. Byrnes)

WASHINGTON, February 20.—The Reed amendment to the Reciprocal Trade Act, strengthening the position of the Tariff Commission in proposing increased quotas to protect domestic production, would be adopted by the Senate if the Senators vote the same way on it as did the majority of their States delegations in the House Friday when the Reed proposal was defeated by seven votes.

A breakdown of the House vote shows the majorities in the delegations from 22 States favored the Reed amendment, the majorities in 19 States opposed it, and in six other States the division for and against was even. One State, Nevada, is not included, as the one Nevada House Member was absent and was not paired.

LOCAL INTERESTS

Analysis of the vote by regions and States shows the dominant influence of local economic interests as contrasted with partisan alignments. New England, with 28 House Members, 18 Republicans and 10 Democrats, voted 22 to 6 for the Reed amendment, thus giving the present law only 21-percent support. The 3 Pacific Coast States, with 41 House Members, 28 Republicans and 13 Democrats, voted 17 to 24 against the Reed amendment, thus giving the present law 57-percent support. This same percentage of support for the present law, 57, also showed for the East Central States, where the 77 House Members comprise 50 Republicans and 27 Democrats and voted 30 to 44 against the Reed amendment. The South, with 106 House Members, 96 Democrats and 6 Republicans, voted 46 to 54 against the present law.

The present law, on the basis of the votes to change it by the Reed amendment, has the least support in the Mountain States, where only 1 of the 16 House Members voted against the Reed proposal. These States are represented by 9 Republicans and 7 Democrats in the House.

The textile industry was probably the basis for most of the New England votes for the Reed amendment. The 3 Republicans from Maine, for example, and the 2 Democrats from Rhode Island were all against it. The 6 New England votes against the amendment came from 4 Republicans, MORANO, of Con-

necticut; BASS, of New Hampshire, HESLTON and MARTIN, of Massachusetts; and 2 Democrats, MCCORMACK and O'NEILL, both of Massachusetts.

The textile industry also was credited with being influential with Members from the South who, now that they have textile mills in their own districts, are no longer exclusively concerned with free trade in order to export cotton. South Carolina, for example, lined up 5 to 1 for the Reed amendment, North Carolina 7 to 5 for it, and Georgia 8 to 2 for it. There is 1 Republican among the 28 Members from these States.

Texas, despite the great influence of Speaker SAM RAYBURN with his colleagues in that delegation, voted 11 to 10 for the Reed amendment. Oklahoma, another State where foreign oil imports are viewed with alarm, voted 5 to 1 for the Reed amendment.

The coal States also reacted on oil, but they are against imports of residual fuel oil as a competitor to the products of their mines. West Virginia, which also claims to have suffered in its pottery and clothespin industries, as well as coal voted solidly for the Reed amendment. Representatives of the Pennsylvania coal regions had been expected to go for the Reed amendment, but they were joined by the 5 Democrats from Philadelphia, so the State lined up 22 for and only 7 against the Reed proposal.

Philadelphia, where only the one Republican House Member voted against the Reed proposal, was the exception among the big seaports to whom foreign trade is a factor, and whose Representatives appeared to react to that. The New York City delegation, including 3 of the 4 Republicans was virtually solid against the Reed amendment. Similar attitudes were reflected in the votes of Members from New Orleans and San Francisco.

Only 2 States, Arkansas with 6 Democrats, and Nebraska, with 4 Republicans, voted solidly against the Reed amendment. Three States with solid Democratic delegations, Delaware, West Virginia, and New Mexico, and four with solid Republican delegations, Maine, Vermont, Wyoming, and Utah, voted solidly for the Reed amendment. In the cases of Vermont, Wyoming, and Delaware, however, the solid delegations comprise only one Member each.

The States which, in the House vote, gave majority support to the Reed amendment were Colorado, Connecticut, Georgia, Idaho, Kansas, Maine, Massachusetts, Montana, New Jersey, New Mexico, North Carolina, Ohio, Oklahoma, Pennsylvania, Rhode Island, South Carolina, Texas, Utah, Vermont, West Virginia, Wyoming, and Wisconsin.

Those which cast the majorities of their votes against the Reed amendment were Alabama, Arkansas, California, Delaware, Florida, Illinois, Indiana, Iowa, Kentucky, Louisiana, Maryland, Michigan, Minnesota, Mississippi, Missouri, Nebraska, New York, Tennessee, and Washington.

States whose House votes were evenly divided on the Reed amendment were Arizona, New Hampshire, North Dakota, Oregon, South Dakota, and Virginia.

Disposal Program at Linda Vista, Calif.

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. WILSON of California. Mr. Speaker, the problems faced by Eisenhower administration agency heads who

are forced to accept unsympathetic holdovers in top policymaking jobs was never more apparent than in the Public Housing Administration today. PHA Commissioner Charles E. Slusser has a distinguished record as an administrator. He served with outstanding ability as mayor of Akron, Ohio, for many years prior to his acceptance of his current position as head of PHA.

One of Slusser's chief responsibilities at PHA, in addition to developing slum clearance projects, is an orderly and quick disposal of war-built housing projects where they are no longer essential to national defense. Congress has given him almost unlimited authority to complete the disposal program.

Yet today Mr. Slusser finds much of his program in the hands of holdovers from the previous administration. One of these men in a top policy job is Mr. John G. Melville, chief of the western region of PHA, who evidently has little sympathy with the mandate of Congress to dispose of these houses at the earliest possible moment.

The disposal program at Linda Vista, Calif., is a good case in point. Because of a dispute over payment of a \$30,000 charge for relocation of utility poles, the Linda Vista disposal program has been again delayed approximately 60 days, at a loss to the Government of considerably more than that amount, due to loss of rental revenue from over 700 forced vacancies in the homes scheduled for sale.

This is just one of the irritating and costly delays that has resulted from decisions emanating from Melville's office. The people of Linda Vista have waited for years while the promised sale of homes has had every conceivable delay. They have reached the end of their patience. So have I. If these delays continue I shall insist on a full-scale investigation of the San Francisco PHA regional office to find the reasons for such tactics.

An interesting and informative commentary on the situation appeared recently in the San Diego Union. Under unanimous consent, I include it as a portion of my remarks:

LINDA VISTA STALL BECOMING HABITUAL

(By Gene Fuson)

From some angles Public Housing Administration's San Francisco stall order on Linda Vista housing sales to private buyers looks like a bureaucratic mountain made of a technical molehill.

The most recent postponement is not the first one.

After Congress first ordered Linda Vista liquidated in April 1951, sales had to be postponed until the end of the Korean fighting.

Mrs. Faye Hartman, PHA special field representative, got the wheels rolling again in January 1954, only to hit several more snags from higher office.

The spring stall was budget trouble. The United States Public Housing Commissioner, Charles E. Slusser, ordered the subdivision budget cut from \$2½ million to \$1¼ million.

The summer stall came when John G. Melville, PHA regional director at San Francisco, ordered the sale stopped when the city refused to rescind a housing ordinance preventing reerection of 3,500 temporary housing units in the city.

Slusser overruled Melville and ordered the machinery back in motion.

In the fall, Melville stopped everything again in a hassle over what kind of appraisal should be made on the houses.

Again Slusser overruled him and ordered sale plans underway.

The latest indefinite postponement boils down to Melville's crew stalling a \$15 million sale over dispute whether San Diego Gas & Electric Co., or PHA should pay \$30,000 to move some power poles in line with subdivision requirements.

Proportionately it's the same as stalling a \$1,500 sale over a \$3 dispute.

The gas company and PHA say they disagree over meaning of the word "removal" in the utility permit, which prohibits the Government from paying for removal of utilities.

Gas company argues that moving a pole 6 inches or a few feet constitutes relocation and not removal under which case PHA should pay. The permit was issued to bypass delay in the World War II rush to build Linda Vista. It was never corrected.

Relocation and removal also involve those of PHA executives who will have to seek jobs in other agencies when Congress' liquidation order is carried out. Some of them are in policymaking positions getting \$7,000 to \$12,000 a year.

They have jobs as long as PHA has public housing not sold.

If the \$1½ million subdivision is not allocated by June 30, the money returns to the general fund to wait for Congress to reallocate it—possibly 6 months to a year.

Linda Vista was carved out of raw material and cactus land and occupied in little over 2 years.

It has been 3 years since Congress ordered it sold, and less than a third of the job is finished.

Slusser's orders from Washington indicate he is trying to get the job done.

Mrs. Hartman has a unanimous vote of confidence on the job she has done.

That leaves Melville in San Francisco.

A turn of Slusser's pen could make Linda Vista a separate field office responsible to Washington only, as it did when the business area was sold.

Comptroller General Campbell could order the \$30,000 paid, as Representative Bob Wilson, Republican, of San Diego, has requested.

Mrs. Hartman could be relieved of personal responsibility; the PHA could pay the \$30,000 and let the case be settled by court action after the sale.

This reporter, attempting for the fifth time to contact and question Melville by telephone, was told, "If Mr. Melville has anything to tell the press, he'll call you."

Maybe it has been forgotten that Joe Public pays the freight on that operation.

Attack on Dollar Is Seen in \$20-Tax-Cut Proposal

EXTENSION OF REMARKS
OF

HON. ROBERT W. KEAN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. KEAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence in the New York Herald Tribune:

ATTACK ON DOLLAR IS SEEN IN \$20-TAX-CUT PROPOSAL

(By David Lawrence)

WASHINGTON, February 21.—The Democratic majority in Congress has apparently

decided to constitute itself a "wrecking crew" with the obvious purpose of wrecking the Eisenhower administration, even if it means wrecking the Nation's economy at the same time.

The party that promised the electorate in the congressional campaign last autumn that it would uphold the hands of the President and support his measures now has turned on him and on the country, too, and has embarked upon a course of irresponsibility which cannot be justified even on the ground of partisan benefit. For the new proposal to buy the American voters by giving everybody \$20 off his tax bill and also freeing nearly 5 million voters from paying any taxes at all is the cheapest form of demagoguery.

The worst phase of it is the way it is being attempted—that is, by a trick of legislative procedure which seeks to tie the President's hands so that, if he wishes to veto the proposal, he will also have to veto the continuance of the corporate taxes at the present rate of 52 percent. The Treasury needs the \$1,750,000,000 in revenue which would be lost if the corporation taxes are automatically reduced to the 47-percent rate.

LOSS TO TREASURY

Also imbedded in the tax law expiring on April 1 next—unless extension is voted now—are certain excise taxes which, if not continued, would cost the Treasury another billion dollars. This is all wrapped up in the same package, which the Democrats assume the President would not dare to veto.

But the proposal to cut off \$20 from everybody's taxes would mean a loss to the Treasury of about \$2 billion. So, if the President vetoes the bill with the \$20 tax cut in it, the Treasury stands to lose about a billion dollars in excise-tax receipts because the Congress wouldn't care to let the corporation taxes go down to 47 percent. A bill to extend corporate taxes could be passed any time between April 1 and December 31, 1955, and still be made retroactive for the full calendar year.

Mr. Eisenhower, therefore, has no choice. He has to veto the \$20 vote bribe, which, because the taxpayers would not get it, the Democrats assume would create widespread resentment at the polls. As between a \$2 billion loss on that scheme, however, and a \$1 billion loss in excise taxes, it is preferable for the President to accept the excise-tax reduction.

There is no certainty, on the other hand, that Congress would refuse to pass a separate bill, after the veto, which would continue the excise taxes. Hence, the loss to the Treasury might not materialize at all. Then if business conditions are booming and tax receipts increase, it may be that in 1956 a general tax-reduction bill could be enacted in which all taxpayers are treated equitably.

The idea of letting any one who gets an income of \$3,000 a year become exempt from the payment of any Federal taxes at all, including the cost of national defense, is not one that will appeal to the sense of fair play of the electorate as a whole. Yet, if the wrecking crew have their way, it will mean that many persons in that very income group will be exempt from the payment of Federal taxes.

What may prove to be the most serious damage done by the "wreckocrats" on Capitol Hill, as someone now has dubbed them, may be in the effect on the purchasing power of the dollar. If inflation is to be the accepted policy of America for the years ahead—and that's what a continuance of the unbalanced budgets could mean—then the dollar will be driven steadily downward in terms of other currencies in the world.

GOOD NEWS TO KREMLIN

The Eisenhower administration since taking office has made a heroic effort to work toward a balanced budget. The promise has

been made that such a balance can be attained in the fiscal year beginning July 1, 1956, or that it will be so close to a balance as to assure the dollar a sound position. But if the spenders are to take hold, then confidence will disintegrate. For if a \$20 for everybody doctrine is to be the political device to win elections, then there is nothing to stop the politicians from making it \$50 next time, and so on. It would be joyful news to the Kremlin, which hopes in one way or another to see the collapse of the private-enterprise system in America.

There are some Democrats in the Senate, like Senator HARRY BYRN, of Virginia, chairman of the Senate Finance Committee, who are opposed to the idea of any tax reductions until the budget is balanced. But the Virginia Senator will have a hard time blocking the \$20 bribe plan unless other Democratic Senators line up with him to conserve the dollar from the most violent attack that has ever been made upon it. The political conspiracy would have no chance of success if it were not assumed by the wrecking crew that the people can be and will be deceived.

No Time To Cut Taxes

EXTENSION OF REMARKS
OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. BYRNES of Wisconsin. Mr. Speaker, I call attention to the editorial in today's Washington Evening Star with respect to the action of the Democratic members of the Ways and Means Committee in voting a tax reduction of over \$2 billion at this time.

The editorial is as follows:

NO TIME TO CUT TAXES

Secretary of the Treasury Humphrey has made a properly forceful protest against the Democratic move in the House to cut individual income taxes at this time. By his estimate, the proposal to give a \$20 tax credit to each taxpayer and dependent would cost the Government \$2.3 billion revenue for a full calendar year. Ways and Means Committee officials estimate the potential loss at \$2.1 billion and point out further that the proposed credit would result in removing about 7 million taxpayers from the income-tax rolls. Whichever estimate of loss is correct, approximately half of the drop in revenue would occur in fiscal 1956, in which the administration already foresees a budget deficit of about \$2.4 billion. Adding a substantial sum to this deficit would increase the inflationary pressures which the administration has succeeded over the past 2 years in bringing under reasonable control, a result which could be greatly damaging to the public interest.

Approximately \$7 billion in tax relief has been given during the past 2 years. In the same period, Government spending has been curtailed to bring closer the prospect of a balanced budget. The administration is recommending now that scheduled reductions in the corporation income-tax rates and in certain excises—involving an estimated \$3 billion in annual revenue—should be extended for 1 year at their present levels in the hope that another general, though moderate, tax-reduction program might be enacted in 1956.

It is unfortunate that political considerations are playing a large part in the maneuvering on tax legislation. For example, the Democratic proposal to reduce individual

taxes is attached to the administration plan to maintain current corporation and excise-tax rates, a maneuver obviously intended to minimize the danger of a Presidential veto if the combination bill should be passed. Clearly enough, the Government needs the revenue involved in this combination of proposals and it is an act of political irresponsibility to jeopardize it. The Democrats, especially those who are accusing the administration of spending too little on national defense, should not stoop to this kind of shabby politicking with tax revenues.

The Forgotten Program: Civil Defense

EXTENSION OF REMARKS OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post and Times Herald of Tuesday, February 22, 1955:

OUR DEFENSELESS CITIES

Val Peterson made a classic understatement in his television interview on Sunday when he remarked: "I do not believe the Congress or anyone else in this country has realized the need for a strong civil defense." There is an ironic inconsistency in the appropriation of hundreds of millions of dollars for early warning lines and Nike rings without any sort of determined followthrough to insure that citizens know how to protect themselves in nuclear attack. Perhaps members of the Senate Armed Services Subcommittee, which will begin hearings today on the problem of radioactive fallout, can dramatize for their colleagues and the country the sad plight of civil defense.

Despite Mr. Peterson's hard work as Civil Defense Administrator, it is plain to be seen that the administration has placed no very high priority on this kind of preparedness. The move of the Civil Defense Administration to Battle Creek, Mich., last year—a move apparently designed more as a political sop than as an effort to improve the effectiveness of the agency—has not helped to promote understanding of the problem. Congress, for its part, has shown little interest. It has repeatedly cut appropriations without insisting on a meaningful civil defense program that would justify the expenditures requested; legislators have been content in an attitude expressed by one House Member several years ago respecting a warning system for the District: "Let them ring church bells." The public apathy is merely a reflection of the apathy in the administration and Congress.

Yet there is every reason for confidence that Americans would respond to a civil-defense program that had the proper high-level attention and leadership. And the first thing to do to make the civil-defense program important is for the administration itself to show that it regards the program as important. The need is for concrete advance planning, for definite instructions to cities on what to expect for workable evacuation and shelter directions, for suggestions to private citizens on what they ought to be doing. The newly disclosed dangers from radioactive fallout—which now also has strategic implications—increase the urgency of realistic planning. Incidentally, the administration has had the facts on fallout for many months, and it is pertinent to ask why so little has been done.

If the Senate subcommittee can help focus some attention on the deficiencies of civil defense it will do a real service. Civil defense will not prevent a war; but adequate advance preparation will help prevent millions of needless casualties if war should come. Even in the hydrogen age civil defense is in no sense futile. What is futile is to kid ourselves that the present confusion constitutes adequate civil defense.

With Further Reference to the So-Called Reciprocal Trade Agreements

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. REED of New York. Mr. Speaker, under leave previously granted, I hereby insert communications received from the Synthetic Organic Chemical Manufacturers Association of the United States with regard to H. R. 1.

SYNTHETIC ORGANIC CHEMICAL
MANUFACTURERS ASSOCIATION OF
THE UNITED STATES,

New York, N. Y., February 17, 1955.

HON. DANIEL A. REED,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN REED: In behalf of our association, I wish to express sincere appreciation for the sound and courageous expression of views of the minority in connection with the recent reporting of H. R. 1 by the Ways and Means Committee.

The views of you and your colleagues well state the importance of the synthetic organic chemical industry to national defense and the imperative need for an amendment of the law which will insure that our defense mobilization capacity will be protected from import injury. In this regard, we note in appendix B to the committee report an excerpt from the testimony of Charles P. Taft which we believe characterizes the position of our industry in a misleading manner. Your attention is invited to the enclosed letter which we addressed to the chairman of the committee following Mr. Taft's testimony on February 7. The purpose of the letter was to set the record straight with respect to the position of our industry on the national defense aspects of our foreign economic policy.

Sincerely yours,

SAMUEL LENHER,
President.

SYNTHETIC ORGANIC CHEMICAL
MANUFACTURERS ASSOCIATION
OF THE UNITED STATES,

New York, N. Y., February 11, 1955.

The Honorable JERE COOPER,
Chairman, Ways and Means Committee,
House of Representatives,
Washington, D. C.

DEAR SIR: On February 7, 1955, Mr. Charles P. Taft, president, Committee for a National Trade Policy, Inc., appeared before the Ways and Means Committee and in a statement apparently intended as a rebuttal to the opposition which had been expressed by various industries to H. R. 1, he made a number of statements regarding the organic chemical industry which are misleading. We, therefore, request that this letter be incorporated in the record following Mr. Taft's speech of February 7 in order to set the record straight.

Mr. Taft stated that, "One fragment of the chemical industry * * * told you that more tariff reductions will hurt our defense production facilities. But Secretary Dulles and Secretary Wilson, who worry about our defenses on a full-time basis, have said that we need H. R. 1 to keep our defenses strong." The synthetic organic chemical industry is the "fragment" of the chemical industry to which Mr. Taft apparently alludes. The industry's position on H. R. 1 was presented by this association. The position of our industry is not as described by Mr. Taft; rather as very plainly stated in my testimony before your committee, we called attention to the importance of establishing in the national interest "a positive policy and procedure under which tariffs could be reduced below a point which the Tariff Commission finds would threaten impairment of the domestic productive capacity declared by the Office of Defense Mobilization to be part of the mobilization base. An essential corollary of that policy and procedure would provide for the withdrawal of concessions which in whole or part have resulted in volumes of imports which threaten impairment of the domestic productive capacity programed by the Office of Defense Mobilization as part of the Nation's mobilization base."

In other words, looking to the future and calling attention to the Government's own policy of maintaining the mobilization base in a state of full readiness, we requested that a procedure be established which would insure that our mobilization base would not be hurt by increased imports under an extension of the trade-agreements program. We find it difficult to imagine that any thoughtful citizen, however enthusiastic for freer trade, would wish for the trade-agreements program to be used in such a manner that vicarious injury would be caused to our defense productive capacity.

Mr. Taft refers to the thinking of Secretary Dulles and Secretary Wilson on this subject. Significantly, Secretary Dulles, answering a question asked by Congressman SIMPSON, stated that the escape clause is needed not only to protect individual producers but also to protect the interests of the United States through the maintenance of the mobilization base, which he described as the minimum productive capacity and skills required to protect the Nation against the possibility of war.

As for Secretary Wilson, the importance he attaches to maintaining the mobilization base in a state of readiness is revealed in his statement before the House Armed Services Committee of January 26, 1955, in which he stated:

"We must also have ready reserve forces, an adequate mobilization base, appropriate reserves of ammunition and other equipment, and stockpiles of critical materials to meet the needs of an all-out war if such a situation should be forced upon us. This is the kind of defense structure that we must build and maintain to deal with the situation we face in the world today. At the same time we must carefully consider the force levels, composition, and the organization of our armed services. The services must be so organized as to permit the maximum utilization of our scientific, technological, and production abilities. In addition to the maximum utilization of modern technology we must plan and organize our forces so as to get maximum combat strength and at the same time minimize the number of men required on full time active duty."

Secretary Wilson quoted in his statement a letter which he had received from President Eisenhower setting forth the President's views. Excerpts from the President's letter pertinent to our national policy of maintaining our mobilization base in a state of maximum effectiveness are as follows:

"Second, true security for our country must be founded on a strong and expanding economy, readily convertible to the tasks of war.

"Our first objective must therefore be to maintain the capability to deter an enemy from attack and to blunt that attack if it comes—by a combination of effective retaliatory power and a continental defense system of steadily increasing effectiveness. These two tasks logically demand priority in all planning. Thus we will assure that our industry capacity can continue throughout a war to produce the gigantic amounts of equipment and supplies required.

"We can never be defeated so long as our relative superiority in productive capacity is sustained.

"In view of the practical considerations limiting the rapid deployment of large military forces from the continental United States immediately on outbreak of war, the numbers of active troops maintained for this purpose can be correspondingly tailored. For the remainder we may look primarily to our Reserves and our mobilization base, including our stockpile of critical materials.

"All these capabilities have a double value—they serve our aim in peacetime of preventing war through their deterrent effect; they form the foundation of effective defense if aggressors should strike."

Mr. Taft confesses his ignorance as to whether it is better policy to rely in time of war on plants located in the industrial areas of the United States or in plants scattered throughout the free world. Fortunately, the Government agencies responsible for our preparedness are not as confused as Mr. Taft on this subject. First, the Congress in the Defense Production Act of 1950, as amended and extended, has declared the Nation's determination to develop and maintain the military and economic strength required to oppose aggression and promote peace in the world. The Director of Defense Mobilization, who is charged with developing the policies to carry out the purposes of the act, has advised the President that to protect the security of the United States and the free world from Soviet aggression, our Nation must have a defense mobilization program of such magnitude that it is capable of deterring an aggressor or if we are attacked, to enable us to fight to win. He stated that the required program must include the industrial capacity to shift in the shortest possible period of time from partial to all-out mobilization. The Joint Committee on Defense Production in its fourth annual report very recently stated that "The all-important job facing both industry and Government is that of keeping our huge industrial empire in the state of maximum readiness for any emergency." The committee wisely observed that "The huge industrial expansions during the last 4 years have been aimed at overcoming shortages so vital to our defense economy. Adding new capacity can be futile, however, unless the mobilization base, built at great cost, is maintained in the maximum possible state of readiness."

The joint committee realizes, as Mr. Taft does not, that some of the production facilities which have been created to meet mobilization requirements are partially idle because the volume of production required for defense exceeds that normally needed for peacetime purposes. The committee's report refers to the fact that the maintenance of the mobilization base where such plants are involved is a substantial problem which requires the Government's assistance. As the Director of Defense Mobilization has stated in his annual report to the joint committee,

"The development of an adequate, secure mobilization base depends upon an understanding and conviction on the part of all levels and branches of the Government, and

of the people as a whole, that these things are necessary and that they offer the best assurance of surviving in what President Eisenhower has called 'an age of peril.'"

In this context, our association called the committee's attention to what we regard as the necessity of establishing procedures through amendment of the peril point and escape clause which will prevent our defense mobilization capacity as determined by the Office of Defense Mobilization from being injured by increased imports under the trade agreements program. We believe this recommendation is quite consistent with the emphasis which the Government itself has placed on maintaining the mobilization base in a state of maximum readiness. Far from opposing an extension of the trade agreements authority with the power to make the type of gradual, moderate, selective, and reciprocal concessions which the President described in his January 10 foreign trade message, our industry stated to your committee that it would not oppose a 3-year extension with authority in that period to reduce tariffs up to 5 percent a year so long as its exercise was subject to such procedures.

It is difficult for us to understand how there can be any disagreement with the principle of shaping Government action in the field of foreign trade policy in such a manner that the domestic productive capacity, which the Government itself finds to be essential to our national defense, will be safeguarded from import injury. On the basis of any fair examination of our statement as presented to your committee, it is ridiculous to say that we are taking the position that any further tariff reduction would destroy our industry. We have felt the urgent lash of war requirements in two world wars and have the right, we believe, to ask the Government to set up procedures for the future which as a minimum will insure that the capacity which the Government itself believes to be necessary for defense mobilization will be protected from impairment by increased imports stimulated by tariff reductions.

The type of reasoning which seems to be inherent in Mr. Taft's mischaracterization of our industry's position is that anyone who undertakes to present a different point of view from his own on the tariff issue must necessarily be someone who is speaking from an assumed state of shock or injury from import competition. He seemingly would deny to anyone holding a view adverse to his own foreign trade policy the right to make recommendations which would secure selectivity in our foreign trade program with respect to recognizable and legitimate national objectives. He says in effect that unless we are suffering a drastic loss of business from import competition at the present time, we have no right to make recommendations with respect to tariff policy for the future. Healthy industries, in his view, could not conceivably be healthy because of the existence of the tariff and must stand mute until progressive tariff reduction places them in a state of severe shock and injury. We think the Congress in the logical order has the right and duty to be concerned about sound tariff policies which will balance expansion of foreign trade with other national objectives such as the strength of our domestic economy and the unimpairment of our mobilization base. To these objectives we addressed ourselves.

Finally, we would like to set the record straight on a favorite error of Mr. Taft's which he persists in perpetuating. He refers to a colloquy which took place between Congressman Mills and me. The Congressman, referring to imports of coal-tar chemicals (which actually had a foreign invoice value of \$12,300,000 in 1953 according to United States Tariff Commission Report No.

194, 2d series, p. 168) and citing the total figure as \$10 million, asked me if these were not the imports which were competitive with the domestic industry's products. I did not undertake to verify of my own knowledge the accuracy of the figure cited by Mr. Mills but realizing that the Congressman's question was addressed to imports of coal-tar chemicals, I undertook to explain that these chemicals are dutiable under the American selling price and that the industry is prepared to live with the manner in which that provision is administered by the Bureau of Customs.

As this committee knows, organic chemicals consist not only of coal-tar products but also a host of non-coal-tar chemicals as well. Imports of coal-tar chemicals are dutiable under tariff paragraphs 27 and 28. The ad valorem or compound duties provided for under these paragraphs of the Tariff Act are based upon a value known as the American selling price. This value basis is applied where the imported item is found by the Bureau of Customs to be "competitive" with any similar domestic article. Organic chemical imports other than coal-tar products, on the other hand, are dutiable either under specific rates of duty or under ad valorem or compound rates which do not involve the American selling price feature. Consequently, the "competitive" determination made in assessing duty on coal-tar chemicals imports has nothing at all to do with the non-coal-tar organic chemical imports. It is a gross oversimplification and distortion, therefore, to imply, as Mr. Taft did before your committee and as he has repeatedly done in the past, that the imports of coal-tar chemicals assessed for duty under the American selling price are the only imports which as a matter of economic fact are "competitive" with the products of the American industry. Mr. Taft learns very slowly. We have called his apparent misunderstanding of the significance of the "competitive" determination with respect to coal-tar chemicals under paragraphs 27 and 28 to his attention on several occasions but he persists in the error. He once referred to the imports of coal-tar chemicals as the only really "sensitive" items among the organic chemical imports and claimed that the Tariff Commission was his authority for such a statement. The general counsel for the Synthetic Organic Chemical Manufacturers Association inquired of the Chairman of the Tariff Commission if there was any basis in the Commission's reports for such a statement. The exchange of letters with the Chairman of the Commission is set forth in full and shows that there is no justification for Mr. Taft's use of the term:

STEPHENS & JOHNSON,

Washington, D. C., May 12, 1954.

The Honorable EDGAR B. BROSSARD,
Chairman, United States Tariff Commission, Washington, D. C.

DEAR DR. BROSSARD: Your attention is invited to the marked paragraph in the enclosed press release from the Committee for a National Trade Policy. You will note that the Tariff Commission is there quoted as the source for a statement to the effect that only \$9 million by value of organic chemical imports in 1952 were really sensitive items.

The Synthetic Organic Chemical Manufacturers Association, whom we represent as general counsel, intends to reply publicly to Mr. Taft's comments in order to correct a number of errors which it contains. We do not believe that the Tariff Commission has ever made any written statement upon which the marked paragraph could be based, and we cannot believe that any authorized representative of the Commission would have supplied any oral information upon which it could be based. Naturally before making any comment to this effect in the public statement we are preparing in response to Mr. Taft, we would wish to have

verification of this fact from the Tariff Commission.

May we, therefore, request you kindly to advise whether or not the Tariff Commission has ever published information upon which the marked paragraph could be based or whether any of your authorized representatives have supplied any oral information to that effect.

Sincerely yours,

DONALD O. LINCOLN.

UNITED STATES TARIFF COMMISSION,
Washington, D. C., May 14, 1954.

Mr. DONALD O. LINCOLN,

Washington, D. C.

DEAR Mr. LINCOLN: I have your letter of May 12 concerning a press release issued by the Committee for a National Trade Policy in which it states that Mr. Charles P. Taft in an address to the League of Women Voters, May 6, 1954, made the following comment: "According to the Tariff Commission, the only really sensitive items out of this \$15 million amount to \$9 million per year, or only a little over one-fifth of 1 percent of the organic chemical business."

You ask to be advised "whether or not the Tariff Commission has ever published information upon which the marked paragraph could be based or whether any of your authorized representatives have supplied any oral information to that effect."

The \$9 million mentioned in the paragraph of the release to which you make reference is a rounded figure representing the total foreign invoice value of imports in 1952 of coal-tar products imported under paragraphs 27 and 28 of the Tariff Act of 1930. The value of these imports, \$8,683,000, was given in the publication of the Commission, entitled *Imports of Coal-Tar Products, 1952*, issued by the Commission in July 1953, and in table 28, page 165, of the Commission's publication *Synthetic Organic Chemicals, United States Production and Sales, 1952*.

In further answer to your inquiry, the Commission has never indicated either in its publications or orally by any members of its staff that the imports of coal-tar products in 1952, to which the \$9 million relate, are the only really sensitive items among imports of all synthetic organic chemicals.

I trust this will answer your inquiry.

Sincerely yours,

EDGAR B. BROSSARD,
Chairman.

In the above correspondence, imports of coal-tar chemicals for 1952 are stated to be \$9 million based on foreign invoice value. (The dutiable value reported by the Bureau of Census is \$11,242,216.) In 1953, the year Congressman MILLS had in mind in asking his question, the foreign value of coal-tar chemicals imports was, as mentioned above, \$12,300,000. The dutiable value of these imports, according to Bureau of Census figures, in 1951 was \$18,569,698.

When we have had occasion to call attention to import and export figures for organic chemicals, we have done so in the interest of pointing to the differing trends involved. Imports of organic chemicals have increased steadily, from \$18 million in 1948 to nearly \$51 million in 1953, the latest year for which we have been able to secure information. Exports show a declining trend—from \$461 million in 1951 to about \$302 million in 1953. 1953's total was lower than any year since 1948 when exports were nearly \$310 million.

The significance of these trends is that the industry is using less of its capacity each year for the production of organic chemicals for export while the increasing imports reflected by the trend are steadily displacing capacity for the production of organic chemicals for domestic sale. We have not said, and do not now say, that the industry has been seriously injured as yet by these imports. What we have tried to call attention to is that at present tariff levels imports are steadily increasing while we are progressively losing

our export markets. In addition, we are producing for domestic consumption annually well below the capacity which would be required for us in the event of defense mobilization.

Respectfully yours,

SAMUEL LENHER,
President.

USDA Uses Unique Methods in Soybean Hearing at Memphis

EXTENSION OF REMARKS

OF

HON. PAUL C. JONES

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. JONES of Missouri. Mr. Speaker, it was my privilege to attend a hearing at Memphis, Tenn., on February 14 when a crowd estimated at more than 300 people were present to listen to testimony in opposition to proposals of the United States Grain Standards Branch of the United States Department of Agriculture to make certain changes both in grades and classifications.

This was a rather unique hearing, Mr. Speaker, due to the fact that the only persons in attendance at the meeting who appeared to favor the changes were Mr. Barr, chief inspector of the Grain Division, and the other representatives of the Department of Agriculture. Anyone attending the meeting had an opportunity to be heard, and several of us stated that we would like to know who was sponsoring the changes and that we would like to hear from anyone present who approved or endorsed the changes.

Mr. Barr was the only person who defended the position of the Department of Agriculture in proposing to make changes in standards and classifications which have been in effect and which apparently have been working very well since 1949. However, Mr. Barr was not only willing to indicate his support of these proposed changes in which he would naturally have a pride of authorship, but went so far at one time as to state that his division was convinced, and then immediately retracted this strong language to state that the Division was of the opinion that the changes might properly be considered.

This meeting or hearing was unique in another way, Mr. Speaker. I am referring to the lack of notice which the farmer—the actual producer of soybeans—had. Actually, it was rather by accident and certainly indirectly that I learned about the hearing to be held in Memphis—one of a series of five.

When I inquired of the Department of Agriculture about the notice that had been given, I was told that the notice of the meeting had been sent to the Federal Register. Now, of course, some of my farmers do not read the Federal Register. I was told the notice was sent to most of the trade journals. Naturally, those subscription lists do not include any considerable number of farmers—the man who actually produces the soybeans and who would be vitally affected by any changes and who certainly should

have the opportunity to express himself before any changes are made.

I was particularly interested in whether or not the Commercial Appeal, the paper that most of the people in the Midsouth area read, was notified of this meeting. If they received a notice, it was not a notice that gained the attention of any editor, for there was absolutely no prior notice of this meeting in the Sunday or Monday morning issues prior to the meeting on Monday.

The crowd that did gather was recruited by some of the smaller elevator operators and through the Midsouth Soybean & Grain Shippers Association. Naturally, the American Soybean Association had notice of the meeting and this notice was carried in its monthly magazine, but, again, this was not the notice that gets to the actual producer. As an indication of the lack of notice given throughout the section of the Midsouth where the soybean is a major crop, and where any reclassification will result in millions of dollars loss to the farmers of that area, I am, in another extension of the Record, having reproduced an article from the Republican, a newspaper of Caruthersville, Mo., as reported by Mr. Albert Cravens, a secretary-treasurer of the Midsouth Soybean & Grain Shippers Association.

Mr. Speaker, I have asked to have included with these remarks of mine a copy of a letter, written by the president of the above-named association, directed to the Director of the Grain Division in the USDA, setting forth the views of the Midsouth Soybean & Grain Shippers Association on the proposed revisions of the soybean standards, which is as follows:

MIDSOUTH SOYBEAN AND
GRAIN SHIPPERS ASSOCIATION.

February 17, 1955.

DIRECTOR, GRAIN DIVISION, AMA,
United States Department of Agriculture,
Washington, D. C.

VIEWS OF THE MIDSOUTH SOYBEAN AND GRAIN
SHIPPERS ASSOCIATION ON THE PROPOSED REVISIONS
OF THE SOYBEAN STANDARDS

1. On the proposed revision that would reduce the maximum limits of foreign material 1 percent in each numerical grade. As country shippers we are in the middle on this question as we only buy on the grade that we have to sell but as the growers as presented by the American Soybean Association and the processors thought their present buying practices want 2 percent foreign material in No. 2 soybeans, we see no reason why the change cannot be made. We do, however, urge that a study be made to see if some simple method can be found to separate true foreign material from the small broken pieces of soybeans that fall through an $\frac{1}{16}$ -round-hole screen. Maybe the use of a smaller hole size such as a $\frac{1}{32}$ would let enough of the small-weed seed through and leave enough broken pieces on the screen to reduce the buildup of foreign material we now have in soybeans through handling. If such a method can be found we urge its use.

2. On the reduction of moisture we see no reason why the moisture in No. 1 soybeans cannot be reduced to 12 percent. However, we feel that no change need be made in the moisture of No. 2 soybeans as we have found that even in our humid climate 14-percent-moisture soybeans can be stored.

3. We can see no reason why the change in splits should not go through if you in the department feel that it would improve the soybean-grading system.

4. On the proposed special limits on heat damage in each numerical grade. We are against such limits as they would work a hardship on all shippers. Today inspectors are having enough trouble determining total damage or just how much total damage a sample contains. However, if the Department feels that such limits should be put into effect, then heat damage should be more clearly defined. We suggest that it means soybeans that have turned entirely black or brown from heat. The present methods of saying that a small brown spot in the middle of an otherwise sound soybean is heat damage leaves too much room for human error and judgment for such narrow limits of heat damage as have been proposed by the Department.

5. On the proposed reclassification of soybeans with green seed coats that are in cross section yellow from the yellow class to the green class. We cannot say too strongly that we are opposed to this change. We have many reasons for being against the change. Here are just a few of them: 80 percent or more of the Midsouth soybean production would be affected by this change. No evidence was present at Memphis to disprove our conclusion that if the proposed change went through that 90 percent of our Ogden type soybeans would grade as mixed. This was the case before the change in 1949. If they were classed as mixed in 1948 and before what new method has been developed to tell class by the variety predominate color and how could variety purity be proven? In other words how could an inspector tell the difference between a bleached Ogden and a pale S-100 to say that the sample was a mixture of green and yellow varieties or just a sample of Ogden type soybean and therefore are classed green and just happen to have 10 percent or more that just happen to be faded yellow?

We recognize the department's desire and the need to make a grade and class such that it will tell the buyer if he wants that certain quality or not. We agree that under the present standards for soybeans it is not always possible for the buyer to get just what he wants by buying a certain grade and class but as one of the speakers at Memphis pointed out No. 2 Hard wheat does not always describe just what type of No. 2 Hard wheat that a buyer wants. Therefore, a buyer will say that he wants Kansas or Texas No. 2 Hard wheat and not Illinois No. 2 Hard wheat. Today most buyers that need a yellow coated soybean for their special products have found that they can get what they want by saying that they want a No. 2 yellow soybean from Illinois points or maybe Ohio. We feel that since the buyers can get yellow coated soybeans by saying what he wants that it is not right to penalize the Midsouth that has no high yielding soybean that isn't mixed with green and yellow coats. We realize that you cannot sell a person for long something that he does not want so if it was not possible for a buyer to get yellow coated soybeans without changing the standards we would not be opposed but as he can get yellow coated soybeans leave the standards alone.

Respectfully submitted,

PAUL C. HUGHES,
President.

Rural Library Service

EXTENSION OF REMARKS

OF

HON. CARL ALBERT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. ALBERT. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I wish to include the following editorial which appeared in a recent issue of the New York Times:

RURAL LIBRARY SERVICE

"Over 26 million Americans, some 90 percent of whom live on farms or in small communities, are still without access to modern library services." That is the first sentence used by Senator HILL, of Alabama, in reintroducing the library services bill which barely failed of passage last year. It points up the fact that a good portion of the citizens of this country are still in a second-class status where access to useful information is concerned.

The library services bill as now constituted will enable State agencies to set up libraries in rural areas of 10,000 population or less, so that these people may have the same advantages that their fellow citizens enjoy in more densely populated and urban areas. The bill calls for the appropriation of \$7,500,000 a year for 5 years to this purpose, with guarantees that there will be no interference on the part of the Federal Government with or control over State or library agencies.

It is hoped that this session of Congress will finally get down to the serious business of making this type of service available to rural areas. The State agencies have programs lined up, but are temporarily strapped by lack of funds to get the initial program under way. The new bill will provide the necessary funds and make it possible to eliminate one more of the obstacles in the way of lifting the educational level of the American people.

Determination of the Filipinos To Stand Up and Be Counted for Democracy and Freedom

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. McCORMACK. Mr. Speaker, I wish to call the attention of the House to a statement made by the President of the Philippines, Hon. Ramon Magsaysay. The American people, with such a forthright statement, will once more realize that they have in the Filipino people a staunch friend and ally. During these days when there are those in Asia who are playing a game of appeasement it should fill our hearts as Americans to note that we have friends with the courage of their convictions such as the Filipinos.

President Magsaysay is a leader who deserves the gratitude, admiration, and respect of the American people and I insert his statement in the RECORD as an expression of American gratitude for another token of the Filipinos' determination to stand up and be counted for democracy and freedom.

President Magsaysay, February 3, 1955, issued the following official statement welcoming the United States position with respect to Formosa:

WELCOME UNITED STATES-FORMOSA STAND

Responsibility for the defense of Formosa has been undertaken primarily by Armed Forces of the United States which, under our mutual defense treaty with America, also constitutes our main bulwark against external attack. Formosa and the Philippines fig-

ure importantly in the defense pattern against aggression in this part of the world. The two countries, by virtue of their geographic proximity and respective defense commitments, have a vital stake in the resolute maintenance of this defense pattern.

We cannot therefore be indifferent to the events that are transpiring in that area nor be unconcerned with the ultimate fate of that island. Our interest extends to the measures that have been taken to defend it against aggression. Formosa is vital to our national security. It must remain free and in friendly hands.

For these reasons, I welcome the decision of the United States Government clarifying its stand on the Formosa question. I trust that this policy of firmness will achieve its avowed purpose of deterring further acts of Communist aggression in this area. We stand squarely behind the United States in its determination to achieve this purpose.

Wheat Acreage Allotments

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. METCALF. Mr. Speaker, now that Congress has enacted legislation allowing additional acreage for durum wheat, consideration should be given to permit growers of high-protein wheat, which is in equally scarce supply, to get an additional acreage allotment. A good deal of this high-quality wheat is grown in the State of Montana and the House of Representatives of the Montana Legislature has passed the following memorial:

House Memorial 4

Memorial to President Dwight D. Eisenhower, Secretary of Agriculture, Ezra Taft Benson, Montana's congressional delegation, and members of the United States House and Senate Committees on Agriculture, seeking an adjustment in the Federal farm program as it relates to the grower of quality wheat

Whereas all wheat acreage allotments and marketing quotas are meant to control surpluses, but there is no surplus of the kind of wheat raised in Montana; and

Whereas millers are pleading for more high milling quality wheat of which Montana is the principal producer; and

Whereas Montana growers are now subject to the same restrictions as are growers of soft low-quality wheats, which are in huge surplus; and

Whereas some adjusted acreage allotments for our small operators will tend to redress a balance which is badly needed and the present pressure on all operators is curtailing too much production of high-protein wheat: Now, therefore, be it

Resolved by the Montana House of Representatives in its 1955 session assembled, That all responsible officialdom noted above be asked to see that revisions are made in the Federal farm program to permit increased production in areas which grow wheat of high milling quality determined to be in short supply.

LEO C. GRAYHILL,
Speaker of the House.

The reason for increased acreage allotments of high protein wheat are summarized in a recent editorial from the Montana Farmer-Stockman. The editorial follows:

NO SURPLUS OF MONTANA WHEAT

The national wheat acreage allotment and marketing quota program are designed to control surpluses, of course. But there is no surplus of the kind of wheat raised in Montana. Millers are crying for more high milling quality wheat and Montana is the principal producer of that type.

Why then should Montana growers be subject to the same restrictions as are the growers of the softer, lower quality wheats which are in vast surplus? Surely some plan can be worked out to permit the Montana grower to meet the need for his quality wheat.

It is the working out of such a plan that the Montana Advisory Committee to the USDA is assuming as its major responsibility. When the committee was first formed in response to the invitation extended by Secretary of Agriculture Ezra Taft Benson at the time of his visit to Montana, it had as its purpose the working out of specific proposals for five Montana farm problems: 1. Protection of markets for Montana mustard. 2. Protection of acreage for Montana sugar beets. 3. Modification of wheat acreage allotments with regard to smaller operators. 4. Establishment of a bushel rather than acre allotment control program. 5. Recognition of Montana's quality wheat.

So far the committee has had two meetings. At its first, in Helena, it quickly agreed on recommendations for Montana mustard and beets but found that it required more study to make proposals for the other problems.

At its second meeting, in Great Falls, it encountered divergent opinions on the subjects of bushel vs. acre allotments and consideration of the small farmer. A bushel method of control for wheat seemed to meet the needs of dryland farmers who might have a large crop one year and a small one the next. But what about the irrigation farmer who has more control of his production and can, conceivably, make one acre produce what two produced before? He'd rather have the limitation on acres.

And as for the small farmer—who is a small farmer? Can his basic problem be solved by giving him a few more acres of allotment? If so, where will those acres come from? Must they not, inevitably, come from the large operator, and what share can the large operator reasonably be expected to give?

Exchange Student From New Zealand Speaks for Democracy

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. JUDD. Mr. Speaker, the Junior Chamber of Commerce of the United States makes a notable contribution to the democratic way of life each year by sponsoring a contest for high school students who write on the subject, I Speak for Democracy. Freedom in America has been so secure that most of us take it for granted to the extent that we seldom think about it or question its origin or fundamental idea. These annual contests dramatize for thousands of young people the basic idea of democracy and freedom and in setting forth their own thoughts they become better citizens, more deeply dedicated to the ideal of freedom.

I am proud that 1 of the 4 cowinners of the national contest is presently a resident of my district in Minnesota. She is an exchange student from New Zealand, spending time in America to become better acquainted with our way of life so that she may become a more enlightened and better citizen of her own country. Miss Catherine Styles develops a most important point for all of us to ponder in this day when the freedom of man throughout the world is being seriously challenged—namely, that freedom and democracy are ideas that inspire all men and in the longing for freedom and self-government by other peoples we find kinship and herein lies our greatest strength in combatting the Communist philosophy which would destroy all freedom. Miss Styles' essay follows:

I SPEAK FOR DEMOCRACY

(By Catherine Styles)

I am not an American. My people are not American. And yet, I, too, speak for democracy.

Not much over a hundred years ago, the race that founded America began to found another nation. Surrounded by the vastness of the Pacific Ocean, a new land had been discovered. The brown-skinned people who already lived there called it Aotearoa, the land of the long white cloud. Today, we call it New Zealand. It is a young country, a virile and growing country. It is a country of sea and sunshine, of snow on the mountains, of trout lakes, and primitive fern forest; of weird pools where the boiling mud leaps and bubbles, cracks in the rocks where the steam comes white from the insides of the earth. . . .

The people who live there are a people who love freedom.

The people who live there are my people, and when I speak for democracy, I speak for them.

I have seen something of America. I have watched the crowds on the streets at night, seeing the advertisement signs flashing on the saw-edge of the horizon, saying: Buy my products; no, buy mine; mine is finer yet. I have seen, back home in the early morning, the man with his horse and his dogs, driving sheep. I remember the jostle and pattering rush of the delicate forefeet, and the clean smell of the bracken, and the sharp barking of the dogs. I remember this, and I know that those crowds with their faces colored by the glow of the advertisements, and that man out early with his flock, although they are 7,000 miles apart, are people with the same ideals and beliefs, the same love of individual freedom. And I am glad that I can say this, and I speak with all the sincerity in my power. I know that people, these people, all people, are the most terribly important thing in the world. I know that to make as many people as possible as happy as possible is the greatest ideal in the world. And I know that this is the ideal of democracy.

You people of America do not stand alone. Democracy extends further than America. Two thousand years ago the Christian doctrine proclaimed the equality of man. Belief in the equality of man means acceptance of all races, all creeds. Belief in democracy means belief in the equality of man. It means respecting the individuality of every human being.

At home, in the summer evenings, near the time of Christmas, I would sit on the low veranda steps, and hear the baby owls calling in the darkness, and the cows coughing and stamping in the paddock, and see the white bobs of the rabbits scuttle in the half light. And by the gate I would hear the voices of a couple murmuring together, the young man and woman. And I would

think: This is good; this is good, this life, this land, this people. All this is good, the best that ever was.

I still believe it is good, but I know now it was no single nation I was believing in, but the truth of free people everywhere. And I know that the most wonderful thing in the world is the freedom of the individual; in my country, in your country, and in every country.

Not as an American, not as a New Zealander, but as a free citizen of the world in which I have faith, I am speaking to you now. I am not remembering that you are American and I am British. I am not remembering that our voices are different, and our manners, and the cut of our clothes. I only remember that, together, we believe in the individual freedom and right.

I only remember that, together, we speak for democracy.

The United States Information Agency

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. WILSON of California. Mr. Speaker, as a member of the advertising profession I have been actively interested in the program and accomplishments of the United States Information Agency, under the able direction of Theodore C. Streibert, an experienced radio executive.

I am convinced that the USIA must greatly enlarge its scope and activity in order to effectively meet the challenge of anti-United States and anticapitalist propaganda being pumped into the neutral and satellite countries of the world by the Kremlin today.

We must be willing to enlarge USIA appropriations and give this agency the support and encouragement it will need in order to meet and stem the flood of Communist propaganda throughout the world.

Encouraging support of the USIA and its objectives has come recently from the advertising profession, members of which are best able, in my opinion, to evaluate the effectiveness of propaganda effort of every kind.

The Advertising Association of the West, a pioneer organization representing the leaders of advertising in the 11 Western States, recently adopted a resolution on the subject of selling America to the rest of the world. The resolution was adopted at the AAW midwinter conference in Los Angeles, Calif., on January 30, 1955.

Under unanimous consent, I include the resolution as a portion of my remarks:

This association is mindful of the immensity of the stakes in the continuing cold-war competition with the ungodly and militant forces of world communism which threatens the very survival of the free world.

We are painfully aware of the viciously distorted version of our country being spread throughout the world by the ruthless and tellingly effective propaganda of the Communists.

We are conscious of the transcendent need for combating this force by portraying to the world more extensively, aggressively, and

effectively the true story of America and our Nation's peaceful and constructive desires.

This association therefore faces our responsibilities as good citizens and as the organized voice of advertising in the West by declaring our policy as follows:

1. We endorse the necessity and objectives of the United States Information Agency and related programs, and deplore the relative inadequacy of appropriations for this vital activity.

2. We pledge the active interest of this association, and urge organized advertising to lend its knowledge, counsel, techniques, and proven skills toward helping sell America as effectively as advertising has proved its ability to sell goods and services.

3. We call on our Government to expand this activity and to utilize more fully the abilities and usefulness of the advertising profession and industry toward this objective, and also to rely on those possessing the proven skills in these techniques and crafts.

4. We recommend appointment of a committee of this association to establish such liaison with the appropriate agencies and organizations, both public and private, as appears practicable. The committee further will explore the problem and make recommendations to this association regarding the value, desirability, and means of doing our part in helping tell America's story abroad honestly and effectively for the welfare of our country and cause.

Narcotics Addicts Have Been Hospitalized by the District Court

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. MILLER of Nebraska. Mr. Speaker, as you may remember legislation was enacted during the 83d Congress which provides compulsory hospitalization, by court order, of drug addicts in the District of Columbia. During the hearings on my bill, it was pointed out that there were approximately 2,500 known drug users in our Nation's Capital.

During the past month the first 2 addicts have been compulsorily hospitalized under the new law. The first was a young man of 20 years who was committed last Friday. Monday, a 30-year-old woman, who admitted using up to 8 caps of heroin a day, became the second to be sent to the United States Public Health Service Hospital at Lexington, Ky.

In the latter case, the new law proves its effectiveness in helping to eliminate crime in the District. An assistant United States attorney testified that the woman told police she had supported her expensive habit by prostitution.

On the other hand, 22 men and women drug users have voluntarily begun hospitalization under a special provision of the act since it went into effect last year. Of these, 1 man has been cured and has returned to the District. He was hospitalized approximately 5 months.

The law directs the court to commit drug addicts to the Public Health Service hospital until they are cured. After

they are released, the patient must make periodic reports to authorities to insure that the person has not returned to the habit.

I believe it is only proper to point out that these persons are not considered as criminals under the provisions of the act but rather as patients. Still, the law provides no haven for those who have committed a crime under some other existing law.

A Political Program To Prevent World War III

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

Mr. FEIGHAN. Mr. Speaker, under leave previously granted, I insert in the RECORD my address entitled "A Political Program To Prevent World War III," delivered before the annual Conference on Freedom and Peace Through Liberation, at its luncheon meeting held at the Washington Hotel, Washington, D. C., February 22.

The address follows:

Mr. chairman and members of the conference, I am very happy to be able to join with you on this Washington's Birthday anniversary to discuss how we may attain the goals of peace and freedom through liberation. I want first of all to congratulate you on choosing such an excellent name for the conference because it connotes a positive goal. Equally important, it leaves no doubt that it is not a "me too" organ of Kennanism, containment, and surrender.

On this occasion when we commemorate the anniversary of the birth of the father of our country, soldier, statesman, and patriot, it is appropriate that we ask ourselves the question:—What should we be doing to advance the cause of human freedom at home and throughout the world?

George Washington and the men who joined hands with him in preparing and signing the Declaration of Independence never stopped thinking about individual liberty and the basic human freedoms. We must never forget that the American patriots, though but a handful of men, gave birth to political concepts soundly based in morality and alive to the basic dignity of man which fired the imagination of all mankind. So appealing was the cause they represented that other fearless souls from the four corners of the earth came to the shores of America to offer their personal fortunes and their very lives in support of that cause.

After the independence of the United States of America was won, the cause of national independence, as represented by that victory, was not seriously challenged in the world political arena until 1918. It might be said that the concept of nation and the cause of national independence held an unchallenged hold on the loyalties of mankind for a period of 140 years.

Today we see the cause which the American patriots gave to the world challenged by a new type of imperialism which seeks to turn back the pages of history by thousands of years and to make of mankind some sort of robot, completely devoid of all human feelings. That challenge is a vigorous and dangerous one as attested to by the fact that in the short course of 37 years, Russian

Communist imperialism has enslaved over 30 nations, in excess of 800 million human beings, and now occupies almost one-third of the earth's surface.

The so-called Russian experts have offered us a number of catch phrases to symbolize the courses of action open to us in our struggle to survive as a national entity. One of these slogans is peaceful coexistence, which, by the way, is a slogan coined by Lenin, and which has but recently been resurrected by Khrushchev the latest czar of the Russian Communist empire. The promoters of this slogan claim loudly that unless we are willing to engage in peaceful coexistence with the empire of communism, all mankind will be doomed because war will surely result. These same advocates maintain that if war breaks out, most of mankind will be wiped from the face of the earth because of the tremendous destructive power of the hydrogen weapons possessed by the free world and by the mad men of the Kremlin. These messengers of doom and despair are telling us that we must accept the realities of communism, that we must learn to accommodate ourselves to it, else we shall surely perish from the earth.

There is only one reward for those who make the fatal error of attempting to make any accommodation with the conspiracy of communism, and that reward is death or slavery. This is the irrefutable, unquestioned record established by communism during the course of its 37 years of tyrannical existence. There is not the slightest evidence at hand which indicates there has been a change in Communist doctrine or objectives. The events of the past 37 years remain as the only reliable index of what happens to nations and people who seek to work out a *modus vivendi* with Moscow.

Another slogan has been coined to describe what these experts claim as the only other course of action open to us, and that slogan is "preventive war." The creators of this slogan maintain that if the United States takes positive and overt action against the Communist conspiracy, a new world war will surely result. The creators of this slogan also maintain that anyone who advocates positive and overt action against the Russian Communists is *per se* advocating war of a preventive type. The promoters of this slogan, like those promoters of the slogan of peaceful coexistence, really maintain there is no other course open to us but to submit to the strangling embrace of the Russian bear. When you cut away all their fancy language and tortured reasons you arrive at no other conclusions.

It is my considered judgment the American people are being subjected to a series of brain washing through the constant repetition of these slogans—"Peaceful coexistence and preventive war." These series of treatments which automatically exclude consideration of any other course of action, are calculated to break the American spirit, to destroy our creative initiative as freemen, and to paralyze action of any type that would challenge the right of way of world communism.

Recent events which have taken place in Moscow leave no doubt in my mind that the empire of communism is threatened by powerful internal forces generated by the enslaved non-Russian nations and people. These forces, in my judgment, are so powerful that their impact upon the Russian central authority located in the Kremlin, is such as to make it impossible for the Red imperialists to conduct a successful war against the free world. In the event of open war, these captive nations and people would rise up against their alien oppressor. While this is true today, I am not certain this will be the case for all time to come. I am certain it is true today, and that is a fact we must act upon while we still have time.

The long-winded oration given by Molotov on the occasion of Khrushchev being

crowned the Czar should have been entitled "Fear of Freedom." The windy, almost childish, boasting, and bullying of the supposedly suave international diplomat, Molotov, must be regarded as a reliable index of the turbulent storms which now best the masters of the Red colonial empire. All of us recall the story of the little boy who, while walking by the graveyard in the dark of night, whistled loudly in the hope that he could drive away the evil spirit. To say that Mr. Molotov was whistling in the dark would be an understatement. More accurately stated he was shrieking in a hurricane.

Recently this practical appraisal of the situation was made by a committee of Congress:

"That the time was never more opportune or the world situation more demanding for a bold positive political offensive by the United States and the entire free world; this is the only course which gives reasonable hope for avoiding all-out war."

This is a quotation from the published Summary Report of the Select Committee To Investigate Communist Aggression of the House of Representatives, dated December 31, 1954. This estimate, as you will note, was made before the recent turn of events in Moscow. I believe that this conclusion has even stronger foundation in fact today than it had then, back in December, and I, as a member of that committee, was absolutely convinced, based on irrefutable evidence in possession of the committee, that this conclusion was conservative. Now the question before us is, What should make up that bold, positive, political offensive? Of one thing we may be certain, slogans, catchwords, and speeches do not mean action. What is needed is the launching of concrete steps calculated to return the initiative in the struggle for the minds and loyalties of all mankind to the cause of human freedom, as represented by the United States of America. I would like to offer you some concrete steps which I believe we must take as soon as possible and which are, without doubt, well within our capabilities. I take pleasure in recalling to your attention the 13 recommendations made by the House Select Committee To Investigate Communist Aggression as the concrete, starting steps in such a bold, positive, political offensive. Those recommendations are:

1. The committee again recommends that the President of the United States take the initiative in convening an international conference of all free non-Communist nations for the following purposes:

A. To express formal recognition of the fact that the Communist governments, which now control over 800 million human beings, are not representative of the will of the people.

B. To seek agreement whereby the free non-Communist nations acting in concert will withdraw diplomatic recognition from all Moscow-controlled Communist governments.

C. To reaffirm the friendship and solidarity of the people of the free world with the people and nations enslaved by communism.

D. To develop a program for the rapid and complete termination of all commercial treaties and trade with Communist governments and the initiation of a program of trade among all non-Communist nations which will strengthen the security of the free world.

E. To develop an overall, dynamic program for the defeat of the international Communist conspiracy.

2. That Congress establish a joint committee on all United States overseas information programs in order that maximum results may be assured in bringing the full force of truth to all the people of the free world and increased hope to the millions of people enslaved by communism.

3. That Congress by appropriate action reiterate and make clear that the eventual

liberation of all the nations enslaved within the Communist empire, together with unqualified support for the principle of national self-determination through free elections and the secret ballot, are firm and unchanging parts of our national policy.

4. That in the advancement of the American program for world peace and freedom all efforts therein be measured against the criteria of whether they assist the captive peoples to hasten the day when they may achieve their liberation, and that all acts or omissions which tend to confirm their enslavement be rejected.

5. That the spirit of resistance to Communist tyranny behind the Iron Curtain be encouraged and supported through the judicious use of funds already authorized by Congress for such purpose.

6. That the appropriate agencies of the Government concerned with the threat of world communism give maximum opportunity to those private American organizations, groups, and individuals that have a natural bond with the enslaved nations and people, to play a major role in the restoration of freedom in the lands of their ancestry.

7. That, as a demonstration of our genuine sympathy for the enslaved nations and peoples, and to weaken the will of the armies under Communist rule to fight and support the Kremlin's plan for world conquest, the President immediately direct the establishment of the national military units formed from escapees from the enslaved nations as authorized by section 101 (a) (1) of the Mutual Security Act of 1951, as amended, thus providing a concrete symbol of a genuine coexistence and unity between the nations and peoples on both sides of the Iron Curtain.

8. That Congress at the next session enact H. R. 8000, known as the Political Asylum Act of 1954, to provide for the rapid and effective reestablishment of selected escapees from communism and to encourage the defection and escape of others.

9. That the Congress give the United States Information Agency full support not only by way of an increase in funds but also by strengthening its role in our Government's political offensive. Similarly, foundations, private organizations, and individual citizens are urged to continue and increase their support to the Committee for Free Europe (Radio Free Europe).

10. That an International Juridical Commission be established within the framework of the North Atlantic Treaty Organization so that Communist crimes perpetrated against humanity may be fully recorded and officially noted for prosecution.

11. That the Department of State transmit copies of this report, together with all other reports of the committee to each member nation of the United Nations.

12. That the Department of State formulate a resolution based upon the findings, conclusions and recommendations of this report, branding the U. S. S. R. as an aggressor against all the nations enslaved by communism and that the United States delegation to the United Nations be instructed to take immediate steps to place this resolution on the agenda of the General Assembly for early action.

13. That the work of this committee be continued in order to complete the investigation of all phases and techniques of Communist aggression in areas of the world not already covered by the committee, together with further inquiry into conditions of life within the Communist empire; a program that lack of time has thus far prevented.

I leave to your judgment whether or not this 13-point program will advance the cause of freedom and peace throughout the world. I believe that we, as a Nation, must initiate such a program because unless we do so, we must face up to the inevitability of all-out war or the alternative of abject surrender

to a life of slavery now threatened by the Communist conspirators. We, the inheritors of this sacred heritage of individual liberty, government under law, and dependence upon divine providence, must not fail in the historic mission the enslaved nations and suffering peoples of the world have called upon us to fulfill. Remaining true and firm in the support of our great American ideals, we cannot fail in this historic mission.

Twentieth Triennial Congress of the General Society of Mayflower Descendants

EXTENSION OF REMARKS OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. REES of Kansas. Mr. Speaker, during the month of September last, at Plymouth, Mass., the 20th triennial congress of the General Society of Mayflower Descendants was held. The attendance of officers and delegates from the forty-odd State societies of the Mayflower descendants, making up the Congress, was the largest in the history of the general society, founded in 1927. There were many interesting features involved in the 3 days of the congress, one of which was the customary Pilgrims' progress, a procession made up of men and women dressed in the costumes of Plymouth Colony days. This picturesque group, headed by a drummer boy, and followed by impersonated Pilgrims: Elder William Brewster, the role assumed by Rev. Cecil Plumb, of Salem, N. Y., elder general of the general society; Governor Carver, John Howland, John Alden, Priscilla Mullins, Captain Miles Standish, Governor Bradford, and others, marched up to Burial Hill, where some of the earliest Pilgrims repose. The procession stopped at the site of the Old Fort of Pilgrim days, and there Elder General Plumb delivered a very fine and appropriate address to the assemblage present, made up of Mayflower descendants, and others.

At the congress, the following officers were elected for the next ensuing 3 years: Governor General Col. Waldo M. Allen, Lake Forrest, Ill.; treasurer general, Merriam Davis, Hartford, Conn.; counselor general, Maurice H. Thatcher, Washington, D. C.; historian general, Mrs. John Kermott Allen, Boston, Mass.; elder general, Rev. Cecil Plumb, Salem, N. Y.; captain general, Gen. Carl R. Gray, Jr., Hudson, Wis.; and surgeon general, Dr. Jay S. Ruldophy, Wayne, Pa.

The new counselor general, Maurice H. Thatcher, was formerly Representative in Congress from the Louisville, Ky., district. He was also chairman of the committee on resolutions at the recent Plymouth Congress, and had served in the like capacity at the 19th triennial congress of the general society in 1951. In addition, he was the author of a proposed amendment to the constitution of the general society on the questions of eligibility and subversives; which proposal was adopted at the recent Congress.

Hon. Herbert Brownell, Jr., Attorney General of the United States and deputy governor general for Nebraska to the general society, delivered before the 20th triennial congress a fine, informative address on the subject of communism, and narrated the steps being taken by the Congress of the United States and the Federal executive departments in dealing with this grave menace.

Also, the recent congress at Plymouth adopted as the theme song of the general society the composition, *Our Mayflower*, of Mrs. Marie Rich Rockwood, well-known composer, of Massachusetts, herself a descendant of Gov. William Bradford, of Plymouth Colony fame.

A unique and interesting feature of the program of the congress was the rendition by Harry B. Sherman, of Rhode Island—impersonating Elder Brewster—of the famous fancied speech ascribed by Daniel Webster, at the Pilgrim Festival in New York in 1950, to the spiritual leader of the Plymouth Colony.

The 20th triennial congress, agreeably to long-established custom, was held in the First Parish Church, at Plymouth—an edifice which may be said to be a lineal descendant—the fifth—of the 1st church of the Pilgrims in the Plymouth Colony, which is considered to have been the first Congregational church in the new world.

Under leave accorded, I am very glad to include as a part of these remarks the indicated address of the elder general.

The address of Elder General Cecil Plumb follows:

This representation of Pilgrims who survived the dreadful winter of 1620 is an attempt to honor the memory of the entire company of those immortals whom we hail today. Their endeavors to serve God had large influence in shaping the frame and substance of the America we love. History should make sharper distinction between the fairly tolerant Pilgrim and his more self-righteous Puritan brother.

The object of their pilgrimage was to build a better material living in order to glorify God, preserve ideals, and propagate the redemptive Gospel of Jesus Christ. It was their share of performance in what they regarded as the whole duty of humanity to glorify God and enjoy Him forever. They who earlier had covenanted in a spiritual society to seek God's will and to obey it so far as they saw it, arriving at these ungoverned shores compacted to also form a political society. Through it they planned to choose officers with responsibility to promote the common good. This compact was the earliest written document of constitutional government known to the world. It was an important factor in the establishment of the United States of America, the world's earliest national example of government by and for the people.

Pilgrims departing from Plymouth, England, received a letter from their beloved pastor, John Robinson, in Holland. His advice was most practical. Because of their plan for a civil community, he said, they would find certain things necessary which he urged they never neglect. These were, first, brotherly forbearance; second, placement of the general good above personal advantage; and, third, choosing officers who love and promote the general good, yielding them honor and obedience.

The loftiness of their ideal, the completeness of their investment, the persevering devotion to their calling, the penalty of their sacrifice, the success of their enterprise, the present challenge of its dream is unmatched

in the traditional or written annals of mankind.

Our world today is in a sorry state. But we face no greater evil, we have no lesser God, than they knew. Each generation must redeem its liberty, make its own pilgrimage. No discouragement is ours that was not theirs. No resource was theirs that is not ours. Need we be reminded that many times the fortunes of this Plymouth were as like to ebb away as the waves of yonder tide? Here is Bradford's estimate of the considered judgment of his fellows: "The dangers were many, but not desperate; the difficulties were many, but not invincible—all of them through the help of God, by fortitude and patience, might either be borne or overcome."

What a place is this for enlistment of modern Pilgrims. What a time is this for the practice of a Pilgrim's progress in godly faith. Shall we not this day join ourselves to these people of the past whose faith, labors, and memory have enshrined this Plymouth in the hearts of America and the hopes of the world? Shall we not this day join ourselves in spirit with all people who love truth, seek virtue, treasure liberty, and in lowliness of spirit are willing to be led and taught by God their Maker?

This is not a world of chance. This should not be a day of darkness or despair. Men and women who receive God are not victims of circumstances, but children of providence. The righteousness of God is revealed from faith to faith, from generation to generation. The just shall live by faith.

Opposition to H. R. 1

EXTENSION OF REMARKS OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. REED of New York. Mr. Speaker, under leave to extend heretofore granted, I am inserting in the Appendix of the CONGRESSIONAL RECORD the following article published by the American Tariff League, Inc.:

UNITED STATES PRODUCERS PROTEST WIDE POWERS OF H. R. 1

The administration's all-out attempt to obtain early congressional enactment of its United States tariff-cutting program has run into strong opposition from major segments of United States industry, agriculture, mining, and labor, whose representatives have been voicing their apprehensions at congressional hearings on H. R. 1, the bill to renew and broaden the President's powers under the trade agreements program.

H. R. 1, an administration-sponsored bill that carries some of the proposals of the Randall Commission, was introduced January 5 by Representative JERE COOPER (D., Tenn.), chairman of the House Ways and Means Committee which started hearings on the bill January 17. It incorporates the tariff proposals submitted to Congress in the President's special message on foreign trade of January 10. Other nontariff recommendations in the presidential message, including the request for further customs simplification, are reportedly being drafted for early submission to Congress.

Efforts to demonstrate administration solidarity behind its freer trade policies highlighted the start of the House hearings as a parade of Cabinet witnesses testified in support of H. R. 1. Members of the President's official family included Secretary of State John Foster Dulles, Secretary of Defense

Charles E. Wilson, Secretary of Commerce Sinclair Weeks, Secretary of Agriculture Ezra T. Benson, Secretary of Labor James P. Mitchell, Secretary of the Treasury George M. Humphrey, and Foreign Operations Administration Director Harold E. Stassen.

Witnesses testifying in opposition to H. R. 1 far outnumbered the proponents of the trade-extension bill and represented a comprehensive cross-section of the United States domestic economy, including some of the largest, as well as the smallest industries, and agricultural producers.

League Executive Secretary Richard H. Anthony, in presenting ATL's views on H. R. 1, declared that the broad and unprecedented powers given the executive branch under the bill presaged "a mopping-up operation . . . on our tariff structure." He warned that they appeared to permit the President to enter into executive agreements, such as the General Agreement on Tariffs and Trade (GATT), "which would become law without being referred to Congress for ratification, and to permit the President to cut tariffs on his own regardless of any trade agreement—an entirely new grant of power."

Representatives of the American chemical industry told the committee that further reductions in United States tariffs on chemical imports would weaken our national security program. Industry spokesmen referred to the rapid recovery of the foreign chemical industries since the last war and the inability of United States chemical producers to compete with efficient foreign producers paying labor one-tenth to one-fourth of our wage rates. They further urged adequate tariff safeguards to help meet the great disparity between United States producers' costs and those of foreign competitors.

Representing the United States chemical industry at the House hearings and testifying their opposition to the tariff-cutting features of H. R. 1 were Edgar M. Queeny, chairman of the board, Monsanto Chemical Co.; Samuel Lenher, president, Synthetic Organic Chemical Manufacturers Association; Sidney C. Moody, vice president, American Cyanamid Co.; Calvin Campbell, vice president and general counsel, Dow Chemical Co.; Fred G. Singer, for the Manufacturing Chemists' Association, Inc.; and D. G. Rogers, president, national aniline division, Allied Chemical & Dye Corp.

Appearing on behalf of the United States electrical equipment manufacturing industry: Gwilym A. Price, president, Westinghouse Electric Corp., testified that United States producers were unable to bridge the price gap existing between them and foreign makers of such heavy-duty items as motors, transformers, control apparatus, turbines and generators. Philip D. Reed, chairman of the board, General Electric Co., expressed concern over increasing Government procurement of foreign-produced electric power equipment and urged that proposed tariff changes should be preceded by a consideration of the probable impact of the proposed change upon our national security and defense program.

The maintenance of an adequate manpower reserve of trained personnel and skills as vital to the Nation's strategic defense industries marked the testimony of L. B. McKinley, vice president, Bausch & Lomb Optical Co., representing the domestic scientific equipment industry.

Wool, cotton, rayon and synthetic fiber processors and manufacturers united to oppose H. R. 1. Commenting upon the heavy textile representation appearing before the House hearings on H. R. 1, the New York Daily News Record on January 31 reported that opposition to the administration's tariff-cutting program "has for the first time in history drawn the entire textile industry into unified action, with 25 trade associations joining forces." Industry representatives,

the New York Herald Tribune reported on the same date, criticized the adoption of a foreign economic program without adequate deliberation as jeopardizing the livelihood of employees and the savings of investors in textile and allied enterprises.

A heavy contingent of witnesses representing a cross-section of the United States domestic independent oil producing industry voiced a strong protest against the impact of increased oil imports and urged Congress to provide adequate safeguards to maintain vital United States natural resources. Industry spokesmen noted that 25 percent of domestic producing oil capacity was now shut-in for lack of market demand.

H. R. 1 PROVISIONS ANALYZED

Although the President, in his Congressional message on January 10, stated that the additional authority requested to negotiate new tariff reductions would be carried out on a gradual, selective and reciprocal basis, an analysis of the provisions of H. R. 1 indicate that substantial, across-the-board tariff cuts are possible on every single United States tariff rate, whether or not it has been reduced in prior United States tariff negotiations under GATT or in separate bilateral pre-GATT tariff pacts.

H. R. 1 extends the President's authority to enter into new trade agreement negotiations to June 30, 1958, and provides for major revisions in the basic trade agreements act. The bill would empower the President to (1) incorporate into newly negotiated trade pacts general provisions related to international trade provided they were not inconsistent with existing legislation of the United States; (2) further reduce United States tariffs in annual stages over the next 3 years by 3 alternative methods, 1 of which would permit the President to lower tariffs on his own authority without relation to a trade agreement, a new concept of delegated tariffmaking power; and (3) follow a new trade agreement negotiating principle in the contemplated United States-Japanese pact, by granting United States concessions on items of interest to third countries in return for which those third countries would reduce their tariffs on items of interest to Japan.

H. R. 1 would authorize the President to include in trade agreements provisions with respect to international trade, including provisions relating to tariffs, to most-favored-nation standards and other standards of non-discriminatory treatment affecting such trade, to quantitative import and export restrictions, to customs formalities, and to other matters relating to such trade designed to promote the purpose of this (act) *Provided, That no such provision shall be given effect in a manner inconsistent with existing legislation of the United States.*

This section of H. R. 1 would appear to permit the President to enter into such an overall agreement as the General Agreement on Tariffs and Trade (GATT) without the necessity of referring it to Congress for ratification.

The language of this section of H. R. 1 is descriptive of the commercial policy sections or substantive provisions, of GATT which are being revised at the current GATT review session in Geneva. In his March 30, 1954, message to Congress, the President had urged a revision of the substantive sections in GATT, but failed to mention that they would be submitted to Congress, adding that the "organizational provisions" thereof would be sent to the Congress for its approval. In his January 10 message of this year, the President again stated that when the "revision of the organizational provisions are satisfactorily completed, the results will be submitted to the Congress for its approval."

GATT, originally negotiated in 1947 and signed provisionally for the United States

under the alleged authority of the Trade Agreements Act, has never been submitted to Congress. Congress, moreover, in recent trade extension laws has incorporated therein a GATT caveat stating that Congress by their enactment, did not express approval or disapproval of GATT.

H. R. 1 does not change the peril point and escape clause provisions of the present trade agreements law. The President would continue to have discretionary authority to negotiate duty cuts below the peril points set by the United States Tariff Commission, provided they kept within the maximums set by the law, and to proclaim or reject Commission recommendations for escape clause remedy to domestic producers injured by increased low-wage imports.

NEW TARIFF—CUTTING AUTHORITY PROVIDED

H. R. 1 stipulates that on or after June 12, 1955, the President may proclaim United States tariff reductions according to the following three alternative methods:

Method 1 provides for decreases, in three annual stages of 5 percent, of duties to a maximum of 15 percent below those existing on July 1, 1955.

Method 2 provides for decreases to a rate 50 percent below the one existing on January 1, 1945 in the case of "any article which the President determines, at the time the foreign trade agreement is entered into, is not being imported into the United States or is being imported into the United States in negligible quantities."

While method 2 may be applied to implement a trade agreement entered into after June 12, 1955, H. R. 1 specifically allows the President to proclaim duty reductions thereunder on his own determination if he finds that the general purposes of the Trade Agreements Act as amended by H. R. 1 are promoted thereby. This latter authorization constitutes a new type of tariff-reducing power not previously granted under the trade agreements program. The bill, however, stipulates that unilateral duty cuts made under method 2 by the President can be proclaimed only after the statutory safeguards, including the peril point investigations, are followed.

Method 3 provides for decreases to 50 percent of any rate above that level, "during a period determined by the President to be a representative period." President proclamations thereunder are to be based on the current valuation provisions of the Tariff Act of 1930. Last year, the United States Tariff Commission was instructed by the Senate Finance Committee to undertake a special investigation on all United States imports subject to duties equal to 50 percent ad valorem or higher and to report its findings to the Congress by December 1, 1954. Portions of this study covering items subject to peril point investigation by the Commission in preparation for the contemplated negotiations with and for the benefit of Japan have been withheld by agreement with the Finance Committee. The committee has received the rest of the study, but is keeping it confidential for the time being.

H. R. 1 AND UNITED STATES-JAPANESE NEGOTIATIONS

H. R. 1 expressly provides that Presidential proclamations of duty cuts negotiated in the projected United States agreement with Japan and certain GATT countries, if concluded on or after June 12, 1955, shall be subject to present limits of a 50 percent reduction of rates existing on January 1, 1945, if the President determines "that such decreases is necessary in order to provide expanding export markets for Japan (including such markets in third countries)."

In the tariff-cut negotiations with Japan and third countries, the United States has made known its intentions to grant United States concessions to third countries in re-

turn for their concessions to Japan, rather than to the United States. H. R. 1 thus appears to expressly authorize the President to employ a new principle of reciprocity. In agreements to date United States concessions to other countries have been made for the avowed purpose of obtaining concessions for the direct benefit of the United States.

GATT REVIEW CONTINUES

Basic agreement on two of the controversial agenda items which have beset the ninth GATT session since the start of its deliberation on a revised GATT is reported in press articles from Geneva. On January 29, the New York Times reported that the GATT meeting had informally agreed to extend for a 3-year period beyond the present expiration date of July 1, 1955, an amended version of the GATT article XXVIII provision which prevents wholesale withdrawal of tariff concessions made by GATT member nations, including the United States. Geneva press reports also stated that agreement had been reached on the type of permanent organization which would be set up to supervise GATT. Tentative titles for the new body were the Organization for Trade Cooperation or the International Organization for Trade Cooperation.

GATT studies of persistent capital movements from foreign countries with the United States were reported in a recent Geneva dispatch to the New York Times. The startling policy implications of these GATT studies were termed highly controversial by the Times Geneva correspondent, who then added: "Indeed, they contain so much dynamite that it is highly unlikely the study will ever be published as an official paper."

The GATT reports emphasize that the "very countries that assert the duty of the United States to help them with capital investments have been pouring hundreds of millions of dollars a year of their own investment funds into the politically secure United States capital market." The Times report continued: "The studies also throw considerable doubt on the thesis that lowering the American tariff is essential to the establishment of better balance in world trade."

Pointing out that if the flow of foreign capital into the United States was the major cause for dollar shortages, the Times report went on to say that it "could easily be made out as the villain responsible for the economic disorder by those interested in maintaining or increasing barriers to competitive imports."

Soybean Producers Face Gigantic Loss if United States Department of Agriculture Carries Out Threat

EXTENSION OF REMARKS OF

HON. PAUL C. JONES

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. JONES of Missouri. Mr. Speaker, in connection with the proposal, if not the announced intention, of the Grain Standards Division of the Department of Agriculture to make certain changes in the soybean standards, I have gone on record as opposing these changes for a number of reasons.

Naturally, one of the most compelling reasons for opposing these changes is the fact that any such change would immediately and without question result in

a financial loss of many millions of dollars, shared by practically every producer of soybeans throughout a large area of the South and the Midwest.

Furthermore, any change at this time, and without giving the farmers of my area, as well as those of many other States, an opportunity to make a change in their plans for planting, would be doing them the greatest disservice. If such a plan as a representative of the Department of Agriculture said they were convinced was in order, and which he indicated would be put into effect this year, is permitted to go into effect, it would cause confusion and penalize thousands of southern farmers at a time when they have already suffered an irreparable damage due to droughts of the past 3 years.

If such a change is to be made, it should not be made until after our farmers have had adequate notice and an opportunity to adjust their planting plans. It should, in my opinion, not be considered until sufficient notice has been given of the contemplated intentions of the Department to permit the development of a type of soybeans which will meet the requirements of the Department's so-called experts.

I would respectfully call to the attention of the Secretary of Agriculture, as well as to those who have the responsibility of carrying out the regulations of his Department, that to make this arbitrary change, without due notice to all parties concerned, would be to take a most unfair advantage of the very persons whose interests they are supposed to be guarding.

Furthermore, I would respectfully point out that, at the recent hearing held at Memphis, Tenn., with approximately 300 persons in attendance, not one single person with the exception of the representatives of the Department of Agriculture, expressed themselves as favoring the proposed changes, and in fact all of those present, including farmer producers, elevator operators, and warehousemen, processors, operators of terminal facilities, exporters, and others, all went on record as strongly opposing the proposed change in classification of soybeans, and at this hearing there was no satisfactory answer to the question of Who wants this change?

In connection with these remarks, I am including herewith copy of an article which appeared in one of the newspapers of my district, The Republican, of Caruthersville, Mo., which sets forth a rather complete résumé of the hearing at Memphis, which calls attention to the damage which would be done by the adoption of the proposed change in classification, and furthermore sets forth rather clearly a substantiation of the charges which I have made that there was inadequate notice of this hearing and that the farmers of that area generally had no notice of the great importance of the contemplated change and therefore have not had sufficient opportunity to voice their great opposition to this change.

Mr. Speaker, I hope that my colleagues, particularly those from the States of Missouri, Arkansas, Tennessee, Mississippi,

Kentucky, and Louisiana, will join with me in protesting this proposed change in the classifications as they would affect not less than 80 percent and possibly as much as 85 to 90 percent of the soybeans produced in their respective districts.

Herewith is a report of the Memphis hearing as reported by Mr. Albert Cravens, secretary-treasurer of the Mid-south Soybean & Grain Shippers Association, in the Thursday, February 17, 1955, issue of the Caruthersville (Mo.) Republican:

USDA RECLASSIFICATION OF OGDEN BEAN WOULD COST PEMISCOT FARMERS

Albert Cravens of the Missouri Soybean Co., of Caruthersville, which also has elevators at Hayti, and who is also secretary-treasurer of the Mid-south Soybean and Grain Shippers Association, was among some 300 Mid-south growers, buyers, and shippers who were in attendance at a United States Department of Agriculture meeting held Monday afternoon at the Hotel Peabody, Memphis, Tenn. A. O. "Cap" Acom of Wardell was also present.

The meeting was in charge of J. E. Barr, chief inspector, Grain Branch, USDA, who heard members of the group in testimony relative to a proposed change in classification of the Ogden soybean from a yellow to a green or mixed bean classification.

An interested witness at this meeting was Congressman PAUL C. JONES, of Kennett, the only Congressman from any of the six States present at this important meeting.

Since the soybean, along with cotton, forms the backbone of this area's agricultural economy, the proposed change in classification is of prime importance to farmers in Pemiscot County and throughout this six State area.

The Ogden soybean sometimes has a green seed coating over its yellow meat, making it appear to be a green instead of a yellow bean. The USDA proposes to change classification of the Ogden bean from yellow to green where it appears green. This actually would put the Ogden bean in the mixed classification, since some of the beans bleach out yellow while others retain their green coat at harvest time.

Mixed beans carry a 25-cent penalty when put in the loan and, it is feared here, this change in classification could lead to some discrimination against the bean in the American market.

At the conclusion of the meeting Mr. Barr gave the group little hope and said the USDA grading change, if made, may not be formulated before May 1, which would be well into the planting time in this county and area and would be too late for most farmers to make any adjustment in their planting schedules.

Mr. Barr told the group that "a lot of foreign buyers have complained on some green beans being certified yellow. We think it was a serious mistake when, in 1949, the Ogden was placed in the yellow classification."

In answer to the question of how many complaints had been made to the USDA by foreign buyers, Mr. Barr replied, "We think one is too many."

A representative of the port of New Orleans, who is also an exporter, told the meeting that this proposal is dangerous and will increase our problems tenfold. We think you will be faced with the never-ending problem of determining whether the bean is yellow or green or what.

A surprise visitor at the hearing was Congressman PAUL C. JONES, of Kennett, Representative from the 10th District of Missouri, of which Pemiscot County is part. Congressman JONES is a member of the Agricultural Committee, serving in the fats and oils division. He testified briefly and chided Mr.

Barr for not giving more publicity to the hearing.

That no publicity was given this important hearing was indicated by the fact that no press representatives were spotted in the large crowd and no Associated Press or United Press wire story was sent out from Memphis, nor was any mention of the meeting heard here over Memphis radio or television stations. No story was carried in Monday or Tuesday editions of The Commercial Appeal which were distributed here.

According to Cravens, Mr. Barr expressed surprise over the size of the crowd on hand and the outspoken manner which those who presented testimony participated in the meeting. "Reminds me of Texas," Barr said.

W. H. (Bill) Wyatt, who spoke for the Arkansas Bureau, pointed out that the mixed bean, in which classification the Ogden would fall, would draw a 25-cent per bushel penalty under the loan program.

"We believe," Mr. Wyatt told the meeting, "any foreign buyer can get strictly yellow beans from northern areas without hurting them and without totally wrecking our economy."

"A four- or five-million bushel crop in Mississippi County (Arkansas) alone in 1955, if the price dropped 20 cents, would mean a \$1 million loss."

"If the USDA can show us just cause why the bean should be changed, then time must be allowed to develop a comparable yielding yellow bean," he stated.

Most farm bureau groups planned to hold meeting when they returned home to state the situation and make plans to press for some action through their Congressmen.

Welcome to the Catholic Lawyer

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. ROONEY. Mr. Speaker, there has recently come off the press the first issue of a new professional publication entitled "The Catholic Lawyer." It is published quarterly by the St. Thomas More Institute for Legal Research of St. John's University School of Law, in Brooklyn, N. Y., under the editorship of Rev. Joseph T. Tinnelly, C. M., dean of the law school.

The statement of policy in the first issue contains the following:

The average attorney is a leader in his community. His opinion is respected, his advice valued, not only in purely professional problems but in a wide variety of subjects having some relation, however tenuous, to law. In consequence, no matter how sound his general and professional education may have been he still feels the need to widen and deepen his knowledge and experience. The success of the Practicing Law Institute, of graduate and post-admission courses in various law schools, and of institutes in taxation, insurance, labor law and other subjects under the auspices of bar associations, gives evidence of this widespread need.

The Catholic attorney has all the professional obligations of his non-Catholic colleagues. Indeed his conscience may be sharpened by the fact that his confessor will require him to make restitution for any harm which his culpable ignorance or lack of diligence may have caused a client.

The publication is intended to supply answers and information on problems of concern to lawyers by the promotion and publication of legal research in such subjects. It is dedicated to the principles of St. Thomas More, Lord Chancellor of England under Henry VIII.

I know that the Members of the House, particularly the lawyer Members, will join me in welcoming this important contribution to the literature of the law, and wishing for it many years of success.

It is particularly appropriate that I should call this to your attention today, Washington's birthday, since this morning, St. John's University of Brooklyn was hailed at Valley Forge, Pa., by the Freedoms Foundation for its outstanding contribution to the American way of life during the year 1954.

A Plan To Torpedo REA

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. JOHNSON of Wisconsin. Mr. Speaker, I wish to insert in the RECORD a portion of the National Farmers Union Washington Newsletter which points up a proposal by a "task force" of the Hoover Commission to abolish REA. I commend this article to the attention of my colleagues who are vitally interested in REA.

As one who has probably the greatest percentage of REA members in any congressional district, I view this proposal by the Hoover Commission "task force" with considerable alarm. While the full Hoover Commission has not considered the "task force's" recommendation, I feel that friends of the REA should be alerted to prospects of legislation being introduced to torpedo REA.

The REA has done more than electrify rural America—thus improving the efficiency and productivity of our farms. REA has also raised the standard of living for farm people and brought to them some of the comforts of living heretofore enjoyed only by people living in urban, suburban and a few rural areas.

The National Farmers Union Washington Newsletter reads in part as follows:

HOOPER GROUP ASKS ABOLITION OF REA

A task force of the Hoover Commission on Governmental Reorganization is recommending that the Rural Electrification Administration be abolished and that REA co-ops be required to depend upon private financing for their future expansion.

Although not yet made public, the Hoover group's recommendations have been learned by the Farmers Union. They are also known to the National Rural Electric Cooperative Association, and were discussed by NRECA leaders at their annual convention in Atlantic City, N. J., this week.

If approved by the full Hoover Commission and the President, legislation to accomplish the abolition of REA will be presented along with the Commission's report.

The Hoover plan calls for an immediate stop to Government loans to co-ops. In

place of REA, a Rural Electrification Corporation would be established through which the co-ops would borrow money needed for their future growth from private financial institutions.

The REC would sell debenture bonds in private money markets at rates of interest sufficient to attract private investors.

Interest rates to be paid by the co-ops would have to be increased sufficiently to cover the interest on REC's bonds, plus all administrative costs of the Corporation.

The Hoover plan would accomplish substantially what the Clardy bill proposed during the last Congress—to double the interest charge on REA co-op loans. It might well go much further.

Rural electric leaders at the convention estimated that interest rates would range between 4½ and 6 percent under the Hoover plan—from twice to three times as high as at present.

Higher rates for electric and telephone service are specifically recommended by the Hoover plan.

The task force recommendation would require co-ops to charge rates high enough "to enable them to pay (a) their own maintenance; (b) provide reserves for expansion; (c) make proportionate purchases of the Government stock in the Corporation (REC); and (d) pay interest and amortization on their loans."

This would place the co-ops at a serious competitive disadvantage. Profit utilities' rates cover only interest and profit on their capital and operating and maintenance costs. They never pay off their debt, nor do they finance their own expansion out of current rates.

Instead, the private utilities borrow the capital they need by selling bonds or common stock. Their debt is perpetual. Their very purpose for existing is to enable investors to obtain interest on their bonds and profits on their stocks. In contrast, the co-ops exist to furnish their owner-patrons with service at the lowest possible cost.

The Hoover plan would immediately "stretch out" the "yardstick" which co-ops have been setting in rural rates and service for the entire utility industry. By weakening the co-ops' competitive position, it would result in rising rates for all rural users of electricity and phone service.

A severe restriction on future expansion of the co-ops would also be put into effect by the Hoover plan, which would prohibit loans "for the construction of telephone or electric facilities which private utilities stand willing to build."

This provision would make "cream skimming" by the private utilities the law of the land, giving to the private utilities all the profitable territories.

It would also completely curtail the co-op generating and transmission projects, forcing the co-ops to depend upon private utilities for their wholesale power supplies.

Control by Congress over the rural electrification and telephone programs would be ended by the Hoover recommendations also.

The Rural Electrification Corporation proposed to replace the REA would be run by a board appointed by the President. Its policies and operations would not be subject to the close review by Congress which is now the case in respect to REA.

In the present situation, this change would immediately put the REA co-ops at the mercy of proutility administration forces which tried, during the past 2 years, to kill the REA program by starving it for loan funds. Farmers were able to go to Congress and get REA loan funds increased greatly above the amounts proposed by the President.

With an REC Board made up of people with points of view like other power officials whom President Eisenhower has appointed,

the co-ops would be put directly at the mercy of the private power lobby.

A "give-away" of the Government's equity in its present investments in REA co-ops is also involved in the Hoover recommendation.

Outstanding REA loans, which are secured by "first mortgage" obligations of the cooperatives, would be down-graded to "second mortgage" status in favor of the new loans from private investors.

This would mean that the Government would take practically any loss that might occur on any REA investment. The private investors would be paid off first in case of any loss, leaving the Government only what equity would be left over as security on its own original investment.

This feature, which would require a voluntary devaluation of the Government's \$2½ billion first mortgage security on its existing loan authorizations, is a tipoff on the lack of genuine concern on the part of the Hoover group for the Government's rights and financial interests.

The Hoover group's real motive is not to protect the taxpayers. It is instead to strangle the cooperative-electrification program as an effective source of competition with the private utilities, and to put the co-ops at the mercy of private financial institutions.

The REA co-ops in their convention declared the Hoover recommendation "would be utterly disastrous to the rural electric systems."

In a strongly worded resolution, the co-ops pointed out that the report's authors refused to hold public hearings. The report was prepared by Price, Waterhouse, the national power lobby's auditors, for the deliberate "purpose of scuttling the rural-electrification program and destroying competition in the electric industry," they stated.

NRECA demanded that Congress not only reject the Hoover recommendation, but also conduct a full investigation into the source of the plan to "expose the authors for what they are—tools of the money lenders and the power monopoly."

President's Plan To Aid School Construction

EXTENSION OF REMARKS

OF

HON. CARL T. DURHAM

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks, I include in the CONGRESSIONAL RECORD the editorial entitled "President's Plan To Aid School Construction," which appeared in the February 17, 1955, issue of the Durham (N. C.) Morning Herald. I am in agreement with the views expressed in this editorial.

The editorial follows:

PRESIDENT'S PLAN TO AID SCHOOL CONSTRUCTION

It is necessary to examine rather closely, in the light of school needs, the President's message on Federal aid to school construction to determine whether his plan will really help the schools meet the building shortage.

In his message, President Eisenhower pointed out that over 300,000 classrooms are needed, largely as a result of curtailed construction during the war, and that an additional 50,000 classrooms must be provided annually to take care of the increasing enrollment. Classrooms which have become

unsafe or otherwise unsuited must be replaced. During the school year 1954-55, about 60,000 new classrooms are being built. He points out that while rate of construction is keeping pace with increasing enrollment, "it has only slightly reduced the total classroom deficit."

The President proposed Federal aid to meet construction needs as follows: Appropriation of \$750 million over a 3-year period to be used for purchase of school bonds by the Federal Government, the local school districts to pay a reasonable interest rate, which Press Secretary James C. Hagerty interpreted as a maximum of 3½ percent; the creation of special school-building agencies by the States, the States and the Federal Government to put up an initial reserve fund equal to 1 year's payment of interest and principal, the plan to provide \$6 billion during the next 3 years; an appropriation of \$200 million over a 3-year period to provide grants to school districts which can prove need and lack of local income; and \$5 million for State conferences (one-half the administrative cost) to plan sound long-term financing of the public schools free of obsolete restrictions.

If Mr. Hagerty's interpretation of the interest rate the Government will expect of the bonds it buys is correct, that proposal will hurt rather than help school districts. Durham County, for example, is paying 1.7358-percent interest on the 1948 issue of \$2 million for city schools and 2.3538 percent on the 1953 issue in the same amount. Both figures are substantially less than 3.125 percent. It would cost Durham more to sell bonds to the Government than it costs to sell them to investment bankers.

The requirements attached to the special agency proposal are such that the States could probably accomplish as much without Federal aid as with it under this proposal.

The appropriation for school districts which can prove need and lack of local income will help in hardship cases, but there are relatively few school districts which can benefit under that proposal.

The appropriation for State conferences to plan school financing sounds like throwing away that much money. State boards of education have no doubt explored such planning exhaustively.

Republican-Eisenhower Economic Philosophy

EXTENSION OF REMARKS OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. HOSMER. Mr. Speaker, a revealing summary of the economic philosophy of the Republican-Eisenhower administration by William H. Stringer, Washington bureau chief of the Christian Science Monitor, appeared in that paper on February 19.

Mr. Stringer avers that things are going well on the Nation's economic front and lists the administration's steps of approach producing it. He raises a query as to whether the economy will tick along at its present fast pace if the prop of defense orders is discontinued.

I believe the answer is that it will, indeed. Not only will any decrease in defense spending allow us to divert spending toward long-delayed internal

improvements in the country, but more basically, our present-day economic philosophy is that which originally brought greatness and wealth to our country. It is a tried, tested, and successful philosophy that leads to ever higher standards of living for the average American whenever the dead hand of Government harassment is kept off his individual initiative and enterprise.

The article follows:

WASHINGTON.—The happy word along the Nation's economic front these days is that the United States business recovery is gaining momentum. The ancient recession has long since been skirted and auto production, construction, and steel output are booming.

This directs attention to the Eisenhower administration's basic business-economic philosophy, the philosophy which to some degree determines the economic climate of the Nation. At the moment business seems rather pleased with this economic climate. Has the Eisenhower administration happened upon a genuine "success formula"? Or is the "massive intervention" of continued heavy defense spending chiefly responsible for today's outlook?

Let us see how the administration authoritatively spells out its economic philosophy. What are the ingredients of this moderate conservatism which the President and his economic advisers have evolved? Fundamentally, a number of basic ideas enter the picture:

1. There is the doctrine not of equal shares for all but of equal opportunity for all; a doctrine not always practiced, but a primary objective.

2. There is the strong faith that incentives and rewards are vital to maintain an expanding economy; that if you tamper too much with the incentive verve it goes dead on you.

3. There is a rejection of the view that the economy must be stimulated by the pressure of steady inflation. The integrity of the dollar is to be preserved.

4. There is a strong belief in the essential role of private investment, the kind which moves ahead of immediate demand to anticipate and prepare for the needs of tomorrow.

(In the 1930's there was great pessimism, even in the schools of business, that the Nation's employment rate could never be adequately restored and kept expanding without massive governmental intervention. Now there is a real confidence in Washington that massive intervention won't be necessary; that business, given encouraged investment and upgraded living standards, can keep employment in a flourishing state.)

5. There is a strong, almost emotional, belief in the tradition of local effort—giving preference to undertakings by State and municipal governments instead of to the Federal Government (school aid, for instance). There is a feeling that private enterprise can do many of the things which the Federal Government was asked to do in the New Deal days (power generation, for instance). President Eisenhower gave his own argument for this view in a recent press conference when he said:

"I believe that the greatest amount of authority, which means comparable responsibility, must be retained in the localities in our country, or we are working steadily away from the system of government that has made this country great."

Local government, the administration contends, is closer to the people, and more responsive. It is admitted that at times a Federal program can be more decisive and efficient, but even so, the President contends, and he has felt this emotionally all through his career, local initiative must be encouraged.

6. Finally, there is a strong confidence in the value of international trade and a belief that markets should extend beyond national boundaries. Hence, the administration's ambitious foreign-trade program, which it feels will produce greater prosperity all around.

Thus reads the administration's economic credo. But it should also be said that there are things which the administration, being avowedly liberal where individuals are concerned and realistic in world affairs, does not believe in—points where, in effect, it tempers the orthodox business philosophy. For instance:

1. It doesn't believe the budget should be balanced at all costs. Budget policy must provide for adequate national defense at whatever price. Budget balancing would have to give way to higher spending if a depression should come along.

2. It holds that the capitalist system has its vicissitudes, which Government must ameliorate. Such as temporary unemployment, and the cares of old age. Thus the Eisenhower administration embraces most of the 1930 social-security reforms without question, including unemployment insurance, old-age pensions, and farm price-support legislation.

3. The administration visualizes a distinct role of Government in developing the Nation's resources. In the main this would mean encouraging development within certain safeguards. Again, it prefers local to Federal initiative. Here the administration runs into its greatest clash with the Democrats and many conservationists.

4. It believes Government must foster a dynamic economic life. This means enforcement of the antitrust laws. It demands Federal funds for research and development. It means resisting attempts to rigidify the economy, such as the use of the tariff to force industry to use coal. Channels for the entry of new businesses into the market must be kept open.

These are among the basic ideals of the Eisenhower regime. Many of them are fairly obvious. Not always do they work out in practice. But their partial implementation has produced one of the most favorable economic pictures in years. That is provided the prop of defense orders continues. Whether this economic philosophy would keep the economy ticking along satisfactorily if war tensions melted and the Nation embarked on a genuine peacetime economy is another question.

What the administration especially feels is that the Nation is moving encouragingly away from the idea, prevalent in the 1930's that we have used up our capacity to grow. There are plenty of new horizons business-wise. When popular wants are being constantly upgraded, no saturation point is likely. And when one's own standard of living is going up, one is not worrying about whether the other guy is getting more than his equal share. At least, this is how the Eisenhower administration expounds its philosophy of plenty in this rosy year of 1955.

Address by the Honorable Charles S. Thomas, Secretary of the Navy

EXTENSION OF REMARKS OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. HILLINGS. Mr. Speaker, I wish to call to the attention of this body an address by the Honorable Charles S.

Thomas, Secretary of the Navy, on the 160th anniversary of the United States Naval Supply Corps, which was delivered in New York on February 17, 1955.

Secretary Thomas in his speech has presented an excellent review of the Navy's defense program and the role of the Supply Corps in providing logistic support. Our Nation is indeed fortunate to have a man of the background and experience of Mr. Thomas serving in this vital position.

The address follows:

Mr. Jack, distinguished guests, ladies and gentlemen, thank you, Mr. Murrow. That introduction, I trust, shows that I am a Supply Corps man at heart. I hope you will accept me here tonight as one of you.

Six days hence, as most of us know, the Navy's Supply Corps will be 160 years old. An organization doesn't attain that venerable age unless it has survived the old-age tests of service, farsightedness, and progressiveness. This birthday has been achieved by a steady performance which has always been outstanding in the area of military supply. The Nation and the Navy are better and stronger because of its contributions.

For those who may not be acquainted with the Navy's Supply Corps and its far-reaching activities, let me say that it is the Navy's business organization. Its officers are the business experts of the Navy. They manage a huge and complex organization which is responsible for getting the Navy what it needs, where it needs it, and when it needs it. Though complex and vast, the Supply Corps' mission is simply summarized in a single phrase: "Service to the fleet."

As you all know, the Navy has just completed a very delicate and potentially dangerous task in the Formosan Straits. That task has been performed expeditiously and in a most outstanding manner of which every American can be proud. I will hazard the opinion that there will be no immediate war in the Formosan Straits, and my reason for saying so is quite simple. Whenever the Communists are confronted by strength, resolve, and courage but without provocation, they halt. For the first time in this cold-war siege, they came face to face with the harsh realities of seapower at the coastline of the Formosan Straits' 100 miles of open sea. To be an aggressor here required more than an order to violate a frontier—they had to have the ability to control and cross that 100-mile strip of water. And that they cannot do.

Parenthetically, I might point out that our Seventh Fleet couldn't have accomplished this task had there not been an effective supply organization behind it. The food, the oil, the gasoline, the spare parts, the thousands of items which keep that fleet operating 7,000 miles from home—and in this case kept it on the line for many days—is an excellent example of the unseen and often unsung work of the Supply Corps.

Right now, Formosa is current business for us all, and I am afraid we haven't seen the last of it because in relation to the global scene, Formosa appears to be but a part of a pattern for conquest. A year ago, the pressure area was Indochina. Before that it was Korea. Before that it was Iran. Before that it was Berlin. The locale of the tensions are constantly shifting, but the pattern for conquest appears to remain the same.

We all know that the country and our President want a real and lasting peace and are working diligently for that objective. However, until the Communists show some tangible evidence of a like desire, we have no alternative but to keep ourselves in a constant state of readiness.

Therefore, I thought it would be both appropriate and timely tonight to speak about

our Navy's defense program for the future and the vital part which the Supply Corps plays in it.

Let us begin by reducing the problem to its basic essentials.

What is the threat which confronts the free world today? It appears to be a very patient and long-range program for world domination. And what is the nature of this threat? There are many answers to this question—the threat is spiritual, it is economic, it is psychological, and it is military. It is a spiritual contest between those who believe in the worth and dignity of the individual and who have faith in God and those who consider man only as an advanced but soulless type of animal. It is a contest of systems—free enterprise versus regimentation. It is a contest of philosophies between those who cherish freedom and those who practice tyranny. And lastly, it is a contest of military strengths. The military threat can be varied and complicated—a cold war or a hot war; a little war or a big war; a nuclear or a nonnuclear war.

Now in analyzing this threat and its danger, we must answer the question:

Is the threat immediate or is it one of extended tension? If the answer is that we anticipate an attack in the immediate future, we obviously should go all out on our expenditures for military defense and get ready to protect ourselves in every possible way.

To do so would cost us over \$100 billion every year. But if we miscalculate, spend \$100 billion and more 3 or 4 times, and we are not attacked, we would find ourselves in serious economic trouble. We might discover we have exhausted ourselves and allowed Communists to win by default.

On the other hand, if we decide that the danger is one of extended tension—one to test our patience, destroy our economy, and yet one which gives us time and opportunity to work for a real and lasting peace—I submit that the following elements are essential for a period of extended tension:

First. We must have a retaliation capability not only to deter war but to overwhelm an enemy if he strikes.

Second. We must have a hard core of land, sea, and air forces which can be used in a variety of situations and in a variety of places. These forces must be able to handle localized emergencies yet strong enough to withstand the initial onslaught of a major conflict.

Third. We must have sea supremacy.

Fourth. We must have a continental defense program.

Fifth. We must have a potent Reserve system organized for rapid expansion.

Sixth. We must have an industrial mobilization base also designed for rapid expansion.

And lastly. We must continue a strong research and development program to maintain our scientific lead.

In years past our defense program was either feast or famine. The past 20 years are typical of this accordion process. In 1935 our entire military defense budget was slightly more than a half-billion dollars. Then, during World War II, we spent approximately \$300 billion. By 1949 our defense budget had fallen back to only \$13 billion annually. Then, during the Korean war, we mushroomed again and spent almost \$200 billion.

The economy of the United States—or for that matter any nation's economy—cannot stand such violent changes very long. It is elementary that the process of rapidly building up and closing up is wasteful and unsound. It hurts labor because it is a series of hirings and layoffs; it hurts industry because there can be no advanced planning; it hurts the military because the Armed Forces are sharply expanded 1 year, seriously reduced the next.

If this process of sharp peaks and valleys in our military expenditures had been per-

mitted to continue, it alone could have defeated us.

To reach his decision President Eisenhower considered all the factors. After the most careful analysis with the Joint Chiefs of Staff, and, as he said, after "prayerful study," he concluded that our military defense program must cover an indefinite period of extended tension, be adequate and strong, and yet one which the American taxpayer's pocketbook can support indefinitely. I know of no American better qualified to make that decision than President Eisenhower.

I would now like to examine with you this program of the President's in relation to the Navy. It is concisely summarized in his state of the Union message and can be divided into four major areas.

STRATEGY, AIRPOWER, PROGRESS; AND ADMINISTRATION

Let us take these areas one by one.

The President had this to say about strategy:

"Undue reliance on one weapon or preparation for only one kind of warfare simply invites an enemy to resort to another . . . we must therefore keep in our Armed Forces balance and flexibility adequate to our needs."

This statement is in sharp contrast to pre-Korean days when our military strategy was drifting toward a one-weapon strategy and to preparation for a single type of warfare. Korea proved this strategy vulnerable and fallacious.

Since our national policy rejects preventive war, a potential enemy can choose the time, the type, the size, the scope, and the location of war. Our defenses, therefore, must be sufficiently balanced and flexible to meet a variety of threats, any one of which could defeat us.

Our offenses too, must be balanced and flexible. By having several systems or methods of retaliation instead of one, we force an aggressor to anticipate retaliation by every one of those methods or systems. By so doing, we accomplish three things:

We force him to increase his defense-offense ratio. In other words, he must translate more of his capacity to strike to self-defense.

We make him dilute his defenses. Instead of defending only one corridor, area, or avenue, he must anticipate reprisal from every direction and every frontier. And we add a heavier burden to his relatively poorer industrial machine.

Having several balanced and flexible offensive systems is a corollary aid in that it increases our chances of being able to deter a war.

The Navy is tailored to provide sea forces embodying these fundamental principles of balance and flexibility. It makes the soundest, safest military sense.

Next airpower.

"The forthcoming military budget," said the President, "emphasizes modern airpower in the Air Force, Navy, and Marine Corps."

How does the Navy feel about this? Well, the Navy agrees solidly. Within the Navy itself, because it is a big contributor to national airpower, the importance of airpower is thoroughly recognized and appreciated. Airpower over the seas, and emphasis upon it, is growing constantly.

For example, the fleet now has airplanes of very great striking potential of many types and sizes which are fully capable of carrying weapons of rapid and destructive striking power. They can deliver atomic weapons to targets 1,000 miles away.

And we have just recently launched the first of a new class of carriers on which these planes are based. We are also developing a new family of jet seaplanes which can use the 70 percent of the surface of the world as 10,000 mile long runways.

These examples certainly highlight the growth of airpower in the Navy.

Third, progress.

"Our military planners," said the President, "must be flexible enough to use new weapons and new techniques."

The numbers of new weapons in the Navy is quite surprising, even since the end of the Korean war. In the subsurface field, we have launched the atomic-powered submarine, *Nautilus*, which has exceeded our expectations. Three more atomic submarines are to be built. We have developed killer submarines to search for and destroy enemy submarines in their own element. We have troop-carrying submarines, tanker submarines, and guided-missile submarines.

On the surface of the sea, the Navy is changing mightily. In addition to the mobile seabases of the *Forrestal* class, two guided-missile cruisers are joining the fleet this year. Three types of guided missiles are now operational in the fleet—an air-to-air missile called Sparrow; a surface-to-air missile called Terrier; and a surface-to-surface missile called Regulus. We anticipate that the guided-missile field will change the Navy quite as much as did the change from wooden ships to metal ships.

In the air, the Navy is developing the helicopter to perform two offensive tasks—to hunt submarines and to transport Marines in an amphibious assault—as well as to perform a host of auxiliary roles. The Navy is also developing vertical-takeoff aircraft, jet seaplanes, bombers, and fighters, all of which we are now testing.

So in the matter of new weapons, the Navy is right in the forefront of progress.

In the matter of new techniques, we feel we are equally progressive. I will mention two new techniques briefly.

To complement our fixed land bases, the Navy is emphasizing a new concept of mobile seabases—carriers, jet seaplanes, and guided-missile ships. These moving bases will be able to prowl an aggressor's coastline. Their use will raise no problem of sovereignty. They will be able to change location at speeds up to 40 miles an hour to any area of the world's oceans and seas where their presence is required. Their locations will be unknown and unpredictable. They will be less vulnerable than fixed bases. These moving seabases will give our reprisal system the flexibility and dispersal it must have in these times when a sudden attack might overwhelm our fixed-land bases.

Secondly, atomic propulsion. Naval ships are ideally adapted for atomic propulsion, and we are moving in this field as fast as is practicable. The naval aviation field also offers a great potential for the atomic propulsion of aircraft. Atomic propulsion promises to change the Navy as much as did the shift from sail to steam.

Finally, the President has repeatedly emphasized efficient administration. At a press conference a few weeks ago he said that it is no crime to strive for efficiency and economy in the national-defense program. In the state of the Union message, he said:

"In administration of these costly programs we demand the utmost efficiency."

With 3 million people in the uniformed services, more than a million personnel in a supporting role, and spending approximately \$35 billion every year for an indefinite period, the armed services obviously must have the most modern, up-to-date supply systems for efficiently supervising volumes of this size.

As you gentlemen who represent American business know, good administration depends upon modern and efficient organization. It also requires experienced and efficient managers. It means good business methods and systems.

What sort of a business organization does the Navy have to handle its \$10 billion annual budget? In my opinion, the Navy's Supply Corps has developed the best and most efficient supply system in the history of any military organization.

First of all, it is composed of a group of officers and men who are specialists and experts in their field. That they are experts is no circumstance. Seventy percent of the corps' officers have undergraduate degrees. Twenty percent have graduate degrees in business administration. This educational process continues throughout their careers, supplemented by periodic 3-month assignments to civilian business.

In regard to organization, the Navy Supply Corps was the first service to adopt financial accounting. It was the first to use industrial stock funds. It developed a cataloging system to handle its 1,350,000 stock items which came to be a model for other organizations. It has adopted whenever practicable the best management systems of business and industry. It was the first to specialize and decentralize its procurement functions to 14 offices around the country. For example, all aviation materials are controlled through Philadelphia; all food is controlled through Washington; all clothing is controlled through Brooklyn; all ships' parts are controlled through Mechanicsburg, and so on. At each of these locations, three key experts sit side by side.

An inventory expert determines how much to buy and where to buy it; a technical expert determines what to buy from an engineering standpoint; and a procurement expert who does the actual buying. This marriage of administrative, logistic, and engineering know-how has given the Navy a sound and economical supply structure and, more important than that, it has made the Navy a more effective fighting force.

In this regard I might mention the Supply Corps' development of the modern supply ship and replenishment-at-sea techniques whereby fighting ships are rearmed, replenished, and refueled at sea. Admiral Nimitz referred to this development as the Navy's secret weapon in World War II. The best example of this is our 6th Fleet which has been in the Mediterranean now for the past 8 years without a supply base nearer than Norfolk—3,000 miles away.

Such things as these bespeak a sound and aggressive organization.

Few people today realize the importance of a modern and efficient supply system. Regardless of how able and well trained the military men, regardless of how fine their equipment, they are completely ineffective unless they can be rearmed and resupplied with all the vital things they need and at the time they need them.

The fine leadership and organization of the Supply Corps can insure, I am confident, that the President's demand for utmost efficiency will be carried out by the Navy.

Tonight I pay tribute to the Supply Corps and the wonderful group of men and women who make it successful. I know that its continued efficiency and performance will give increased strength to the Navy's and the country's defense program in the years to come.

Atoms for Peace

EXTENSION OF REMARKS

OF

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the Record, I include an editorial entitled "Atoms for Peace," which appeared in the *Nippon Times, Ltd.*, of Tokyo, Japan, on February 13, 1955. The editorial follows:

ATOMS FOR PEACE

A proposal of utmost importance to Japan is now before the United States House of Representatives. This is the resolution presented by Representative SIDNEY R. YATES, of Illinois, calling for the construction by the United States, with Japanese cooperation, of a nuclear power reactor in the city of Hiroshima.

That an atomic reactor "dedicated to the advancement of peace and progress through the production of power for industrial purposes" should be set up in Hiroshima would be highly significant. It would mark the return of the atom to that war-shattered city in a constructive role and would indicate the first concrete step toward the implementation of President Eisenhower's famed atoms-for-peace proposal made on December 8, last year.

It is gratifying to note that not only Mr. YATES but also Commissioner Thomas E. Murray, of the United States Atomic Energy Commission is strongly advocating that the Japanese people, who first felt the fury of the nuclear power as a weapon of war, should also be among the first to benefit from the use of atomic energy for peaceful, industrial purposes.

If any nation needs a constant source of abundant and cheap power to run its machines of industry, it is Japan. The promise which the harnessing of atomic power for constructive, not destructive, uses holds for all mankind would be a boon of immeasurable worth to this nation.

We are grateful to Mr. YATES and his colleagues who are exploring the possibilities of this humanitarian project. But we must admit at the same time that there are strong voices of opposition being raised here against the proposal.

Foremost among these are those who are still unable to distinguish between the atomic bomb and an atomic reactor. While this is understandable among a people with a first-hand experience with the horror of a nuclear explosion, we would do well to realize that atomic energy can and has been harnessed. The launching of the world's first atom propelled submarine, the *Nautilus*, is visible proof of the wonders nuclear power will be able to perform for mankind.

The Economic Counsel Board recently pointed out several technical difficulties, such as the signing of a Japan-United States bilateral agreement on security measures and the ability of Japanese atomic experts to handle the generation of electric power. It referred also to the national sentiment against the A-bomb. But these are not impossible obstacles.

As to be expected, Communists and other leftist elements are professing to look with horror at the proposal to build a nuclear power reactor in Japan. We take this to be one of the highest recommendations why this project should be carried through by all means. An abundant supply of atom power to fill our shortage of energy resources would mean a prosperous Japan—one which the Communists could not subjugate.

The need here is for a wider perspective. We must not forever be looking back at the destructive power unleashed on Hiroshima and Nagasaki. There are other uses for nuclear power than as a weapon of war. Scientists today have proved that the energy held within the atom can be used for peaceful and constructive purposes.

We are reminded of the fears and suspicions entertained when steam power and electric power were first introduced to a world unprepared for such magic.

We need not hesitate to usher in the atomic age of peace and progress in Japan. There is not reason why we should turn our backs to this great and humanitarian gesture of friendship and good will being extended to the Japanese people.

Anniversary of the Founding of Rotary

EXTENSION OF REMARKS

OF

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 23, 1955

Mr. GOLDWATER. Mr. President, last evening it was my pleasure and honor to address the Rotary Club of Muncie, Ind., on the occasion of the observance of the 50th anniversary of Rotary. I ask unanimous consent to have my remarks printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. BARRY GOLDWATER, OF ARIZONA, BEFORE ROTARY CLUB, MUNCIE, IND., FEBRUARY 22, 1955

When you asked me to be with you tonight to help commemorate the 50th anniversary of the founding of Rotary, I was both honored and surprised. Honored because my friends in Muncie would want me for this important occasion—surprised because you would risk the perfection of the program by exposing it to the usually dull and overextended verbiage associated with the office which I hold.

The feeling of honor, though, far outweighed that which bespoke of surprise and, being constantly aware of my debt to Muncie, I accepted. The source of that debt sits by my side tonight, as she has done constantly for the 21 years since she brightened the dull garden of my life by marrying me. The memories of her loving patience and high inspiration, her devotion to our children and her tolerance of the vicissitudes of being a politician's wife, make me look to the future with anticipation and with a knowledge that my debt to Muncie will forever remain an IOU, for it is not within either the material or the spiritual capacities of a man to repay to the full measure a debt of devotion such as the one I hold.

We are gathered here tonight to pay tribute to Rotary—not a tribute that would laud its many fine deeds, but a tribute to the lofty objectives of Rotary which have caused it to be what it is. We can pay homage, also, not so much to the men whose foresight patterned those objectives, but to that foresight itself; for today we, as never before, must draw upon the basic purposes or creeds of our lives for renewed strength and inspiration to meet the trials and challenges of the future.

Objectives or creeds are as much a part of our lives as is the sunshine, but, unfortunately for the ultimate good, too many of us treat them as casually as we do the warm rays of the sun, forgetting that only by storing the warmth of the sun do we stay warm during the cold of night. So must we store within us, by a proper adherence to them, the protection and strength of our creeds, so that, come the cold nighttime of trial, we will not be found wanting in the elemental power which their words bespeak.

You and I, as Americans, are not the only people who work and live under the writings of creeds. A constant reminder to a leader of communism in New York City is a placard across his desk that says "A world to win." This glaring creed tells that Communist that his aims are not bound by the corner drugstore or the next street, but that the world must be won. No job is too trivial, no time too long, no risk too great for him and his comrades as they pursue the dedicated task of the Communist, which is to win the world.

Why this devotion? They have been wise enough to their mad hatred of Christ to steal for their own foul purposes His command "Go ye into the whole world and preach the Gospel to every creature." They have taken this basic instruction and they are using it against the very ideal that gave it to us: "Go ye into the whole world and preach the Gospel to every creature."

When we do this, as Americans, then I suggest that peace will come. Yet, you might ask, "Where do I start? The world is a big place and I am but one." If that is your question, then it is only proper that we start with ourselves by making sure that we know the tune as well as the words of our objectives of life.

Words alone are not the fullness of the objectives; there is a tune of meaning behind them, so the tune alone will not suffice. The 2 must be 1 and, as we recite our objectives, our mottoes, our beliefs, or our creeds there must be in our hearts the full music of understanding and love and devotion to them, or else we say empty words and we lead neither ourselves nor our friends into belief and following.

The end result of a wordless belief is illustrated by the story of the Pied Piper of Hamelin, who, by playing a tune on his flute, lured all the rats of that city into the death that came with their plunge into the sea. They followed blindly, neither knowing nor caring why. It was a pretty tune, friends they knew were in the vanguard, so they joined in also, to their sad regret. The Pied Piper had no words or reason to offer, only his lilting flute, but he was successful, for they followed who only cared for the tune.

Let me burden you with another illustration. Mark Twain carried the doubtful reputation of being quite profane. His wife was greatly disturbed by this disagreeable leaning and tried in vain for years to cure her husband of it. She tried the pleasant approach and the harsh approach, both of which wives are masters of, but to no avail. Then one morning she put into operation the attack at which she had long worked—Mark had cut himself while shaving, and had gone into a long and garish dissertation, fully embellished by foul oaths, on the distastefulness of shaving. His wife entered the bathroom during the tirade, and when it had finished she looked him calmly in the eye and repeated in exact order every foul oath he had used. Mark smiled at her, at the completion of this approach, and said benignly, "Honey, you have all the words but you haven't got the tune."

To further answer the question "What can I do?" I will put a question to you first concerning this great organization to which you and I pay tribute tonight. Do you want to be a Rotarian? Not just a dues payer or one who attends meetings, but do you really want to be a Rotarian enough to live the meaning of Rotary? Are you willing to live your daily lives so that the people of the world will hear and understand the words and music of Rotary's great objective of service. Stated as the first of the six objectives of Rotary is "the ideal of service as the basis of all the worthy enterprises," and the word "service" appears in four of the remaining objectives of this club.

In fact, we call Rotary a service club, and not without reason. We look to you for service as a unit of our local and international society, but service as a unit or a club does not carry out your individual responsibilities to your accepted creed. To be only a part of it is not enough. It must also be a part of you, for service to man, service to Christianity, and service to your country are the words and music which you and I must preach to the world if free men, Christianity and our country are to survive and, in the survival, stamp out the evil alternative to these, which is communism.

True service is not for one's self. It becomes an unconscious acceptance of our responsibilities to one another and an automatic doing of those things which will be of service to our brothers. Service goes out to all, wherever we see it needed. Unlike the signal station attendant who saw a trainload of commuters stalled in deep snow and did nothing about it because, as he said, "It was not in my territory," it goes out without question or hesitation.

It is easy to lose sight of the true meaning of service and to live exclusively for ourselves and to be interested in service only when it serves us. This habit of forgetting that we are our brothers' keepers is one of the major wrongs of the world today. Shakespeare said something about it when he wrote: "That, sir, which serves and seeks for gain, and follows out for form, will act when it begins to rain, and leave thee in the storm."

We see in service, then, a fundamental creed that not only Rotarians, but all of us must accept if we are to approach our full obligations as Christian citizens of a free Republic. As one who is not a Rotarian, I salute your organization for making the words and the music of service available to so many thousands of men all over the world. Now, if they all really want to be Rotarians, and if those of us who are not want earnestly to emulate you in your decision, then all of us will, together, reap the blessings of this objective.

Having assumed a readiness for service and an understanding of its true unselfishness, we must now go two steps further for its full meaning. In addition to serving men by being our brother's keeper, there is also the responsibility of service to God. This does not mean just service to your church by attendance, or service to your church by donation of your time or money, but it means service to the teachings of God.

Here, again, I will counter your question, "What can I do?" with another question: "Do you really want to be a Christian? It isn't hard to be a good one. It merely requires a desire to live by the teachings of the Lord and to practice what we preach."

It's as simple as that, and when you and I have the words and the music of His teachings in our hearts, so that they are reflected in our daily lives, then we will be serving God in the truest sense. "Love thy neighbor as thyself," "Do unto others as you would have them do unto you" is the creed or objective of Christian living, and it is a creed subscribed to by everyone. Unfortunately, however, it is one that is not practiced devoutly by each person as an individual. Do you want to be a Christian? The answer rests within you and your willingness to be of service to the Christian cause.

As I indicated earlier in my discussion with you, there are three questions that come to mind when we think of the word "service" in connection with our lives. These have not been developed tonight in their natural or normal order because, if they had, I would first have asked you, "Do you want to be a Christian?" Then I would have asked you the question that will come next, "Do you want to be an American?" and lastly I would have asked you, "Do you want to be a Rotarian?" Inasmuch, though, as the creed of Rotary brought the word "service" into tonight's discussion, I purposely started with the question concerning your willingness to assume all of its responsibilities.

I followed that with questions directed at your acceptance of the responsibilities involved in being of service to God, and my third, and final, question is directed at your willingness to assume the full responsibilities to being an American. If you live up fully to the responsibilities of being a Christian and being a Rotarian, then I suggest to you tonight that you will find it easy to live up to the full qualifications called for in an answer to the question "Do you want to be an American?"

Here, again, we must search for a basic objective or creed—we must find it out and understand it, so that we may know fully that which we pledge ourselves to serve. When one thinks of being an American one immediately thinks of the word freedom. One is constantly reminded of the blessings of this freedom: our ability to meet as we meet tonight and to discuss any issue that we care to discuss; our ability to print on the pages of our newspapers and in the chapters of our books words that we know might be disagreed with, but words that we know we will not be punished for printing. We associate freedom with our ability to go to the church of our choice. We associate freedom with our method of business, which we call the free enterprise system. We associate freedom with our ability to travel any place that we can or care to in this broad land of ours, and we associate freedom with our friends—our unrestricted ability to make them or to lose them according to our actions, and not the actions or choice of some dictator.

We associate freedom with all of those things, but do we stop often enough to ponder the source of that freedom, because in the recognition of the source of that freedom is the basic difference between our Republic and all of the governments of history that have come and gone before us. When people came to our shores from Europe, over 200 years ago, they did not come seeking wealth because they left wealth at home. They did not come seeking education because they came to a land devoid of schools from lands that were rich in educational institutions. Rather, they came seeking relief from the oppression of tyranny, and not long after they came they began to realize that the freedom which they sought was not to be obtained from the strength of material things, from the strength of armies and money, but instead, from the strength of something that had never been recognized.

We slowly began to feel the great strength of freedom, but here we differed from other people in history who struggled to their various victories, to their brief moments of freedom. We, through the strength our people had in their great belief in God and their willingness to serve God, realized that we would not become free because of arms or physical might, but that we would become free only when we knew and believed that our freedoms came from God and that we were the free children of God. When that realization came, our wise forefathers worked out on paper those ideals of government which they pledged themselves to serve and which they served so well. For the first time in the history of man's free search for government the answer was found by people who recognized the source of their freedom. Those men wrote in the Declaration of Independence "We hold these truths to be self-evident: that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness."

This, then, expresses the basic ideal or credo of our Government. On these wonderful words has been constructed this great Nation of free people. On the adherence to these ideals depends our future as free people. I might suggest, also, that on our adherence to these ideals and to the daily living of these ideals, depends the freedom of the world. Without them we become but another government waiting for the sands to run their sure course through the glass of time. With them we remain forever the only government in history to have found the real source of freedom. By living them we become the beacon light that will guide the oppressed of the Communist world to the freedoms of our life. We must show

them by our willingness to serve our ideal, by our belief in our ideals, and by our constant practice of them that we have a vision which they can share.

That, then, becomes your challenge as you answer the question "Do you want to be an American?" To put it simply, it means that you must be as convincingly and as constantly willing to serve our ideals of government as you are to serve the ideals wrapped up in your religion and in Rotary. We must, by our actions, show the darkened world that light and freedom still live. It is a rich challenge, one that man has never before been presented with, because never before has the concept of government been based on the idea that freedom springs from God. It is a thrilling challenge because, by accepting it, we can help change the world from a place of distrust and oppression to a place of trust and freedom. It is a dutiful challenge, for we owe it to our children to live by these ideals so that this which we have might be passed on to them in the clearness with which we received it.

When we talk of service in connection with our country we are too prone to associate that word only with serving the Nation in time of trouble, such as many of you men and women have done during the wars of this Nation. Yet, the kind of service that will maintain this free Republic, and cause it to grow to even greater heights in the years to come, is not confined just to the wearing of the uniform. It applies to our everyday responsibilities, to their perpetuation of our basic ideals of government.

Remember the Communist credo: "A world to win." Remember that communism does not recognize God, so that communism cannot recognize a government whose source of strength stems from the freedom of God. Remember that communism works 24 hours a day to destroy that which is yours and mine. So when we speak of service in connection with our Republic, we speak of service 24 hours a day—the dedicated task of being an American.

Still you say "What can I do? I am only one." Let me start to answer that question by reminding you of what has been said, "The greatest strength of those dedicated to evil lies in the indifference of those dedicated to good." While the good people have been taking care of themselves, the wrongdoers have been taking care of everyone else. We can just as truthfully say that bad politics are caused by good citizens who don't vote.

So, what can you do? Start now to see that in your next municipal or State or national election the dismal record of voter apathy is changed. Start with yourself by registering. Your party affiliation is not important because the majority of America has usually been right, but register yourself and encourage your friends and employees to do so as well.

During a hearing I recently sat through, a witness made what I think to be a very pertinent and timely remark. He said, in the course of the discussion, that he thought we had "been Americans too long." What he inferred by that, of course, was that we, as American citizens, accept all the pleasures and wondrous things that our freedom gives us, but we pay little attention to what can take that freedom from us. It is an amazing and frightening criticism of our bland acceptance of this freedom when we realize that we, as citizens, will fight and die for our Republic, we will pay taxes to keep it going, we will give our blood for our soldiers, but, when it comes down to the question of voting, the question of working at this business of being free, it actually takes a major catastrophe, a revolution, to arouse the American people to the point that they will exercise their franchise. Freedom has never been

something that was designed for lazy or indifferent people. It requires a constant dedication, a constant willingness to serve its basic principles if this freedom is to survive.

That, though, is only the first part of this challenge to you in seeking your willingness to serve your America. Voting is not enough. There are other things in the political fields that you can do to serve your country well, and American businessmen must recognize this and be willing to expand their fields of service to include them. There is the active arena of political life, where you engage, either at the precinct level, the district level, or the State level, as an active, working member of your party, or even go a step further and become a candidate for public office.

Remember, though, that in this area the enemies of our Republic not only want but seek the opportunity to serve their army of rottenness in any capacity for which that army calls them. There is an army of vigilance—ours must also be an army of vigilance. Our Army, however, will be vigilant in its dedication to the basic concepts of our freedom, while theirs cannot be dedicated to this same cause because their philosophy does not recognize the existence of God.

It is obvious that there is a relationship between these three fields of service which we have discussed tonight. The relationship is carried through by one concurrent recognition in all fields, and that is that to serve each well one must carry a faith in his God and a willingness to perform His work. In service in these three fields we find a great strength in a common song that has at the same time meaningful words and a purposeful tune.

It is good that this exists, because today as we sail this great ship of freedom through the dark and uncharted seas, we can be reminded of the cruise of Greek mythology that sailed the oceans of that day. You will recall that, as the ships came upon a certain part of the sea, they could hear strange and wonderful voices coming from the shoreline—voices of enticement, voices that spoke of great promise—and the ships would turn from their course and head toward these dark shores. They they would be wrecked upon the uncharted shoals and reefs from whence these voices of the sirens came, and it seemed that no ship's crew could forego the temptation to seek the source of these songs. One skipper plugged the ears of his sailors and then tied his hands to the mast, but he could hear the songs and he directed the ship to its sure course of destruction.

It remained, though, for one Greek skipper to solve this, Orpheus. He was a man possessed of a marvelous voice and he sang a strong and meaningful tune, and as he approached the dangerous part of these seas he began to sing, and he sang in such a loud and wondrous way that the voices of the sirens were drowned out and his ship passed that place safely and sailed on out into the broad seas.

We can liken that story of Greek mythology to our present day, when our ship, sailing as it is through the sea of life, is tempted to deviate from its true course of freedom to investigate the tunes of socialism and communism coming from the black shores that line this sea. If you and I know this great song of freedom, and if we are willing to serve man and to serve God and to serve our country by singing this song daily as we go through our lives, then I suggest to you that we can be as that one successful Greek ship, safe and secure in our passage through these trying times, and that we will emerge onto the great bright sea of freedom and move ahead in our journey through our free way of life.

South Carolina Day Address by Hon. Olin D. Johnston, of South Carolina

**EXTENSION OF REMARKS
OF**

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 23, 1955

Mr. MARTIN of Pennsylvania. Mr. President, on February 20, the distinguished senior Senator from South Carolina [Mr. JOHNSTON] delivered a very interesting address at Valley Forge, in my State. I think his address should be generally read, and therefore I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY HON. OLIN D. JOHNSTON, OF SOUTH CAROLINA, ON SOUTH CAROLINA DAY AT THE GEORGE WASHINGTON MEMORIAL CHAPEL, VALLEY FORGE, PA., SUNDAY, FEBRUARY 20, 1955

Reverend Hart, ladies and gentlemen of the Washington Memorial Chapel, and friends, the invitation to participate with you in the South Carolina Day observance at this historic shrine so beloved by all Americans is both a pleasure and an honor. It is my lot to have been born near the site where the great Battle of Ninety-six was fought. The greater portion of my adult life has been lived almost within the shadow of Kings Mountain. Cowpens is only 10 miles away. Often from my window have I seen the monument to Gen. Daniel Morgan as the rays of the morning sun clothed it in splendor. These connections attach me by inheritance and sentiment to this place which we are privileged to honor today—Valley Forge.

The encampment here at Valley Forge 173 years ago has been, through the succeeding decades, of great and abiding significance to America. The example of personal sacrifice, privation, devotion, and fortitude of the men who weathered the storms here during the winter of 1777-78 is unparalleled in any other nation's struggle for freedom. The quality of men who were quartered in this valley tempered the mettle of the American Patriot. The zeal of the Patriot was here solidified into an unrelenting determination to proceed with the work at hand and persevere until victory should crown his efforts.

These Sunday commemorative services, assigned to each of our sovereign States, have a larger purpose than merely to recount the suffering and sacrifices of Washington and his Continental Army as they wintered in these surroundings: A review of Valley Forge also quickens within us a deeper sense of our personal obligations to God and country. By recalling the trials which were here met, and resolved by our forebears, we are inspired to a renewing of their high purposes. Except we approach these services in such a purposeful and dedicated attitude, we shall miss the sublime lessons of Valley Forge.

In his centennial address here, Dr. Henry Armit Brown reminded us that "a country is benefited by great actions only so long as her children are able to repeat them."

Not many years ago, the late Dr. Henry Nelson Snyder, president of my alma mater, Wofford College, in making reference to the Memorial Day services each year held at the Tomb of the Unknown Soldier in Arlington National Cemetery, repeated the same injunction in other words:

"Whenever a people forgets its worthy past, the day will come when it will not have a past worth remembering."

It is well, therefore, that we commune with the past, for we then may better appraise our heritage. As we revisit the springs which nourished our roots, we gird our loins for the present and fortify ourselves for the future.

It has been rather truthfully said that the American Revolution was won at Valley Forge. To this wooded and desolate winter retreat Washington gathered his half-defeated, half-naked, half-starved forces. It was fire-cake and water for breakfast, water and fire-cake for dinner. No battle was fought here. These valleys and hills were not the scene of any military triumph. What then are our special remembrances of this place? Not a military engagement involving technical skill, nor the valor and glory of men sacrificing their lives to cannon and bayonet. That was to come later. Valley Forge is etched indelibly in our memories because here it was that the spirit of the war for independence was rekindled and kept alive. Here the military skill of the army was developed to achieve the glorious victories ahead. Those who survived the encampment emerged as confident, well-drilled, and inspired soldiers—an army of intent, stouthearted, tenacious men with a will to win. And thus the clarion call to arms reverberated and reechoed throughout every colony. With clarity and unity of purpose, the American patriots redoubled their efforts. Moreover, it was here at Valley Forge that the adversity of want from within and evil conspiracies from without met their challenge. Here was born the steadfastness of purpose and will, during the darkest hours of the Revolution, in which the greatness of our Nation as a symbol of freedom was crystallized. At Valley Forge our brave men suffered, sacrificed, and endured that a newly born nation might live.

It is therefore appropriate that we set aside these days—these Sabbath days—for Representatives from our States to reflect in sober contemplation upon the participation of our fathers in the War for Independence. Ours is a great legacy, if we but pause to realize and revere it. Let us not be distracted by the glib tangents in some current writings whose authors lack a deeper appreciation of the significance of these surroundings and the history here made. No sacrifice is recorded in history comparable in magnitude to the trials and experiences at Valley Forge.

The soldiers were not given to much whining, but often glossed over their hardships, as did Richard Wheeler, who reassured his mother:

"We are very comfortable and are living on the fat of the land."

George Ewing modestly entered in his journal:

"Were I to describe the hardships and the difficulties we underwent, no person but those who were with us would credit my relation. Therefore, I choose to pass it over in silence."

Notwithstanding their heroic silence, the record is replete with accounts of the cruel suffering borne so valiantly by the American troops here. In a letter to Clinton of New York, General Washington said:

"Naked and starving as they are, we cannot admire enough the incomparable patience and fidelity of the soldiery."

Lafayette in writing to a friend, said: "The unfortunate soldiers were in want of everything: They had neither coats, hats, shirts, nor shoes. Their feet and legs froze till they had become almost black, and it was often necessary to amputate them. . . . The patient endurance of both soldiers and officers was a miracle which each moment served to renew."

Bitter indeed was the cup of which they drank at Valley Forge, but oh! how glorious the ideal which sustained and inspired them to ultimate victory! Dr. Brown stated the ideal thus:

"And here, in this place of sacrifice, in this vale of humiliation, in this valley of the shadow of death out of which the life of America rose regenerate and free, let us believe with an abiding faith that to them union will seem as dear and liberty as sweet and progress as glorious as they were to our fathers and are to you and me, and that the institutions which have made us happy, preserved by the virtue of our children, shall bless the remotest generation of time to come."

Let us, for a moment, get our historical setting in mind. Politically the Continental Congress began its meetings in Philadelphia in September of 1774. I shall refer to the Congress in more detail later. The tea-party episodes in Boston, Mass., and Charleston, S. C., had occurred in 1773. Militarily, the encampment followed Lexington, Concord, Bunker Hill, and the forced evacuation from Boston of General Howe. The attack on Charleston, S. C., on June 28, 1776, had been repulsed by Colonel Moultrie. John Adams referred to this event as the first real victory of our land and naval forces in the Revolution. South Carolinians glory in the fact that 5,000 pounds of ammunition seized by their militia aided Washington in his siege of Boston. Washington made his successful retreat from New England and New York with his victory at Trenton and Princeton during the Christmas season of 1776. Then, with singular magnitude, followed the occupation of Philadelphia by the British under General Howe during the fall of 1777. Congress moved to Lancaster, settling later at Yorktown (now York), Pennsylvania. The news of the capture of Philadelphia had a depressing effect on our fortunes abroad. Our enemies were rallied. Our friends were stunned. But the sage admonition of Franklin softened the blow:

"Howe," he said, "had not captured Philadelphia," rather, "Philadelphia has captured Howe."

Later events proved the truth of that sober reflection.

Having these events in proper focus, South Carolina is proud of her contribution to the dividends accruing from Valley Forge:

South Carolina was the first colony to organize and by formal act declare its freedom from Great Britain; in history little noted, representatives duly chosen from every district in South Carolina met in Charleston on January 11, 1775, and organized a provincial congress. On February 1, 1776, its delegates formalized a document declaring that South Carolina was no longer a province subject to the King of England, but "that she was now, by her own act, a free and independent State." At 4 o'clock in the afternoon of March 26, 1776, the members of the provincial congress declared themselves members of the General Assembly or Legislature of the State of South Carolina, with John Rutledge as president and Henry Laurens as vice president. The term "governor" came into official useage 3 years later.

Henry Laurens was born in Charleston, S. C., of Huguenot parents who theretofore proceeded from New York. He became a great leveling influence in the Continental Congress during the American Army's suffering at Valley Forge. Succeeding John Hancock as President of the Congress on December 1, 1777, he was a man of great Christian virtue and charity. He served without salary, working from 18 to 20 hours a day, though physically handicapped by a prolonged attack of gout and fever. He never complained, but rather compared his own physical discomforts as greatly less than those of the estimable leader and his men at Valley Forge. He once remarked that at least his sufferings were beside a fire, whereas the men and General Washington were on the cold ground with little straw and clothing to keep them warm. His son, John Laurens, as a colonel, became a valued and trusted aide to General Washington.

Through President Laurens' voluminous letters to his son, we find that Congress maintained the closest liaison with General Washington. When the conspiracy and intrigues of the day were bearing heavily on the cause of the Colonists, President Laurens, in writing to his son, said:

"In (Washington's ruin) would be involved the ruin of our cause. On the other hand, his magnanimity, his patience, will save his country and confound his enemies."

The estimate of President Laurens by John Adams is worthy of note. Adams makes reference also to the first great victory of the Revolution in Colonel Moultrie's preservation of Charleston. Having only a month's acquaintance with President Laurens, John Adams wrote his wife on August 19, 1777:

"I feel a strong affection for South Carolina for several reasons: (1) I think them as staunch patriots as any in America; (2) I think them as brave; (3) they are the only people in America who have maintained a post and defended a fort; (4) they have sent us a new Delegate whom I greatly admire, Mr. Laurens, their Lieutenant Governor, a gentleman of great fortune, great abilities, modesty, integrity, and great experience, too. If all the States would send us such men, it would be a pleasure to be here."

Daniel Roberdeau, of the great Commonwealth of Pennsylvania, is credited with saying that President Laurens was a "worthy, sensible, and indefatigable gentleman."

Three great measures affecting the fortunes of the Colonies marked the contribution of South Carolina through the civil service of Henry Laurens as President of the Congress:

- (1) The Treaty of Alliance with France;
- (2) The conclusion of the proposals for the Articles of Confederation; and
- (3) The rejection of the Proffer of Peace with Great Britain in 1778. (Peace without freedom and independence was unacceptable to Laurens.)

The Continental Congress is worthy of a moment of favorable historical recollection. Congress through the years—Continental, under the Articles of Confederation, and under the Constitution—became the whipping boy for all our ills except, possibly, the sudden changes in the weather. Some of the writers of that day failed to realize its origin, its loose association, and the utter lack of constitutional power. That error has been perpetuated by subsequent historians and commentators because of their failure to recognize that the Continental Congress should be immediately differentiated from the constitutional Congresses that have succeeded them.

The colonial governments in 1774, 1775, and 1776 were houses divided against themselves, a condition naturally to be found in colonial governments aspiring to self-determination. The call for a convention of the Continental Congress lacked constitutional or sovereign authority. The British authorities had dissolved the colonial legislatures, and our States had not yet been organized. The selected representatives were not invested by their constituencies with sufficient power to execute either the will of their constituencies or even their own. The Congress ruled more by persuasion and patriotic fervor for a common cause than by any set rules of delegated authority. Therefore, to assess such an association with blame is to overlook its lack of delegated powers. The high resolves passed by the Congress on October 14, 1774, were instrumental in unifying and consolidating the thoughts and actions of the Colonies.

A great historian (Dr. David Duncan Wallace) under whom I had the privilege of studying put it this way in his life of Henry Laurens:

"Moreover, the situation of the Congress at the best was precarious and difficult.

Suddenly placed under the necessity of conducting a war, it was unsupplied with every power, authority, and resource for its task and could rely only on a steady sense of public duty in its constituents—a devotion which it was useless to expect. The war was conducted without any formal constitution, adequate authority, or orderly Government, and in the face of an apathetic or hostile party embracing probably a majority of the population. Yet, under difficulties almost beyond belief of a generation accustomed to well ordered institutions enjoying authority beyond derogation and supported by an ardent patriotism practically universal, the old Congress in one way or another kept the Government going and, with the aid of their great general and a handful of devoted patriots up and down the country, brought it to a successful termination and meanwhile performed a service for which they have received scant recognition in laying the permanent foundations of national administration which endure to this day. A Congressman had a difficult and thankless task, and those who performed it with ability and disinterested patriotism deserve a credit which they have not usually received. The earlier runners in a relay race have been forgotten in the shouts of acclamation for those of the later course who arrived bearing the torch of a completed constitutional system. The final runner could not take even his first step until the previous bearer of progress had arrived, and doubtless the first mile was as dusty and toilsome as the last."

In December of 1777, during the sojourn here at Valley Forge, the Congress consisted of only 14 Representatives. Eight Colonies had 1 representative each, 3 had 2, and 2 Colonies had none. Many of the able men of the day returned to their respective homes to strengthen their local governments. The First Congress met without an agenda. Their sessions were of necessity bound to secrecy. In the absence of constituted authority, a chief executive and departmental heads, it is a remarkable tribute to their common sense, ardent patriotism, and unity of purpose that the Continental Congress was able to carry on foreign affairs, raise an army, conduct a war, and bring it to a successful conclusion. Hence, I deprecate the rather general and unfounded criticism, often gratuitously and never rightfully heaped upon the achievements of the Continental Congress. Let us ever remember that the Congress then was and now is the only spokesman and the last resort in expressing the will of our people. Without such an elected, representative body, we drift aimlessly but certainly into the despotism of a one-man government or an oligarchy of tyrants. The meaning of Valley Forge becomes depreciated if we minimize the real worth of the representatives of the people of that day.

Slowly but in orderly succession the fruits of the sacrifices at Valley Forge appeared upon the American scene. Out of the darkness and despair of the suffering here, victory in time emerged.

From this crucible of hardship General Green was enabled to prepare the artillery and gather necessary supplies. General Von Steuben brought a knowledge of military science and tactics to our determined but untrained Continentals. The lesson of warfare learned and practiced here are reflected in the great result that followed. The first effects of such training appeared at Monmouth. After Savannah and Charleston had been taken by the enemy, important events followed closely in my native State. The strongholds of the enemy had been reduced to New York, Camden, and Charleston. Generals Green and Morgan were deployed to the South because it was there that the British hoped to divide our colonies and later conquer Washington's forces. The battles of Camden, Kings Mountain, Cow-

pens, and Guilford Court House forced Cornwallis to retire to Wilmington. This led Cornwallis to Yorktown, Va., and the surrender there on October 19, 1781, followed by the signing of the peace on November 30, 1782.

Incidents and events—small and large—form significant links in our chain of recollections of Valley Forge and contemporary happenings:

Henry Laurens fathered for a time the wounded Lafayette. He made him a personal loan of \$6,000. Many years thereafter (1825) Lafayette laid the cornerstone of the monument to De Kalb at Camden, S. C.

Col. John Laurens in defense of the honor of his chief, challenged and wounded Gen. Charles Lee because of the latter's disregard of General Washington.

We recollect the capture of Henry Laurens by the British while he was en route to Holland as our ambassador. Laurens' value to our cause was illustrated in his exchange by the British for Lord Cornwallis, and confirmed by his appointment as one of our peace commissioners along with Franklin, Jay, Adams, and Jefferson. Edmund Burke commented in Parliament on the coincidence that Lord Cornwallis upon his surrender at Yorktown was held as prisoner in America by Colonel Laurens while the latter's father was imprisoned in the Tower of London, over which Lord Cornwallis held authority as constable.

History likens Col. John Laurens, the able son of Henry Laurens, to Alexander Hamilton. Being detached from Washington's headquarters and because of his fluent use of the French language he was made Special Minister to France to secure and expedite loans, ships, men and supplies. The several ships filled with supplies, money, men, and sinews of war were testimonials to his ability, zeal, and accomplishments. It will be of particular interest to you to recall that from the funds he brought back, \$250,000 was used by Robert Morris, who with his associates added \$150,000, to establish and capitalize the Bank of America at Philadelphia. The early and untimely death of Colonel Laurens, on August 27, 1782, on a completely unnecessary battlefield in South Carolina, was the occasion of much grief and a fine expression of regard from General Washington. The English poet, Day, in an epitaph for young Laurens, wrote:

"Beyond the rage of time or fortune's power, remain, cold stones, remain and mark the hour when youthful Laurens yielded up his breath and sealed his country's liberties in death. For injured rights he fell and equal laws the noble victim of a noble cause. Oh! May that country which he fought to save shed sacred tears upon his early grave."

Valley Forge had a great bearing on subsequent events in South Carolina. After Lord Cornwallis and Admiral Parker captured Charleston, they began to overrun the State. They met great resistance at the hands of our militia. General Gates lost Camden to Cornwallis. The riflemen of the State under Moultrie, Sumter, Pickens, Harden, Thompson, Marion, Hampton, and others together with some forces from North Carolina and Virginia under Generals Green and Morgan began a wearing-down process of Cornwallis' forces. He was defeated at Kings Mountain on October 7, 1780; Tarleton's forces were defeated at Cowpens in January 1781. These battles and those in North Carolina forced Cornwallis to Wilmington, whence he left to Yorktown, Virginia, where, as I have said, he surrendered to Washington.

History records 137 battles—large and small—fought in South Carolina; 103 of these were fought by her own troops, and in 20 major engagements other South Carolinians participated.

Turning the pages of history it is easy to recall that great events and noble achievements often are born in moments of seeming

despair and periods of depression and hardship. Traditional history relates that the great Homer was blind when he gave the world his *Iliad* and *Odyssey*, as was Milton when he wrote *Paradise Lost*. Dante, while suffering, produced his greatest works, and the music of Beethoven, much of which was written after he became completely deaf, will inspire the world as long as time lasts. Tennyson in the depth of his grief gave us the immortal *In Memoriam*. Historians credit Gen. Robert E. Lee with even greater stature achieved in his civil accomplishments following the War Between the States than for his brilliant exploits in battle. The French rose to their greatest heights at Verdun. Helen Keller has persevered despite deafness, blindness, and muteness to become a great crusader for others similarly afflicted. Dunkirk is too fresh in our minds for proper evaluation, but in all of these events we find that in periods of doubt and circumstances of greatest stress, men have arisen to their greatest stature. So it was with Washington, his brave generals, and the invincible soldiers at Valley Forge.

The feat of Sergeant Jasper at Charleston, S. C., had its sequel in the flag-raising at Iwo Jima. Such has been the history of the bravery, fortitude, and steadfastness of purpose of America and her fighting soldiers from the very beginning.

From the date of the Stamp Act Congress in 1765 in New York, of which John Rutledge, of South Carolina, was President, when the members were stirred by the plea of Christopher Gadsden, another South Carolinian, that "there ought to be no New Englanders, no New Yorkers known on the continent, but all of us Americans," and running through the services of those I have so briefly sketched, are found the indissoluble links that have bound our fate and fortune to Valley Forge. These events of such historic importance which you have given me the honor to relate today, happenings before and after the winter of 1777-78 and the events forged here, made possible the chain of successes that followed. We are the beneficiaries of the dividends from the despair of that fateful period in American history. May we never fail to recall them. Let us ever cherish them, teach our children to revere them. In a spirit of gratitude to a divine providence which has guided and multiplied our Nation's fortunes, let us all be thankful.

Shall the Tail Wag the Elephant?

EXTENSION OF REMARKS

OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. HILLINGS. Mr. Speaker, recently President Eisenhower summed up his program as being one of dynamic conservatism. Previously, he had characterized his thinking as progressively moderate. These two terms are typical of the Republican Party and its place in history. Historically, we have shunned extremes.

Mr. Kyle Palmer, political editor of the Los Angeles Times, writing in that newspaper on Sunday, February 20, 1955, has some interesting observations to make concerning the Republican Party. His comments should be required reading for all Republicans. His analysis of the leadership of the late Senator Taft as a statesman of moderate ideas rather

than an extremist is something we should keep in mind today.

Senator Taft was a man who possessed the unerring ability to keep his eyes on the major goals and refused to be diverted by the day-to-day actions of the extreme right or left. Such is our job today to move ahead with President Eisenhower and moderation and pay no heed to extremists who would divide us. After all, there is only 1 America and 1 Republican Party.

The article follows:

SHALL THE TAIL WAG THE ELEPHANT?

(By Kyle Palmer)

If we are to judge from some recent unpleasanties between Republican leaders of differing views and intents, a fight is brewing for control of the Grand Old Party.

It is somewhat ironical that the party's family quarrel should be brought into the open in connection with various celebrations of the natal day of the GOP's generally acknowledged saint, Abraham Lincoln.

Lincoln's birthday has become a traditional occasion for Republicans to point with pride at their own virtues while viewing the iniquities of the opposition with suitable alarm, just as the Democrats utilize the birth date of Andrew Jackson for a reverse process.

This year many dissident Republicans took occasion to depart from usage and turned the thunders of their wrath upon elements in their own party which they condemn for this or that departing from party regularity.

As one who generally finds himself disinclined to follow any leadership that swings to extremes—whatever the direction—I am disposed to feel that all this talk of recapturing the Republican Party is not a healthy thing.

The theory that absolute conformity to fixed political doctrine must be acknowledged if one is to remain respectably orthodox is an unsound surmise. First, because orthodoxy isn't necessarily consistently commendable, and, second, while we may recognize fixed truths and eternal verities, we can never be sure who holds or exemplifies them.

Not entirely.

Politics itself is not a fixed science, and it is in essence an application of influences that seek the greatest good for the greatest number. Which entails compromise between extremes and even, at times, between issues that may have virtually equal worth.

Thus, who is going to recapture the Republican Party from whom?

Political parties offer opportunities for the widest differences of opinion and conviction, but in the main have a central core of philosophy that binds the minds of men and women to a common purpose—not absolute, not inelastic, not always in complete harmony, but yet sufficiently cohesive to become propulsive and effective.

There are many interpretations of what is meant by Republican or Democrat, and an even broader category of those who make the interpretations.

Governor J. Bracken Lee of Utah and Senator JOSEPH McCARTHY of Wisconsin were two of the Lincoln Day speakers who voiced a desire to "recapture" the Republican Party, each disclaiming any intention of leading or joining in a third-party movement.

But could anyone acquainted with the respective careers of Lee and McCARTHY have confidence that they could agree for any length of time on what to recapture? Their first recapturing adventure would scarcely end before they'd become engaged in recapturing from each other.

Governor Lee is, without question, an excellent governor. He has firm ideas on government, most of them sound, but he is in no better position than JOE McCARTHY to set himself up as one competent to set a fixed Republican pattern.

There is no such pattern. And a good thing there isn't.

For once a political party become hide-bound, once its ideals and inspirations are static, the people will discard it.

Evolution rather than revolution is most likely to keep a political party robust, responsive to public ideals, and capable of carrying out the popular will.

Dwight Eisenhower, who is not a professional politician, and who has learned much of the game of politics—especially as it represents party politics—on a day-to-day basis, has not always struck just the right political note nor has he escaped making some of the blunders of a man who deals with those more adept in the profession than himself.

He has backed sometimes when he should have filled and filed when he might have been wise to back, but he has profited from his experiences, and his better understanding is and will be reflected in a stronger Republican Party if—and a very large "if"—he is not frustrated and thwarted by extreme GOP elements.

It is of course true that Mr. Eisenhower's power in politics is not menaced solely from the political right; he faces a like jeopardy from another extreme which, at all cost, would kick the so-called rightists out of the party and, in its turn, "recapture" what it regards as the true Republican spirit.

Neither side to that argument has any exclusive claim upon the Republican Party or Republicanism, and either, were it suddenly to become the arbiter of all that is Republican, would carry the party into the political ditch.

Torn between two such elements, the best attitude for Mr. Eisenhower to assume is that of Mercutio, who learned the folly of extreme partisanship the very hard way with a sword thrust in his gizzard and who, as he expired, invoked "a plague on both your houses."

It is revealing of the ineffectual position of both Republican extremes that the one continues to present its case as a prolongation of the leadership of Robert A. Taft while the other essays to condemn its opposite from the standpoint of a purely imagined and fictitious portrait of the late Ohio Senator. Neither is correct in its assumption.

Taft was never an extremist, had his convictions firmly rooted but never rootbound. He was capable of compromise without surrender, could see merit in an opponent's contention, never considered himself immune to miscalculation or mistakes.

By common consent he was known as "Mr. Republican." And this was not because of his assertion of infallibility but because of his readiness to reach sound and equitable adjustments.

He was much more moderate than many who gathered under the banner of his leadership. In the supreme test of his patriotism and statesmanship—which came after his convention defeat by Eisenhower and the later need by Eisenhower for his counsel and support—Taft set out neither to capture nor be captured. His purpose was to serve as best he could, and both in the interests of his country and his party he channeled his services through the mediums that offered or could be developed.

Taft's brand of Republicanism is now what the party most needs. No political leader in contemporary history tried harder than Taft to promote his ideas and his personal political fortunes, and none either in victory or defeat has demonstrated a greater readiness to place public welfare ahead of personal advantage.

Hence if there is to be any effort at recapture of the Republican spirit by those now displeased with what they perceive, some effort directed to the possibility of emulating the example of the great Ohioan could prove most salutary.

George Washington and the \$20 Income Tax Reduction Scheme

EXTENSION OF REMARKS OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. HOSMER. Mr. Speaker, today this House heard an excellent reading of the Farewell Address of our first President, George Washington, by the gentleman from Florida [Mr. KRAMER]. I congratulate him.

This is a traditional honor we pay to the founder of our country on the anniversary of his birth.

But it amounts to more than that. What George Washington said in that address amounts to a lot of good common sense on how to run a country. We rear a lot of foolishness in this chamber from time to time and I presume whoever thought up this custom of reading the Farewell Address each year had in mind that such an annual air conditioning would do us some good.

Certainly, this year it could not have come at a better time considering the fact that we are shortly to commence debate on the politically frank and obvious \$20 income tax scheme measure.

Now I ask you, my colleagues, isn't it pretty clear what George Washington would say about the thing if he were here today?

Listening to his beautifully worded Farewell Address leaves little doubt he'd go out after it like a mongoose after a cobra.

My only question is what kind of language would he use. It's my guess it would be a lot less formal than the style he used for the Address.

But he isn't here so we have to look to the Farewell Address.

This is what Washington says about the politics involved in this scheme by the Democratic Party to woo millions of votes by putting an extra \$20 bill in each of their pockets:

The common and continual mischiefs of the spirit of party are sufficient to make it the interest and duty of a wise people to discourage and restrain it. It serves always to distract the public councils, and enfeeble the public administration.

As I read the foregoing in light of the \$20 scheme, Washington would regard the partisan political purpose behind it as a mischief which sidetracks the Congress from its duty of providing good government for the people of the United States. It would, in fact, weaken the Government of the United States. Further, according to Washington, the people of this country in their wisdom ought to discourage such goings on.

Next, let us take a look at what the Father of our Country has to say about the finances involved:

As a very important source of strength and security, cherish public credit. One method of preserving it is to use it as sparingly as possible, avoiding occasions of expense by cultivating peace, but remem-

bering, also, that timely disbursements, to prepare for danger, frequently prevent much greater disbursements to repel it; avoiding likewise the accumulation of debt, not only by shunning occasions of expense, but by vigorous exertions, in time of peace, to discharge the debts which unavoidable wars may have occasioned, not ungenerously throwing on posterity the burden which we ourselves ought to bear.

The execution of these maxims belongs to your representatives, but it is necessary that public opinion should cooperate. To facilitate to them the performance of their duty, it is essential that you should practically bear in mind that toward the payment of debts there must be revenue; that to have revenue there must be taxes; that no taxes can be devised which are not more or less inconvenient and unpleasant.

As I read the foregoing in light of the \$20 scheme, Washington would abhor it. He says to have a regard for the amount of our public debt. Sure, spend money to meet emergencies, but when the emergency is over, get rid of the debt; do not saddle it on your children and your children's children. And do not forget, unpleasant as they are, taxes are the only way of paying for the expenditures of government.

There, my colleagues, you have the wisdom on this subject of a man much more versed in the intricacies of government than most of us.

But even George Washington was somewhat dubious as to whether or not you would heed it. In the closing portions of his Farewell Address he had this to say:

In offering to you, my countrymen, these counsels of an old and affectionate friend, I dare not hope they will make the strong and lasting impression I could wish; that they will control the usual current of the passions, or prevent our Nation from running the course which has hitherto marked the destiny of nations, but if I may even flatter myself that they may be productive of some partial benefit, some occasional good; that they may now and then recur to moderate the fury of party spirit * * * this hope will be a full recompense for the solicitude for your welfare by which they have been dictated.

As I read the foregoing in light of the \$20 scheme, even though Washington mentions the expectation that his advice "may be productive of some partial benefit," I think in this instance he would expect us to do more than cut it down to \$10. I think he would expect us, in this situation where there is a choice between doing what is right for a political party and doing what is right for our country, to have the wherewithal to choose to do what is right for our country.

Dixon-Yates Contract

EXTENSION OF REMARKS OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. HILLINGS. Mr. Speaker, our colleague the gentleman from California [Mr. UTT] has reported to his constitu-

ents on the so-called Dixon-Yates contract. I wish to include in the RECORD at this point the gentleman's statement which is short, lucid, and points up the real facts surrounding this issue which has become the subject of unnecessary controversy.

The report follows:

WASHINGTON REPORT

(By Congressman JAMES B. UTT)

I am impelled to make a few simple remarks about the Dixon-Yates contract because it is being used by some as a symbol of evil. It is the bone of contention in the fight of the Socialists to destroy private enterprise. They use it as the offsetting answer to everything that is good. You make the casual remark that inflation has been stopped, and the cost of living is down. The reply is, "Yes, but how about Dixon-Yates?" You continue, "The national income is going up and taxes are coming down." Again the reply is, "Yes, but how about Dixon-Yates?" That reply has become so universal that if you were talking to Chou En-Lai and said, "It is a violation of the Korean Armistice for you to hold our prisoners," he would say, "Yes, but how about Dixon-Yates?"

POWER REQUIREMENTS

Some background is necessary in order to understand how the contract came into existence. The Atomic Energy Commission is the largest single user of electric energy in the United States, and by far the largest customer of the Tennessee Valley Authority. The TVA came to Congress a few years ago and said that by 1957 they would be short of power by some five or six hundred thousand kilowatt-hours. The AEC has first call on energy, and private users would have to be rationed. They asked for \$100 million of Federal money to build a steam plant at Fulton, 25 miles north of Memphis, which is nearly 100 miles outside of the Tennessee Valley watershed. Three times Congress refused to appropriate this money as the locale was not within the jurisdiction of TVA.

The Director of the Budget suggested that it might be feasible to find some private industry to supply this anticipated shortage. TVA has long been unable to supply the AEC with needed energy at the Paducah atomic-energy plant, as witness the fact that the Commission under the Truman administration negotiated two contracts for private supplies, three times in excess of the current subject contract. These contracts were negotiated without any of the sound and fury which accompanies the Dixon-Yates negotiations, even though the energy charge was slightly higher than the one now contemplated.

NO GIVEAWAY

The Government can cancel these contracts on 3 years' notice, and the private companies would then have to find a market for the surplus energy so canceled out. This in itself would be no small task. Due to the possibility of cancellation, it was felt that it would not be feasible to concentrate additional power around Paducah, which could not be absorbed by other customers, but that any additional energy should be generated at a point which, if cancellation should come, the supplier could find a reasonable ready market for the energy.

It was felt that a plant located near Memphis could be built, and the energy exchanged with TVA to cover its growing shortage. The AEC would exchange kilowatt for kilowatt with TVA. The contract provides that the Government can buy the Dixon-Yates plant at any time, or can cancel at any time. Here I should say that Dixon and Yates are just names. Each is the head of a large going public utility in the area, and the two companies formed the Mississippi Generating Co. to finance the project which has an estimated cost of \$107 million. One hundred

million would come from bonds and notes, and the balance would be the risk capital supplied by the two parent companies.

The contract provides a ceiling on what they can earn, but no floor. There is no guaranteed income. The ceiling is less than the national average for public utilities. The energy charge will be less than TVA now charges the AEC at its Oak Ridge plant, if you eliminate the tax factor. And speaking of taxes, it should be noted that the taxes paid by private electric utilities for local, State, and Federal taxes in the United States average 44 percent of the gross income from sale of energy, and while TVA claims to pay taxes, they amount to only 4 percent of their gross income from energy sales.

SOCIALISM OR FREE ENTERPRISE

The question arises: Are the people of this country going to support the Government, or is the Government going to support the people? The attack on the Dixon-Yates contract is not based upon facts, it is a diversionary action, while the real attack is against private enterprise. The Socialist plan is for government ownership of all capital. Public power is the spearhead of this drive, and because it is the easiest segment of industry to nationalize, the Socialists cannot afford to let the Dixon-Yates contract go unchallenged, even though it would supply the shortage of energy, encourage private industry, and save the Government from borrowing another \$100 million.

I am glad that the President is standing firm on the issue in spite of the attacks. The opponents have done a potent job of obscuring the provisions and purposes of the contract and we who support private enterprise should be just as effective in presenting the facts in their true light.

The United States Army and Army Installations in Alabama

EXTENSION OF REMARKS OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 23, 1955

Mr. SPARKMAN. Mr. President, on the 21st of January of this year Hon. Frank H. Higgins, Assistant Secretary of the Army, delivered a most interesting and informative address before the State Press Association of Alabama, which was meeting in its annual convention at Huntsville, Ala. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY THE HONORABLE FRANK H. HIGGINS
BEFORE THE STATE PRESS ASSOCIATION OF
ALABAMA, HUNTSVILLE, ALA., JANUARY 21,
1955

Ladies and gentlemen, I am indeed happy to be here tonight and am very grateful for the opportunity to speak to you as a group—a group that is such an important segment of one of our great democratic institutions—the American press.

I want to talk to you tonight about your Army and your Army in Alabama. However, before I do, I would like to make an observation which I feel is particularly appropriate.

In the British Parliament, you often hear the expression, "Her Majesty's loyal opposition." The last two words of this expression can be applied to the description of the

relationship of the press and the Army. Those of us, all down the line, that are charged with the management of your Army are human and, therefore, are not infallible. Yes; we've made some mistakes, and we'll probably make others.

It is not expected that you will be in agreement with us on every detail of every subject—nor would we want it that way. When the press praises us, we feel good about it. We are concerned when we are criticized; but this is good, and that's the way it should be, for the probing finger of the press sometimes points to an error or a wrong which, of course, we all are anxious to set right. Let me add that there may have been times when the Army has been unjustly criticized, and naturally we don't like that.

But—and this is the point I want to make—if you begin with the assumption that your Army and its management are sound, although not infallible, we can reach a point in our dealings—and I believe we have reached this point—where we can refer to the American press as our loyal opposition. This, to me, expresses the real value and strength of our relationship, from which stems the great power of the press.

Since I went to Washington, I have been particularly impressed by those many things that the Army does, in peacetime, which result in many benefits to all of us and to our Nation. Many of us look upon the Army as a highly specialized fighting machine, costly to maintain, and useful only to fight wars. We overlook, or perhaps have not been given an opportunity to look on the other side, so to speak, of the Army; those things that the Army is doing and has done for our Nation besides defend it.

American history is replete with examples of such activities which have contributed to the continuing growth and expansion of our great Nation. But, before I talk of those contributions made by the Army from which all of us as a Nation have benefited, let's take a very specific look at the Army in Alabama today.

Located in Alabama, from Theodore in the south to Huntsville in the north, the Army has 7 installations, comprising more than 170 thousand acres, at a real property cost of over \$291 million.

These seven installations are Fort McClellan, Camp Rucker, Anniston Ordnance Depot, Theodore Ammunition Loading Terminal, Alabama Ordnance Works, Phosphate Development Works and, here in Huntsville, Redstone Arsenal.

In Army installations and activities in Alabama there are over 13,000 civilian personnel employed, and over 9,100 military personnel, with a payroll of \$85 million a year. So the importance of Alabama in the Army's plan is pretty obvious.

Now that I have given you a brief rundown of what the Army has in Alabama today, let us examine a few of these installations more closely, and see just what they are.

Let us take Camp Rucker first. Camp Rucker was a World War II training camp. It was the home of the 66th Infantry Division, and trained thousands of infantry replacements during World War II. It also trained many nondivisional, battalion-sized units of engineers, tank destroyers, 42 chemical mortars, and heavy artillery. After the war, it became the home of the 47th Infantry Division.

Last year the time had come to find a new home for the Army Aviation School then located at Fort Sill, Okla. Because of economy measures, our choice was limited to already existing Army installations. We had to meet all of the many basic requirements for operating an aviation school, and at the same time find a place where we would have to make minimum changes and additions in construction; and where manpower and operating fund requirements would be at a minimum. We considered every feasible in-

stallation, and we chose Camp Rucker because it met, to the greatest degree, all of the varied requirements.

The move of the Army Aviation School to Camp Rucker has not been completed, but we plan to finish it by June 30. You see, it is very difficult to move the school in toto and still meet our training requirements; but as rapidly as present classes are graduated, and requirements on equipment and personnel decrease at Fort Sill, the move to Camp Rucker will be completed. We expect that all elements of the school now at Sill will be at Rucker to start the new training year beginning in July of this year.

At Camp Rucker we anticipate that the number of military and civilian personnel, including the aviation school faculty and students, will total approximately 5,000 people during fiscal year 1956. In addition to the Army Aviation School, plans are now being made to station other types of units at Camp Rucker, so as to use the installation and its facilities to the maximum. There is little doubt as to the importance of the economic benefits that will accrue to the surrounding community as a result of the activities at Camp Rucker.

Another historic military installation in Alabama is Fort McClellan, just outside of Anniston. Alabama's sons in World War I and World War II were trained there. It stands today as the home of two major Army activities: the Chemical Corps School and the Women's Army Corps Center.

Since June 30, 1949, the Army has completed construction of almost \$9 million worth of facilities at Fort McClellan; and, in addition, there are more than \$10 million worth of facilities now under construction. There are over 5,400 military personnel, both men and women, stationed at Fort McClellan, with over 900 civilian personnel working on the post.

At Childersburg we have the Alabama Ordnance Works, which produces smokeless powder, TNT, tetryl, and other explosives for the Army. A portion of this plant is being rehabilitated, and the investment will be approximately \$46 million. Construction, we hope, will begin sometime in April.

Somewhere in the neighborhood of 2,000 people will be employed there. This will mean considerable benefit to the economy of the local area.

Now let me tell you a little bit about the Redstone Arsenal. Redstone was a Chemical Corps manufacturing arsenal during World War II. Now it is the heart of the Army's guided missile and rocket research and development program. This arsenal is responsible for research, development, and procurement for manufacturing in the field of guided missiles and rockets for the Army—a highly important installation.

Although its principal business is the research and development of rockets and guided missiles, Redstone has other activities. It is the home of the Ordnance Corps Guided Missile School, which is charged with the troop training for all guided missile organizations. The production lines of Redstone's ammunition division are now in operation for the loading and assembling of components into a finished round of conventional ammunition.

The Army has spent \$7½ million on expansion and rehabilitation projects at Redstone. Expenditures for projects currently underway total \$27 million. And within the bounds of its 10 by 12 mile area, more than 7,100 people, civilians and military, are employed.

I have discussed briefly with you, in a statistical sort of way, some of the Army's activities in Alabama. Before I leave the subject, I feel I should quote two more very important figures, and these are in addition to all the things which we have been discussing so far: From July 1952 through September 1954, the Army placed 934 pro-

curement actions in the State of Alabama, for a dollar value of \$172.6 million.

So far tonight, I have been talking primarily in terms of the economic benefits that stem directly from your Army's activities now, during peacetime. These are the "extra dividends," in the sense that we have the defensive strength that our Army provides—and of course we cannot have that without paying for it. But some of that investment comes back to us in the economic benefits I have just mentioned. This is a part of the "other side" of the Army.

Now I would like to go back in history a little, and cite a few other examples of these "extra dividends" we get from our Army in peacetime that benefits our whole Nation. The benefit to you or me may be felt only indirectly in the raising of our standard of living and making our way of life so much better, but they are still important examples of the tremendous contribution your Army makes to the everlasting greatness of this country.

One of the earliest of these examples occurred in 1803, when an expedition of Army volunteers, under Captains Lewis and Clarke, conducted explorations which were later to bring American civilization to the great Northwest. For the next half century, the Army assisted our forefathers in their westward expansion. It conducted nearly all of the preliminary explorations. The Army constructed roads and trails to the West. It built bridges and canals. It conducted surveys and prepared maps.

The need of our new Nation for engineers became acute. There were no schools to train them. The first technical school established in America was the Military Academy at West Point; which, at that time, was created to train engineers. Early West Point graduates were called upon to do many jobs for our expanding Nation—mineral exploration, railroad construction, surveying, and the development of our waterways.

The civil works program of the Army engineers is a tremendous, never-ending mission: In Washington, the engineers had charge of building the Capitol, the Library of Congress, the Post Office Building, the Government Printing Office, the Washington Monument, the Department of Agriculture Building, and the Pentagon—the largest office building in the world.

So far, Army engineers have opened up, or improved, 27 thousand miles of inland and intracoastal waterways. Dams constructed under the supervision of the Army engineers now protect over 4½ million people, and 28 million acres of farmland, from devastating floods. And 2½ million kilowatts of power are now being generated by these dams.

The building of the Erie Canal; the cutting of the Panama Canal; the development of Ohio River navigation stand high among the accomplishments of the Army engineers. And as many of you know, the engineers have now been called upon to assist in the construction of the St. Lawrence seaway.

Another quite different service to which our daily lives and fortunes are geared, had its beginning in the Army. In 1870, Congress directed the Army to organize the first weather bureau. The Army was required to take meteorological observations throughout the country, and warn the Great Lakes and coast sections of the approach of storms. This first organization of a weather service on a national scale was handled by the Army's Signal Corps.

Upper-air sounding devices, recently developed by the Army, have contributed in a major way to improved weather forecasting. But perhaps the greatest military assistance to civilian weather knowledge is in the area of severe storm and hurricane warnings. Military weather reconnaissance missions assist the civilian forecasting services in following and forecasting these storms and hurricanes.

Now a joint group, with military and Weather Bureau participation, has been established to study the characteristics of severe storms and hurricanes; and to find out how to pool our knowledge more effectively, so that the forecasting of hurricanes can be improved.

In the field of medicine, the Army has made many outstanding contributions. The accomplishments of Maj. Walter Reed and Maj. William Gorgas, of the Army Medical Corps, top an impressive list of these notable contributions. The first typhoid vaccine in the United States was made by the Army Medical School. Smallpox vaccination was introduced in this country by an Army medical officer. The first apparatus using chlorine gas in the purification of water was developed by another Army medical officer. And now, to defeat one of man's oldest enemies, the Army Medical Corps has developed primaquine—to cure malaria.

The Army's vital need for lightweight metals of great tensile strength—for equipment used in airborne operations, for example, provided stimulus to the development of metals which are strong, lightweight, corrosion-resistant, such as magnesium, aluminum, and titanium alloys now used in commercial products.

Many other benefits, difficult to visualize, accrue to all of us in the metal products we use daily—they are made better, with better materials, and they last longer, because of the contributions made in the field of metallurgical techniques by the Army Ordnance Corps.

Our transportation industry is watching very closely a development project of the Army's Transportation Corps. This project is called containerization. Army materiel is placed in steel cargo containers, which move intact through the transportation system from originating depot in the United States to using depot overseas. These standard steel containers measure roughly 7 feet on a side, and can be used over and over again. The adoption of this containerization program on a broadening scale by the military will effect economies by simplifying documentation; the reduction of loss, damage, and pilferage; and, in the case of overseas shipping, the elimination of expensive export packing.

The Army Quartermaster Corps has always been high among the organizations contributing extra bonuses to our country. Gen. Nathaniel Greene, the Quartermaster General during the Revolutionary War, started this trend. He set up a system of Army warehouses which was the forerunner of modern warehousing methods. Our entire complex economy depends upon the efficient system of distribution that started then.

In the Seminole Indian War, the Army needed a waterproofed outer garment. The Quartermaster Corps impregnated a light cotton coat with gaita percha—and that was the first raincoat.

Until the war between the States, practically all clothing was either tailored-to-order or made in the home. But during that war the Army Quartermaster Corps set up the first system of mass-producing ready-made clothing. We all know the importance of the multi-million-dollar industry—which was created then.

I hope you have noticed a very significant factor in the things I have been telling you about our Army. In the early days of our history, the Army performed a variety of civilian-type functions for our Government and for our people. But as our dynamic American way of life evolved and developed, all of those civilian-type functions were shifted elsewhere—out of the military. Our Army has concentrated on the tasks that relate specifically to the accomplishment of its military mission.

All of the civilian-type "dividends" we are now receiving from the Army are by-products of work that is being carried on for purely

military purposes, with one exception: that exception, of course, is the civil-works program handled by the Army Engineers. Here, direct work for primarily civilian purposes goes on. But in this case, the Nation draws significant military strength from the arrangement, and this makes the exception worthwhile.

In peacetime, our military construction program is very minor. Yet when mobilization comes, one of the very first things we need is a large and effective organization for carrying on urgent military construction. By having the Army engineers handle our civil-works program in peacetime, when war comes we already have an extensive construction organization in being, which is fully integrated with the Army, and which can be instantly switched from the execution and supervision of public works programs to the execution and supervision of military construction programs. This was a lifesaver in World War II, and if a third world war should come, it is impossible to calculate its importance.

Now, most of the "extra dividends" I have been talking about tonight are fairly tangible and material. But before I sign off here, I want to mention one more dividend we civilian Americans get from the military Americans in this Army of ours.

Often, in our home communities, we have spoken about some young man to the effect that—"He should join the Army. It would be good for him. It would make a man of him." Like most of our folk sayings, this is based on something sound.

Naturally our sons, and brothers, and our daughters' husbands, will gripe while they are in the service—and try to impress us with how tough things are. That's only human. But when you sit down and talk seriously with them, they will tell you that their stint in the Army broadened their horizons, and matured them, and made much more responsible citizens of them than they would have been without it.

The Army chaplains and our character guidance programs, and our information and education activities help, of course. But when the chips are down, what the young man is made of—will show through.

Some of the young people who have been through the toughest circumstances in their military service will tell you that—if a person is made of the right stuff—he will benefit from living with other people, and shouldering new problems, and adjusting himself to the different phases of Army life.

So this is the final "extra dividend" I wanted to mention tonight. This is the one that we can never measure in dollars and cents. But it is a "dividend" which contributes importantly to the strength and maturity of our Nation.

I hope that you have found this look at the Army's "other side" interesting. And I hope that the next time you pay your taxes, you will find comfort—not only in the knowledge that some of your money is being invested in the building of a strong Army to defend your home, your family, and your freedom—but also in the knowledge of these other ways in which the Army serves you in time of peace, with the same dedication that it serves you in time of war.

And I want you to remember too, that the things I have been talking about tonight are extra dividends. We receive regular dividends from the Army—not only when it is actively engaged in winning wars, so that we may retain our freedom and our way of life—but every day of our lives, simply through the sense of security which we enjoy because we have the Army.

Try to imagine, just for a moment, what it would be like if we had no Army. Try to imagine that the professional soldiers who have dedicated their lives to the defense of the Nation have vanished; and that we have lost, along with them, all their military skills and knowledge. Our military equipment is

gone, and our supplies and facilities have vanished. There isn't an American soldier anywhere in the world. Then remember the news as you printed it in your papers today, as you saw it on television, as you heard it over the radio.

Now, if you will give that imaginary picture just a moment to sink in, I think you will be inclined to agree with me—that we have never made, and never will make, a better dividend-paying investment than when we pay our share toward the maintenance of our Army.

Thank you.

Lincoln Day Address by Governor of Idaho

EXTENSION OF REMARKS

OF

HON. HENRY C. DWORSHAK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Wednesday, February 23, 1955

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a Lincoln Day address delivered by the Governor of Idaho at Pocatello, Idaho, on February 9, 1955.

There being no objection, the address was ordered to be printed in the Record, as follows:

ADDRESS BY GOV. ROBERT E. SMYLYE, OF IDAHO, AT THE ANNUAL BANQUET OF THE SOUTHEASTERN IDAHO LINCOLN DAY ASSOCIATION, POCATELLO, IDAHO, FEBRUARY 9, 1955

Seven years in the history of a great State is a comparatively short period of time. To me on this night it seems even shorter than usual. For tonight marks an anniversary of sorts. Seven years ago, almost to the very hour, I had the honor of addressing this association on the occasion of your 1948 commemoration of the birthday of the great Lincoln. Then I had served you as attorney general for the brief period of 2½ months. Your invitation then was my first opportunity to make a public speech to a large audience. For that reason it was fitting that I should return this year as your Chief Executive and I hasten to say to you that I am honored that you invited me.

There is an obscure quotation from Mr. Lincoln's papers that somehow seems appropriate to this time and place and to this minor anniversary of my own. In 1864, just as they departed to join the Army of Northern Virginia, then commencing its campaign through the wilderness, Lincoln said to the 184th Ohio Infantry on the lawn of the President's house in Washington:

"I happen temporarily to occupy this big White House. I am a living witness that anyone of your children may look to come here, as my father's child has. It is in order that each one of you may have, through this free Government which we have enjoyed, an open field and a fair chance . . . that the struggle upon which we are engaged should be maintained."

That simple statement is to me a challenge and an inspiration. Drawn from the deep springs of Lincoln's humility and his communion with the spirit of our Nation's greatness, it is a beacon that anyone of us can follow. It speaks the ancient command that we must so honor our freedom that no act of ours shall ever leave that heritage less secure than it was when we received it from our fathers.

Some of you may remember that night 7 years ago when first you honored me with your invitation to come here. I had occasion then to say that it was fitting that we honor

Lincoln here "in the heart of this burgeoning new industrial empire in southeast Idaho." Just because that 7 years have been so brilliant, and our accomplishments so many, let me take you back in memory along the path that we have traveled.

Seven years ago the Westvaco plant was not yet built on the western approaches to this city. Monsanto had not been heard of in Soda Springs. The Atomic Energy Commission's development in the Arco desert and at Idaho Falls was the secret of some classified drawing board. The Jefferson Lake plant in Bear Lake County was not even a dream. Jack Simplot's plant was only about half its present capacity, and the Garrett terminal on Poleline Road did not exist.

But our development has not all been industrial. We have faced the challenge of the growing years in other fields as well. Count the number of new schoolhouses that dot this southeast Idaho landscape. Add up the support that those schools now have that wasn't there in 1948. Measure the miles of new and improved highways that move our pleasure and commercial traffic to and through our State. Remember that Idaho State College was then in the first year of its life as a 4-year degree-granting college, and that 20 years of sterile conflict on that score were behind us. And ponder the fact that only this week, with the signing of House bill No. 30 your college really reached maturity with the privilege of offering graduate work and granting graduate degrees. With that act, when it is properly implemented, southeastern Idaho will have come of age in the field of higher education.

And then as good Republicans, remember that these 7 years were Republican years, and let that be an answer to the prophets of gloom and doom who would have you believe that there is no future and that we must always be someone's colony.

They have been a brilliant 7 years, studded with the accomplishments of a free people, born to persevere and prosper. They have been the accomplishments of men and women true to the heritage of liberty and enterprise bequeathed to us by the great Lincoln. And the future that lies ahead can be just as bright, and brighter. We face great challenges, but the history of this mountain country is the story of difficulties met and mastered. We have the vision, the courage, the ideals and the spirit with which to face these bright tomorrows and to make them our years of historic growth and development.

I am happy that I can report to you tonight that your 33d legislature is writing a brilliant record of accomplishment. With devotion to the welfare of our State, without regard for partisan advantage, they have worked untiringly toward the solution of some of the most difficult legislative problems to confront a legislature in many years. As your chief executive I have insisted that we must put our financial house in order, and that that task must be the first order of business. The members of both parties in the house and senate have bent to that task unparingly and we are solving our financial problems without recourse to partisan bitterness with all its wasting effects on our future. The spirit and commonsense with which this legislature is facing its work is historic. It makes it possible to view the great future of our State with calm confidence that we can master this challenge that history has given us to build, and then sustain, an economic landmark in the Mountain West.

But I trespass overlong in a discussion of those things that lie closest to my heart these days—those problems of our young and vigorous and growing Idaho.

We are met tonight to honor the memory of the first President which our Republican Party installed in the White House. It is

true that Abraham Lincoln belongs to the ages—to the brilliant history of a free world whose concept of liberty is encrusted with Lincoln's devotion to the Christian dignity of the individual human being. But history will understand in this hour of commemoration on the anniversary of our party's birth, if we remember with glad hearts that peculiarly and historically, the great Lincoln belongs to us—to the Republican Party whose first principles he enunciated and whose feet he first set firmly on the path that led to power. And in this hour of dedication and commemoration, it is fitting that we look to the greatness of his spirit for guidance and for inspiration.

In the Book of Ecclesiastes there is a somber passage about the "time of little hope," which is described as the day when the clouds return after the rain. In some ways it fits this time of international stress all too well. The immediate, deadly danger from the storm is long over. Yet the clouds return and instead of the sunshine of enduring peace in which we hoped to bask after 1945 we have lived under gray overcast.

It was in just such a period that Abraham Lincoln came to the White House almost 100 years ago. The storm had not burst, but the clouds hung low and were growing thicker and blacker. The hearts of brave men faltered when they tried to look into the future; and cowards were already whimpering and whining on street corner and rostrum and editorial tripod. The analogy with our own time needs no stressing.

Yet, had the Nation but known it, on March 4, 1861, the Nation was already saved, for the man had arrived. It took a long time for people to realize it, long years of blood and fire and anguish; and longer years for the dust of battle and the clouds of passion to drift away. But when we could see clearly again, the truth was plain—from the moment that Lincoln took the oath of office as President, the Union was saved.

I draw the parallel no further. I dare not. Men of Lincoln's stature are God's gifts to a nation, bestowed when and as His wisdom, not our wishes, may determine. He may not grant us another in the present crisis; or, perchance, He may have already sent us one whom we have not yet recognized any more than in 1861 men recognized the gaunt rail-splitter as the Nation's savior.

But this we do know—in times when the road ahead is shrouded in mist, it is the spirit of Lincoln that this Nation needs above all else, and it is the gift of that spirit for which it should pray. I am no theologian, but I understand well enough the parable of the Pharisee and the Publican in the temple. Prayer is not enough. The man, or the nation, that goes down from the temple justified is the one that prayed for the right thing. I doubt that it is right to pray for another Lincoln; but I am no more firmly convinced of my own existence than I am that it is right to pray for the light that glowed from the mind and heart of Lincoln.

Carl Sandburg has published as a little book the preface that he wrote for his great life of Lincoln but later for some reason discarded. In it he has a description of Lincoln that may strike you at first as merely curious, but which, when you study it, I think you will admit is great. Sandburg said, "He was not only a genius in the science of neighborly human relationships and an artist in the personal handling of life from day to day, but a strange friend and a friendly stranger to all forms of life that he met."

Translate that into national terms and see what a lordly thing you get. Imagine, not a man, but a Nation infused with the spirit of that man—a genius in the science of neighborly human relationships. How soon the worst of its diplomatic problems would dissolve and vanish. Imagine the United States an artist in the personal handling of

life from day to day—how magically our public life would be transformed, how quickly the screaming and vituperation would die away, how rapidly we would suppress the merchants of hate, how we would scorn the sowers of suspicion and prejudice. Imagine us as strange friends and friendly strangers to all forms of life—the Samaritan among the nations, never identified with any, never inseparably bound to any, always a stranger but always a friend.

Somewhere in that picture I believe you will find every good thing that the United States has done in this blasted and twisted century, the bloodiest in human annals, in which good deeds, God help us, are few and far between. A great deal more is in the picture—it includes every good deed we might have done, but didn't. Take such splendid moments as we have had, such fragments of nobility as we have managed to achieve and fit them together, discarding the weaknesses and villainies, and you will have a portrayal of the grandeur of Lincoln's spirit.

Then add the lost opportunities—the times when we didn't quite understand, or didn't quite dare, or weren't quite generous enough to do the great thing we really wished to do—and you will have the sorrow that brooded over his spirit.

In 1861 it was Lincoln's wish to purchase the slaves and set them free at the expense of the whole country, not at the expense of the Southern States alone. But he was not permitted to do it. Passion was running too high, misunderstanding was too thick on both sides for calm reason to obtain a hearing; so, while the evil was eliminated, it was at the cost of fearful agony and loss on both sides.

In 1955 we are facing the same old evil. It has a new name, but that doesn't matter. They call it totalitarian dictatorship now, but in essence it is slavery. It must be and it will be eliminated; but I believe, as Lincoln believed, that there are better ways of eliminating it than by fire and sword. Where Lincoln said "this Nation," we must say "this world," but the rest we may quote verbatim—this world "under God, shall have a new birth of freedom." The best and wisest among us know that there are better ways of eradicating the evil that must go.

So while I dare not claim that there is a Lincoln among us, I have faith to believe that some men among our leaders are imbued with the spirit of Lincoln to the extent that they will not accept war as the solution of our problem until the last alternative has been exhausted.

You will find such men in both parties, but conspicuous among them is the President of the United States. Under intense provocation at home and abroad, he has yet to utter one inflammatory speech, on the one hand, or, on the other, to yield 1 inch to the communist doctrinaires. With firmness in the right as God gives him to see the right, he is yet convinced that hatred and suspicion, to say nothing of the wild passions of war, are poor instrumentalities to advance the right. He knows that there is a better way and, like Lincoln, he is seeking desperately to find it and then persuade his countrymen to follow it.

It is no partisan appeal to call upon all men of all parties to sustain him in this endeavor. Disagree with him on everything else, if you please, but follow him in his effort to make reason the rule and charity toward all, the spirit of our foreign relations; for this is the spirit in which Lincoln acted, and, so acting, rose above all parties, all sections, all economic interests. In that spirit there is neither Democrat nor Republican, no North, no South, no East, no West, only Americanism.

It was in so acting that Lincoln acquired the piercing vision before which the mists of passion, the dust and smoke of battle

that blinded other men, became the thinnest of transparent veils through which he could see that Nation that was to be—that vision without which the people perish.

These days in Idaho we can be prayerful that a little of this vision of Lincoln's—the divine inspiration that marked out his path—will be given to us at this crossroad. There is now marked out the pathway that will put behind us all of our old and sterile controversies, all our regional jealousy and distrust, if we have the courage and foresight to follow it. And once those areas of mistrust are liquidated, and we all approach our problems without the rancor of partisanship and beyond the dictates of regional pride, then we will truly have turned the pages into the bright history that will be tomorrow.

In the century since the Lord took Lincoln from among us we have learned to know that his real genius was his oneness with his people. Sprung from the most humble among us, born to suffering and privation, touched with an inspiration that had its source in divinity and took its strength from our whole concept of individual freedom and dignity, Lincoln lives in history as the one really great example of the brilliance of the American way. He had the enduring patience to live with a problem until it could, would be solved, and he knew that no issue, no question, would long be mistakenly decided if it was submitted to the patient wisdom and the ultimate justice of the people themselves.

It is fitting then that we should come here to do honor to this greatest of all great Americans and that the brooding and somber spirit of the Emancipator can look down upon us to see if we remember his sacrifice and if the love of liberty and human freedom still burns in our hearts. Look down, Lincoln, look down up us. This is more than an anniversary—it is a rendezvous with your spirit—an occasion for reporting that for another year we have kept the faith.

May God preserve the memory of this great and gallant American. May God preserve the land and the principles for which he lived and died. May God bless our Nation, and give to each of us the strength to answer whenever duty calls, and to say by deeds, as well as words, "Lincoln, we are here, and we remember."

President's Highway Message

EXTENSION OF REMARKS

OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. HILLINGS. Mr. Speaker, President Eisenhower's highway program repeats his now familiar process of coolly surveying a national problem and advancing a sound means by which the problem can be attacked and steps taken toward eventual solution.

No responsible person can deny that our Nation is facing eventual strangulation on the highways. For half a century it has been a nip and tuck battle to keep highway construction ahead of automotive progress. We must move ahead with this bold plan in order to expedite the flow of goods and people from place to place. Whether in war or in peace, our highways are vital to the national economy and welfare. If we can

reduce the annual carnage caused by traffic accidents, this alone will make our efforts worthwhile.

I am particularly pleased with the fiscal aspects of the President's scheme. Here again, the planning is based on our anticipated revenues over a specific period of time. The improved highway system will be paid for out of the funds received from increased gas tax revenues as America grows and is not a mortgage on the earning capacity of future generations as has been the case with other half-baked schemes of past years.

This is a blueprint for action which we as legislators should get behind and support.

Contributions by American Indians for the Welfare of the United States

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Wednesday, February 23, 1955

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Mr. Thomas Dixon, national commander of the United American Veterans, delivered over the facilities of WPIK, at Washington, D. C., on February 19, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Patriotic Americans, in my broadcast last Saturday I brought to you the good news about the building of an Indian temple here in Washington. I want to refresh your memory on the many contributions made by American Indians for the welfare of the United States of America.

Now I will bring your memory back to the year 1492 when Columbus discovered America. To his surprise, Columbus found Indians here on this continent; they were friendly people and brought many gifts to express welcome to Columbus and his crew.

When the Pilgrims landed here, broke and hungry, it was again the American Indians who came to the assistance of these poor and destitute people.

The first Thanksgiving Day was based on the native Indian custom of celebrating their harvest season. The pale-faced Pilgrims carried on this thanksgiving custom with many kinds of food which the Indians brought them.

During the long, bitterly cold winters there was terrible suffering among the early pioneers. They were at the point of starvation for many years—until they could plant and harvest their simple food needs. During these very trying times, it was the American Indians who gave the Pilgrims wild fowl, drinking water, fish, corn, and other provisions. You may be sure that the Pilgrims were grateful for this blessed understanding and help on the part of the American Indians.

The Pilgrims realized in those early days that the Indians were deeply moved by a spiritual influence. The Indians called it the Great Spirit. We call it God.

The American Indians taught the Pilgrims how to take certain roots and make it into a bread, and how to use the wild herbs as food,

and how to make a kind of tea out of small roots.

The Pilgrims were moved to see how devoted the Indians were to their spiritual rituals. Even in those early days the Indians had many skills which made their survival possible; just to cite a few: The Indians showed the Pilgrims how to make fire from two rocks, and how to make cutting implements from rocks.

Next in line was the great Pocahontas, the daughter of Chief Powhatan of the Powhatan Tribes of Delaware. Although Capt. John Smith committed a breach of trust with the Indians and was condemned to die by the Powhatan Indians, it was then that the famous Pocahontas saw a religious duty to be performed, and she went against the wishes of her own father and did her duty by saving the life of Capt. John Smith, because she did not want the hands of her tribe stained with the blood of a human being. I have been told that there are some direct descendants of the great Pocahontas living today, and that they are very proud of their Indian lineage.

Every American has heard of the great Chief Sequoia, whose American name was George Guess. He was the first Indian to make an alphabet of the Indian dialect.

Every American of today knows of former Vice President Charles Curtis, who rose from a lawyer in Kansas to the United States Senate, and then to the Vice Presidency of the United States. Mr. Curtis was exceedingly proud of his Indian heritage, and his sister, Mrs. Dolly Gann, was the leading woman in the society life of Washington for many years.

And everyone knows about Will Rogers, who boasted rightfully, that he never had an enemy. His statue stands in the Hall of Fame in the Capitol Building. He was also of Indian descent.

There was also Senator Robert L. Owens, from Oklahoma, himself an Indian. It was he who brought about the enactment of law which recognized the five civilized tribes as American citizens. Senator Owens was very proud of his Indian lineage.

And every sports writer remembers old Jim Thorpe, who was classed as the greatest all around athlete in the world.

And the aviation world remembers Wiley Post, another Indian, who was the first to fly a solo flight around the world.

Also in the sports world, they all know of Soxolexis, also of Indian parentage. He was a great ball player, and for many years headlined the Cleveland ball team; his name has made baseball history, and today the Cleveland ball team is called the Indians.

And every American knows of the heroes who raised the American flag over Iwo Jima. Well, one of those heroes was an Indian soldier from Arizona.

The American Indians have given outstandingly good accounting of themselves in every war in which this country has been involved, either as individual soldiers, or in regiments of Indian infantrymen and artillerymen. They are unexcelled in military scouting.

The Indians are a proud and patriotic part of our citizenship. They deserve to have their early history and their present treasured heritages recognized in a substantial way as a spiritual force in the establishing of a sacred shrine to be known as The Temple dedicated to the Great Spirit.

This temple will be located in Washington, the seat of our Government, where divine services can be held in the native languages and dialects of the many tribal groups all over the country.

One of my listeners wanted to know why an Indian shrine should be built in Washington. Is it possible that an American can be so shortsighted as not to realize the moral and historical value of such a shrine? We think nothing of tossing billions of dol-

lars into foreign countries. We have spent millions of dollars building monuments to Washington, Lincoln, and Jefferson. But when it comes to a just debt of gratitude to the original owners of this country, the American Indians, why, that has been completely overlooked.

Right at this very minute, our political and religious leaders are rightfully doing everything possible to arouse the people all over the world to the necessity of moral rearmament. I ask you, what better moral rearmament could we have here in America than the building of a shrine to the American Indians?

I would be very ungrateful if I did not say a word in appreciation of the sponsor of this broadcast, Mr. Collis Ormsby Redd, founder of the Crusaders for the Forgotten Man. Mr. Redd has dedicated his life to the task of awakening the political leaders all over the world to the necessity of getting back to God. Mr. Redd spends his own money in financing these broadcasts, he realizes the moral value of this great cause on behalf of the American Indians.

I thank you.

Washington's Birthday Address by Hon. William F. Knowland, of California

EXTENSION OF REMARKS OF HON. WILLIAM F. KNOWLAND OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 23, 1955

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered last night at the Washington's Birthday banquet of the Sons of the Revolution at the Waldorf-Astoria Hotel in New York.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, distinguished guests, and members of the Sons of the Revolution of the State of New York, I am greatly honored to be called upon to respond to the toast to General George Washington.

As the leader of the Army of the Revolution he was first in war and his courage and ability played a major part in the winning of our independence.

After this great service to the new Nation, he felt he was entitled to retire, but we consider him first in peace because he presided over the Constitutional Convention which gave us the basic framework of our Government and then later became the first President under the Constitution.

In the period of our national life since then, he has been truly first in the hearts of his countrymen.

While we are here to pay tribute to George Washington and the service he rendered to our Nation, it is also fitting and proper that we review some of the current problems and the effect they may have upon the institutions he did so much to help create and to preserve.

The world balance of power has been so upset that no prudent person can ignore the realities of the situation. Not only the future of this Republic but the hope for a free world of free men largely depends upon the policies that we follow and the firmness with which we and the free nations deal with future communist aggression or threat of aggression.

In the past 10-year period international communism has increased its power, its area,

and its population. Ten years ago at this time there were less than 200 million people behind the Communist Iron Curtain. Today over 800 million people live under the most ruthless, godless tyranny the world has ever known.

Recognizing the inherent danger in further Communist conquest, the Government of the United States has undertaken a series of commitments under the North Atlantic Alliance, the ANZUS (Australia-New Zealand-United States) Mutual Defense Pact and mutual defense pacts with the Republic of the Philippines, the Republic of Korea, Japan, southeast Asia, and the Republic of China.

The last two treaties were overwhelmingly ratified by the Senate this month.

In a display of national unity that should have encouraged our friends abroad, given courage to the neutrals and opened the eyes of the would-be aggressor, the House of Representatives passed the resolution by a vote of 409 to 3 and the Senate by a vote of 85 to 3.

This action had no sooner been taken and the two treaties ratified than diplomatic moves started on the part of certain Asian and European powers to bend the line of defense in the Pacific and lay the groundwork for a conference which would have all the unfortunate results of a Munich, a Yalta or a Geneva wherein the aggressor gains his objectives at the conference table.

Unfortunately, the history of these conferences has been that it is always the free world that gives up territory and surrenders human beings to the control of the Communists. It is never the other way around, wherein the enslaved people gain their freedom. We must not permit Gulliver to be tied down by the Lilliputians. There are those, at home and abroad, who seek to advance the cause of world government. Until now it has not been a major threat to our Constitution or our sovereignty. The development of the atomic and hydrogen weapon has caused some persons at home and abroad to believe that world peace and security depend upon some form of world state. This is a fallacy that could cost us our freedom.

This country cannot join its political system with the other nations of the world, including Communist or other dictatorships, without diluting our constitutional guarantees. How can a Communist dictatorship, or any other kind, have an equal voice with this free Nation without compromising our constitutional structure of government and the rights of free men? How can a Socialist or Communist economic system be tied to ours without first compromising and then destroying the free economic system, the rights of private capital, and the unregimented life of our people? How can we join our productive capacity and resources to the unproductive who lack resources without destroying the living standards of our people whose enterprise and thrift helped them accumulate property and capital for new industry? This has been the great incentive that has advanced us from a small colony of 3 million to a great Nation of 165 million people, the most productive the world has ever known.

It is one thing for the American people by deliberate choice, after thorough debate, to amend our Constitution to meet changing conditions. To allow it to happen by default would be a betrayal of our responsibilities.

We must not permit court decisions of Executive agreements to raise such to the status of treaties. Nor will we long preserve our Constitution, drafted at Philadelphia under the chairmanship of George Washington, if we fail to challenge any effort to amend our Constitution by use of a loophole which may provide a treaty or Executive agreement short-cut to what was intended to be a difficult process.

Let us examine the record of the United Nations as an agency for effective collective security as envisioned by some or as a basis

for a world government as contemplated by others.

World War II had not yet terminated in 1945 when the United Nations Conference was held in San Francisco. The people of the world did not know that we were on the threshold of the atomic age though those high in Government had reason to believe a vast new power that ultimately could be used for destructive or constructive purposes was soon to be unveiled.

Hopes were high everywhere that the Soviet Union, though a dictatorship, had learned the folly of aggression and of war and because of the vast help given by the free world to them they would be willing to help establish a system of international law and order to preserve the peace of the world for ourselves and our children.

Unfortunately both during the San Francisco conference and in the 10 years that have followed a vast propaganda effort has taken place to build the United Nations into something which its charter provisions could not or did not permit it to become. In the United Nations different people envisioned different things.

Some envisioned it as a mighty force of collective security that would rally most of the nations of the world to resist aggression and preserve the peace. In moments of oratorical fancy some even suggested that the fact the United Nations was in being would warrant free nations to scrap most, if not all, of their armed forces and place their reliance upon the "police power" of the United Nations and the collective moral persuasion of that organization. On June 25, 1950, this concept was shattered shortly after it appeared to be confirmed.

When the Communist forces crossed the 38th parallel, the United Nations Security Council promptly acted and first called upon the Communist aggressor to cease the aggression. The Communists, of course, forthwith showed they were not impressed by a United Nations resolution or the adverse moral reaction of that organization. The Security Council next called on the 60 members of that organization to give aid and support to the victim of the aggression, the Republic of Korea.

What is the record on this? After 3 years of the Korean war, of the 60 members of the United Nations only 17 contributed a single soldier, sailor, or airman to the resistance of aggression. Outside of the United States of America, the other 16 contributed armed forces in the amount of 45,000. The United States of America alone contributed more than 450,000, and we rotated more than 1 million men through the Korean theater of war. The little Republic of Korea, which was the victim of the aggression, supplied over 600,000.

This means that of the United Nations members the United States of America supplied more than 90 percent of the manpower and better than 90 percent of the resources.

When the forces of the Republic of Korea, not being a member of the United Nations (having been kept out by a Soviet veto), are added to those of the United States, it means that our two nations alone supplied better than 95 percent of the manpower.

Does this indicate that the United Nations is an effective instrument of collective security? The answer must come back in the negative.

Our associates in the United Nations so tied us down that a stalemate was all that could be gained after 3 years of struggle in Korea.

We were denied the right of hot pursuit and the enemy was protected in his sanctuary across the Yalu.

With that example are you prepared to risk the future of our Nation and the safety of our people upon the collective ability of the United Nations to function in the event of aggression? The answer likewise must be in the negative.

Has the time not come for a realistic appraisal of just what part the United Nations is qualified to play and to stop kidding ourselves into believing it is something it is not and, in my judgment, cannot be.

There are some who have envisioned the United Nations as a world state to which openly or clandestinely, individual nations would surrender their sovereignty. Some of the more enthusiastic proponents of this type of super state compared the San Francisco meeting with that of our own Constitutional Convention at Philadelphia. Of course, the two gatherings are not comparable when one considers the building of a government upon which man might depend for the protection of his life and his religious, economic, and intellectual freedom.

In the first place, those who met at Philadelphia spoke a common language and had a common heritage. True, they had come from different areas of the world, but they or their predecessors had come seeking a new way of life, freedom from Old World tyranny or a desire to worship God according to the dictates of their own consciences.

They had fought a common battle against the mightiest empire of that time. They had carried over from the old country the background of the Magna Carta and of representative government. They had had experience as an independent nation, much of it unsatisfactory, under the Articles of Confederation.

With that background, under what I believe was divine inspiration, drafted the greatest document produced by the mind and hand of man for his self-government and protection of his natural rights.

A little more realistic understanding of the history of the nations gathered in San Francisco should have made it clear that such an organization could not be and should not be considered a basis for world government.

There is no common language or common heritage. Nations which have had no experience with representative constitutional government sit on equal terms with those that have had long experience. Nations of less than 1 million have equal representation with those of over 300 million. The Soviet Union, which is perhaps the most tyrannical government since western civilization entered the modern era, sits as an equal partner with nations with long-established constitutions of law, order, and a respect of the rights of man.

Now, there are those who urge the admission of Communist China which was the aggressor in the Korean war. This, together with the other Communist states, would give that system of tyranny over 800 million people that they claim to speak for.

As for me, as long as I have a voice or a vote in the Senate of the United States, I shall never consent to permitting the guarantees of freedom under our Constitution being diluted or modified directly or indirectly by any organization having in powerful policy positions nations which have no appreciation of or respect for free institutions.

Let us be gradually edged into such a world state before we learn too late wherein we have been taken. I believe that every candidate for public office—executive, legislative or judicial—should be asked to give a forthright view upon this great public issue. It is later than you think.

The United Nations, if it does not destroy its moral position by actions which I shall mention, does have a function it could perform. It could be a forum wherein the views of the free world and the Communist world might be aired provided that there was assurance the debates in the General Assembly or the Security Council were receiving as widespread coverage behind the Iron Curtain as they do in the free nations.

Otherwise, it becomes a vast propaganda forum for the Communists wherein the point

of view of the West does not have the equal opportunity to get to the people in the Soviet Union and its satellites because of the strict censorship those governments exercise.

Even in regard to its position of moral leadership the United Nations has allowed itself to become seriously compromised.

Following the intervention of Communist China into the Korean war the United Nations, after great hesitation, declared Communist China the aggressor. There had been no such hesitation when the small aggressor Communist Korea, crossed the 38th parallel in June of 1950.

To close observers this seemed to indicate that there would be alacrity to pass a resolution and to act against a small aggressor but there would be procrastination and delay in acting against a large aggressor. This seemed to be an abandonment of principle for expediency.

Later, when the evidence was conclusive that the Soviet Union was not only giving moral support to Communist aggression in Korea but was supplying MIG planes, tanks, artillery, ammunition, and other weapons in clear violation of the United Nations resolution and the charter of the organization, no steps were taken to expel the Soviet Union from the United Nations.

Later on, the official representative of the Soviet Union baldly and boldly admitted the fact that such support had been given and in effect defied the United Nations to do anything about it. They did nothing and by inaction underscored their futility when dealing with Soviet charter violations.

Every member of the United Nations knows that the terms of the Korean armistice have been violated on numerous occasions. The neutral nations commission is not allowed to function in Communist North Korea as it was intended though they have complete freedom in the area of the free Republic of Korea. In violation of the terms of the armistice, the Communists have brought in equipment and built military airfields. No effective steps have been taken to require respect for the terms of the armistice.

The most flagrant violation has been the admitted holding of 15 members of the American Air Force, 11 of whom have been sentenced to prison terms of from 4 to 10 years. Under the terms of the armistice it was required that all prisoners of war who wanted to be returned should be allowed to do so.

There is strong reason to believe that there are at least several hundred additional United Nations and United States prisoners of war being held in violation of the terms of the armistice.

The United Nations passed a resolution expressing its concern in this matter. The Secretary-General, Mr. Hammarskjöld, made a special trip to Peking. He returned without the release of the prisoners and without any date upon which they might be expected to be returned in the future. It is apparent that they are being held for the purposes of international blackmail on the part of the Chinese Communists.

Impotent and paralyzed, the United Nations Security Council and General Assembly have taken no effective steps to enforce the release of our airmen in accordance with terms of the Korean armistice. Again I ask: "What effective steps, if any, does the United Nations intend to take?"

In the matter of the Chinese Communist aggression against the Republic of China which is a charter member of the United Nations, that organization invited the Chinese Communists to come to New York to discuss a cease-fire.

Arrogantly, the Chinese Communists laid down terms that a victor would be expected to lay down to the vanquished—namely that the Republic of China should be removed from the Security Council and that the Soviet Union resolution condemning the United

States should be made the order of business rather than the New Zealand resolution relative to a cease-fire.

When this message was received the United Nations again demonstrated its ineffectiveness by postponing the whole situation, while some of the neutralist friends of the Soviet Union and Red China are trying, through diplomatic channels, to provide for a Far Eastern Munich whereby the Chinese Communists will be given the key coastal islands of Quemoy and Matsu and membership in the United Nations. This, of course, would be another defeat for the free world and throughout all of Asia looked upon as another victory for the Communists, comparable to that growing out of the Geneva Conference, wherein the Communists gained control of Northern Vietnam and 15 million more human beings.

I am strongly opposed to the admission of Communist China into the United Nations.

If, as part of a Far Eastern Munich, the appeasers force Red China in I shall devote the balance of my life to taking the United States out.

These are not pleasant facts, and there are many in this country and elsewhere who, because of the vast amount of publicity and propaganda, have gotten a distorted view of the capabilities of the United Nations Organization.

Certainly, in this day and age of the airplane and the atomic weapon, a nation can no more return to isolationism than an adult can return to childhood.

It is important that we have a system of effective collective security and to demonstrate to the Communist world that there will be no further retreats or the abandonment of free people into Communist hands.

This Nation will live up to all of its treaty obligations, and we have the right to expect that our allies will do likewise.

I have a deep conviction that the American people and those throughout the free world who understand the dangers facing us will never again pay the price of another Yalta or another Geneva in order to buy a temporary respite from the insatiable appetite of international Communists to destroy human freedom.

If we as a free people will show the same courage and common sense that motivated Washington and the others who under divine inspiration gave us our Constitution there are none of our great domestic problems we cannot solve and there is no foreign foe we need fear.

Twenty-Dollar Tax Cut: Will It Do Something for the Average Person, or to Him?

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. HOSMER. Mr. Speaker, I am including below an article from yesterday's Christian Science Monitor documenting the political nature of the proposal for a \$20 reduction in personal income taxes for each taxpayer and each of his dependents. The article also sets forth the purposes and plans of the Democratic Party for further and additional maneuvers with political "sex appeal."

In it the distinguished majority leader is quoted as saying that whenever "anything is done for the average person, the

Republicans oppose it and cry politics." With such statement I heartily disagree.

I believe a more accurate summation would be this: "Whenever anything is proposed that will do something good for the average American, the Republicans support it wholeheartedly; but whenever anything is proposed because it is politically attractive, but in the end will do bad for the average person, the Republicans have the courage to oppose it."

The \$20-reduction scheme is a case in point. By dint of real political courage, vision and foresight during 1953 and 1954, the Republican-Eisenhower administration came to grips with the problem of spiraling inflation in this country.

In 1939 the cost of living index was at 59.4. By 1954 it had skyrocketed to 114.4. In these 15 years under previous administrations the average person had more than half of his savings wiped out by the indirect taxation of inflation, the security in social security was taken away because benefits of the program no longer were enough even to buy necessities at inflated prices, and there was no end in sight for similar hardships on the average person.

Were these previous administrations doing something for the average person? More accurately, they were doing something to him, because they failed to get the public debt in hand and thus stop the spiral of inflation.

Then along comes the Republican-Eisenhower administration and after 2 years the cost of living index at the end of 1954 is at 114.6, with two-tenths of 1 percent of what it was when that administration took over.

Now comes 1955 and a Democratic-controlled House and Senate. Within 7 weeks there is proposed the \$20 tax reduction political scheme to upset the economic appletart. It would result in cutting the Government's revenue, increasing the debt, and thus start the vicious inflation spiral all over again. It will cost the average person in increased prices far more than the \$20 it saves him in taxes.

So, Mr. Speaker, I propose this honest question: Are those behind this scheme going to do something for the average person, or something to him?

The Monitor article above referred to follows:

DEMOCRATS TRY TO OUTDO GOP?

WASHINGTON.—That proposal for a \$20 reduction in personal income taxes—which the Democrats are seeking to rush through Congress this week—is the opening gun in a frankly political drive to win voter support for 1956.

The Democrats are preparing to outbid the Eisenhower administration—on taxes, on schools, on highways, on whatever else looks feasible.

In a reversal of the usual conservative-liberal sequence, the Democrats are preparing to say: "We can do what the Republicans propose, but we can do it better."

The Eisenhower administration has held out the hope of an income-tax reduction in 1956. The Democrats propose to vote it through now—a \$20-a-year cut in personal income taxes, with an additional \$20 cut for each dependent, effective next January.

DEMOCRATIC TACTICS

The Eisenhower administration is sending its \$101 billion highways program to Congress February 22. A Democratic-con-

trolled Senate Public Works Subcommittee has started hearings 1 day earlier on a bill introduced by Senator ALBERT GORE, Democrat, of Tennessee, authorizing annual Federal appropriations of \$1,600,000,000 a year for the next 5 years for highway construction.

President Eisenhower has proposed a \$7 billion school-construction program, designed to build schools through local option, private lending and construction and very small increments of direct Federal aid. The Democratic National Committee has circulated a confidential memorandum to all Democrats in Congress saying this program would produce no new schools for 2 or 3 years.

Democratic Members of the Senate Labor Committee, conducting hearings on the schoolroom shortage, look with favor on a bill by Senator LISTER HILL, Democrat, of Alabama, proposing big direct Federal appropriations for school aid.

This is the new Democratic strategy—to outdo and outbid the Republicans. Democrats have been complaining that President Eisenhower has moved so far in adopting humanitarian, liberal legislation that he has seized the Democrats' best issues before the voting public.

POLITICAL MANEUVER

Democrats have been wondering how on earth they could defeat President Eisenhower if he stands for reelection in 1956. They find it dangerous and unwise to attack him directly. But perhaps he and his party can be outmaneuvered; the income-tax cut suddenly exploded in the House by able veteran Speaker SAM RAYBURN, Democrat, of Texas, is the first tactical move in this direction.

House leaders, formally introducing the income-tax cut in the House Ways and Means Committee, February 21, want to achieve House passage by this weekend. The measure then would go to the Senate where most Democratic leaders have thus far remained noncommittal, although influential Senator WALTER F. GEORGE, Democrat, of Georgia, who is a member of the Senate Finance Committee, said the House leadership, led by Speaker RAYBURN, had drafted the measure without consulting Senators.

Quite naturally, Republican leaders in Congress have denounced the surprise Democratic plan as an irresponsible move intended to embarrass Mr. Eisenhower. They have protested that it is improper and disgraceful for the Democrats to try to ram through the proposal in a week without regular hearings. The income-tax cut is proposed as a rider to the administration bill to extend present corporation and excise taxes, due to end April 1, for another year.

M'CORMACK RETORTS

Because of the administration's desire to extend these taxes, to prevent the budget from falling further out of balance, President Eisenhower hardly will want to veto the main bill to kill off the rider. Here is where an item veto would be helpful to the Chief Executive.

The House majority leader, Representative JOHN W. M'CORMACK, Democrat, of Massachusetts, has retorted to the Republican outcries that whenever "anything is done for the average person, the Republicans oppose it and cry politics."

Mr. Eisenhower has said the Government cannot afford the revenue loss of an income-tax cut so soon because of the estimated \$2,400,000,000 deficit in the fiscal year starting July 1. The President is likely to have one powerful Democratic supporter in the Senate, Senator HARRY BYRD, of Virginia, but he would hardly be able to stop the proposal in committee.

Tax reduction always has heavy political overtones. Political scientists and economists make the point that in these days when tax policy has such far-reaching impact on the national economy, partisan con-

siderations should be subdued, and tax policy should, in effect, become as bipartisan as foreign policy.

The vital immediate tax issue before the Nation is whether the 52-percent corporation excise taxes (which under present law fall to 47 percent in April) and the special excise taxes on autos, tobacco, liquor, and gasoline shall continue for another year.

It is really too early now, in the opinion of economists, to know whether it would be wise to cut individual income taxes next year. But to the strategists of the Democratic National Committee and the Democratic House, it is politically wise to resuscitate some vote-getting issues well before 1956.

Investigation of November 1952 Election in New Mexico

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Wednesday, February 23, 1955

Mr. CHAVEZ. Mr. President, I ask unanimous consent that the report of the United States grand jury for the Federal district of New Mexico on the contest growing out of the general election held in New Mexico on November 4, 1952, be printed in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

IN THE DISTRICT COURT OF THE UNITED STATES
FOR THE DISTRICT OF NEW MEXICO—IN THE
MATTER OF THE GRAND JURY REGULARLY
CONVENED AND EMpaneled AT ALBUQUERQUE,
N. MEX., ON SEPTEMBER 13, 1954—No. 3685,
MISCELLANEOUS

REPORT OF THE GRAND JURY

To the Honorable CARL A. HATCH,
United States District Judge:

We, the grand jury, having been duly empaneled, sworn, and instructed by the court, having performed our duties in accordance with the instructions of the court, and having completed all business now before us, beg leave to submit the following report of our actions:

We were empaneled and began our deliberations at Albuquerque at 9:30 a. m. on September 13, 1954, and have been in session until the time of this report at 4:30 p. m. on September 24, 1954.

We have investigated 82 matters presented to us by the United States attorney, said investigations involving 99 defendants.

We have examined 110 witnesses, and herewith return into open court 65 true bills and 16 no bills. In certain cases investigated by the grand jury, the persons investigated were not bound over to await the action of this court and the grand jury found no basis for indictments. In accordance with the instructions of the court, no bills are not being formally returned into court in such cases. This accounts for the discrepancy between the number of cases considered and the number of true bills and no bills returned.

The grand jury expresses its sincere thanks to the court for permitting it to use Judge Hatch's library to hold its session. The grand jury further takes notice that during the time the grand jury was in session Judge Rogers was conducting jury trials in the only courtroom in the Federal Building in Albuquerque, and that his jury was forced

to use the room that was normally used by the grand jury which, by the way, is too small for the use of the grand jury. The grand jury further notes that during its session at the same time that Judge Rogers was using the courtroom Judge Hatch had to conduct trials in his private office, both Federal judges having business at the same time.

The grand jury wishes to take this opportunity to stress that in its opinion the courtroom facilities and grand jury room facilities in the Federal Building in Albuquerque, N. Mex., are completely inadequate now that there are 2 Federal judges, so much so, to the point that 1 of the judges has had to use his personal office to conduct trials coming before him officially. The grand jury considers it against the public interest in the conduct of the business before the Federal courts in New Mexico that one of the judges, namely, Judge Hatch in this instance, had to release the room where he has the court's library, it being the only library in the United States District Court for the use of the grand jury, to the detriment of the court and the attorneys who were participating in the trials before Judge Rogers inasmuch as they had no access to the library during the time that the grand jury was in session.

Certain evidence was heard by this grand jury at its last meeting which ended on the 31st day of March 1954, indicating that there were possible violations of Federal laws in connection with the general election held in this State on the 4th day of November 1952. As a result thereof and in the interest of the people of the State of New Mexico, this grand jury requested that a full and complete investigation of said election be had in order to determine whether there was any fraud or whether there was a violation of the civil rights of any individuals. We expressed the desire that this investigation be conducted by the Federal Bureau of Investigation.

We wish to report that pursuant to that request by this grand jury, the court ordered all the ballots concerned impounded. The Federal Bureau of Investigation conducted a wide, thorough and complete investigation of all of the allegations made. We have spent more than 3 days during the last 2 weeks in which this grand jury has been sitting, listening to a very complete, detailed and thorough report concerning every aspect of the investigation conducted by the Federal Bureau of Investigation on 39 separate allegations made by several persons concerning the 1952 general election, each 1 of said 39 allegations branching out into numerous suballegations.

We wish to report to the court that the great majority of the allegations which were made concerning violations of Federal laws were completely irresponsible and without basis in fact. The Federal Bureau of Investigation, upon instructions from this grand jury, spent a tremendous number of man-hours investigating each phase of those allegations so that this grand jury could once and for all determine what the alleged violations were and, if there were any violations, who was responsible therefor. From the very thorough investigation that has been made and the evidence that has been presented to us, we feel that the great majority of those allegations should never have been made in the first place as they had absolutely no basis in fact. Most of those allegations seem to have been motivated for purely political purposes without any investigation having been made concerning the facts, by the people who made the allegations.

We wish to highly commend the Federal Bureau of Investigation and especially the agents who worked on this case, as well as the staff of the United States attorney for the district of New Mexico, on the thoroughness and diligence of their work in this matter. They carried out the wishes of this grand jury in a most excellent manner.

The evidence produced before this grand jury showed that out of 105,000 ballots, which were involved in the several allegations of this case, only an infinitesimal number were found to contain any evidence of irregularities at all, including cases where there was strong doubt as to whether there were irregularities. In our opinion it is doubtful that in any election of this type held anywhere, fewer voting irregularities would be found.

We wish to report to the court that no evidence of a conspiracy to violate the civil rights of any individuals was found during this investigation. There was some evidence of technical violations through ignorance of the law on the part of some individual election officials and voters. The grand jury is of the opinion that in those cases there is not sufficient evidence of willfulness to warrant the return of an indictment as the persons involved were acting in good faith. In matters which disclosed technical violations or other violations of State laws, we find that such evidence was turned over to the State authorities. We find that many of the allegations which were eventually investigated by the Federal Bureau of Investigation turned out to be based purely on hearsay stories which came out in the newspapers after the general election of 1952, and had no basis in fact.

We wish to state that this grand jury is composed of representative people of the State of New Mexico and that it is our opinion that the laws concerning elections in the State should be enforced, but that in doing so the people involved in making accusations of violations of such laws should be more careful in investigating for themselves the facts before such allegations are made public and turned over to the investigative agencies of the Government. It is perhaps appropriate to point out that in our opinion any laxness in the conduct of the elections is due in a large measure to the lack of interest of the general public in the State in lending themselves to help at the polls. It is our opinion, after listening to all of the evidence in this case, that the great majority of the election officials, who sacrificed their time and efforts in the 1952 general election in carrying out their duties, did a most meritorious job. Nothing more could be asked of them. There were a few instances where some election officials were perhaps negligent. In this respect we feel the blame lies not only with those election officials but with the attitude of the general public in not taking a more active part in the election processes which are such vital functions in our republican form of government.

Paper Is Not Money

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, February 23, 1955

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Paper Is Not Money," written by Philip M. McKenna, and published in the American Mercury magazine of March 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

What is money? "Congress shall have the power—to coin money and regulate the value

thereof—" says the Constitution. By regulation was meant to establish the weight of the coin and the grains of precious metal in it.

The framers of the Constitution did not have any idea that they should presume to say how many bushels of potatoes, or bales of cotton, or pounds of iron, or yards of cloth should be exchanged for a dollar. Nor were they pursuing that will-o'-the-wisp of some of our modern economists who propose that the standard of value of our dollar be a list of commodities that would have the same value indefinitely.

They were to provide the people with coins in dollar denominations, of monetary metal. Nor did they intend, by coining money, to mean printing paper. They were providing a convenient unit of value by which free men might exchange goods and use money as a store of value.

In fact, they were so opposed to paper money experiments that the Constitution further forbids any State of the Union to make anything other than gold or silver a legal tender for payment of debt. That's the law today. Only a devious course of legalistic rationalization has permitted denial of that plain intent.

What's wrong with paper currency and checkbooks? They are fine and dandy when we have an ultimate standard into which paper currency and checkbook dollars can be converted on demand.

But, wittingly or unwittingly, in 1933, the people were taken down the communistic path, Lenin having been reported as saying that the best way to take over a country for communism was first to debase the currency. We proceeded to lay the groundwork for debauching the currency of the American people just after we had elected Franklin D. Roosevelt on his campaign statement that a sound currency is to be maintained at all hazards.

Roosevelt, in his campaign speeches in 1932, had given no inkling of his later course. In fact, he had referred to the magnificent speech of Carter Glass at that time, who had denounced the immorality of any government which would break its covenant with the people by issuing promises, in the sale of bonds which they did not intend to pay back in the same standard of value in which the borrowing was made. Foreign economists advocated the abandonment of specie payments to American citizens to further the interests of their own countries.

There was no valid reason for the action on March 6, 1933, taking us off the gold standard. There was more gold in the United States Treasury January 1, 1933, than there had been in September 1929 when a very great amount of credit existed, in fact, too much. It was described by the then Secretary of the Treasury Woodin as "a suspension of specie payments, for the time being, to meet an emergency." Since then, apparently we've had nothing but emergencies.

We continue, under the laws hastily enacted by a rubber-stamp Congress April 6, 1933, to deny to the American citizen the right to redeem currency in our standard of value, gold at \$35 per ounce, while making good, any business day in the week, to foreign central banks, shipping gold from our Treasury at \$35 per ounce in exchange for dollar credits they may present for redemption. During the week of November 15, 1954, foreign interests drew out \$50 million in gold. During 1953, and down to June 1954, \$1,247,000,000 of gold was transferred to foreign interests from our Treasury. Foreigners own it now. That amount is about 5 percent of our total stock of gold.

To remedy that discrimination against the United States citizen by his own Treasury in favor of foreign central bankers, the Senate

this spring in its Committee on Banking and Currency heard the witnesses who testified regarding the Gold Redemption Act of 1954 and other bills which would take off the deadly hand of government from the people's money by requiring that currency be redeemed in gold coin on demand when wanted by any holder of it.

Testimony showed that there is in the United States Treasury sufficient coverage to meet any expected demand from United States citizens, provided the Government's actions meet with general approval as to their fiscal soundness. Foreign interests can take out gold now, so that the Treasury would be exposed to no more hazard from them than it is today. Students of the facts about redemptions know that gold tends to flow to countries where there is no doubt about the currency being redeemable.

When already swimming, the danger of a shower making you wet is not worth considering. We now have in our Treasury about 10 percent of gold reserves to all currency outstanding, plus all demand bank deposits (your checking accounts and everybody else's) in the United States of America. That's more than was found necessary in 1926, for example, when it was 8.4 percent and nobody thought it dangerous. It averaged 8.6 percent from 1915 to 1932.

Why, then, all this fuss about a redeemable currency? Because of the threat that an irredeemable currency implies to every holder of life insurance, savings accounts, bonds, and pensions payable in dollars, and because government has the power to deteriorate still further the value of the dollar by issuance of bonds and notes which it doesn't promise to pay back in anything better than irredeemable currency.

Such mere threats cause people to do queer things, wasteful to the country as a whole. Testimony showed that since 1940 the dollar has lost on the average 5 percent of its remaining value every year. As people become aware of that fact, they seek what they call hedges against inflation. Lacking a sound currency, people resort to barter instead of money. That is the beginning of the road which, once taken, leads to financial disorder by rapid deterioration of the dollar.

The burden falls on the trustful holder of dollar obligations; the thrifty citizen; the endowment fund of the college; the trust fund of the widow and the children; the savings of the rank and file citizens whether in bonds, savings account or pension fund. Slowly and unobtrusively the value of his savings is taken away by the sly process of monetary inflation.

He thus becomes an easy prey to the claims of any leader who says that he will correct all by rent fixing, by controls, and by a managed economy in which the government will take over his affairs. That's the essence of communism.

One government official said that now is not the time for resumption of specie payments—the dollar would not stand the test. Another testified that, in his opinion, the dollar was very strong, that not until confidence in the dollar got a great deal worse would it be necessary to restore faith in it by making it redeemable to the United States citizen. Like the Arkansas settler who couldn't fix the leak in the roof now because it was raining, and when it wasn't raining the roof didn't need fixing, there is a tendency to procrastinate on the matter of the immediate restoration of the gold standard for the United States citizen. It can and should be done—without devaluation, and without delay.

Remember that Lenin, founder of communism, told J. M. Keynes that the best way to soften a country for communism was first to debase the currency.

A Fighting Secretary of Labor

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, February 23, 1955

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "A Fighting Secretary of Labor," which appeared in the January 1955 issue of the Carpenter, the official publication of the United Brotherhood of Carpenters and Joiners of America. This article includes the text of the address which Secretary of Labor James P. Mitchell delivered before the 27th general convention of the brotherhood, and I wish to commend it to the attention of the Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EVENTS ARE PROVING JIM MITCHELL TO BE A FIGHTING SECRETARY OF LABOR

As the months roll by, it is becoming increasingly evident that the Department of Labor is in militant hands. There is evidence that under the leadership of Secretary James P. Mitchell the Department is going to do the things it was set up to do—namely look after the interests of working people.

In a hard-hitting address to the 27th general convention in Cincinnati last November, Mr. Mitchell outlined the things which the Department already is doing, and the new measures it plans to adopt, to protect the rights and interests of men working on projects financed in whole or in part by Federal funds.

By decentralizing responsibility for policing wages and working conditions, chiseling has been made a good deal more dangerous for unscrupulous employers. By coordinating enforcement efforts of all Government agencies, buck-passing has been reduced to a minimum.

Shortly the Department will issue a poster outlining legal wages and working conditions for each job financed by Government funds. These posters are to be displayed in a prominent place on the job site so each worker can tell exactly what he is entitled to. The poster will also tell the worker where to file a complaint in case of a violation.

Since addressing our convention Secretary Mitchell made another major policy speech in which he placed himself on record as being categorically opposed to right-to-work laws. Naturally, he has incurred the displeasure of those who want to see unions placed in a legal straitjacket.

Because it contains a good deal of pertinent information, a major part of Secretary Mitchell's address to our convention is herewith reprinted:

"I know you share my conviction that Federal money spent in connection with construction projects should not be used to depress the prevailing local wage rates. Neither you nor I want unfair contractors to be able to underbid fair contractors by chiseling on established wage rates.

"I am in favor of vigorous law enforcement. I believe that Federal construction work should go only to fair contractors. These contractors, who, I am glad to say, are greatly in the majority, do business according to the rules laid down by Congress in the Davis-Bacon Act and in the other statutes containing prevailing-wage provisions.

"For many years, as you know, enforcement of these laws by the contracting agencies of the Government was not uniform, and sometimes it was lax. To correct this situation, in 1950, the Secretary of Labor was given responsibility of coordinating enforcement of these prevailing-wage requirements by the responsible Federal agencies. The Secretary of Labor was given authority to issue standards and regulations to be observed by these agencies in their environment. The Secretary can make investigations to obtain compliance.

"Real progress has been made in the past year. Liaison with the other agencies involved and enforcement have definitely improved. Serious violations continue to be found, however, and there is still lack of knowledge or lack of interest by some local project officers of the procurement agencies. Some agencies continue to conclude that violations do not merit blacklisting where the facts appear to us to warrant it.

"While these trouble areas exist, the Labor Department's enforcement activities are steadily increasing. There is clear evidence that due to efforts of the Labor Department and the contracting agencies a new climate of responsibility is building up among both contractors and the Government agencies involved.

"We like to think that our efforts in the Department of Labor have played some part in these achievements. Still, we have not had this enforcement function too long, and time is needed for working out procedures with the Federal agencies having contract responsibilities. And, more importantly, with your help, money is needed from Congress to help us work out these enforcement functions of the Department of Labor, and I hope that in cooperation with the American Federation of Labor legislative group we can persuade Congress to give us more money to enforce the laws that Congress has passed.

"Let me give you a few examples of how our improved-enforcement program is working. The Department of Labor received what appeared to be a rather minor complaint regarding violations at an armed services base in Georgia. This matter was referred to the contracting agency, one of the armed services. When no immediate action was taken, we sent an investigator. As a result of what he found, Department of Labor investigators have been in there since the spring of 1953. Instead of just 1 firm being investigated, about 30 firms working on the same base are now under investigation and it is estimated that restitution of over \$200,000 is due employees.

"In another case a painting contractor in the Pacific Northwest was under investigation. He moved several times and each time used a different gimmick to get around paying the required prevailing wages. He came up with a new one I never heard of before. He listed his employees as subcontractors, and he kept no payroll records. We finally caught up with him, and he is now on the ineligible list.

"In Texas—and you see these examples are in the South and Southwest—a very large contractor was found using a great number of workers to perform journeymen's work and improperly paying them as helpers, such as carpenters' helpers—and, mind you, he came up with a new gimmick. He called some of them 'junior helpers.' At the Labor Department's request, the contracting agency stopped any further payments under the contract and ordered the practice to be discontinued. We have started a full-scale investigation on this job to determine the amount of back wages due to the workers.

"In another case we found a contractor in New Mexico violating the Fair Labor Standards Act in work at an airbase. The men were working seven 8-hour days, 56 hours a week, without overtime compensation. With-

in a week after we discovered these violations we asked the Federal court to order these practices stopped. In addition, an investigation for Davis-Bacon Act violations was started.

"At another base in New Mexico we found a case of fraudulent payrolls. The contractor was very accommodating in this case. He gave each employee a slip of paper with his paycheck showing just how the juggling was done.

"We were very fortunate and it was very easy to catch it.

"We are now developing the case for criminal prosecution and blacklisting.

"As a result of our vigorous enforcement of these laws, a larger number of contractors are ineligible to receive Government contracts for 3 years, because of violations of the law. This is a stiff punishment because it prevents a firm from participating in a substantial portion of all the construction in this country. During the last fiscal year—from June of 1953 to July of 1954—20 firms were blacklisted as against only 4 during the 17 years from 1935 to 1952. I am sure any objective person would agree with me that this shows vigorous enforcement.

"Now I don't want to leave the wrong impression. Most of the contractors who do business with the Government carefully observed the law. But there are those who would break down hard-earned labor standards, cheat their own workers, and place fair bidders at a competitive disadvantage. While the blacklisting penalty is not one that should be used lightly, the law has been and will be enforced, and where willful violations of the law are found, the blacklist penalty will be used and used and used by the Department of Labor.

To do an even better job of enforcing the law, we have given more responsibility to our regional offices. Our attorneys and investigators are now closer to the job sites from which these complaints come. There are now 10 offices instead of 1 responsible for the coordination of the enforcement function. This decentralization should improve enforcement and the handling of complaints of violations.

"In order that workers on the job will be aware of their rights under the prevailing wage laws, and so that they may recognize violations of the law, and how and where to file complaints, we have issued and distributed a poster prepared by the Department, to be placed by contracting agencies or project sponsors on job sites.

"This poster says, in effect, you are entitled to be paid not less than the hourly rate for the particular classification of work which you perform, as set forth in the attached schedule. Apprentices rates apply only to apprentices properly registered under approved Federal or State apprenticeship programs, and it shows where they may file their complaints at the local offices. This will be the poster, and below it will be the wage rates which should determine under the Davis-Bacon Act, and we hope that with the widespread use of these posters more employees and more workers on the job will become better aware of their rights.

"There will also be published soon a pocket-size pamphlet explaining the various laws and regulations for the benefit and protection of construction and other workers. This pamphlet will be available to workers, unions, and contractors throughout the country. And I hope that with this pamphlet your membership and the members and employees of contractors who are not your members will be better able to understand their rights and their benefits under the Federal law.

"Finally, I want to refer to the 8-hour laws which require the payment on Government construction contracts of overtime compensation of time and one-half for hours worked each day in excess of 8. Dur-

ing the past months I became aware of a serious gap in these laws. Apparently, under their provisions, there is nothing to prevent a contractor from working his employees seven 8-hour days, or a total of 56 hours in a week, without the payment of overtime compensation. Of course, some construction activities are covered by the Fair Labor Standards Act which requires the payment of overtime compensation for hours worked in excess of 40 per week, but this is not true of most construction. This is a problem that needs attention and should have legislative remedies in the next session of Congress.

"If we are to enforce strictly the laws for which the Department of Labor is responsible, we need your help in at least two ways. First, we need you to tell us when you see violations of these laws so that we may take action. Violations should be reported to the contracting agencies, or to the regional offices of the Department of Labor, or directly to me. Secondly, it is important that the complaints we receive be sound ones. When we receive complaints of violations of prevailing wage laws, we call them to the attention of the appropriate contracting agency—the Army, the Navy, the Air Force, or some other agency. If the agencies investigate and find them justified, they have confidence in us and will act quickly and cooperatively when we call violations to their attention. If, however, the allegations do not stand up when they are investigated (or are too trivial and picaresque to be worth noting), this hampers our effectiveness with the contracting agencies. It is then natural for them to tend to act more slowly and with less interest when we call alleged violations to their attention. It is the old story of crying 'wolf' too often.

"For example, we received a complaint from a business agent that laborers were operating certain pieces of equipment on a construction project. We referred the complaint to the contracting agency, which made the investigation and informed us that no such equipment had been used on the job. We then wrote to the union and so informed them, and they still made the same charge and gave us the name of the person responsible. The agency again investigated, and then the Department of Labor had a qualified person to check the matter, not a person in the agency, but from the Department of Labor, who found that the whole complaint was wrong and that the union had the wrong job. You can see what kind of a spot that puts us in in enforcing our will with the contracting agency. What I am saying here, of course, does not apply to the Carpenters Union. I just felt it was worth mentioning to give you the full story about our work in this field.

"With your cooperation and with that of the contracting agencies and contractors, these laws can be enforced vigorously and fairly. That is our objective, and I think you will agree we are well on our way to realizing it. If you can suggest any way we can be of better service to you, I hope you will let us know.

"This enforcement of the Davis-Bacon Act which I dwelled on at great length because of your special interest in it is just one example of President Eisenhower's dedication to good government and to the enforcement of law. I know that throughout the country in many States union organization is becoming more and more difficult. I know that in many States of the Union you have a deliberate and direct attempt to undermine the standards which your union and other unions have built up. But I want to assure you that the Department of Labor, within the legal means given to us by Congress, will see to it that the laws that are on the statute books that apply to labor standards are going to be strictly, vigorously, and continually enforced."

Personal Income-Tax Exemption of \$800**EXTENSION OF REMARKS**

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. RODINO. Mr. Speaker, about this time of year some 60 million taxpayers are struggling over the preparation of their income-tax returns. This mental struggle, coupled with the painful duty of paying the taxes, is not restricted to persons of large or even moderate incomes. It extends to persons of very low income as well. It is my conviction that the law is exacting tribute from millions of persons living far below what we like to think of as a fair standard. I believe that equity and economics both demand that the level of personal exemptions be raised to at least \$800.

The tax on income has long been recognized as potentially the fairest tax in the whole lexicon of public finance. It is the one tax which lends itself to manageable progressivity, and measures out its burdens according to the financial capacity of those upon whom its burdens fall. But the Congress has pushed the application of the tax too far. The law now lays a heavy hand on the poor and economically depressed. Reason protests this anomaly. Here we have in the income tax the most perfect tool for distributing burdens according to ability to pay, yet, as it were, we take billions of dollars out of the hides of millions who lack any real taxpaying ability. When personal exemptions under an income tax are so low that the burden of the tax falls on persons whose incomes are below a level capable of supporting a minimum standard of living, then the tax ceases to be levied in accordance with ability to pay.

Economists and sociologists have figured out what is the minimum that any individual or family can receive and still maintain a reasonable living standard compatible with American concepts. These minimums give recognition to the requirements of health, education, decent housing, clean living, an opportunity to share in a minimum of the good things of life. Certainly the Congress, even if it does not guarantee such a minimum, should not deliberately lower the standard of those who already are sub-par. Yet that is exactly what the Congress does when it exacts a toll from the person whose income barely exceeds \$600.

The Congress has not always been so niggardly. Except for a single year, Federal personal-income-tax exemptions, measured in terms of buying power, are lower today than they have ever been in the past. When the income tax was first enacted in 1913, a family of 4 was entitled to an exemption of \$4,000. In terms of the buying power of depreciated 1955 dollars, that was the equivalent of about \$11,000. But actually today, a family of 4 enjoys an exemption of only \$2,400. In 1931, the legal exemption was \$4,300. This had a purchasing power of around \$7,600. Even

in 1944, when World War II was at its height, the exemption had a purchasing power in excess of 3,000 of our 1955 dollars. But today, as I said, the exemption is only \$2,400. This is at least 50 percent and more below what is held out as being necessary to provide a minimum American standard of living. And every dollar exacted in income tax from persons below that minimum drives them one rung farther down on the economic ladder. My point is: If we cannot help to raise up these poor, the least we can do is to refrain from pushing them farther down.

If we raise the exemption to \$800, we will reduce the tax of everybody, and at the same time—and this is the most important thing—abolish the tax on 13.2 million taxpayers with very low incomes. This will give relief not only to these taxpayers, but also it will reduce the tax compliance burdens of thousands of employers who now have to withhold for these low-income taxpayers. Removing some 13 million taxpayers from the rolls will also greatly reduce the administrative burdens and costs of the Internal Revenue Service and permit that agency to apply its personnel in much more constructive and revenue-producing work.

There are those who support tax relief for the wealthy but oppose tax relief for those at lower levels. They protest against removing anyone from the tax rolls. Everybody should pay their fair share, they say. Nobody should be exempt. Happily there are those who read statistics differently, and have a different concept of what is fair. I cannot understand how ordinarily intelligent well-thinking men can argue the justice of all levels of government in the United States taking in taxes more than one-fourth of the income of families with incomes below \$1,000, \$2,000, \$3,000, or even \$4,000. Yet that is what the statistics show. To repeat so there will not be any misunderstanding, the combined Federal, State, and local tax burdens on families with incomes of \$1,000, \$2,000, \$3,000, or \$4,000 exceed 25 percent of their income. To be sure, much of this burden comes from excise and property taxes, but the Federal Government in taxing their incomes also adds to the burden. It is at least this added burden that I insist should be removed.

I consider all that I have just said to be of great importance, but I have not yet reached what to me is one of the most important economic consequences of increasing personal exemptions. Increasing the personal exemption by \$200 will reduce the tax burden of persons in the lowest bracket by a maximum of \$160 for a family of four. With taxes reduced, take-home pay will be increased. But much more important is the fact that the tax savings of all these taxpayers will add about \$4.5 billion in purchasing power, principally of persons in the low-income brackets. They will spend this money for clothing, better housing, more adequate food, refrigerators, automobiles, and the thousand and one items and services that consumers buy. But the net effect on the Nation's economy will be much greater than simply an increase in retail sales by \$4.5 billion. This increased spending will re-

sult in higher business profits, higher tax revenues for the Federal Treasury, and greater employment for all. Recognized economists in the country estimate that increased purchasing power of \$4.5 billion could raise aggregate income by perhaps double that amount when secondary or induced effects are taken into account.

We should remember that many workers are being displaced each year through technological improvements. We cannot and should not try to fight this. Hundreds of thousands of new workers are also moving into the labor market each year. We certainly cannot fight this. But we must ever be on guard to prevent developing unemployment. I caution that 3 million unemployed—the approximate figure today—is not to be viewed with complete disinterest and unconcern. I point out, too, that the average period of unemployment toward the end of last year was nearly 13 weeks. We can only view this with the greatest seriousness.

There are those in the United States who seem to think that the way to promote prosperity is to maintain an economic system and policy which favors business, the great corporation, the wealthy stockholder. Their thought is that some of the benefits accruing to these groups will trickle down to the mass of workers and consumers. It is thinking such as this which dominated the enactment of the 1954 tax law. It seems to me to be far more logical to assure a continued prosperity by increasing consumer purchasing power. With increased purchasing power will come increased demand. Investment, production, and sales will rise, and these in turn will promote more investment, more jobs, continued prosperity. Congress should be ever alert to do all that is necessary to prevent economic depression. But the Congress must also realize that one consequence of concentrating incomes in a relatively few hands is a reduction of consumer buying power. Depressions have been born and will continue to be born so long as the mass of the population have a purchasing power inadequate to buy our potential tremendous industrial output. The Congress must realize that failure to give some relief to consumers from heavy tax burdens is depression creating. The 84th Congress has an opportunity to enact an economically sound, and equitably just, tax measure. An increase in personal exemptions to \$800 is just such a measure, and I call upon the Congress to act favorably and speedily thereon.

Utilization of Congressional Record by Educators

EXTENSION OF REMARKS

OF

HON. EARLE C. CLEMENTS

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Wednesday, February 23, 1955

Mr. CLEMENTS. Mr. President, I ask unanimous consent to have printed in

the Appendix of the Record an article by Mr. Glenn A. McLain, director of eastern Kentucky center of international relations of the Eastern Kentucky State College, Richmond, Ky., which was published in Social Studies, a periodical devoted to subjects of interest to teachers and administrators. As is indicated by the title of this article, "The CONGRESSIONAL RECORD as Source Material for Social Studies Classes," Mr. McLain has pointed out some illuminating and useful ways in which the CONGRESSIONAL RECORD has been utilized by teachers and other educators of our schools across the country, which I think will be of interest to the Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE CONGRESSIONAL RECORD as SOURCE MATERIAL for SOCIAL STUDIES CLASSES

(By Glenn A. McLain, Eastern Kentucky State College, Richmond, Ky.)

Social studies instructors in both the conventional and general educational course often find difficulty in selecting current materials for lecture or discussion purposes. The difficulty often arises because of the mass of material available, not because of the lack of material. It is usual to find many different types of newspapers, magazines, and special pamphlets at hand for either illustrative purposes in the survey course or as a prime basis for panels in the general educational course. Through the use of the Readers Guide to Periodicals and other reference books in the library there is seldom any lack of material, but selectivity is another problem entirely. Although social studies instructors point out the merits or the weaknesses of such periodicals as Harpers, Atlantic Monthly, Reporter, Freeman, and the many others, one source of material is frequently overlooked. The CONGRESSIONAL RECORD, an often criticized, but seldom read publication, can provide necessary historical background and authoritative source material. It is especially necessary in the social studies problems course to help the student find out the issues of our age. These issues are spelled out for the student daily in the CONGRESSIONAL RECORD.

The CONGRESSIONAL RECORD is the publication of the House and Senate. It is published at the close of each daily session before the next day. In Washington, the RECORD is used as a current bible of legislative happenings. Senators, Congressmen, and the President of the United States read the daily RECORD, as the play-by-play report of the most complex governmental operation in the world.

Most Americans are familiar with the general purpose of the RECORD, to provide a verbatim account of the speeches and debates of our elected representatives. Few Americans are familiar with the other but not less important functions of the RECORD. Each Senator and Member of the House is privileged to have printed in the Appendix of the RECORD any material which will benefit the work of the Congress. Our legislators are the sole judges of what type of material will benefit the work of the Congress. Such material may include a recipe for chocolate cake from the legislator's hometown newspaper. It may be the official program of the administration or the opposition party for a new social-security system. Frequently our Representatives have articles printed from the

leading publications of the world. During the first session of the 83d Congress over 2,000 articles from newspapers, magazines, and periodicals were placed in the RECORD. There are few libraries in the world which could boast of such a collection of material on world problems, past and present. Important speeches aside from congressional efforts are included. Resolutions, treaties, and international documents of interest are also printed in great numbers.

It is customary to consider the instructor's teaching aids from a strictly pedagogical point of view. If the instructor makes it his practice to use the CONGRESSIONAL RECORD, he will benefit as much as his students. Instructors today are confronted with the task of keeping abreast of current material pouring from the presses of America. Few instructors faced with heavy teaching schedules can do more than read the specialized journals available in 2 or 3 fields. A daily reading of the RECORD will provide a good cross section of the type of reading material which directly influences our lawmakers. The solving of current problems can be shown to be a matter of sectional opinion induced by historical influences of the past. The instructor can use past issues of the RECORD to build this historical perspective so needed in the problems course concerned mainly with current issues. A careful check by the instructor of the daily flow of publications in special fields being authorized for reprinting by the Congress will provide the most authoritative material available. Such issues as foreign military aid, the United Nations, farm prices, the national debt, or the search for subversives in government can be quickly reviewed and studied by the class.

The instructor will find he can receive the RECORD at no cost to himself. This should be a welcome thought in these days of skyrocketing prices for all publications. An annual subscription to the RECORD will be, in most cases, gladly supplied by the instructor's Congressman or Senator. A privately paid subscription costs \$18 a year. Each Congressman is supplied with 68 copies and each Senator with 100 for distribution to their constituents. Educators are always considered first in the makeup of the legislative mailing lists for the RECORD.

The direct advantages of using the CONGRESSIONAL RECORD as a source for discussion and problem-centered courses are several. A daily reading of the RECORD will show the student exactly how our Government operates from a legislative point of view. Too many times the problems discussed in the social studies class are analyzed in the abstract, without taking into consideration the background of their origin. Both current and past historical background will be highlighted by the use of the RECORD. The class will have the benefit of using authoritative reports as soon as they are printed for the use of the Congress. Otherwise, much valuable material is often sidetracked after congressional studies have been completed until the United States Superintendent of Documents catalogs it for distribution through Government channels. Frequently, the class and the instructor will get the benefit of articles published in newspapers, magazines, or journals which are not accessible in their own libraries. The Appendix of the RECORD is a veritable gold mine in this respect.

By regular usage of the CONGRESSIONAL RECORD, both the instructor and the student will appreciate more readily the vitality and complexity of our governmental and social institutions. New insights can be gained which will improve the content and method of teaching in the social studies course.

Congressional Salaries

EXTENSION OF REMARKS OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 23, 1955

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "Underpaid Public Servants: They're Not All in Congress," which was published in the Detroit Free Press of February 18, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNDERPAID PUBLIC SERVANTS: THEY'RE NOT ALL IN CONGRESS

In voting to hike their present \$15,000 salaries to \$25,000—a 66-percent increase—Members of the House of Representatives took an action for which reasonable-minded citizens will not criticize them.

The pay increase, which applies to Senators also, but which still waits Senate action, is realistic in the light of what has happened to living costs in the past few years. The last time Congress got a pay raise was in 1946, and any housewife or any wage earner knows what has happened since then.

It should not be the policy of the United States, the strongest and richest nation in the world, to expect its public servants to be paid a wage which is not in keeping with the demands and dignity of office.

If we insist upon paying Members of Congress, Federal judges, and other officials (the latter also are provided for in the House bill) salaries below the standards of business, industry, and the professions, we can expect a caliber of men and women who are themselves below those standards.

About one-third of the House Members voted against the pay increase, but we suspect that most of those who did so actually voted against their convictions. We doubt there are many Members of Congress who don't really think they are entitled to more than they are getting now and would be glad to receive more. The votes against the increase, we imagine, were mostly political, and were cast with attention to what some of the less favored folks back home might say.

And what about those folks back home?

We know of one man in Detroit with reason to feel rather bitter about his Congressman voting himself a \$10,000-a-year raise.

That citizen happens to be a veteran Detroit postal clerk with 29 years' service behind him.

He appeared in Federal court Wednesday to plead guilty to stealing \$231.

Stealing postal funds cannot be condoned. But this employee, on the job for 29 years, with 5 children, all under 12 years, to support, has a wage of \$84 a week.

Can the richest and strongest nation in the world be any more complacent about overlooking the dignity of a humble Federal worker than in taking care of the financial needs of our Congressmen, Senators, and judges?

We can't plead surprise. Postal employees have made their plight known to Congress and the people.

Congressmen are undoubtedly entitled to more money. But before they adjust their own pay levels they might first take a good look at some of the inequities in other categories of the Federal service.

Or does the old principle of noblesse oblige exist only in the pages of the romantic novels of the days of chivalry?

Opposition of Electric Cooperatives to the Missouri Basin Interstate Compact Bill

EXTENSION OF REMARKS OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES
Wednesday, February 23, 1955

Mr. MURRAY. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an article from the February 1955 issue of the South Dakota Rural Electric Cooperative paper, the High Liner. This article reports the opposition of the electric cooperatives to the passage of the so-called Missouri Basin interstate compact bill.

The electric cooperatives foresee only interminable delay if attempt is made to deal with the Missouri Basin development through compact procedures.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EAST RIVER DIRECTORS OPPOSE COMPACT PLAN TO MANAGE BASIN

East River Electric Power Cooperative directors here February 1 opposed passage of a compact between the 10 Missouri Basin States as an organization for directing the development of the water resources of the basin, such as is proposed by the bill recently introduced in the Senate by Senator Karl E. Mundt, Senator Francis Case, and 10 other colleagues.

The directors said that the South Dakota Rural Electric Association had previously gone on record against such a plan and questioned that the compact plan is really what the people of this State and basin want. "Certainly, if the people understand these plans," a spokesman said, "they would choose a commission type, such as is proposed by the Hennings bill, which was proposed in the last session of Congress."

A resolution against the compact form was passed by the directors. Motion to pass this resolution was made by Sam K. Ulrikson, Canton. It was seconded by Ralph Dennis, Canova. The resolution:

"Whereas the orderly development of the resources of the Missouri Basin demand that control of these resources be placed in the hands of a commission with fixed authority and fixed responsibility;

"And whereas the need for such a commission is immediate because of the threat of a water shortage during 1955;

"And whereas the attempt to negotiate a compact between the 10 basin States of the Missouri Basin will take unlimited time and will inevitably end in failure: Now, therefore, be it

"Resolved, That we record our opposition to the compact approach to basin management and urge Congress to create a responsible agency on the Federal level."

A compact plan, the directors said, would just add confusion to the situation. It could have no authority and control, would just become another buck-passing organization to further confuse development of the resources of the basin.

Report of Dr. Daniel A. Poling on His Visit to Korea, Japan, and Formosa

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES
Wednesday, February 23, 1955

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting and informative report on the situation in respect to Formosa, made by Dr. Daniel A. Poling, editor of the Christian Herald magazine. Dr. Poling has recently concluded a personal visitation there.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

(EDITOR'S NOTE.—Dr. Poling's report was based upon his visit to orphanages and military installations in Korea, Japan and Formosa. Christian Herald operates 8 children's homes or orphanages in these areas and 1 in Hong Kong. Dr. Poling returned to New York today, after 1 month's absence.)

Dr. Poling said: "It is the glory of the Army of the United States that it has been and is an army of compassion. From his pay, the young American in uniform in all the services has contributed not less than \$4 million to feed, clothe and house the orphans of Korea, Japan, Germany, and the islands. Today more than 50,000 of these children and babies are in Korea alone."

Dr. Poling stated the following as his conclusions from his visit:

"1. Today Moscow and Peiping are joined in a gigantic conspiracy to blackmail the world into surrendering freedom. A 'cease fire' could become a worse disaster than Munich.

"2. The loss of small islands off the mainland may be, from the military standpoint, inconsequential, but with them would go a loss of face that could become a major setback to the United States and the United Nations.

"3. As to American prestige in Asia, the repudiation and recall of Douglas MacArthur was a catastrophe. Followed by the failure of the United Nations to win the Korean War, there had resulted a weakening of the will to resist communism that has become a creeping paralysis throughout the East.

"4. The strong message of President Eisenhower and the practically unanimous support of Congress, have revived hope and gone a long way to restore faith throughout Asia. A week ago nationalist flags flew everywhere over the refugee areas of Hong Kong, where more than 2 million Chinese suffer and wait for the liberation of their homeland. In Japan the growing propaganda for closer ties with Moscow and Peiping was definitely halted by the action in Washington.

"5. I have talked with the representative leaders in every area and level of life in Japan, Korea, Formosa, and Hong Kong—generals, ambassadors, missionaries, prisoners-of-war who refused to return to their homes and chose Formosa, businessmen, refugees, social workers, and recent escapees. Among these men and women there is almost complete agreement as follows:

"(a) More than 90 percent of mainland Chinese hate their Communist masters. Millions have died hopelessly. As to the total number liquidated, such men as Bishop Quentin K. Y. Huang and correspondent John C. Caldwell vary, but the high figure is 43 million. The living wait only for outside help and a leader to rise in revolution

from Canton to the Yellow River. Those with whom I sat in conference are convinced that, given an air umbrella of strength and Gen. Claire Chennault's formula for invasion, Chiang Kai-shek could establish a bridgehead, hold it, and then steadily advance. These same competent observers, many of whom have spent from 20 to 40 years in China insist that American ground troops would not be required.

"(b) We lost the Korean war because we listened to the wrong men, who steadily hindered or reversed our military leaders. For the first time in our history we fought a war, with all its sacrifices and losses, in which we committed ourselves, deliberately and unnecessarily, to less than victory. For this, pressure from abroad was largely responsible.

"(c) Today time runs out—fast. But there is still time enough if, following President Eisenhower's message and leadership and the action of Congress, we listen to such men as Judd and Knowland and give to Admiral Radford and Generals Hull, Taylor, and Chase full responsibility for military action as required."

Move to Town?

EXTENSION OF REMARKS OF

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES
Thursday, February 10, 1955

Mrs. KNUTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Wallaces' Farmer and Iowa Homestead of February 5, 1955:

MOVE TO TOWN?—YOUNG FARM WIFE WONDERS ABOUT QUITTING THE FARM

Here is a letter from a young Iowa farm woman. Her husband is a renter. Read it and see if you think she has the right bear by the tail:

"To the Editor:

"This is the first letter I have ever written to any magazine or newspaper, but I just have to let off steam some place.

"I get so tired of all these writeups worrying about how the young folks are leaving the farm. Look at us. We're staying—so far.

"We are a young couple with four children. We've lived on the farm 6 years, since our marriage. My husband has always lived on the farm. I came from a nearby town.

"We have never given a thought to any life but the farm, but now we are wondering.

"We live moderately and have managed to obtain the necessary machinery, but we cannot seem to get ahead of expense enough to save for that farm of our own we hope to have some day.

"How does the little farmer ever get ahead?

"Right now, the easy way to have a place of our own is to sell out and buy a place in town. Anyone can get a job in town, but my husband is a born farmer and a good one.

"I used to think a man farmed when he couldn't do anything else. I know now that it takes more knowledge and ability than any job a city fellow holds.

"Why, then, can't it be made easier for us to be independent?

"Yes, I know the Government has a plan where you can buy through FHA. But the land has to be cheap and falling apart before loans of this type will be granted.

"Yet there must be a way. I look around me and see so many who are still renting

after 30 years or more. Yes, they were good farmers too, but could never make the step to ownership. I shudder to think that is what will happen to us.

"Perhaps the easy way—moving to town—is the best way? I'm wondering.

"YOUNG IOWA FARM WIFE."

How would our readers answer this? Say that town jobs aren't so easy to get now and that some renters get a better living than some owners? Or what?

Wallaces' Farmer and Iowa Homestead agrees that young people who started in the high time have a special problem. We'll run a series of articles soon about the difficulties of the young farmer. But in the meantime, we'll appreciate comment from our readers. If you want to write to Young Iowa Farm Wife, we'll forward the letters.

Postal Clerk Steals: Judge Is Sympathetic

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. RABAUT. Mr. Speaker, I should like to bring to the attention of my colleagues a matter which will soon come up for their consideration: The question of postal pay raises. At the conclusion of my remarks I insert a news item from the Detroit Free Press, dated Thursday, February 17, 1955, and a copy of my letter to Federal Judge Theodore Levin. The news story tells of a veteran post office clerk with five children making \$84 per week and pleading guilty in Federal court of stealing \$231 of postal funds. Further, I am inserting in the RECORD a copy of my letter to Federal Judge Theodore Levin assuring him that my remarks are in no way intended to influence his duties as a jurist.

In his remarks from the bench Judge Levin states that "Something should be done about it." The implications contained in his statement, I feel, are directed to this body. When a jurist decries the inequities of a socio-economic situation which places beyond his scope of authority a means of applying a remedy I am of the opinion that those in a position to take action should not falter or hesitate. The remedy must be shaped here in the form of adequate postal pay legislation capable of answering not merely the needs of bare existence, but sufficient in scope to make the public servants of our postal system shareholders of a standard of living for which we can be justly proud.

I feel that the President's message on postal pay increases falls short of the mark in supplying the needed solution for this problem. The administration's salary plan, now before committee, calls for a 5 percent increase in basic salary rates. What would this mean to the postal clerk that is responsible for nourishing five children along with himself and his wife? Not enough to pay one-half the milk bill if he is supplying these tots with the recommended minimum of 1 quart per child per day. Since when has this great legislative body considered

the basic welfare of its citizens secondary to a dream of making the postal service a self-supporting, going business concern? I do not say this to slur any efforts to make more efficient the operations of our Government agencies, but when human values are being equated with the cold statistics of fiscal policy, I, for one, shall never abide by any resultant that sacrifices humaneness for business expediency. Our responsibility is to the many—as well as the few.

Therefore, Mr. Speaker, I earnestly request my colleagues to join me in support of a 10-percent increase in the basic salary rates; retroactive to the date of the President's disapproval of H. R. 7774 of the 83d Congress.

POSTAL CLERK STEALS: JUDGE IS SYMPATHETIC
(By Charles Manos)

A veteran postoffice clerk who makes \$84 a week pleaded guilty Wednesday in Federal court to stealing \$231.

Charged with misapplication of postal funds collected by him on cash-on-delivery packages was Clem Hall, 49, of 1866 Kenmore, Grosse Pointe Woods. He has five children—all under 12 years of age.

Hall's plea immediately drew from Judge Theodore Levin a sympathetic comment apparently aimed at pay scales for postal workers.

"It's a shame a good man like you should be a victim of circumstances," Judge Levin said. "Something should be done about it."

Hall, a clerk in the Grosse Pointe branch, has worked for the postoffice for 29 years.

Judge Levin released Hall, who will forfeit his job and possibly his pension rights, on personal bond pending sentencing.

FEBRUARY 23, 1955.

HON. THEODORE LEVIN,
Judge, Federal District Court,
Eastern District of Michigan,
Detroit, Mich.

DEAR JUDGE LEVIN: I am enclosing with this letter a copy of some remarks I made this week on the floor of the House of Representatives. I sincerely hope that I have not taken any privileges in my interpretation of your comment in regards to this matter.

Since this individual is a member of my constituency I felt duty-bound to make public mention of the matter with the hope that adequate legislation would evolve therefrom. In no way do I intend my comments to influence you in your duties of administering the justice that our laws require.

I would be most interested to hear whatever further views you might have about the general problem.

Cordially,

LOUIS C. RABAUT,
Member of Congress.

Trade Agreements Extension Act of 1955

SPEECH

OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 1) to extend the authority of the President to enter into trade agreements under section 350 of the Tariff Act of 1930, as amended, and for other purposes.

Mr. BYRNES of Wisconsin. Mr. Chairman, since I have been a Member of the House I voted on the matter of extending the Reciprocal Trade Agreements Act in some form or other on six separate occasions. In looking through the record of those occasions I find that on four of them I voted in favor of the legislation. On two occasions I voted against.

When this matter was before us in the 79th Congress, it contained no provision to safeguard the American producer and workman against unwise reductions of duties. There was no provision for escape clauses and no provision providing for a finding by the Tariff Commission as to the limit to which a modification or binding of duties and other import restrictions may be made without causing or threatening serious injury to domestic producers. I voted against this legislation.

In the 80th Congress, with a Republican majority, we were successful in writing into the law a provision requiring escape clauses in trade agreements and also the provision providing for a finding by the Tariff Commission of the points below which it would be perilous to our domestic economy to go in reducing tariffs. With these provisions in the bill, I voted for the extension of the Trade Agreements Act.

Then came the 81st Congress. The control of the Congress had shifted to the Democrats and one of their first acts was to repeal the provisions adopted by the 80th Congress. The escape-clause and the peril-point provisions were completely eliminated. I voted against this bill.

In providing for the extension of the Trade Agreements Act in the 82d Congress, the Congress reinserted the escape-clause and peril-point provisions over the vehement objections of the then Secretary of State, Dean Acheson, and President Truman. With these protective provisions in the bill, I voted for the legislation.

The matter of extending the Trade Agreements Act was before us on two occasions during the 83d Congress. It must be said to the credit of the present administration that they did not then, as they do not now, request the elimination of the escape-clause and peril-point provisions. I voted for both extensions.

Mr. Chairman, this brief history of the recent actions of Congress in connection with the Trade Agreements Act shows that the question at issue has not been so much the matter of authorizing the President to enter into agreements with foreign countries, but rather the extent to which the position of our domestic producers would be recognized and the extent to which they would be protected against unfair competition in international trade.

We all agree, I believe, that our prosperity is tied up with the exchange of goods and services. The greater the velocity and volume of this exchange, the greater is our prosperity. That is true whether applied to domestic trade or to international trade. The more goods you can move back and forth between people, the more prosperous everybody is going

to be. We must, therefore, have some machinery, some mechanism, some authority, to make possible the elimination of unnecessary restrictions and burdens on that exchange of goods. The President must have the authority to enter into agreements with other countries which will eliminate unnecessary restrictions. The basic purpose of the Trade Agreements Act is to provide this authority. I support this basic purpose.

Please note that I used the word "unnecessary" in referring to the restrictions and burdens which we should attempt to eliminate. I use the word "unnecessary" because I think we must recognize that circumstances can and do exist which require a nation to place certain restrictions on the goods or services entering into that country. I think we are most unrealistic and make a serious mistake when we criticize either our Government or a foreign government for imposing a restriction on the flow of goods into that country in order to meet some conditions then existing in that country.

The proponents of free trade speak loud and eloquently about the virtues of open unfettered competition. We have heard some of their speeches today. Given their way, we would completely repeal the Tariff Act of 1930, and any of our other laws which regulate the flow of goods into this country.

I, too, believe in competition. I would remind my colleagues, however, that what we in this country have always strived for is fair competition. We have many laws written on our statute books to assure that our domestic commerce will be based on fair competition. With respect to our domestic economy, we recognize that Government has an obligation to assure an environment which encourages fair competition. In 1914 we established the Federal Trade Commission. Look at its basic objectives. Let me quote briefly from the United States Government Manual of 1954-55 concerning the duties and purpose of this Commission:

Although the duties of the Commission are many and varied under the statutes, the foundation of public policy underlying all these duties is essentially the same: to prevent the free-enterprise system from being stifled or fettered by monopoly or corrupted by unfair or deceptive trade practices. In brief, the Commission is charged with keeping competition both free and fair.

Yes, that is our governmental policy in the field of domestic commerce—to keep competition both free and fair. The question I would ask my friends who advocate free trade is, "Should we have any less concern about assuring fair competition in the area of foreign commerce and foreign trade, particularly when that competition arises from foreign producers who are outside of the scope and application of our other domestic laws?" In my judgment, Mr. Chairman, we should be more alert to assure fair competition when the threat is from foreign producers outside of the jurisdiction of our basic laws.

Let it always be remembered that we, as a Government, impose burdens on our domestic producers which we do not and cannot make applicable to foreign producers. Let me call your attention to

just a few of them. I have already mentioned the Federal Trade Commission Act. In addition, there is the Clayton Act, the Sherman Act, the Fair Labor Standards Act, the Federal Food, Drug, and Cosmetic Act, the Labor-Management Relations Act, and, of course, the various States' fair-trade laws. In addition, there are the various Federal and State taxes imposed on domestic producers. There is also the social-security law, the Unemployment Compensation Act, and the various States' workmen's compensation acts. Those are just some of the burdens which we have placed on our domestic producers by law which do not apply to foreign producers of similar commodities.

I am certainly not suggesting that these laws should be repealed. I do say that we must, however, be fair to our domestic producers and recognize that these laws can place them at a distinct disadvantage in competing with foreign producers.

There is no question but what we would all be horrified if anyone were to suggest that the minimum-wage provisions of the Fair Labor Standards Act should apply to only a small section of the country, such as New England, and that the rest of the country would not be subject to this law. There is no one who would not recognize that this would place the New England producers at a decided disadvantage in any effort to compete with producers in other sections of the country. We would hurl all of the derogatory adjectives in the book at such a proposal. Yet, if it would be unfair and unreasonable to discriminate between domestic producers, is it not just as unfair and unreasonable when we require a domestic producer to comply with such laws and at the same time require him to compete in our domestic market with foreign producers whom our laws do not reach. Certainly the answer must be "Yes," unless we provide some other compensating device to protect against the unfairness. Our tariff laws and import regulations must perform that function.

I have emphasized the need to protect our domestic producers from unfair competition because I am very fearful that there have been times when this fact has not been recognized in negotiations and agreements entered into under the authority of the Trade Agreements Act. I share the concern of many in this House that those who administer the act under Presidential directive are sometimes overly anxious and overly enthusiastic about befriending some foreign country and, in their enthusiasm, lose sight of their fundamental obligation to be fair and honest with our own people. That is why I have long been an advocate of the escape-clause and peril-point provisions of the act. That is why I also feel that there is a need for strengthening the present escape-clause provisions.

Mr. Chairman, I am supporting this extension. I voted to report this bill out of the Committee on Ways and Means and I will vote for its passage today. If I could vote to give the authority referred by this bill to a Democrat administration, as I did in 1948 and in 1951, I

certainly can vote to give it to the present administration.

Because I believe we must take every precaution to assure protection for our domestic producers against unfair competition from foreign producers, I intend to vote for the motion to recommit, which has as its objective the strengthening of the escape-clause procedure.

Toynbee Answers 10 Basic Questions

EXTENSION OF REMARKS OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, February 23, 1955

Mr. SMITH of New Jersey. Mr. President, in the magazine section of the New York Times of February 20, 1955, there appears an article entitled "Toynbee Answers 10 Basic Questions." The subtitle of the article is "The Noted Historian-Philosopher Expresses Optimism on Some of the Great Issues of War and Peace That May Determine the Future of Western Civilization."

These questions and Professor Toynbee's answers are so illuminating that I ask unanimous consent to have the article printed in the Appendix of the Record.

Let me call the attention of my colleagues to the 10th question, which is: "Do you think that communism is the wave of the future?" An outstanding statement in his answer is the following, which can be characterized as the key to the entire article:

The wave of the future is, not communism, but religion of the kind that does give the individual human being effective spiritual help in leading his personal life.

There being no objection, the article was ordered to be printed in the Record, as follows:

TOYNBEE ANSWERS 10 BASIC QUESTIONS

(EDITOR'S NOTE.—The writings and speeches of Arnold J. Toynbee, author of the monumental *A Study of History*, have produced a good deal of controversy. What follows are 10 basic questions put to Professor Toynbee and his answers to them.)

1. Are you an optimist or a pessimist about the future of Western civilization? Why?

I am an optimist in two senses: (a) I do not believe that Western civilization is fated to decline and fall. (I do not believe, either, that it is bound automatically to survive and prosper.) (b) I believe we Westerners have it in our power to save our civilization by our own exertions. No doubt, we may fail to do the things necessary for our salvation, but this is not what I expect. My expectation is that the challenges presented to Western civilization in our time are going to arouse us to repent, to reform, and to lead a new life.

2. Do you believe that history repeats itself?

Repeats itself is ambiguous. It may mean "is bound to repeat itself" through the working of some inexorable law of nature which cannot be broken by the action of human minds and wills; or it may mean "has sometimes repeated itself in the past," and therefore can repeat itself, without there being any evidence that it is bound to repeat itself.

I believe that history repeats itself in the second of these two alternative senses, but not in the first. I am not a determinist.

3. Isn't our present period distinguished by new factors which make it unique—the atom bomb, the rise of Communist states, etc.? Can it, therefore, be said to be repeating any other period?

The atom bomb is not the first new weapon, of greater destructiveness than any weapon known before, that mankind has added to its armory; the atom bomb is in the same series as the airplane, gunpowder, the crossbow. The present Communist states, again, are not the first states that have been dedicated by their rulers to the militant propagation of some particular ideology or religion. There have been militant Protestant Christian, Catholic Christian, Islamic, and Jewish states in the past. So there is a sense in which neither of the new factors mentioned in this question makes our present period unique.

At the same time, a difference in degree, when it is very great, can become a difference in kind; and I do think that the difference, produced by the invention of atomic weapons, in the degree of the destructiveness of war is a difference that has produced a change in the nature of the institution of war as known and practiced hitherto.

In the past, war has seemed to "make sense" because it has seemed reasonable to make two assumptions: (a) That the soldier, by risking and, if need be, sacrificing, his life at the front has at least a chance of being able, at this price, to defend something behind the front effectively; (b) that it is better to win a war than to lose it. But the invention of atomic weapons looks as if it may have obliterated the formerly valid distinctions between soldier and civilian, front and rear, victor and vanquished. If so, then our present period would be unique in seeing the historic institution of war turn into something new and different: mass suicide. We have already coined a new word, "genocide," to describe this new possibility.

A second difference in degree that has perhaps become a difference in kind is the improvement of means of communication to a degree at which we have come near to "annihilating distance." With atomic weapons in our hands, we are now within pointblank range of one another. We can use this "annihilating of distance" to destroy ourselves. Alternatively, we can use it to make the world a common home for mankind to live in as one family. Both these alternatives have become possibilities in our present period for the first time in history.

A third difference in degree that has perhaps become a difference in kind in our present period is the acceleration of the pace of social change. The revolution through which we are living is not the greatest in human history up to date. It cannot be as great as the revolution through which our pre-human ancestors passed when they were becoming human. But that earliest revolution must have been spread over so many successive lifetimes that no single individual will ever have been aware of the mutation that he was undergoing.

By contrast, in our time the pace of change has become so fast that the individual is now conscious of being kept on the run in trying to keep up with it. This, too, is something new, but it is also not quite without precedent; for something like this bottleneck acceleration of the spread of change has sometimes overtaken human beings in the past when people with widely different ways of life have suddenly run into one another.

Conclusion: Our present period is in some sense unique, and this in important ways. But it is not unique in being unique. Other periods, too, have been unique in ways of their own.

4. If history repeats itself, does that mean world war III is inevitable?

Yes, if "repeat" means "must repeat" (which I do not believe); no, if "repeat" means "has sometimes repeated" (which I do believe).

5. You stress the importance of reviving religion. How would you define true religion?

I would define true religion as being right belief and right feeling taking effect in right action. Without right action, right feeling, and right belief have no virtue in them. By right belief I mean recognizing that (a) we human beings understand and control only a tiny fraction of the universe, and (b) that there is a presence in the universe which is spiritually greater than we are and which is absolute reality. By right feeling I mean awe in face of the mystery of the universe and humility in the presence of absolute reality. By right action I mean trying to bring one's self-centered self into conformity with this spiritual presence behind the phenomena.

I have tried to put my definition in terms that hold good for the religions of the Indian family (Buddhism and Hinduism), as well as for those of the Palestinian family (Judaism, Christianity, and Islam), with which we in the West are better acquainted so far.

6. If there is no religious revival, how will that affect the West?

If there were to be no religious revival, the outlook for the West, as I see it, would be unpromising. I believe our modern western way of life is the expression of a belief in the sacredness of the personality of the individual. This high valuation of the individual personality in the West is being challenged today by communism and other totalitarian ideologies which deify the human community and maintain that the individual human being exists for the sake of the community, as the ant exists for the sake of the ant heap and the bee for the sake of the beehive.

If this totalitarian exaltation of the community were to prevail over our liberal western belief in the sacredness of the personality, that would, I should say, be the death of the distinctive ideal for which the West stands. If our western ideal is to hold its own against the challenging totalitarian ideal, it must stand on sure foundations. Its original foundations were religious. The historical origin of our western belief in the sacredness of the human personality is the Jewish and Christian belief that human souls have an absolute value in the sight of God; and, though, in the modern age, this religious basis of our western belief has been forgotten or even repudiated, I cannot see any other foundation on which our belief can stand.

For this reason, I think the outlook for the West would be unpromising if there were to be no religious revival. In looking forward to a religious revival, I do not expect to see us return to our ancestral religions in the traditional forms into which they had set in the age before the beginning of the modern western scientific movement.

7. One of your critics writes: He comes to the strange conclusion that the Russian reaction to the technical power of the West is analogous to Christianity's reaction to Roman imperialism." Is his a fair statement of your point of view?

No; it turns my point of view upside down and the conclusion attributed to me would be strange indeed, if it had ever really been reached by me or by anybody else. My critic has mixed up two quite separate points of mine, and he has misstated each of them. I have never compared the Russian reaction to the technical power of the West with Christianity's reaction to Roman imperialism. I have made the quite different point that the Russians, since Peter the Great, have reacted to the technical power of the West by mastering western technology and using

it as a means of holding their own. Christianity does not come into the picture here.

On the other hand, in another context, I have compared Russian communism, not with Christianity, but with Roman imperialism, on the ground that communism and Caesar worship are like one another in being glorifications of collective human power at the expense of the sacredness of the individual human personality. In this connection I pointed out that, in the Roman Empire, Caesar worship, which had seemed to have overwhelming material force at its command, was defeated by oriental religions which were not forms of man worship, as Caesar worship was, and which had neither the will nor the power to use material force; and I suggested that, in our world, communism might be defeated by oriental religions, as Caesar worship once was.

I was thinking here of four living oriental religions: Judaism, Hinduism, Islam, and Christianity. In contrast to Christianity, which started in Palestine and reached the West from there, communism is not oriental in origin. It is a western product, a western export. It was manufactured by a Rhinelander in the reading room of the British Museum, London, England, Western Christendom, and it was exported to Russia from here.

8. Is coexistence possible?

Yes, on the evidence of past experience. For instance, in the world in which we are living at this moment, Protestants are coexisting with Catholics, and Moslems with Christians. In the 17th century there were Protestants and Catholics who believed that existence would be impossible for them if the other party were not eliminated, while in the age of the Crusades and the jihads, there were Moslems and Christians who believed that the liquidation of the enemy religion was a necessity if they themselves were to survive. Yet centuries have passed; the parties are still coexisting; and they have not, after all, found it impossible to go on living side by side. These precedents are encouraging. I think of them when I hear western contemporaries of mine saying that coexistence with communism is impossible. In the light of history, I do not take this state of mind tragically.

Coexistence will, though, be uncomfortable and unsafe so long as both sides are simply putting up with it as a state of affairs which they dislike and to which they are submitting only sulkily, out of sheer necessity. If we manage, as I believe we shall, to stave off a third world war, we must make positive use of the time that we buy. We must use it for trying to understand one another and to acquire some confidence in one another. Our long-distance aim ought to be to prepare the way for worldwide cooperation in dealing with the major problems that face the world today on both sides of the Iron Curtain.

The alternative to coexistence is not the continuation of our own existence, with the other party conveniently eliminated, while we live happily ever after by ourselves. The alternative to coexistence is more likely to be nonexistence for both parties, because the alternative is a third world war, and a third world war means mass-suicide in the atomic age.

9. What are the major problems facing the world today, as you see them?

First, the problem of staving off a third world war as a first step toward reaching a relation with one another of sufficient mutual confidence to reduce the fear of war to the vanishing point.

If we manage to solve the problem of keeping, and then insuring, the peace, the next major problem may be that of limiting the world's population. If atomic weapons do not destroy all life, preventive medicine applied by public health authorities will allow the numbers of the human race to

multiply up to starvation point and beyond it, unless we can bring ourselves quickly to change our habits, and our traditional attitudes, in regard to the procreation of children.

In this inner sanctum of family life, habits cannot be changed easily. It will be hard, indeed, for wives and husbands to reconcile themselves to the necessary new idea that the number of children they are to have is not exclusively their own private affair but is something in which the world, too, has a say, since it is the world that will have to provide the food ration for the children if these are born into a world on the brink of starvation.

If the world manages to keep the peace and also to keep its population within limits by other means than the inhuman traditional means (war, famine, and pestilence), I think the greatest problem of all will be the revival of religion. I believe man cannot live without freedom; his spiritual life is the sphere in which he needs freedom most of all; and religion may be the only field left for freedom of any kind in the world into which we are now moving.

I see at least three forces at work which are all militating against freedom and telling in favor of totalitarianism. These three forces are the pressure of population, the dangerousness of the high-powered tools with which we have now equipped ourselves and the demand for social justice. All three forces are driving us toward the regulation and regimentation of life. In the fields of economics and politics, the opportunities for freedom, therefore, seem likely to diminish. If freedom is not preserved in religion, which is its spiritual citadel, it may be altogether lost; and, without freedom, man would no longer be human. This is the nightmare of "1984."

10. Do you think that communism is "the wave of the future"?

No, I do not. In the long run, I believe that communism will fail to captivate mankind, because, as I see it, communism has very little spiritual help or guidance to offer to men and women in the personal trials and troubles of their individual lives. I know of no religion or ideology that has captivated people in the past without having proved itself to be a very present help in trouble of the personal kind. I therefore believe that "the wave of the future" is, not communism, but religion of the kind that does give the individual human being effective spiritual help in leading his personal life.

Religion of this kind is represented in the world today by half a dozen living religious faiths: Judaism, Christianity, Islam, Hinduism, the Hinayana Buddhism of southeast Asia, and the Mahayana Buddhism of eastern Asia. "The wave of the future," as I foresee it, is the resurgence of these living religions. I should expect to see them revive in new forms that might be startling, and even shocking, to people who have remained faithful to them in their traditional forms. I should also expect, in a world in which distance has been annihilated, to see them come into a much more intimate contact with one another than ever before, and to learn a great deal from one another.

At the same time, I should not expect to see them coalesce into a single world religion. I should expect to see each maintain its own historic identity; and, for most people, for a long time to come, their ancestral religion will probably be the one in which they will find themselves most at home—though, as the world grows into a single family, more and more people are likely to choose their religion for themselves when they are grown up, instead of automatically remaining members of the local church in which they happen to have been brought up.

Though I do not think that communism is the wave of the future, I do think that it is a formidable movement, and that we cannot afford to sit back and wait passively until mankind becomes disillusioned with it.

It is formidable because it makes a powerful appeal to at least three different publics. It appeals (a) to weaklings who long for clear-cut and authoritative answers to all questions, both on matters of fact and on issues of conduct; (b) to idealists who long to devote themselves to some great suprapersonal public cause which will take them out of themselves; (c) to natives who long to find a shortcut to catching up with the West in material efficiency and power. Of these three publics, (b) is influential out of all proportion to its numbers; (a) and (c), which overlap, include, between them, the great majority of the human race.

If the mission field for communism is as favorable as this, the propagation of our own faith will call for the utmost spiritual exertions from us. We are free to make these exertions if we choose; neither communism nor anything else can prevent us. And we can be confident that, if we do exert ourselves, our faith will win in the struggle for the conversion of souls. We believe that our faith is the true one, and that the truth is mighty and will prevail.

Problems of Aged Persons in the United States Today

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, February 23, 1955

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Care Inadequate for the Sick Aged," published in the New York Times of Tuesday, February 22, 1955. The article dramatizes the critical health problems confronting aged persons in the United States today.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CARE INADEQUATE FOR THE SICK AGED—MOST INSTITUTIONS ACCEPTING THEM WERE NOT DESIGNED FOR THAT PURPOSE—PROBLEM IS INTENSIFYING—INCREASED LONGEVITY ADDS TO BURDENS CAUSED BY SENILITY AND CHRONIC ILLNESS

(By Edith Evans Asbury)

Thousands of New York's aged already are mentally or physically ill and live in institutions. More than half of these ailing aged are supported at public expense.

Two city infirmaries, a city nursing home, 11 State mental hospitals and 100 commercially run nursing homes house and care for the aging ill from this area. Additional hundreds are being cared for in 91 homes for the aged operated by religious and philanthropic organizations. Nobody, including the city's commissioner of hospitals, knows how many chronically ill aged men and women languish in general and voluntary hospital beds, not because they need expensive care but because there is no place to send them.

Most of the havens in which these men and women have found refuge for their declining years were not designed to handle their problems.

Bird S. Coler Infirmary, a 1,920 bed institution on Welfare Island, is an exception. One of the most modern and best-equipped facilities in the Nation, it was planned to meet today's needs of the infirm aged. It was completed 2½ years ago, and already is filled nearly to capacity.

Creedmoor Hospital for the mentally ill, on the other hand, was designed to accommodate a higher proportion of younger and ambulatory patients than it now has. When it opened as a separate institution in 1935, only 28 percent of the patients in New York State mental hospitals were senile. Today this group constitutes 36 percent of the inmates of state hospitals.

Because most of Creedmoor's aging patients are bedfast or have limited mobility, they cannot, for instance, go to centrally located dining rooms in other buildings.

Replanning of food service for patients who cannot climb stairs, or even leave their beds—and some of the very old have to be spoon-fed like babies—is just one example of the adaptation required at Creedmoor.

HOMES FOR AGED EVOLVING

Similar changes, usually at great expense, have become necessary in homes for the aged. Originally planned as rest and retirement places for ambulatory, and sometimes healthy, oldsters, many of these homes are gradually evolving into infirmaries or hospitals.

There are two major reasons for the evolution. First, their original inhabitants lived for many years after entering, became chronically ill, and continued to survive for many more years. Secondly, men and women enter homes for the aged now at the aged of 75 or 80, usually for health reasons.

A generation ago, the average age at admission to a home for the aged was 60 or 65, and the reason was usually a need for shelter and food.

Nowadays, men and women in their sixties have the wherewithal to buy food and shelter in their own communities, thanks to social security, old-age assistance, pensions and the like. And they show an overwhelming preference for remaining independent, and outside an institution, as long as possible.

The old idea that retired men and women romp joyously into homes for aged, or sunny colonies in Florida to rest and relax after years of happy anticipation, has been disproved by recent surveys. They want to stay in their own homes in their own neighborhoods, near friends and relatives, regardless of the rigors of climate or penury.

Eventually, because of the increased life span, illness and enfeeblement overtake many of the aging, and they have to enter some kind of institution when they can no longer take care of themselves.

When aging men and women begin to deteriorate they are prey to a variety of diseases, and sometimes suffer from more than one at the same time.

THE DISEASE OF SENILITY

One of the most distressing illnesses to befall the aged and their families is senility. Medical science has not found its cause or cure. It can last for many years, during which the patient gradually grows increasingly feeble physically and mentally, requiring more and more care. The cost, over a period of years, of providing for a severely senile relative is utterly beyond the means of the average family.

Mildly senile persons can remain with relatives if there is someone to keep an eye on them. They cannot be left alone for long. They are forgetful, may wander away, may turn on the gas to make coffee and forget to put a match to the gas. At this stage their medical needs are likely to be few.

New York's small families, usually living in small apartments, often with husband and

wife both working, face a problem not to be underestimated even with mild senility. The situation is the more critical if teenagers in the family feel shamed by grandmother's behavior, or a daughter-in-law represents the burden of caring for her.

As the disease progresses, the senile person grows more forgetful, more vague, more childish. Physical and sanitation needs, as well as personality disturbances, become extremely difficult for the average family to cope with. At this point, some kind of custodial care elsewhere is usually necessary to keep the rest of the family from being blown apart.

Senility, while it affects the mind, has physical, not mental causes. In nontechnical language, it is the result of hardening of the arteries. The aging, thickening arteries permit less and less blood to flow to the brain, which becomes undernourished, starves and fails.

The disease can occur in any person, regardless of how satisfying his occupation, physical health, mental and emotional stability were during his active mature years.

ALL GROUPS AFFECTED

All income groups are struck. Wealthy families can hire companions or nurses, and keep the patient at home when the disease becomes severe, or they can obtain suitable institutionalization—at great expense.

If the family is supported by welfare funds, or demonstrably unable to pay for the care of the senile relative outside the home, public agencies will assume all or part of the burden.

The average, self-supporting, middle-income family, however, finds it virtually impossible in New York City to solve the problem of long-term custodial care for a senile relative in a way commensurate with its pride and self-respect.

In a nursing home—if one can be found that is willing to take a senile patient—fees will be at least \$150 a month, for bed, board, and nursing care alone. Medical treatment, when needed, will be billed separately.

Homes for the aged are extremely reluctant to accept senile patients, because of the more intensive, therefore more expensive, attention they require. Their financial resources are already strained to the breaking point by the unanticipated greater number of years their present population has survived, and by the resultant increase in chronic illness among them.

Another reason for the reluctance to accept a senile is that his childish behavior sometimes disturbs other patients.

By reducing their own standard of living some middle-income families, at great financial hardship, manage to maintain a senile parent or grandparent. But the senile can survive for years. Usually, as things are now, the senile from the middle and lower income family eventually goes to a tax-supported institution, despite his family's financial sacrifices and pride.

Usually that institution is a mental hospital, to the further demoralization of the family and drain on the taxpayer.

STATE HOSPITALS OPPOSED

Many students of the problems of the aged believe that the majority of the senile do not belong in State hospitals for the mentally ill. They believe the care there is more expensive than need be for this type of patient.

According to State law, senile psychotics must be committed to a hospital for the mentally ill. Many welfare workers believe the law is sometimes loosely interpreted in order to commit nonpsychotic senile men and women because there is no place else to put them.

In the opinion of this group, the law should be rephrased to distinguish between psychotic and nonpsychotic senility. They advocate separate institutions, more like

nursing homes than hospitals, for the senile.

If this were done, they argue, the senile's care would be less of a burden on the taxpayer, his last years could be spent more comfortably, and his descendants would be spared the stigma of mental illness.

Administrators of the State Department of Mental Hygiene are outraged by the latter argument. They declare that no more stigma is attached to illness of the brain than to bodily illness.

Dr. James A. Brussel, assistant commissioner, insists that no patient is in a State hospital for the mentally ill who is not mentally ill.

"Our mental hospitals are so overcrowded now that we are hard pressed for space," Dr. Brussel declares.

"Don't you think we would be delighted to empty our beds of older people if they were not mentally ill?" Dr. Brussel demands. "Then we could reduce overcrowding and concentrate our efforts and facilities on the younger person who would receive more benefit from treatment and perhaps be cured."

A spotlight was thrown on the situation last December, when Supreme Court Justice Benjamin Brenner declared that he was sick and tired of sending old people to mental institutions simply because there is no place else to put them.

Referring to four elderly persons appearing before him for commitment, Justice Brenner said: "Since denial of custodial care and hospitalization to these people would probably result in their death, I find myself compelled to certify them as mentally ill."

Miss Ollie Randall, national president of the Gerontology Society, applauded the jurist's outburst as a welcome shock. It underscored a problem that deserves a high, if not the highest priority in the community—planning for old age, Miss Randall said.

Commissioner Brussel's retort is that after a thorough clinical study—"and you can be sure it was thorough"—all four of the persons to whom the jurist referred were found to be "definitely very psychotic."

Miss Randall and scores of others, including physicians and psychiatrists as well as welfare workers, believe there is merit in drawing a sharper distinction between psychotic and nonpsychotic senility, and in providing separate facilities for them.

Even a distinct wing of a mental hospital, with a different name, which would appear on the death record handed down to his descendants, would be a humane step in the right direction, declares Justice Brenner. He also proposes that a new term "helpless aged," be used in commitment proceedings.

No layman is qualified to diagnose psychotics. Qualified psychiatrists themselves may vary in their judgment as to when the borderline has been crossed from emotional disturbance and neurosis into psychosis.

To the untrained observer, mere erratic behavior may be deemed psychotic, or outward calm of a true psychotic may be mistaken as proof of normality.

PSYCHOSIS IS DEFINED

Dr. S. Bernard Wortis, professor of psychiatry and neurology at New York University College of Medicine, and director of psychiatric and neurological services at University Hospital, New York University-Bellevue Medical Center, says there is no dispute about the exact definition of psychosis.

A psychotic, Dr. Wortis says, is an individual of normal intelligence in such a state of mind as to be unable to care for his own needs, unable to deal with the ordinary requirements of his normal environment, and devoid of insight into the consequences of his actions.

The city's psychiatrists base their decision on commitment recommendations on whether the senile person has reached this state, Dr. Wortis says. He denies that they take into

consideration any lack of other facilities for the patients' care outside a mental hospital.

The same definition, incidentally, almost applies to a baby. And, indeed, senile men and women revert to childishness as their disease progresses. As their memory fails, they forget acquired habits of self control. This means diapering, constant change of clothing and bed linen, and sometimes resistance to being bathed and fed.

One of the most tragic sights imaginable is the wasted, feeble 90-year-old, a great-grandmother, crying piteously in her bed for, Mama, I want my Mama.

Not all the aged become senile. The percentage is small. However, the numbers are large, and are bound to increase as our aged population increases. Unless some answer is found to the problems posed by their need for specialized care, its expense will continue to engulf an ever-growing number of families, and the taxpayer.

Some answers have been found to the question of how to care humanely and economically for the aged who develop other kinds of chronic illness. They will be discussed in tomorrow's article.

Fair Treatment for Mexico Under the Sugar Act

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. ENGLE. Mr. Speaker, there are in my district, many splendid United States citizens of Mexican descent. Through them and through my experience as a Member of Congress, I have come to admire and respect the Mexican people and our great good neighbor to the south, the Republic of Mexico.

That is why, Mr. Speaker, I should like to call the attention of the House to an urgent problem facing the Mexican people—the present plight of the Mexican sugar industry. That industry, the fourth largest in Mexico, is in danger of being frozen out of its fair place in the world sugar market. Regrettably, that result is being brought about in large part, through the operation of the United States Sugar Act.

In recent weeks there have been discussions, at the White House and the Department of Agriculture, with a view to recommending legislation to amend the Sugar Act so as to insure an equitable share of the United States sugar market for domestic sugar producers. I am heartily in accord with that objective. At the same time, however, if we are to amend the existing legislation at this time, we should certainly use the opportunity to adjust the grossly inequitable division of the remainder of the United States market among foreign producers, which exists under the present law.

Mr. Speaker, the requirements of the Mexican sugar industry are in no sense inconsistent with the promotion of a healthy, competitive sugar industry in the United States. Mexico has no quarrel with the objectives of the United States sugar producers or with their pro-

posals as set forth in recent official discussions. Mexico is merely seeking an equitable distribution among foreign countries, of the market which remains after domestic production is accounted for—a distribution which takes into account the economic facts of life in terms of trade balance with the United States, total sugar production and the impact of the United States sugar program upon the economy of the exporting countries.

In the recent discussions of the reciprocal trade bill we heard many fine sounding words about trade, not aid, and about the necessity for enabling our friends and allies to purchase our goods and services by purchasing from them what they can best produce. It is time to practice what we preach. I firmly believe in helping those who help the United States.

Mexico is the third largest purchaser of United States goods in the entire world, surpassed only by Canada and Japan. In the past 22 months, Mexican purchases from the United States totaled \$1,165,000,000. In the eight classifications of leading United States exports to Latin America published by the United States Department of Commerce for 1953, Mexico is the largest importer and occupies first place in 5, second place in 1 and third place in 2 of the classifications. In that year, Mexico imported from the United States \$156.2 million in industrial and electrical machinery, \$83.4 million in autos and trucks, \$70.5 million in chemicals, \$39.4 million in iron and steel mill products and \$294.9 million in other products. No other sugar exporting country came anywhere close to these figures.

At the same time, over the past 22 months, Mexico's balance of trade with the United States has been unfavorable to Mexico by \$532 million. For every dollar the United States spent in Mexico, Mexico spent \$1.84 in the United States—almost 2 for 1.

Even within the sugar industry itself, the balance of trade between the United States and Mexico is overwhelmingly unfavorable to Mexico. Every bit of sugar-processing machinery and spare parts used in Mexico has been purchased in the United States. During the past 5-year period the Mexican sugar industry imported \$38 million worth of United States manufactured equipment. During the same period, Mexico was permitted to sell to the United States only \$4½ million worth of Mexican sugar.

It is obvious, of course, that in the present dollar situation no nation can indefinitely sustain so great a trade imbalance without a serious deterioration of its imports from the United States. Mr. Speaker, one of the stated objectives of the Sugar Act is to promote the export trade of the United States. In view of this express language of the statute, one would certainly expect that the export quota allotted to Mexico by the administrators of the act would bear some reasonable relationship to the trade picture and take into account the crucial dollar gap problem of the Mexican people. That has not been done, however. In fact, the quota allotted to Mexico is so small as to be ridiculous.

In the face of the tremendous support afforded the United States economy by Mexican imports, Mexico has been allotted a quota of only 11,445 tons of sugar out of a total United States consumption of 8,200,000 tons. This represents only 1 percent of Mexican production and only fourteen one-hundredths of 1 percent of the total United States market. Moreover, it represents only thirty-one one-hundredths of 1 percent of the total export quotas allotted all foreign countries.

Contrast the position of other sugar exporting countries. Cuba, which imports from the United States only about two-thirds as much as Mexico, and whose trade balance with the United States is substantially favorable to Cuba, has a quota of 2,667,840 tons. This represents 47 percent of her production, 32.5 percent of the total United States market and 96 percent of foreign quotas, excluding the Philippines.

Peru, which purchases from the United States only about ½ as much as Mexico, has a quota of 51,922 tons—almost 5 times that of Mexico. The Peruvian quota represents approximately 8 percent of her production, 0.63 percent of the United States market and 1.4 percent of the total foreign quotas.

The Dominican Republic, which purchases from the United States only about one-fourteenth as much as Mexico, has a quota of 27,634 tons, more than twice that of Mexico. This represents 4 percent of Dominican Republic production, 0.34 percent of the total United States market and 0.74 percent of total foreign quotas.

How did this grossly inequitable situation come about? It came about because of the failure to formulate in the Sugar Act a realistic basis for the continuing establishment of foreign sugar quotas. As a result, the system has broken down and produces outlandish results. There is a crying need for a commonsense approach to the foreign sugar problem, related to the facts of present day life, and divorced from ancient patterns and prejudices. We must recognize the equities and exigencies of today, and we must be mindful of the impact of what we do upon the lives and well-being of our friends and neighbors.

Aside from the simple equities of the situation and the economic self interest of the United States, there are other reasons why a healthy Mexican sugar industry is in the best interests of the United States. Mexico is the only sugar producing country with a border contiguous to our own and the only one in a position to provide uninterrupted, overland supply in the event of an emergency. In time of war, this assured supply for United States industry is a matter of utmost importance to United States industry and the consuming public.

We all want our allies in the free world to be strong as a bulwark against Communist aggression. The economic well-being of our friends and allies is as much a part of our own national security as are arms and armies.

We must not underestimate the tragic effect which failure to correct the in-

equitable foreign sugar quotas will have upon the Mexican economy. The Mexican sugar industry is the fourth largest in that country. It supports well over half a million people. By dint of diligent and persistent effort, over the years, that industry has raised the standard of living of Mexican farm workers to a reasonable level. The operation of the quota system, as presently constituted, however, spells ruin for that great Mexican industry. With present export restrictions in the world sugar market, if the United States does not allow Mexico a more equitable share of its sugar imports, it can only mean ruinous surpluses in Mexico or crippling acreage restrictions, either of which would deprive thousands of Mexican workers of a livelihood. The social and economic impact of such an eventuality upon Mexico should be obvious. Mexico has already undergone a devaluation of its currency because of the unfavorable balance of its trade with the United States. Surely we should take reasonable measures to prevent additional economic dislocation and possible collapse of United States markets in that country.

Mr. Speaker, it is not as though these people were asking for an increase of millions of tons in their sugar quota. Cuba, which has a favorable balance of United States trade now has a quota equivalent to 32.5 percent of the United States market. A sugar quota for Mexico of only 2 percent of United States consumption would absorb that country's exportable surplus and give the industry the stability it so urgently requires. Such an adjustment would have a minimal effect upon the overall sugar picture. This is a case where so little on the part of the United States will mean so much to our Mexican friends.

Mr. Speaker, this is a situation which cries out for correction and I intend to make every effort to see that justice is done.

A Letter From a Constituent

EXTENSION OF REMARKS OF

HON. ALBERT W. CRETELLA

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. CRETELLA. Mr. Speaker, I have received a communication from a constituent of mine, which I take the privilege of inserting in the RECORD under leave to extend my remarks, and which I believe shows quite adequately and fully some of the frustrations involved by some of our young men, who by their courageous actions attempt to enter a military career, but become faced with problems which perhaps many of us are not fully aware of.

I believe Joseph Zito's letter to me shows that frustration and disappointment which may be shared by so many other boys. The letter follows:

NEW HAVEN, CONN., February 20, 1955
 Hon. ALBERT W. CRETELLA,
 Congress of the United States,
 Washington, D. C.

DEAR MR. CRETELLA: Up to now you have known me as the fellow who is looking for European employment, but now I would like to pass on a bit of information that may prove both interesting and amusing.

Last December, somewhat discouraged at the lack of results from employment seeking, I was attracted by one of those "The Army Needs You" posters. I had served in the Army twice, once as enlisted man and once as officer, and had been in the infantry, constabulary, and artillery. During that time I had had the finest training that the taxpayers' money could give, and an unblemished record. As an officer, though by no means brilliant, I was always dependable. With all this in consideration, after 7 months of civilian life I decided I could easily be the "you" part of the poster for an Army career. Next stop: the recruiting station.

I finished the comprehensive test 10 minutes ahead of the allotted time, missing only one question. My physical test produced a 1-1-1-1-1-1 profile. Next, I presented my engineering degree from Yale, my diploma from the battery officer course at the Fort Sill Artillery School, the diploma from the Artillery Survey School, and the Land Mine Warfare School. I threw in my fluent knowledge of Italian and German for good measure. In view of these qualifications, the local recruiting office forwarded my request for regular enlistment, recommending an E-7 master sergeant's rating. From there the papers went to First Army Headquarters, where they timidly stuck their neck out to recommend a lower E-6, sergeant first class rating, and forwarded them to Washington. Then came the coup de grace when some exalted shoe clerk sent them back authorizing an E-4 corporal's rating. Needless to say, all I got out of this is a good laugh. Just what the hell does one have to be to rate as a master sergeant? Especially at the present time when a great many of the officers and noncoms have only one good qualification—that of being there "fustest" and knowing when they are well off.

When you again hear that the Army wants good men, would you be so kind as to ask and inform me what "good" means? In closing, I would turn a skeptical ear to anyone who claims that it takes a higher pay scale to build a good army. Take it from one who got along on \$50 per month as well as \$320 per month, that not one of the men who turned down reenlistment in my battery gave finances as a reason, but we all resented the "sili-vilians" running the Army in such a wretched way.

Thank you for your time.
 Sincerely,

JOE ZITO.

Should the United Nations Review Conference Be Called This Year?

EXTENSION OF REMARKS OF

HON. CARL T. DURHAM

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an address entitled "Should the United Nations Review Conference Be Called This Year?" which was written by Mr. Harry Ganderson and delivered to the Guilford Battle Chapter of the Daughters of the

American Revolution at Starmount Forestry Country Club, Greensboro, N. C., February 10, 1955:

It is a real pleasure and honor to be your guest today, to discuss the United Nations Charter and the 1955 Review Conference. Because of the apparent growing belief that the proposed review conference is a must under article 109 of the charter, I have chosen to speak on the subject of Should the United Nations Review Conference Be Called This Year?

I understand that I was invited to address you on this subject as a result of my testimony given before the Subcommittee on United Nations Revision Conference, of the Senate Foreign Relations Committee, which hearings were held in Greensboro under the chairmanship of Senator ALEXANDER WILEY, of Wisconsin.

As you know, Senator WILEY, prior to Democratic control this session, was chairman of this important and powerful committee, and he is at this time the ranking Republican member of that committee. Recently, I had the occasion to write Senator WILEY about the proposed review conference, and in his reply, he remarked that as yet the subcommittee had not completed its hearings and study. I would gather from these remarks that the Senate Foreign Relations Committee has not yet decided if our country will support a call for a review conference, come September. Since that question is of foremost consideration, I would like to limit my remarks to this one issue. I know that you are already quite familiar with the basic theory of the United Nations, its structure, its weaknesses, its accomplishments, its failures, as well as the wide variety of amendments which have been proposed.

Your last two Continental Congresses adopted resolutions opposing any 1955 revision of the charter which might have the effect of superseding our Federal Constitution, or limiting our National and State liberties or freedoms, or which might attempt to bring about through the United Nations a world government or partial world government. Confronted as we are with the imminent threat to our American way of life, by the growing menace of world Communist dictatorship, the question of calling a review conference at this time should be a matter of great concern to the American people.

Your revolutionary forebears laid the foundation for our Government and made possible our great American way of life. Like the patriots of the American Revolution, who sacrificed their lives and fortunes for freedom and independence, we must be ever vigilant and zealous to preserve and protect our great heritage of life and liberty. Our country's unparalleled growth and development was made possible because, under our form of Government, we have a free and independent Nation, of free and independent citizens. In my humble opinion, we can ill afford in this critical period to lower our guard by diverting our energies, to urging and preparing for a review conference. There is no obligation under the charter to call a review conference, and I very much question the wisdom of calling it this year, or at any time in the near future.

Let's look briefly and quickly at the charter itself. Paragraph 1 of article 109 provides that a general conference to consider amendments to the charter may be held at any time upon a vote of two-thirds of the General Assembly and any seven members of the Security Council. Now, as for the much-discussed review conference, paragraph 3 of article 109 simply declares that if 10 years has elapsed and a general conference has not been called under paragraph 1, then the proposal to call a review conference must be placed on the assembly agenda, and only a majority vote is required for passage to call the review conference.

There appears to be too much emphasis on the proposed 1955 conference—in fact, to such an extent that many have forgotten, or have become unaware, that full opportunity is afforded for needed amendments to the charter at any time under article 108. Admittedly, such amendments would require the recommendation of two-thirds of the U. N. membership and the constitutional ratification of two-thirds of the member nations, just as would any amendments proposed at a full-dress review conference.

Already the charter has been subject to changes in a variety of ways, changes which one might call informal amendments. I would like to briefly cite a few illustrations.

1. The nonimplementation or nonapplication of fundamental provisions of the charter—like the failure to implement the disarmament provisions or to create an international police force under the Security Council, as specifically called for by the charter, to carry out the chief purpose of the U. N.—that is, the maintenance of permanent peace and security and the prevention of war.

2. Through the creation of specialized organizations and agencies—very worthy indeed, but which nevertheless have tended to minimize or rather subordinate the chief aims of the charter, at least in our time.

3. Through the interpretation of the charter by various organizations and members of the U. N.—like the perverted exercise of the veto, and the absences and abstentions by the Communist bloc.

4. Through the conclusion of supplementary treaties and agreements, such as the Headquarters Agreements of 1947, and the North Atlantic and other regional defense pacts. Actually, aren't we presently engaged in a civil war within the U. N.? On the outcome of this struggle may depend the very fate of the United Nations and civilization itself.

These illustrations clearly show that the U. N. has made changes in the charter, whether we choose to call these amendments or not. There are, nevertheless, adequate provisions in the charter for formal amendments to be made at any time.

To call a review conference simply to consider minor or technical matters would hardly be worth the effort which it would require. Furthermore, any effort to make fundamental changes in the structure of the U. N. might very well precipitate a struggle which would result in the very destruction of that organization. Of course, for those who are opposed to the existence of the U. N., a conference would furnish them an excellent opportunity to make lethal attacks upon it. That, however, is already taking place without a review conference. From some quarters the attack against the U. N. goes like this—the U. N. is obstructed by Russia and is not performing its chief aims, but rather, is devoting all of its time and our money to improving the impoverished nations. And then they make the point—that history shows it has been the advanced nations for the most part, and not the so-called backward countries, that have been the arch disturbers of world peace. They may have a point there—only time can tell.

Formulas for radical changes in machinery, elaborations of new procedures, plans for supergovernments, and the like, unfortunately rest on an unconscious assumption, that the more explicit the obligation, the more it is honored, and that the more parts the machinery has, the more smoothly it will run. Any of these proposals for collective security can be carried out under the present charter, when those obligated under that document perform their responsibilities.

The United Nations Charter described the foundation for permanent peace and security and the prevention of war, and it likewise describes the machinery to implement

those provisions. It is obvious, therefore, that the charter has not stood in the way of maintenance of peace. On the contrary, it is the failure of certain nations to do their part in implementing those provisions and living up to those obligations which they assumed when they became bound by the charter in 1945.

Twenty years ago we were trying to stop the piecemeal efforts of aggression by the Fascist rulers, who finally brought the holocaust of war misery upon mankind in their efforts to subjugate the democratic and Communist worlds. Today, we are faced with this same problem from the Communists, only on a broader scale, but dressed up in a different coat of armor. Without a shot, they have, since the creation of the U. N., enslaved close to one-fourth of the human race. They, too, led by the Communist despots, defy the charter. Another quarter of the human race is in the balance, while being snared into the iron jaw of the Kremlin. Mere reformulation of the obligations under the charter will not change the nature of either the revolt in the U. N. or the threat to the human race.

Although I would consider the veto question the principal issue which would come under consideration at a review conference, I do not consider that issue in itself as being decisive in effecting our position for or against calling the review conference. We should not forget that the United States no less than the other great powers, insisted upon the veto as a condition for the acceptance of the charter. The veto has not worked out like the U. N. founders had hoped, when the charter was forged under the crucible of wartime cooperation and allied victory, against the common enemy.

Modification of the veto power does not necessarily involve charter revision. During the past 8 years, the United States has participated unsuccessfully in efforts to reduce the use of the veto by agreement among the permanent members or by other methods which would not involve charter revision. Furthermore, several of the smaller nations have made attempts since 1945 to bring up proposals in the General Assembly to amend the veto. It was the dissatisfaction of the smaller nations with the charter's veto power at San Francisco which furnished much of the impetus for making provision for possible revision of the charter by a review conference.

The arguments are stronger today than during the San Francisco Conference for American protection of the veto power. Certainly, before Americans can take a position with regard to abolition of the veto, they must first decide if the best interests of the United States would be served by relinquishing the veto over U. N. use of American Armed Forces without our consent. They must also decide whether we should give up the veto with respect to U. N. membership, or as to who should represent China in the U. N. Would you dare relinquish the right of veto over international atomic control, even before a U. N. plan is devised acceptable to Russia? It would be utterly unthinkable to believe that Russia and its satellites would change their leopard skins at a review conference, except to perpetrate more frauds on the democratic world.

Admittedly, the Communist bloc has perverted the veto power and obstructed implementation of the primary functions of the charter. Nevertheless, conditions being as they are, the United States can ill afford to give up the veto. We are the principal defenders against the Communist aggressors and we must, therefore, protect our position and power to make our own decisions. We should not add to existing problems or increase the dangers to our own democratic institutions by calling a review conference at this time. Nor should we minimize the splendid opportunity such a conference

would offer subversive elements to strengthen their nefarious Communist network, both in our own country as well as the U. N.

Do you know that some of the formulas, like world federation, world government, and so on, which are suggested for charter revision, would necessitate amendments to our own Constitution also? It would, therefore, seem highly desirable to settle the American attitude regarding these proposals before talking about placing issues of such gravity into international debate. For example, it would be quite awkward for the American delegation to a charter review conference to be confronted with the support which the Communist delegations might give to such charter amendments which would alter our own sovereignty. It would be far better before deciding to call the review conference, for the twenty-odd Senators who want to explore an Atlantic Union and those who favor a world federation to publicly state their opposition to the proposed Bricker amendment which is clearly designed to make their proposals impossible.

These are just a few of the hard questions which should be answered before the American people decide whether or not to call for a charter review conference.

History teaches an important lesson—that in the development of new forms of government, certainly under democratic principles, society is ad hoc-minded and bit-minded. Let the charter evolve little by little, case by case. We must not be hasty or impetuous, or expect so much in so short a period of time.

The U. N. is a mere infant, disillusioned with false hopes, as compared with our Constitution, 167 years strong, blossoming in full manhood, and fulfilling the hopes of its founders. Experience, custom, usage, informal adoption and change, amendment, and judicial interpretation over the centuries have made our Constitution the greatest living document in governmental history. We have not had a review conference or convention to amend the Constitution since it was framed in 1787. No review conference was required for the Bill of Rights, or other amendments including the right of women to vote. I see nothing in the history of the world or in the development of the federal form of government of the United States which indicates that there will be any departure from that course of history as it relates to the United Nations. I do not think, therefore, that a charter review conference this year, or at any time in the near future, would serve the best interests of the United States, the United Nations, or the cause of world peace and security.

The world's population now is about 2½ billion, living in more than 120 large and small countries. Practically one-half of the human race are still underprivileged and impoverished. Most of the countries are inhabited by natives deeply rooted in a wide variety of mores and civilizations, and possessed of some radical concepts about human rights, quite foreign to ours. Under the charter, these conditions are branded as the causes of war.

Indeed the humanitarian aims of the charter are laudable objectives, but is the achievement of those aims the real cure for war? If so, will they be achieved in time to stem or stop the imminent drift toward world war III?

We know from experience in our own great land with only a handful of people compared to the world's population, that the concepts of people about their mores and human rights, the world over, cannot be changed overnight—not even by legislative or judicial fiat. While we may support and pray for the realization of the idealistic hopes of each generation, and now the United Nations, to bring peace to the world,

we must, nevertheless, be realistic in our practices.

In the meanwhile, therefore, we must keep our arsenal full, and our powder dry, and pray God this will deter and keep the horrors of war from our doorsteps.

Polish National Alliance

EXTENSION OF REMARKS OF

HON. ALBERT W. CRETELLA

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. CRETELLA. Mr. Speaker, from the floor of the House on various occasions, many fine things have been said about the brave and courageous people of Poland, who are now suppressed behind the Iron Curtain. Many other statements have been contained in the Appendix to the Record at different times.

I can say with justifiable pride that I subscribe to all these statements and have associated myself with them in the past.

I incorporate herewith, under leave granted by you to extend my remarks, a resolution which was passed by the delegates of the lodges, belonging to Council 25 of the Polish National Alliance, in assembly gathered in Bridgeport, Conn., on January 23, 1955:

We, delegates of the lodges belonging to the Council 25, of the Polish National Alliance, whose president is Charles Rozmarek, gathered at the yearly meeting, on January 23, 1955, in Bridgeport, Conn., have resolved as follows:

We, Americans of Polish descent express our loyalty to the United States of America and to President Dwight D. Eisenhower, as well as our solidarity with his struggle against communism which menaces our American freedoms. We urge the United States Government to strengthen the military power of our country. We do not believe in the policy of coexistence. The struggle between the communistic world and free world has been carried for years. This struggle will be ended with the victory of one side. We strongly hope that our beloved democratic country will be the victorious one. All free countries should get united in this struggle, and we should also look for our prospective allies among the peoples behind the Iron Curtain, who can bring us a great help in case of war. This was proved during the last war against Germany. This was proven by the Polish Underground Army which sabotaged German military effort, by cutting their communication lines and destroying war materials ready to be sent to the battlelines. If we want the peoples of Poland, Czechoslovakia, Hungary, and other countries to be on our side, they should be informed as to what they can expect after victory of the free world. They should know, in advance, that their territories will be not infringed.

We urge that the United States Government declare that the Oder and Neisse Line be a permanent frontier between Poland and Germany. No decision relating to the fate of Poland must be undertaken without the consent of Poles themselves. We state that the only legal representative of independent Polish policy in the world is the legal Polish Government in Exile, residing

in Great Britain. This Government has our unanimous endorsement and support.

We confirm, once again, our unflinching determination to undertake everything possible to carry on our fight for the final liberation of Poland and to persist in our fight until justice is done to Poland and independence is restored.

We extend our deep sympathy to the Polish nation, which, we believe, will endure, until the hour of final victory, the Soviet slavery into which it was sold by the secret agreements concluded at Yalta. We express our belief in the ideas of American democracy, which have put our country at the head of all free nations, and we believe that our free and democratic country will lead other countries to freedom and democracy. We are also of the opinion that everything should be done to free all Americans held by any communistic country.

Long live the United States of America.
Long live free and independent Poland.

HENRY BORONY,
CHESTER E. SZYMARE,
JOSEPH WISINSKI,
FRANCOSER LACHOWICZ,
Resolution Committee.

Thanks From the Outposts of Korea

EXTENSION OF REMARKS OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 23, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include herein an editorial entitled "Thanks From the Outposts of Korea," which appeared in the Nutley Sun of February 17, 1955. I join in the salute to these fine women who have for so long unselfishly dedicated themselves to humanitarian pursuits—and who helped to make lighter the burdens of our boys who served in Korea:

THANKS FROM THE OUTPOSTS OF KOREA

The Nutley Committee for Servicemen in Korea disbanded this week, after having, for 4 years, sent packages and letters to Nutley soldiers, airmen, sailors and Marines in Korea. There will be no official recognition of the activities of the 10 women who, from their hearts and from their purses, paid a neighborly tribute to as many as 50 Nutley servicemen at a time, but the women will be amply repaid by the warm letters of appreciation which came to them from the Nutley boys in the field who received the writing paper and envelopes, the soap and shaving materials, the candy and other little extras which they could not find in the severe service rations in the Korean mountains.

Those boys were holding the outposts of civilization against communism. They were in the rugged highlands, often living in the open, in all sorts of weather, far from the niceties and comparative ease of the base ports where army exchanges would have catered to their wants.

Those 10 women saw to it that none of the Nutley boys lacked what they needed. Each package, each letter carried with it a breath of Nutley air, a word from home, an assurance that even though they were half way around the world those boys were not forgotten by their friends and neighbors in Nutley. Those women made our sons happy, they made them glad that they were from Nutley. Many wrote back to say that of all the towns in America, Nutley was the only

one to keep such friendly contact with its sons.

For the 10 women who conceived the idea, who took from their own purses to pay for the costs, who gave the many hours needed to gather, to wrap and to mail packages, Nutley can only say: Thanks for your generous gesture; thanks for those who no longer live to speak their gratitude. Thanks for all those boys whose service in the most deplorable conditions was made a little more bearable. Thanks for expressing, so beautifully, the true spirit of Nutley.

R. E. H.

1955 Lincoln Day Address

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 23, 1955

Mr. VAN ZANDT. Mr. Speaker, it was my privilege during the period set aside for the observance of Lincoln's Birthday to deliver the following address to Lincoln Day dinners at Keene, N. H.; Indiana, Pa.; New Brighton, Pa.; and Huntington, Clarksburg, and Charleston, W. Va.:

LINCOLN DAY 1955

You have honored me by your invitation to join in this annual tribute to the memory of the immortal Lincoln, our first Republican President.

Lincoln, in all his greatness, was a common man with common attributes, yet by character and self-education he elevated himself to such a degree that world historians acclaim him as one of the six greatest personalities in the history of the human race.

Thus, as the Great Emancipator's soul took flight from his weary body, Edwin Stanton, Secretary of War, proved himself a prophet when he announced his death in these historic words: "Now he belongs to the ages."

Many times the question is asked, Why do we look to the philosophy of Abraham Lincoln for inspiration and guidance in the conduct of public affairs even though 90 years have elapsed since his passing?

The answer is that Lincoln was a common man whose words and deeds enshrined him forever in the hearts of mankind.

But this great Republican President did not reach the heights of world acclaim without experiencing heartaches and bitter disappointments.

A close study of his many reverses in life reveals that few men could have weathered such a series of trials and tribulations.

When you read of Lincoln's life, you are reminded of his statement in speaking of his lack of formal education when he said, "I do not know much—my schooling was limited to reading, writing, and ciphering to the rule of three."

This statement reveals the humility and sincerity of Lincoln, who was not ashamed of his early life and humble surroundings.

This humility of Abraham Lincoln was reflected in his first campaign for a political office when he was a candidate for the State Legislature in Illinois in 1832.

At that time, Lincoln said, "I presume you all know who I am. I am humble Abraham Lincoln. My politics are short and sweet, like the old woman's dance. I am in favor of a national bank. I am in favor of the internal-improvement system, and high protective tariff. These are my sentiments and political principles. . . ."

On clearly defined political principles Abraham Lincoln was content to place his future in the hands of the American people.

It took courage on his part to stand on his principles and to bypass the political magic of promising everybody everything in the hope of garnering a vote, a practice that became so popular with the New Dealers and Fair Dealers.

Lincoln, because of his courage and convictions, went down to defeat in 1832 as a candidate for the legislature.

He was defeated again in business in 1833 and lost everything of a material value.

In 1832, as candidate for speaker, he was again defeated.

In 1840, he lost as a candidate for elector. In 1843, he was defeated as a candidate for Commissioner of the General Land Office and also as a candidate for nomination to Congress.

In 1848, he lost in his campaign for reelection to Congress.

In 1855, he was the losing candidate for United States Senator.

In 1856, he was defeated as candidate for Vice President.

In 1858, he was defeated as a candidate for United States Senator.

But in 1860, he was elected as the first Republican President of the United States.

What a glowing tribute Lincoln's crowning victory was to his perseverance and to the truth of the old saying, "You can't defeat a man who will not quit!"

Abraham Lincoln refused to quit because he knew in his heart that the principles he espoused must be adhered to if this young Republic expected to become strong materially, morally, and spiritually.

He declined to surrender or compromise his principles with the result that his patience and perseverance have become a national symbol.

By comparison, the Republican Party of Abraham Lincoln can take a lesson from his determined and persistent attitude.

The Republican Party is still smarting over the reverses suffered in the November elections of 1954 when we lost control of Congress and met a similar fate in some State elections.

As members of the Party of Abraham Lincoln, we should honor his memory by abandoning our negative thinking and present a united and militant front behind the forward-looking program of our Republican President, Dwight D. Eisenhower.

It has been a little more than 2 years since the American people repudiated 20 years of the New Deal-Fair Deal brand of political philosophy by entrusting the affairs of Government to a Republican President.

There is none who can deny that under President Eisenhower remarkable progress has been made in the transition from a wartime to a peacetime economy.

At the same time, a more realistic and firm foreign policy has been formulated with the result that Uncle Sam is no longer being pushed around in the field of foreign affairs.

It is gratifying to realize that this new, firm foreign policy under President Eisenhower is responsible for the following accomplishments, namely:

- (a) Brought an end to the Korean war.
- (b) The Iranian oil situation has been ironed out.
- (c) The explosive problem of the Suez Canal which concerns the British and the Egyptians is being settled in a peaceable manner.
- (d) The troublesome problem of Trieste which has been a threat of war for years has been settled.
- (e) The Communist-inspired activities have been halted involving countries in Central America.
- (f) International relations are improving with respect to the arming of West Germany

as part of the defense against Communistic aggression, and finally

(g) In the Middle East, the real desire of the United States for peace and friendly relations is truly understood.

It should be remembered that President Eisenhower inherited the hopeless situation in French Indochina which had deteriorated to the point where it was beyond diplomatic solution.

Yet today in French Indochina, there is hope of saving at least a part of that area from the Iron Curtain.

In true Lincoln style, President Eisenhower redeemed his election pledge to the American people that he would consult Congress before sending United States Armed Forces into conflict.

Unlike his predecessor, Mr. Truman, who sent American troops to Korea on his own initiative, President Eisenhower asked and received from Congress the authority to employ United States Armed Forces in defense of Formosa, the Pescadores and related positions and territories in that area.

By consulting Congress regarding the Formosa situation, President Eisenhower clearly demonstrates his bipartisan foreign policy which is a vital factor in uniting the American people.

At the same time, President Eisenhower served unequivocal notice on the Chinese Reds that they will be at war with the United States if they attack the Formosan area.

This bold decision which results from the firm foreign policy on the Eisenhower administration is at the same time a blunt warning to Soviet Russia that its policy of wars by proxy or through its satellites will no longer be tolerated.

This courageous attitude on the part of President Eisenhower will restore not only our dignity as a nation but it also serves notice on Russia that we are sick and tired of her role as an enemy of world peace.

In backing up this bold and courageous decision of President Eisenhower, we have his assurance that every single order concerning the Formosan situation will have to clear his desk before it receives approval.

What a contrast this is to the conduct of the Korean war when the State Department headed by Dean Acheson tied the hands of General MacArthur by preventing American forces from pursuing and destroying the Chinese Reds north of the Yalu River in Korea.

It was this spineless and vacillating foreign policy that prolonged the Korean war, took the lives of 143,000 of the cream of American youth and left us with the irritating and troublesome problems we have now concerning the Chinese Reds.

The result of the futility of the Dean Acheson policy in Korea is demonstrated by the fact that it was America's first military defeat, not because our forces were wanting in valor, courage, or sacrifice, but only because it was a war rigged against victory from the very outset.

This statement is supported by every American field general who served in Korea.

For example, testimony given before a committee of the United States Senate reveals that General Stratemeyer, commander of the United States Air Force in the Far East, complained: "The enemy can hit me where I am based. I cannot hit them."

Gen. Edward M. Almond in answer to a question by a Member of the United States Senate as to how many opportunities did our side have to win the war, answered by saying: "Two . . . First, in November 1950, following the historic Ichon envelopment of the North Korean forces; and second, in June 1951, when some 50 Chinese divisions were trapped and routed clear across the Korean peninsula."

General Almond continued his testimony by saying: "At that point, 2 months after President Truman had fired General Mac-

Arthur, the whole American offensive was halted and abandoned on direct orders from Washington."

Gen. Mark Clark, in his testimony, said that Chiang Kai-shek on more than one occasion, had offered General Clark three of his best divisions with supporting air.

General Clark said, "I recommended it shortly after I got over to the Far East, but my recommendations were never answered."

Questioned as to whether he agreed with General MacArthur that the enemy should not have been allowed a sanctuary beyond the Yalu River, General Clark replied, "Yes, sir. I agreed at the time when the Chinese came in."

Continuing, General Clark said: "They came across the Yalu and killed our men."

"I think at that time we should have indicated that we were at war with Red China and should have retaliated with everything we had at our disposal."

General Clark was then asked, "Did you ever fight a war like this before and would you ever want to fight another one like it?"

General Clark replied with an emphatic, "No, sir."

These quotations from the testimony of three of America's great generals prove the oft-repeated assertion that officials in our State Department by their bungling tactics and with the consent of President Truman denied our American forces the opportunity to win the Korean war.

By contrast, President Eisenhower, as Commander in Chief of the Armed Forces and fortified by his outstanding military experience on the field of battle, assures us that the folly in Korea will not be repeated.

We have the added assurance that America with an adequate national defense in this atomic-hydrogen age stands ready to give the American people the maximum of national security even if it requires using atomic and hydrogen weapons.

In support of this firm and realistic foreign policy on the homefront, the Eisenhower administration as the result of action by the Republican-controlled 83d Congress is meeting the problem of Communist infiltration.

This is made possible through a subversive-control program that is proving a mighty weapon to the Department of Justice and its FBI in the all-out effort to combat the Communist threat within our country and the worldwide menace of international communism.

This two-fold militant anti-Communist program is designed to stop playing patty-cake with the Communists here and abroad.

It permits the granting of immunity to witnesses who are willing to testify concerning subversive activities but who heretofore have invoked the fifth amendment against self-incrimination.

It provides the death penalty for peacetime spies.

It makes ball-jumping a serious crime.

It closes many loopholes in existing laws through which Judy Coplon and others of her kind escaped prosecution.

It provides for the loss of citizenship to persons who knowingly engage in Communist conspiracy.

It requires the registration of Communist-action and Communist-front printing equipment.

It increases the penalty for harboring or concealing a fugitive who is wanted on a felony charge or who has been convicted of any offense irrespective of whether it is a felony or a misdemeanor.

It denies Government pensions to convicted felons like Alger Hiss.

In addition, the Republican-controlled 83d Congress enacted a law which outlaws the Communist Party of the United States.

It likewise applies to any successor organization whose purpose is the overthrow of the Government of the United States or any

political subdivision therein by force or violence.

This subversive control law makes it a felony for any person to be a member of such an organization when he has knowledge of the revolutionary activities of such an organization.

In addition to this subversive-control program and our vigilant attitude in tracking down, exposing, and prosecuting Communists one of our mightiest weapons strong and solvent America.

For that reason, our domestic economy is of paramount significance because if we allow it to decay morally, spiritually, and financially, we become an easy and certain prey to world communism.

The Eisenhower administration's program designed to transfer the economy of our country from a wartime to a peacetime basis has been acclaimed by friend and foe as being in the best interests of the United States.

Unfortunately, the dove of peace brought with it serious economic dislocations in certain areas of the country where unemployment occurred when the manufacture of war materials was terminated.

In general, however, business is good and the savings and spending of the American people as a whole have increased.

The President's dynamic and progressive legislative program resulted in a revision of the tax structure that brought about one of the greatest tax reductions in the history of the Nation.

In addition, the Federal Government is now being operated at greater economy, with the result that it has been possible to lessen the tax burden on the people by many billions of dollars.

President Eisenhower's program in the field of health, social security, highways, housing, agriculture, and commerce has attracted bipartisan support which is indicative of its real merit.

Ladies and gentlemen, this dynamic Eisenhower program that is building a stronger America is a tribute to the genius and sincerity of our Republican President.

With less than 2 years remaining of his present term in the White House and confronted by a Democratic-controlled Congress, make no mistake that President Eisenhower's dynamic and progressive program is facing the acid test.

With the 1956 Presidential election in the offing, we Republicans cannot afford dissension in our ranks or sulking in our tents.

Therefore, it is incumbent upon us as disciples of Abraham Lincoln to close our ranks and present a united front in meeting Democratic attacks on our President and on the Republican Party.

May I warn you as a battle-scarred veteran of the political arena, that the Democratic Party will leave no stone unturned to lure us into political booby-traps in its effort to recapture the White House.

Frankly, we can expect a knock-down drag-out political fight with no holds barred in the 1956 campaign.

While we listen to loud protests about political smears, I predict that the campaign of 1956 will outsmear the despicable New Deal attack on President Hoover in 1932.

The campaigns of 1952 and 1954 will prove to have been "cream-puff" affairs in comparison to the 1956 campaign already underway and spearheaded by Chairman Butler of the National Democratic Committee.

Chairman Butler's attacks on Vice President Nixon reveal the pattern to be followed in next year's campaign.

These smear attacks make a mockery of the so-called Democratic pledge of bipartisan support of the Eisenhower program.

Fellow Republicans, time is running out on us.

This is February 1955 and already the Democratic campaign to recapture the White House and continue Democratic control of Congress is well underway.

Therefore, I say to you in all sincerity, it is time that we Republicans spring into action.

As I have said before, let us bury our party differences, close ranks and join hands on the firing line.

First, We should recruit more followers, especially among the younger generation.

Second, We should tell the American people of the forward-looking program of the Eisenhower administration and the success of its efforts to restore honesty and integrity to Government.

Third, We should refresh the memories of the American people of the 20 years of Roosevelt-Truman rule whose only means of providing employment was based on two wars with jobs and overtime at the expense of the flesh and blood of American fathers and mothers.

Fourth, We should convince the American people that as a Nation we are at peace and that the transition from a wartime economy cannot be accomplished overnight and without some economic dislocations.

Ladies and gentlemen, as Republicans we have nothing to hide in giving an account of the stewardship of the Eisenhower administration during its 2 years in office.

The Republican Party is leading this Nation out of the valley of destruction by providing real leadership in President Dwight D. Eisenhower.

I repeat, we must bury all selfish desires and settle petty differences that if not compromised will divide our ranks and render us completely helpless.

Fellow Republicans, the task before us is to restore to Republican control our city halls, our courthouses, our State houses, and the Congress of the United States as well as to retain control of the White House in 1956.

As I have warned, the hour is getting late. This is no time for party bickering or weak-kneed Republicans who are timid about reshouldering the pack and moving into battle.

Let us never forget that, in 1952 after 20 long years of political exile, the American people gave the Republican Party control of Congress and the White House.

At this moment with the Democrats again in control of Congress, further defeats in 1956 could lose us the Presidency and the opportunity to recapture control of Congress.

Therefore, fellow Republicans, I beseech you to guard against any defeatist attitude by meditating on the long 20 year battle we had to regain the White House and Congress in 1952.

In addition, let us not lose sight of the fact that Abraham Lincoln after 10 crushing defeats from 1832 to 1858 finally achieved a glorious triumph in 1860 when he was elected as the first Republican President of the United States.

In commemoration of the 146th anniversary of the birth of Abraham Lincoln, let us rededicate ourselves to the task before us—the preservation of our form of Government, keeping in mind as the great Emancipator did that, "You can't defeat a man who will not quit."

In 1952 with President Eisenhower as our standard bearer, we promised the American people who were weary of the New Deal-Fair Deal philosophies a new birth of freedom.

We are well on the road to redeeming that pledge under the brilliant and dynamic leadership of our beloved President, Dwight D. Eisenhower.

Therefore, in the knowledge that our cause is just, let us reconsecrate ourselves to the task before us by presenting a united front.

At the same time, let us recall with pride and confidence that down through the years

the Republican Party has faithfully followed the sage advice of Abraham Lincoln.

As we gird ourselves for the 1956 campaign, let us adopt as our battle cry the ringing words of Abraham Lincoln uttered nearly 100 years ago when in 1856, during the formative years of the Republican Party, he said:

"Let us, in building our new party, plant ourselves on the rock of the Declaration of Independence and the gates of hell shall not be able to prevail against us."

Roslyn News Celebrates 75th Birthday— Second Oldest Weekly on Long Island

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. DEROUNIAN. Mr. Speaker, I am delighted to join in congratulating the Roslyn News on its 75th birthday today. The American weekly newspaper, as I have stated previously, is as American as the Constitution of the United States and has contributed much to our progress since the birth of this great Nation. I am proud to claim the Roslyn News as one of my constituent newspapers and I am pleased to present its history.

February 23 marks the diamond jubilee for the Roslyn News of Roslyn, N. Y.

Three-quarters of a century of publication is a long time and in the space of those 75 years many changes have come to both the paper and the area it serves.

The first issue of the paper was published late in the nineteenth century by Pier Keeler and his brother in a small print shop on a winding country lane, now Main Street. They called their paper the Tablet, and since the town had but a handful of residents that, too, was the size of the paper's circulation.

One of the town's early visitors was George Washington, one of its best remembered sons, the poet, William Cullen Bryant. Through the years the sleepy village has changed to a smart and beautiful residential area on Long Island's famous North Shore, but it still houses famous artists, writers—Christopher Morley—television and theatrical celebrities.

A year after the Keelers started their paper, they sold it to William R. Burling who changed its name to the one it now bears. After him there were several other owners who struggled to make a small village weekly pay for itself. One of these was Maj. George M. Robertson, Roosevelt Raceway official and winner of the famous Vanderbilt Cup in 1903.

Today, instead of measuring its readers on the fingers of both hands, the Roslyn News can point with pride to a wide readership in an area that covers Roslyn, Roslyn Heights, Roslyn Harbor, Roslyn Estates, Greenvale, East Hills, Glen Head, Albertson, Williston, and Williston Park.

The Roslyn News is a part of the Griscom Publications, Inc., which consists of seven important Long Island weeklies.

In 1933, the Roslyn News, together with the Great Neck Record and the Oyster Bay Enterprise and Pilot were acquired by Bronson W. Griscom, of Syosset, and Barklie Henry, of Wheatley Hills, to form the Township Press. Two years later, in April 1936, the Township Press had grown to be a chain of nine papers and it then merged with the Woodyard Publications of New York—publishers of seven weekly papers—to form the Griscom-Woodyard Publications, Inc.

Later, Bronson W. Griscom formed the Griscom Publications, Inc., which has been responsible for the publication and growth as a community force of the Roslyn News.

In October 1954 the Roslyn News, under the editorial leadership of James J. Tuite, went into the tabloid format, a move which was hailed by local residents as giving the paper easier readability and a new freshness. Under Mr. Tuite's guidance, the Roslyn News has increased its circulation almost 50 percent.

In celebration of its anniversary, the Roslyn News is planning to move next month into modern and larger offices located at 45 Lincoln Avenue, Roslyn Heights.

The staff of the Roslyn News includes, in addition to editor, James J. Tuite; Harry V. Forgeron as advertising manager; Mrs. Esther T. Jacobs, associate editor; and Mrs. Anne Schlansky, circulation manager.

A Report of My Efforts To Relieve the Un- employment Situation in the Altoona, Pa., Area

SPEECH

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. VAN ZANDT. Mr. Speaker, the acute unemployment situation in the Altoona, Pa., area has had my undivided attention for the past many months. Despite the fact that Altoona has been classified since 1949 as a labor-surplus area, the degree of unemployment has mounted during the past 16 months so that it is now classified by the United States Department of Labor as being in an area having a very substantial labor surplus.

It is encouraging to state that the unemployment situation in Altoona and vicinity has been attacked on all fronts with business and labor groups working collectively while the citizens of Altoona voluntarily contributed better than three-quarters of a million dollars in a "Jobs for Joes" campaign to finance the efforts being made to attract new industries to the Altoona area. This "Jobs for Joes" campaign supplements the program of the Altoona Enterprises, Inc., a subsidiary of the Altoona Chamber of Commerce, which raised in excess of

\$600,000 for the purpose of assuring continued employment. Already several new industries have been secured because of the splendid response to the appeal of Altoona Enterprises, Inc.

The unemployment situation in Altoona is the result of a sick coal industry which is reflected in a marked decrease in employment in the railroad and other related industries. Nearly 18 percent of the employables in the Altoona area are unemployed, or a total of 10,000 jobless persons, 6,000 of which are furloughed railroad employees. This unemployment situation is attributable to three factors: First, loss of coal markets because of the use of substitute fuels, chiefly foreign residual oil; second, dieselization of the Nation's railroads, which replaced steam locomotives; third, the general effect of unemployment in the coal and railroad industries, which is reflected in allied industries.

Recently I had occasion to write to Mr. Murray M. Gassman, national CIO representative in Altoona, Pa., on the subject of unemployment in the Altoona area outlining the efforts that have been and are being made to relieve the unemployment situation.

My letter to Mr. Gassman follows:

CONGRESS OF THE UNITED STATES,

HOUSE OF REPRESENTATIVES,

WASHINGTON, D. C., February 19, 1955.

MR. MURRAY M. GASSMAN,

United Railroad Workers of America,

CIO, Local Union 2017, Altoona,

Pa.

DEAR MR. GASSMAN: Further reference is made to your letter of February 14, our telephone conversation of February 16 and my telegram to you of February 19 regarding my attendance at a mass membership meeting of your organization in Altoona, February 23, 1955.

As mentioned in my telegram of February 19, according to the legislative program announced by the House leadership early Friday evening, February 18, a busy legislative program is scheduled for Wednesday and Thursday, February 23 and February 24, 1955. In addition, committee meetings are scheduled for both morning and afternoon on these dates when matters affecting my congressional district will be discussed which require my presence.

Since there is no legislative business scheduled for Washington's birthday, February 22, as mentioned in our telephone conversation on February 16, I am committed to spend the entire day at the Pennsylvania State University, State College, Pa., which is in my congressional district. To keep this engagement at State College which concerns the 100th anniversary of the establishment of Penn State, I will travel by train in both directions because of weather conditions. Therefore, you will understand regardless of the legislative program on Wednesday and Thursday that it is a physical impossibility for me to be in Altoona on Wednesday evening, February 23, as I will not get back to Washington until Wednesday morning.

You stated in your letter of February 14 that the meeting on February 23 was called for the purpose of accelerating efforts in helping alleviate the unemployment crisis and to receive a report from the United States Representative from the 20th (not 23d) Congressional District regarding a program he may have to help the unemployed. Since it will be physically impossible for me to attend the meeting, the following report is presented which contains information which was furnished several weeks ago to the Altoona Community Welfare Council, copies being furnished to your associates of the

Blair County United Labor Council as well as to the Altoona newspapers. There is herewith enclosed copies of the information furnished which has been designated exhibits A, B, and C. Copies of the bills mentioned in these exhibits are also attached.

As you will note in my letter of January 7, 1955, to Charles A. Mentzer, executive director, Altoona Community Welfare Council marked as exhibit A, after exhausting all efforts to find legal authority on the part of the Federal Government to cope with the Altoona unemployment situation, the following program was developed as represented by the following bills I introduced on the first day of the 84th Congress, January 5, 1955, all of which are pending before appropriate committees having jurisdiction over the subject matter contained in each bill.

H. R. 860 provides a program of public facilities construction which will stimulate employment in areas having a substantial surplus of labor and for other purposes.

H. R. 861 provides temporary unemployment benefits to unemployed railroaders whose benefits terminated after January 1, 1955, by extending the period of eligibility for railroad-unemployment insurance to July 1, 1955.

H. R. 862 amends the Social Security Act by prohibiting the several States from taking a lien against the real estate of the recipient of public assistance benefits as is being done under existing law in Pennsylvania.

H. R. 863 provides for the distribution of certain surplus food commodities by use of a food stamp plan.

Since introducing H. R. 863 and as a result of further consultations with the Department of Agriculture and representatives of labor organizations, H. R. 3144 and H. R. 3145 were introduced by me, copies of which are enclosed. Both of these bills place the cost of distribution of surplus food commodities in labor surplus and disaster areas on the Federal Government as well as authorizing the Commodity Credit Corporation to process these food commodities into a form suitable for home consumption such as wheat into flour, corn into meal, etc. I am informed that H. R. 3144 and H. R. 3145 provide a better approach than H. R. 863 providing for a food stamp plan.

As mentioned, all of these bills that I have introduced are pending before the House committee having jurisdiction over the subject matter contained in them. Each committee chairman concerned has received a letter from me a few days after the bills were introduced requesting that he immediately secure a report from the Government agencies concerned on the bill or bills pending before his committee and upon receipt of such report that hearings be scheduled on the bill at the earliest possible date. In addition to writing each committee chairman, I have had a personal conference with each of them furnishing them full information about the Altoona unemployment problem and urging the earliest possible action on the legislation. In addition to my contacts with the committee chairmen, the White House, the Office of Defense Mobilization, and the leadership of both parties in the House of Representatives, all agencies of Government concerned have been fully informed of the unemployment situation and of my program designed to alleviate it.

As you will observe from exhibit B which concerns H. R. 861, a bill designed to provide temporary extension of railroad unemployment insurance benefits, after many hours of research on my part, all available information concerning not only the Altoona unemployment situation but also the national picture was placed in the hands of the Chairman of the House Committee on Interstate and Foreign Commerce on January 22, 1955. Since that date I have had several conferences with Chairman Percy A. Priest

whose home town, by the way, is Nashville, Tenn., where there are 2,500 railroaders unemployed. I have also written a personal letter to every member of the House Committee on Interstate and Foreign Commerce and furnished the same information I gave Chairman Priest.

In order to develop nonpartisan support of my legislative program, I wrote a personal letter to the Governor of Pennsylvania on January 22, 1955 and a similar letter to the legislative representatives of the CIO, the A. F. of L., the International Association of Machinists, the Railway Labor Executives Association and the Operating Railroad Brotherhoods. I have received replies from the legislative representatives of the organizations mentioned and in addition, I have been in personal contact with each of them. In each instance they have given me helpful suggestions and have agreed to work collectively with me in an effort to enact my legislative program.

With reference to H. R. 861 providing for the extension of railroad unemployment insurance benefits to July 1, 1955, it is only fair to tell you that there is a division of opinion as to the practicability of its provisions. First, because the bill may lead to Federal control over railroad unemployment insurance benefits; second, because of its effect on collective bargaining in the field of wage increases and third, the bill will establish a precedent for other unemployed groups covered by unemployment insurance as administered by the several States.

As you probably know, a new Congress such as the 84th Congress spends the first two months of the year organizing and being brought up-to-date by various agencies of the government with respect to their legislative requests to Congress which include appropriations. The result is that unavoidable delay is encountered in perfecting legislation since it has to run the gauntlet of the various congressional committees before reaching the floor. In the meantime, you can be certain that I am not leaving any opportunity pass to expedite early consideration of my legislative proposals.

In addition to the legislative program I have described, your attention is called to Exhibit C which concerns the government's efforts to provide employment opportunities to the unemployed in the Altoona area. This program results from my request which brought a governmental committee to Altoona for the purpose of inventorying the skills of those unemployed and seeking to obtain employment for them. As you know, this program is in full effect at this moment.

With respect to railroad unemployment insurance problems such as delays in certifying claims or the tardy receipt of checks, a complete review of the office procedure in handling these claims was made at my request with the result that through my Altoona office I have given 24-hour service and complaints have been reduced to an absolute minimum. In addition to the personnel of the Cleveland regional office of the Railroad Retirement Board being increased and authority given for overtime pay in processing unemployment insurance applications, at this moment the United States Treasury Department is setting up the machinery whereby authority is being delegated to the regional offices of the Railroad Retirement Board to write their own checks instead of the Treasury Department thus saving a whole day in issuing them. I have spent hours in contact with officials of the Railroad Retirement Board reviewing every procedure for the purpose of eliminating delays and I feel that we have gone the limit in cutting corners.

In an effort to alleviate the unemployment problem by bringing about a diversification of industry in the Altoona area, I have been active the past several years in cooperating with individuals and groups in Altoona and my entire congressional district

in furnishing information, running down leads, and otherwise aiding in trying to attract new industries. A useful information kit compiled by the United States Department of Commerce and containing material designed to assist local groups in organizing for the purpose of securing new industries has been sent to interested persons in this congressional district.

From your knowledge of Altoona, I think you will agree that the organized effort of Altoona Enterprises, Inc., is unequalled anywhere in the United States. This fact is confirmed by the United States Department of Commerce who has commended Altoona Enterprises, Inc., for its initiative and success in raising funds for the purpose of attracting new industries to the Altoona area. At frequent intervals, I have sent a list of industrial firms that the United States Department of Commerce reported as being interested in expanding their facilities mostly as a result of the Government's dispersal order under the civil defense program. This information has been furnished to all community groups in my congressional district where there is a committee organized for the purpose of seeking new industries. As you know, at my request representatives of several Government agencies visited Altoona about a month ago and conferred with officials of the Altoona group to make certain that everything possible was being done to utilize the aid of the Federal Government in diversifying industries in the Altoona area.

Over a period of weeks I have had lunch on numerous occasions with key officials of Government and labor organizations in an effort to coordinate my activities and to develop new approaches to solving the Altoona unemployment problem. In all fairness to those with whom I have talked, they have been unable to suggest any new approach. In fact, some of these Government and labor organization officials have commended me for the determined and energetic effort I have made the past many months in trying to alleviate the unemployment situation in my congressional district.

There is attached as exhibit D several pages of the CONGRESSIONAL RECORD of February 17 and February 18 which reveals an additional effort on my part to relieve the unemployment situation not only in Altoona but also in the central Pennsylvania area by my opposition to the unregulated flood of foreign residual oil from Venezuela that has captured the eastern seaboard coal market thus destroying the jobs of coal miners, railroads, and those in related industries.

In regard to the series of resolutions adopted by the county and city commissioners, there is no doubt that the unemployment problem is being attacked on all fronts; namely, at the local, county, State, and national levels. With such fine spirit of co-operation, I feel that our collective efforts cannot help but produce results. In view of the activities of so many persons and groups in helping to solve the unemployment situation in Altoona, I am sending a copy of this letter to interested persons.

With every good wish, I am

Sincerely yours,

JAMES E. VAN ZANDT.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., January 7, 1955.

CHARLES A. MENTZER,

Executive Director, Altoona Community Welfare Council, Altoona, Pa.

DEAR CHARLIE: For your information, Dr. Arthur S. Flemming, Director of the Office of Defense Mobilization, furnished me the following information on January 4 relative to the designation of Altoona as a disaster area:

"This has further reference to your inquiry relative to the designation of Altoona as a

disaster area. The Surplus Manpower Committee of the Office of Defense Mobilization has given very careful consideration to your proposal, and after consultation with the General Counsel of ODM, the Committee has found that the present Disaster Relief Act does not permit Federal assistance for the alleviation of unemployment.

"As you know, the Disaster Relief Act (42 U. S. C. 1855-1855g) authorizing Federal assistance to States and local governments in major disasters reflects the intent of Congress to alleviate suffering and damage resulting from major disasters, and to foster the development of such State and local organizations and plans to cope with major disasters as may be necessary. As defined in the act, the term 'major disaster' means any 'flood, drought, fire, hurricane, earthquake, storm, or other catastrophe' in any part of the United States."

With the ODM decision that the provisions of the Disaster Relief Act are not applicable to Altoona, I arranged a meeting with representatives of the Departments of Commerce, Labor, the Small Business Administration, and the Railroad Retirement Board, which was held in Washington this week. At this meeting Mr. Dewey Coates, former resident of Altoona, and community employment consultant, Bureau of Employment Security, United States Department of Labor, Washington, D. C., was named as the coordinator of the efforts the Federal Government will make to aid unemployed railroad workers in the Altoona area.

Already the Chairman of the Railroad Retirement Board, as part of the Committee's program, has designated Mr. Merritt Robson, a Railroad Retirement Board representative from Chicago, to proceed to Altoona immediately for the purpose of determining the skills of those unemployed so that the United States Department of Labor and the Railroad Retirement Board may unite their efforts in securing employment for such persons.

Another step in the program will bring to Altoona representatives of the United States Department of Commerce and the Small Business Administration, who will make an inventory of the production potential of all industries other than the railroad to aid the Altoona Chamber of Commerce and Altoona Enterprises, Inc., in their efforts to secure new industries. This Committee will function in accordance with the Eisenhower administration's directive that areas like Altoona with a very substantial labor surplus shall be given every possible assistance in rehabilitating their economy.

In addition to the committee mentioned in the above paragraph, I introduced on January 5, 1955, H. R. 861, a copy of which is attached. This bill provides an extension of the payment of railroad unemployment insurance benefits to July 1, 1955 for the unemployed railroaders whose benefits terminated after January 1, 1955. The bill provides that the sum of \$10 million shall be appropriated from the general funds of the Treasury of the United States to cover the cost of all the benefits provided in the bill. Through the extension of railroad employment insurance benefits for the first 6 months of 1955, assistance will be rendered the unemployed while they await either recall to service or obtain employment elsewhere through the united efforts of the Railroad Retirement Board and the United States Department of Labor.

In addition to H. R. 861, I introduced H. R. 860 to provide for a program of public facilities construction which will stimulate employment in areas having a substantial surplus of labor. This bill which I had pending in the 83d Congress when it adjourned, also provides for an appropriation of \$3 billion to cover the cost of my proposed public works program.

To further assist the unemployed and their families, I introduced on January 5, 1955, H. R. 863, to provide for the distribu-

tion of certain surplus food commodities by use of a food stamp plan, and requested that the necessary expenses of administering the food stamp plan be borne by the Federal Government.

To protect the property of all those who may be called upon to depend on public assistance from the Commonwealth of Pennsylvania, I introduced H. R. 862, which prohibits the several States from taking a lien against the real estate of the recipient as is being done under existing law.

The legislative program for the relief of the unemployed railroaders in my congressional district outlined in this letter has been called to the attention of the leadership of the Democratic-controlled 84th Congress and the chairman of the congressional committees concerned urging immediate consideration of the legislation. In addition, I am personally contacting every Member of Congress and officials of organized labor including railroad brotherhoods, asking their assistance in securing early congressional action.

As you know, the 84th Congress convened this week and it will be the early part of February before the legislative machinery will begin to function. Meanwhile, you can be certain that I shall continue my determined efforts to provide relief for the unemployed by obtaining early action on my legislative proposals.

I am sending copies of this letter to interested persons in the Altoona area for their information.

With best wishes, I am

Sincerely,

JAMES E. VAN ZANDT.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., January 22, 1955.
Hon. J. PERCY PRIEST,
Chairman, House Interstate and Foreign Commerce Committee, Washington, D. C.

DEAR PERCY: You will remember our recent conversation concerning my bill, H. R. 861, a copy of which is attached and which provides temporary extension to June 30, 1955, of railroad unemployment insurance benefits to those who have or will have exhausted their rights under existing laws.

There are 24 areas in the United States where a substantial number of railroad workers are unemployed because of a permanent or indefinite shutdown of railroad facilities. Starting early this month, many of these unemployed railroad workers exhausted their rights to railroad unemployment insurance with the result that there exists a most acute economic problem in these areas.

For an illustration, according to information furnished me by the Railroad Retirement Board, in Nashville, Tenn., 2,500 railroaders are unemployed and the survey reveals that the local industry other than the railroads will be able to absorb only a few of them. The result is that in your hometown of Nashville there are some 2,500 unemployed railroaders and their families who have lost or are about to lose their unemployment-insurance benefits which is their only source of income.

In my hometown of Altoona, Pa., there are 6,000 unemployed railroad workers whose unemployment-insurance benefits began to expire January 10, and in the matter of a few weeks some 4,500 will have exhausted their rights to unemployment-insurance benefits. Since Altoona's basic economy is the railroad industry, the only source of income left for these furloughed railroaders and their families is public assistance because local industries cannot provide employment for them. Therefore, my hometown has a similar acute economic problem to that of your hometown of Nashville.

At my request, the United States Department of Labor and the Railroad Retirement Board have made a survey of the Altoona

situation with the result that the skills of unemployed railroaders have been classified and every effort will be made to secure employment for them elsewhere. While this effort is being made to obtain employment for this group, my bill, H. R. 861, will extend their railroad unemployment insurance benefits to the end of the present fiscal year as if they had retained their eligibility. You will observe that I have requested an appropriation of \$10 million from the general funds of the Treasury of the United States so as to finance the cost of the extension and not disturb the solvency of the railroad unemployment insurance fund.

As I said in the beginning, there are 24 areas in the United States which include your hometown and my hometown that are faced with this acute economic problem resulting from unemployment in the railroad industry. I have delayed writing this letter to you so as to permit adequate time for perfecting the organization of your committee. Now that your committee is organized, it is my hope that you can give the subject of railroad unemployment top priority and arrange to discuss it at either a full committee meeting or assign it to a subcommittee so hearings can be held.

On behalf of the citizens of Altoona, I wish to inform you that everything possible is being done from a community standpoint to relieve the unemployment situation, and it is hoped that the extension of unemployment-insurance benefits will receive early consideration by your committee.

With kindest personal regards, I am

Sincerely,

JAMES E. VAN ZANDT.

CHICAGO, ILL., January 25, 1955.

To: Regional Directors, regions 1, 2, 3, 4, 5, 6, and 7.

From: Director of unemployment and sickness insurance.

Subject: Railroad unemployment, Altoona, Pa.

Please refer to our memorandum of January 18, 1955, on the above subject. In that memorandum we mentioned that unemployment of railroad workers in Altoona, Pa., is attracting national attention and informed you that you would be requested to ask your field offices to develop orders for recruitment in Altoona as soon as information was available from the inventory of unemployed railroad workers then in progress.

Attached is a tabulation showing by age groups the number of unemployed railroad workers in Altoona (Blair County) in each occupation or occupational group listed. A majority of these claimants have already been paid the maximum amount of UI benefits to which they are entitled this benefit year. A high proportion do not have enough 1954 earnings to be qualified next year.

You are requested to forward this tabulation to each field office in your region and ask them to contact all railroad hiring officials who might possibly have need for the

services of employees in any of the occupations listed. Any orders developed are to be written up on form ES-113a and forwarded direct to the district manager at Altoona, Pa. All sections of form ES-113a should be carefully completed. Depending on the conditions of the order, particularly arrangements for transportation and physical examination requirements, the district manager at Altoona will either (1) refer applicants in person direct to the hiring official shown on the order, or (2) will forward to the hiring official an application form similar to exhibit A of FOM-III-4.

Please request your field offices to give top priority to this attempt to develop orders for recruitment in Altoona. It is requested that all hiring officials be contacted and all possible clearance orders obtained and forwarded to Altoona no later than February 4, 1955.

H. L. CARTER.

Active claimants, Jan. 1, 1955, Altoona, Pa. (Blair County)

[From the CONGRESSIONAL RECORD of February 17, 1955]

Mr. VAN ZANDT. Mr. Speaker, I am opposed to the rule because it will not permit amendments to H. R. 1 when it is read under the 5-minute rule.

This closed rule is a gag rule and denies me as a representative of some 300,000 people to offer amendments to the bill that will protect their interests as American wage earners.

We who live in the 20th Congressional District of Pennsylvania, have made every effort possible to obtain relief from the adverse effects of the unlimited and unrestricted importation of foreign residual oil which is one of the main factors in wrecking our economy. Unless those of us from coal-producing States are permitted to offer amendments to H. R. 1 curbing the flood of foreign residual oil, we have no other means of stopping it.

The unemployment in my congressional district is mounting daily and as of January 1, 1955, there were 18 percent of our employables unemployed. It is in the name of the unemployed in my district who are today living on public assistance and surplus

food commodities, that I ask that this closed rule be defeated.

I am sure that the membership of this House if given an opportunity to vote on an amendment providing for a 10 percent quota limitation on the importation of foreign residual oil that such an amendment will be approved overwhelmingly, since it will restore employment and also protect the jobs of those presently employed.

[From the CONGRESSIONAL RECORD of February 18, 1955]

Mr. VAN ZANDT. Mr. Chairman, the opposition expressed by a great many Members of this House to the gag rule now in effect on H. R. 1 reveals the feeling on the part of a great percentage of the American people that this legislation should be open for amendments.

I opposed the gag rule yesterday, and shall vote to recommit the bill. If the motion to recommit the bill fails, I shall vote against H. R. 1 on final passage because the interests of American wage earners are not protected.

After all, it is only through appropriate amendments that the jobs of American wage earners can be protected.

As the printed hearings on H. R. 1 will show, a long list of Members of Congress as well as spokesmen for numerous industries appeared before the House Ways and Means Committee pleading that H. R. 1 be amended in order that relief might be provided to many of our basic industries which have suffered because of the unfair competition resulting from a flood of cheaply manufactured foreign goods.

Many Members of Congress who appeared before the House Ways and Means Committee in protest against the damaging effects on the jobs of American wage earners resulting from reciprocal trade agreements have supported the principle of reciprocal trade in previous Congresses but to use their own words—they could not continue to do so any longer unless appropriate amendments were adopted.

When I first came to Congress in 1939 I opposed reciprocal trade agreements on the grounds that they were destroying the jobs of coal miners in my congressional district in Pennsylvania. At that time, imported Russian coal had captured some of the eastern seaboard coal markets from coal producers in my congressional district.

During the early part of World War II and before resigning my seat in Congress to return to military service, I supported the extension of reciprocal trade agreements in the 78th Congress because we were at war and the demand for coal revived our coal industry.

When I was elected to the 80th Congress I voted in favor of extending reciprocal trade agreements with the understanding that American industries would be protected from unfair competition resulting from a flood of cheaply manufactured foreign goods.

For example, in Pennsylvania residual oil from Venezuela was beginning to flood the eastern seaboard, thus destroying the market for Pennsylvania-mined coal.

During the 82d Congress I voted to extend reciprocal trade agreements because there was contained therein the so-called peril-point amendment which was designed to provide a checkrein on imports that could destroy the jobs of American wage earners.

During the 83d Congress I joined many of my colleagues in an effort to stop the uncontrolled flow of foreign goods. Many of you will recall that we were supporting the Simpson bill. My special interest was in regulating the flood of foreign residual oil by placing a quota limitation on the importation of such oil. As many of you will recall, the Simpson bill was returned to the committee.

During the early part of 1954 the so-called Randall committee was created and took testimony from spokesmen for industries adversely affected by the importation of cheaply manufactured foreign goods. I regret to state that the coal industry was denied the opportunity to present its side of the case. Consequently the Randall report ignored the increasingly serious situation existing in the coal-producing States of our Nation.

Mr. Chairman, by my votes as a Member of Congress there is ample proof that I believe in the principles of reciprocal trade agreements and that I supported them until I found a wholesale disregard for protecting the jobs of American workmen.

It became evident that the so-called peril-point amendment was meaningless and that the Randall committee merely performed a window-dressing job and actually by their recommendations threw American wage earners to the wolves.

Mr. Chairman, I voted against the extension of reciprocal trade agreements last year and I intend to continue to do so until the interest of the American working man is protected.

As a means of attaining the objective of protecting the jobs of American workmen,

I have 3 bills pending before the House Ways and Means Committee, namely: H. R. 345, H. R. 864, and H. R. 3019.

H. R. 345 is designed to provide a 5-percent quota limitation on imports of foreign residual oil; while H. R. 3019 would increase the limitation to 10 percent.

H. R. 864 provides a permanent procedure for the adjustment of tariff rates on a selective basis and regulates the flow of imported articles on a basis of fair competition with domestic articles. H. R. 864 also contains a 5-percent quota limitation on imports of foreign residual oil.

Mr. Chairman, I am opposed to H. R. 1 because it will continue the disastrous effects on our economy by the reckless importation of foreign goods manufactured at a fraction of the wages paid American workmen.

For several weeks the House Ways and Means Committee has heard expert testimony from spokesmen for various industries regarding the adverse effects reciprocal trade agreements are having on our industrial economy. These experts produced facts showing that the employees of the industry affected not only lost their jobs but many of the manufacturing plants have been driven to financial distress, and in some instances were forced to close their doors.

Spokesmen for the coal industry told how the flood of foreign residual oil from Venezuela has destroyed the domestic coal markets of the miners in Pennsylvania, Maryland, and West Virginia.

Back in 1939 when I first voiced my opposition to the importation of slave-mined Russian coal and other cheaply manufactured foreign products, I predicted that such a reckless policy would create ghost towns out of many communities in my congressional district and throughout the Nation.

Mr. Chairman, my prediction of 1939 has become a reality. Practically all of our deep mines in central Pennsylvania are closed and thousands of miners have been out of work for several years. In fact, many mining towns have been abandoned and their empty and dilapidated rows of houses stand as a monument to the destructive effects of the importation of foreign residual oil. Because they have nowhere to go, there are only a few of the unemployed in the coal-fields of central Pennsylvania that have left the area. The result is that today, according to the United States Department of Labor, my congressional district is classified as a critical area because of the fact that nearly 18 percent of the civilian labor force is unemployed.

This unemployment is not confined to coal miners, but includes those employed in affected related industries such as the railroads.

Mr. Chairman, in my home city of Altoona, Pa., nearly 10,000 people are unemployed, 6,000 of whom are railroad employees with 4,100 of this number having exhausted their rights on January 10, 1955 to railroad unemployment insurance benefits. A similar condition exists among coal miners and others who have lost their right to unemployment compensation benefits from the State of Pennsylvania.

Mr. Chairman, every community in my congressional district has an active committee engaged in trying to attract new industries and millions of dollars have been raised by voluntary subscription to finance this long-range program of rehabilitating the industrial economy of the area.

While this united community effort goes on, thousands of my constituents—all good Americans and victims of this reckless foreign-trade policy—are today dependent for their existence upon public assistance and surplus food commodities.

I regret that every member of this Committee is unable to talk to these unemployed Americans as they stand in line to

pick up their food coupons. If it were possible for you to talk to them, you would hear the pitiful story of their plight as citizens of a nation that boasts of its high standard of living.

As I mentioned a moment ago, communities affected by unemployment in cooperation with the State and Federal Government are endeavoring to rehabilitate their economy by attracting new industries. The unemployment situation, however, is getting worse as mines continue to close and more miners and railroaders are losing their jobs.

While this unfortunate situation prevails in the United States, residents of Venezuela, which is the chief exporter of residual oil, are enjoying unbridled prosperity.

Let me read you excerpts from Hal Boyle's syndicated column of January 24, 1955, titled "Venezuela Seen As the Texas of South America":

"So much money is being made here (Venezuela) that visiting Texans actually get an inferiority complex and the United States dollar feels like 50 cents. . . . The visitor has a dazed sensation he is caught in a mid-century Klondike gold rush. The atmosphere of quick money is overwhelming, and tales of riches made overnight are a bolivar a dozen. . . . Venezuela is bigger than Texas and Oklahoma combined and larger than any European country except Germany. . . . Its chief income is from oil—no land except the United States produces more. . . ."

"Although the nation has a population of only 5½ million, the Government spent half a billion dollars in 1954 on vast public-works projects and still ended up with \$80 million left in the till. . . . Foreign investors from the United States and Europe are pouring untold millions into the industrialization of the country. It has taken in more than 100,000 immigrants from Europe the last 10 years. . . ."

"Caracas, the 388-year-old capital, is now one of the world's greatest boom cities. Fifty years ago milkmen herded cows through its ancient streets. Today they are jammed by thousands of new high-priced motorcars. . . . Nearly a million people live in the metropolitan area, and so many new buildings are going up construction workers have no time to even take Sundays off to go to the bullfights.

"But the city has abysmal poverty as well as tremendous wealth. The shanties of the poor still crowd many of the raw red hills that stud Caracas. The Government has torn down thousands of these eyesores and replaced them with forty 15-story apartment buildings at a cost of \$24 million. Workmen can rent the apartments for \$6 to \$30 a month, own them after a period of 20 years.

"In 1955 the Government plans to tear down 6,500 more shacks and spend \$25 million more on apartment projects for low-income workers."

Mr. Chairman, what a contrast it is to compare living conditions in Venezuela with the coal fields of Pennsylvania.

May I add that the prosperity enjoyed in Venezuela is to a great extent at the expense of the misery and suffering of residents of the coal-producing States of our Nation and especially of my congressional district.

At this very minute a quarter of a million ton tanker ship is tied up at an east coast dock carrying disaster to the coal, railroad and related industries of this Nation, in much the same manner as rat-infested vessels brought disease into our port cities in years gone by.

This foreign tanker with its bunker space filled with residual oil is dumping it in violation of every American concept of fair competition. As a matter of fact, even if the miners of our Nation would work for nothing and the railroads transported the coal for practically nothing, the coal industry could not compete with this unfair com-

petition from foreign residual oil because its price is continually manipulated downward to capture the eastern seaboard coal market.

Mr. Chairman, it is being said in defense of residual oil that the oil companies have been requested to restrict voluntarily the amount of residual oil imported quarterly.

It has also been said that if any restrictions are placed on the importation of foreign residual oil that we will offend Venezuela.

Let me state, Mr. Chairman, that every time a coal miner loses his job because of the unfair competition from foreign residual oil a railroad has also been added to the list of the unemployed.

Mr. Chairman, those of us who represent coal-producing States recognize foreign residual oil as the archenemy of our industrial economy.

Therefore, I plead with you that H. R. 1 be returned to committee so that appropriate amendments can be adopted.

As far as I am concerned, it is about time we start adopting some of the policies foreign nations apply against us in protecting the jobs of their industrial workers.

Mr. Chairman, H. R. 1 without appropriate amendments will not correct the unemployment situation and afford the necessary relief to distressed industries and therefore I cannot conscientiously vote for it.

Meet Brooklyn, U. S. A.

EXTENSION OF REMARKS OF

HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 23, 1955

Mrs. KELLY of New York. Mr. Speaker, it was with great interest and I assure you with deep pride that I read in the Christian Science Monitor for February 18, 1955, the article entitled "Meet Brooklyn, U. S. A." By that title, proper tribute is rendered the community of Brooklyn which has contributed so very much to the greatest city, the greatest State, and the greatest Nation in the world. I include it here so that others will find pleasure and enlightenment in reading it:

MEET BROOKLYN, U. S. A.

(By H. A. Morris)

Most Americans know nothing of Brooklyn, N. Y., except what they read in the papers. Often these reports aren't flattering.

In reality, Brooklyn is one of the world's premier cities. In size it ranks third among the communities of the United States. As a voter's community it is second only to Cook County, Ill. The city also ranks third in the number of its industrial concerns, and fifth in the total value of its manufactured products.

Brooklyn, although only 1 of the 5 boroughs that comprise Greater New York, is separated from Manhattan by the East River and connected by 3 large bridges and a tunnel. It is made up of numerous sections, the best known of which are Flatbush, Williamsburg, Ridgewood, and Bay Ridge. Although governed by the Mayor of New York and the city council, Brooklyn has its own borough president and municipal officers and its own postmaster.

The history of Brooklyn began in 1660 when 134 hardy Dutch settlers occupied a strip of its shore. They were later joined by groups of English, Walloons, and French

Huguenots, and when the first United States census was taken in 1790 their numbers had grown to 5,000. The area was a small agricultural community for over 200 years, but a rapid development took place after the opening of the Brooklyn Bridge in 1883. In 1898 the separate city charter was given up and, through consolidation, Brooklyn became a part of New York City, as we now know it.

One of the first free schools was built in Brooklyn in the 1600's. The city was the first to free slaves under the Manumission Act of 1798. James Gordon Bennett and Horace Greeley, two of the greatest of newspaper editors, are buried there. Brooklyn manufactures 732 different articles, more than any other American community.

Brooklyn had the first heated horsecars in America. The borough ranks second as the coffee roasting center of the world. It is one of the Nation's leading centers for the manufacture of knit goods and food products, for fur dressing and for ship and boat building.

The *Monitor*, the ship that had the famous encounter with the *Merrimac*, and many of our great warships today were built at the Brooklyn Navy Yard.

The Bush Terminal, which covers an area of 200 acres, is the largest single coordination of manufacture, storage and shipping in the world. Brooklyn high schools are among the finest and best equipped in existence. The St. George Hotel has over 2,000 rooms and a beautiful salt water swimming pool.

Brooklyn has 81 parks. The largest, Prospect Park, covers 526 acres. It lies on the ground where the historic battle of Long Island was fought and is said to be worth \$150 million.

Brooklyn has a wonderful children's museum, a beautiful botanic garden, an institute of arts and sciences, an academy of music, almost 60 hospitals, 4 major colleges and 201.5 miles of waterfront.

The borough is often called the "City of Churches" and it deserves the title. Starting with 3 churches in 1864, Brooklyn now has almost 800 places of worship. Church properties in the city have an estimated value of \$200 million.

Brooklyn boasts three of the world's largest playgrounds. Coney Island has 5 miles of bathing beach, and is internationally known. Manhattan and Brighton beaches are also large enough to attract thousands of bathers.

Novelist Betty Smith, Singer Phil Regan, Radio Comedian Bud Abbott, Playwright Irwin Shaw, Shep Fields and Vincent Lopez, the orchestra leaders; Phil Rizuto, Tommy Holmes, and Billy Loes, the ballplayers, all came from Brooklyn. So did the one and only Mickey Rooney and the biggest share of the boys of the 1st Infantry Division, the first American outfit to land in north Africa, Sicily, and Europe during World War II.

Brooklyn is truly a big city, with 50,000 retail stores and a population approaching three and a half million.

Despite its critics, Brooklyn is really in the U. S. A.

Freedom Message to People Behind the Iron Curtain

EXTENSION OF REMARKS OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 23, 1955

Mr. RODINO. Mr. Speaker, one of the principal aims of our post-World War II

foreign policy is to gain and hold the confidence of all freedom-loving peoples in our unrelenting struggle against totalitarianism. In this global battle in defense of our beliefs and ideals we need to have all believers in democracy closely united spiritually and morally to our cause. We and our friends and allies are convinced that the cause for which we are prepared to fight with all our might is the cause of humanity; it is the sacred cause of all free men. On that issue there is and should be no question in our mind. There can be no doubts or uncertainties. For when one is girding himself for a bloody battle, he must have no misgivings about the righteousness of his cause.

Today in our struggle against totalitarian communism, that fearsome and godless doctrine whose fanatical adherents have already enslaved almost one-third of the world's population, not only should we help all free peoples, but we should also seek ways of encouraging and inspiring those unfortunate millions in Communist-dominated countries who are being held in servitude against their will.

In this connection our principal task should be to keep alive the spirit of freedom in those peoples. Next to actual liberation, the best thing we can do, and I am sure we can do it effectively is, to inspire them with confidence and instill in them some hope, to show them some gleam of light, something indicating that they have friends and sympathizers in the free world who are seriously concerned with their fate. That is the purpose for which the Voice of America has been working, an endeavor which our taxpaying citizens are gladly supporting. The broadcasts sponsored by the free Europe group have similar ends in view. These broadcasts have done a good job in enlisting more friends for the cause of democracy. However, radio broadcasts have certain limitations. Many people in the Communist-dominated countries do not have radios, and furthermore radio broadcasts can be jammed. Consequently, alternative methods of reaching the people of Eastern Europe are required. One very effective method of dealing with the situation is by distributing leaflets with freedom messages to Iron Curtain countries by balloons. Of course, there is nothing novel in this suggestion. It has been tried on various occasions in the course of the past several years and has proved to be quite effective. In the resolution—House Joint Resolution 76—which I recently introduced, it is proposed to regularize this system, and thus make it more effective. This resolution also suggests an additional measure. It proposes that not only freedom messages but also food packages be dropped over Iron Curtain countries by balloons. This should prove far more effective than the leaflets alone. Our experience with distributing food parcels in Berlin has demonstrated that this type of psychological weapon has a powerful impact. If we should now use it in conjunction with freedom messages, it would not only give added force to those messages and help to convince the recipients of our

sincerity, but the food might also help save many victims of Communist tyranny from starvation.

In view of our past experience, this idea of sending our freedom messages and food packages to Iron Curtain countries by balloons is certainly worth trying. As has been stated in the proposed resolution, the food for this purpose is to come out of our surplus agricultural commodities. The administration of the whole scheme under the Secretary of State, would cost no more than \$2 million. It would be one of the cheapest and most effective methods of winning deserving and worthy friends behind the Iron Curtain for the cause of humanity and for free democracy. I sincerely suggest that we try it.

The Golden Anniversary of the United States Forest Service

EXTENSION OF REMARKS OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. SIKES. Mr. Speaker, under leave to extend my remarks in Appendix of the Record, I include the following excellent editorial by Don Saults, editor of the Missouri Conservationist, on the golden anniversary of the United States Forest Service which was established 50 years ago this month:

THE GOLDEN ANNIVERSARY

It was just 50 years ago this month that the United States Forest Service was born. Its sire was Gifford Pinchot and its dam was intelligent planning; its godfather was Theodore Roosevelt and its godmother was Congress.

The Service has had a distinguished life since then, and it would appear to be in a state of vigorous maturity today. It was reared, nurtured and educated according to a basic precept enunciated by Godfather Teddy: "Forestry is the preservation of forests by wise use. And wisdom has been a pretty good guide to behavior even though men change the legends by which they live."

Gifford Pinchot became the first chief of the Forest Service; he was also the first native American to have professional training in forestry. And the Service has been run by professionals ever since. This seems a reasonably sound idea, too, in fields as widely separated as medicine and baseball.

Forest Service has a lot of children, now. Nearly all States have their agencies working in the field, just as Missouri has its forestry division in the conservation commission. Thirty universities and colleges, among them the University of Missouri, offer full instruction in forestry. (Pinchot had to go to Europe to learn.) Forty-five States—including Missouri—have extension programs in forestry conducted by the State agricultural colleges. And today, some 5,000 professional foresters are employed by private industry in the United States.

Back in the days of its callow youth, Forest Service wasn't quite socially acceptable and frequently got snubbed by local people. But at 50 years of age, Service has become not only respectable but even a romantic hero subject of movies, novels, and radio programs.

How times do change in 50 years. Too bad the men who dreamed the great dreams, who birthed the idea, aren't around to see people accept their scion as a distinguished citizen.

Just consider the matter of public forests, pretty much taken for granted today, although attacks are still being made on them by interests who have learned nothing and forgotten nothing since the turn of the century. Ever think what would have happened to our national forests if a protecting hand hadn't been laid on them a half century ago?

Those public forests—nearly 1,500,000 acres of them in Missouri—are big lumbering operations on the controlled-use principle, though our acreage here is only now developing into the harvest stage. Apart from sustained yield, they were visited by 35 million people last year, not just visited but used by those people for hunting, fishing, and outdoor recreation.

The Service is helping educate a lot of people, too. The most dramatic example of that is the development of Smokey Bear as symbol of cooperative forest-fire prevention, a program jointly conducted by the State foresters and the Service.

It has been a good 50 years, despite two world wars and an amazing growth in population and industry, which meant tremendous pressure against the Forest Service. But what will the future bring?

The Service doesn't know, any more than in 1905 it could foresee 1955. But it guesses there will be steady growth for forest recreation and for timber needs; that the forests' protective role on the watersheds will become even more important. Perhaps forestry research will develop new and better kinds of trees and other concepts of timber management.

Fifty years can be a long time to men, but it isn't much to a redwood or even to a Missouri white oak.

So the 18-year-old conservation commission of Missouri wishes the 50-year-old Forest Service of the United States a cheery golden anniversary and many, many happy returns of the day.

H. R. 1

EXTENSION OF REMARKS OF

HON. ORVIN B. FJARE

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. FJARE. Mr. Speaker, under leave to extend my remarks by way of explanation of my vote against H. R. 1, I am concerned with the protection of America's industrial and agricultural production. During the past 20 years we have seen a tremendous reduction in our tariff barriers, and abnormal world conditions have been such as to make it difficult to assess the full effect of these changes in our tariff structure on our national economy. It is safe to say that the United States is no longer one of the high tariff nations. Our tariffs are now at their lowest point in history, and average only about 5.1 percent of the value of imports. In addition, it is to be considered that actually our tariffs affect less than one-third of our total imports.

There are many factors that affect free trade between the nations of the world. Import quotas, currency restrictions,

monopolies, government trading, cartels, and other devices are far tighter barriers to free trade than tariffs. The United States actually permits freer trade than any other industrialized country in the world, because, except with respect to quotas on agricultural products subject to price supports, it does not engage in these practices. The use of such devices by other nations has increased markedly during the past 20 years.

It is my feeling that a sound, stable, and prosperous economy in the United States is the world's greatest hope at this time. The theory that the United States should import those things that can be produced more cheaply abroad and emphasize production of those things which we ourselves can produce more cheaply is not true under present world conditions. We need a broad base of all industries for our Nation's economic strength, and some segments of our economy have to be protected to insure that condition.

Our Government is great because it is composed of a system of checks and balances and I believe that the escape-clause provisions should be strengthened and implemented toward that end. In addition, I feel that H. R. 1 was too great a departure from the time-proven basic American concept that we should have a Government of law and not a Government of men.

If Giveaways Are Sound

EXTENSION OF REMARKS OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I include an editorial from the Omaha World Herald entitled "If Giveaways Are Sound."

Mr. Speaker, the United States of America has given away more than \$40 billion of American money since 1948 trying to save other nations and to buy some good will. This money was borrowed from the American taxpayer. It is a part of our debt structure. If you or I or any individual would proceed on the same theory that we should borrow money from the bank and go in debt so we could give it away, then surely someone, sooner or later, would suggest that we be examined by a psychiatrist.

It would seem that the money we have given away has bought more ill will than good will. It is my hope, Mr. Speaker, that the Congress will this year examine with great care the money already available for the many foreign aid programs and the amount of money requested for additional programs. It is my humble opinion that we could well cut out all economic aid which would assist to balance our budget and perhaps even permit a small reduction in our taxes. I would suggest that military aid be made

available only to those countries who prove to be our friends and will fight when the chips are down.

The editorial follows:

IF GIVEAWAYS ARE SOUND

Last fall America's master of global giveaways, Harold Stassen, announced that his Foreign Aid Administration would buy 10 million tons of coal for distribution abroad.

Nothing was done about the coal until the other day when Kentucky Senator CLEMENTS asked Mr. Stassen if he could move Kentucky's share, 2 million tons, some time between now and October.

"Yes, if Kentucky wants it," said Mr. Stassen.

"Do they want it," said Senator CLEMENTS. "They want it as of yesterday."

"They," of course, are Kentucky coal interests. The idea is to relieve a depressed industry through Government purchases.

Now that foreign aid is in disrepute the country over, and almost everybody realizes the program won't buy allies or insure peace, the FOA is badly trying to buy allies here at home—allies who have a financial interest in continuing foreign aid.

If there's not enough demand for the high-priced coal that John L. Lewis' miners are digging, so goes this reasoning, then give it away, let the taxpayers foot the bill, but by all means keep the miners at work.

By the same token, if there's no market in America for the flood of price-supported farm crops, then dump the stuff on the world markets at cut-rate prices, or give it away as was done in the case of India.

There is a certain logic in this, once one accepts the premise that giveaways are a fine and sensible means of achieving desirable ends. For if it is a good idea to rescue foreigners in distress, it obviously is an even better idea to rescue depressed industries in America. Charity, after all, should begin at home.

But if this philosophy is accepted, why limit rescue operations to depressed industries only? Why not insure full employment, overtime, and everlasting prosperity simply by having the Government buy everything that can't be sold at home and give it away abroad?

Automobiles, for instance. They're streaming out of the factories at the rate of 8 million a year and the experts are shaking their heads, saying the boom can't last through the year. Why not keep the auto factories humming at full speed, why not give Reuther his guaranteed annual wage (because the industry would have guaranteed annual production and profits), and spread the shining product of Detroit as a free-for-nothing gift the world around?

Henry Wallace was a piker with his proposal of a quart of milk a day for the Hot-tentots. Why not throw in a new V-8, a 24-inch television set, and chicken every Sunday?

If a still, small voice should ask who's paying for all this, silence him quickly, for he is either a willful reactionary or an ignorant character who has not caught the vision. No true believer in the giveaway principle would ask such a foolish and unenlightened question.

The Late Pete Jarman

EXTENSION OF REMARKS

OF

HON. KARL M. LeCOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. LeCOMPTE. Mr. Speaker, I take this opportunity to express my apprecia-

tion of the life and services of the late Pete Jarman.

The untimely death of Hon. Pete Jarman, of Alabama, a former distinguished and very useful Member of this House, brought very great sadness to me, and my heart aches for his charming wife. Mr. Jarman was a Member of Congress and was serving with distinction on the Foreign Affairs Committee when I came in January of 1939. He continued to serve his constituents and the country as a whole for a number of years, gaining in stature each year. After his retirement from the House he was appointed Ambassador to the Commonwealth of Australia where he represented our Government at Canberra in this far-away, but relatively new country. In that capacity he gave his best efforts at all times, and he continued in this capacity until 1953.

In 1951 I was a member of a delegation sent by Congress to Australia to help in the observance of 50 years of free government in Australia, and it was my opportunity to learn at first hand about the outstanding service performed by Mr. Jarman. He was respected by the government officials of Australia and by the representatives of other nations at the Australian capital. Our country gained in prestige as a result of his constructive work.

Mr. Jarman died years too soon, but he left an indelible impression on our foreign service, and in all this his charming wife was an active and splendid participant.

Postal Decentralization Benefits Being Felt Here

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks, I am inserting in the Appendix of the CONGRESSIONAL RECORD the following article from the St. Louis Globe-Democrat of Sunday, February 6, 1955, entitled, "Postal Decentralization Benefits Being Felt Here."

POSTAL DECENTRALIZATION BENEFITS BEING FELT HERE

Postmaster General Summerfield's program to decentralize the Nation's postal system has been felt all the way down to the rural postmaster.

St. Louis District Manager James E. Newton reported getting this comment from a fourth-class postmaster who had been invited to attend a meeting of postmasters from this area:

"There's something funny going on down there at St. Louis. I got a letter from some big shot who wanted me to attend a meeting clean down to St. Charles. I haven't been that far away for more than 10 years. It's almost 40 miles; besides the meeting was at 8 o'clock and I'm always in bed by 9 o'clock."

SIX-DAY REPLY

The "something funny going on" at St. Louis and nine similar regional offices throughout the United States, is an attempt

to streamline a Government department which until Summerfield took over in 1953 was still operating with horse-and-buggy methods.

Improvements in service are typified in this letter to the St. Louis district manager from a post office inspector relative to the extension of rural delivery service from Jackson, Mo.

"In the past it would take from 4 to 6 weeks to have a reply from the Department. In this case it took just 6 days."

The postmaster's request for an extension of service had been given prompt personal attention and several families received improved service without delay.

CLOSE TO HOME

Summerfield's decentralization plan also brings promotion and personnel decisions down to a level where they can be settled by supervisors who know the capabilities of their employees.

The Summerfield theory is that simple decisions that would have taken Washington offices weeks to handle can now be made close to home in a matter of days. Postmasters formerly petitioned Washington for such trivia as typewriter repairs.

Decisions on Missouri postal routes once made in Washington can now be made in district offices at St. Louis, Kansas City, or Springfield.

The St. Louis regional office, 111 North Fourth Street, directs postal service in Missouri, Iowa, and Arkansas. Regional manager James B. Tunny is a 45-year veteran of the postal service. His assistant is George J. Gross, a lawyer and former FBI agent.

OPENED IN SEPTEMBER

Tunny set up the Japan postal service after World War II and was in charge of the Cincinnati pilot office, the first of the regional offices to be activated.

Opened September 9, 1954, the St. Louis regional office supervises 3,434 post offices serving more than 8 million persons. Other regional offices are at Cincinnati, Chicago, Dallas, Minneapolis, Portland, Washington, Philadelphia, San Francisco, and New York City.

Regional offices are staffed by a public relations officer, an industrial engineer, and a management-employee relations officer. The engineer is charged with the elimination of duplication and the establishment of more efficient procedures.

The employee relations officer attempts to adjust grievances at the local level. Included in the Postmaster General's goal is a desire to place greater responsibility in the hand of the postmaster.

Summerfield's aim is to pare bureaucracy and operating costs and increase efficiency. At the same time the Postmaster General hopes to give the sprawling \$2 billion postal business some semblance of home rule.

Under the reorganization program, which began in November, 1953, the country will eventually have 15 regional postal offices.

The Post Office Department reports that between 1953 (when Summerfield took office) and 1954 the Department's operating cost deficit was cut from \$635 million to \$399 million.

Summerfield has not batted a thousand in attempting to pull the Department out of the red. His "junk mail" experiment was a notable failure. However, no one can accuse him of standing at the plate with the bat on his shoulder.

Another proposal for which he is pressing is an increase in postal rates.

Despite recent economies, the Post Office Department operates at a loss of between \$300 million and \$400 million a year. Proposed wage increases and fringe benefits will cost an estimated \$170 million annually for the Department's 540,000 employees.

Thirty-seventh Anniversary of Lithuanian Independence

EXTENSION OF REMARKS

OF

HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. ALLEN of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Petras Dauzvardis, consul of Lithuania at Chicago, on the occasion of the 37th observance of the independence of Lithuania, Sunday, February 20, 1955, Lithuanian Auditorium, Rockford, Ill.:

The 37th anniversary of the Republic of Lithuania (February 16) and the 12th year of the occupation and domination of Lithuania by Soviet Russia, affords an opportunity to review the case of Lithuania; to bring out the falsehoods of its Soviet occupant; to ask the Soviets whether they made false representations at the time of signing the treaties of peace and nonaggression with Lithuania and the other Baltic states, or are they making false representations now in proposing "peaceful coexistence" with America and other countries; to assess the American policy of peace and liberation, and to rededicate ourselves to the cause of freedom and liberation of Lithuania.

Soviet coexistence with other nations and respect for law and decency were manifested in the early treaties. The peace treaty with Lithuania (July 12, 1920), article I, declares: "Russia, without any reservation whatsoever, recognizes Lithuania as a self-governing and independent State with all juridical consequences that follow from such a recognition and in a spirit of free and good will renounces all sovereignty rights of Russia concerning the Lithuanian nation and Lithuanian territory which previously belonged to her."

The nonaggression pact of September 28, 1926, provides:

"Art. 2. The Republic of Lithuania and the Union of Soviet Socialist Republics mutually undertake to respect in all circumstances the sovereignty and territorial integrity and inviolability of each other."

"Art. 3. Each of the two contracting parties undertakes to refrain from any aggressive action whatsoever against the other party."

The Mutual Assistance Treaty of October 10, 1939 reaffirms the principles of the above two treaties and ostensibly speaks for coexistence between Lithuania and the Soviet Union. The preamble states:

"For the purpose of developing the friendly relations established by the peace treaty of July 12, 1920, and based on the recognition of an independent state existence and non-intervention in the internal affairs of the other party."

"Recognizing that the peace treaty of July 12, 1920, and the pact of nonaggression and peaceful settlement of conflicts of September 28, 1926, continue to form a firm basis of their mutual relations and undertakings."

The seventh article of the treaty provides: "Realization of this treaty should not affect in any way the sovereign rights of the contracting parties, in particular their State organization, economic and social system, military measures and generally the principle of nonintervention in internal affairs."

In addition to the above, shortly after the signing of this treaty Soviet Commissar for Foreign Affairs Molotov, in presenting the treaty to the Supreme Soviet of Soviet Russia for ratification, said:

"This treaty of mutual assistance in no way implies any interference of the Soviet Union in the affairs . . . of Lithuania, as some foreign newspapers are trying to infer. On the contrary, this treaty strictly stipulates the inviolability of the sovereignty of the signatory states and the principle of non-interference in each other's affairs."

SUBJUGATION INSTEAD OF COEXISTENCE

The term of the treaty was 15 years. And yet, before 8 months had elapsed, it was flagrantly violated—Lithuania was seized by the Soviet Union in June 1940. Coexistence, law, and decency were superseded by aggression, destruction, and genocide.

After seizing Lithuania, Russia deposed Lithuania's legal government, replaced it with an illegal puppet regime. That puppet regime was and is illegal and without authority from the people or the constitution of Lithuania. It reigns by terror and through the Soviet armed forces. The people are deprived of human and property rights—they have been degraded to the level of horses or oxen.

NATIONAL DETERMINATION

Despite all this, the Lithuanian nation did not and will not approve the anti-Lithuanian and illegal acts of Russia and her puppets. Citizens of Lithuania and the entire Lithuanian nation have demanded and are demanding total independence for Lithuania—factual as well as juridical. The legal representatives of Lithuania, the Supreme Committee for the Liberation of Lithuania, the underground, various Lithuanian immigrant organizations, about 3 million people in Lithuania and more than 1 million abroad—in fact all patriotic Lithuanians—denounced the Soviet occupation and spoliation of Lithuania, and are working for the freedom of Lithuania.

NONRECOGNITION AND LIBERATION

The United States Government and the American people have defended and are defending Lithuania in every way. The State Department made its forceful and noble declaration (of nonrecognition) the second day (July 23, 1940) after the treasonous and illegal vote of the so-called People's Diet to incorporate Lithuania in the Soviet Union. This declaration states:

"The devious processes whereunder the political independence and territorial integrity of the three small republics—Estonia, Latvia and Lithuania—were to be deliberately annihilated by one of their more powerful neighbors, have been rapidly drawing to their conclusion."

Note that it clearly states that Lithuania's independence and territorial integrity are being annihilated by a neighbor—not by the Lithuanian nation, as the Soviets and their agents claim. The declaration states further:

"The people of the United States are opposed to predatory activities no matter whether they are carried on by the use of force or by the threat of force. They are likewise opposed to any form of intervention on the part of one state, however powerful, in the domestic concerns of any other sovereign state, however weak."

In pursuance of this declaration, Presidents Roosevelt, Truman, and Eisenhower, and their State Secretaries, have repeatedly reaffirmed the United States policy set forth therein. Both political parties, the Democratic and Republican, placed Lithuania and other Soviet occupied and dominated countries in their platforms of 1952, thereby making their independence part of the United States national policy. As a consequence thereof, the incumbent administration adopted and proclaimed the policy of liberation of the captive nations. The House of Representatives has unanimously adopted a resolution to appoint a select committee to investigate the seizure and incorporation of the Baltic states of Lithuania, Latvia, and

Estonia by and in the U. S. S. R. The committee made a thorough investigation and found that those states were forcibly seized by the Soviet Army and illegally incorporated by the Kremlin regime into the Soviet Union.

The committee concluded that the continued occupation of these nations by Soviet Communist power is the basic cause of the growing menace of war and stands as a threat to the security of the United States. This threat is increased in direct proportion to the time and opportunity afforded the Communists to digest and consolidate their gains and to use these gains as bases for further and greater aggressions. This threat is diminished in direct proportion as the Communist hold on the captive nations is weakened by a positive policy that promotes the forces of national independence behind the Iron Curtain.

The committee recommended that the United States Congress by appropriate action reiterate and make clear that the eventual liberation of all the nations enslaved by and within the Soviet empire, together with unqualified support for the principle of national self-determination through free elections and the secret ballot, are firm and unchanging parts of our national policy, and that the Department of State formulate a resolution based upon the findings, conclusions, and recommendations of the committee's report, branding the U. S. S. R. as an aggressor against all the nations enslaved by the Soviets and that the United States delegation to the United Nations be instructed to take immediate steps to place this resolution on the agenda of the General Assembly for early action.

The Senate's Resolution 214 proclaims that the Soviet government has forcibly and aggressively incorporated the territory of the nations of Lithuania, Estonia, and Latvia into the Soviet Union.

"The Senate endorses the refusal of Presidents Roosevelt, Truman, and Eisenhower to recognize the seizures of Lithuania, Estonia, and Latvia, and requests the President to use all available and appropriate means, through the United Nations, United States Information Agency, and otherwise, to keep the facts of the Soviet government's inhuman actions in these matters and its violations of solemn agreements before the attention of the world and to let the subject peoples know that they have not been forgotten."

In line with the foregoing thoughts, many Senators and Congressmen addressed the Congress on the occasion of the Independence Day of Lithuania; State Secretary John Foster Dulles made a statement in which he said: ". . . Through our contributions to the material and spiritual strength of the Free World, we seek to create conditions under which the right of the Baltic peoples to resume their place in the community of free nations will be universally respected. We are convinced that a world community in which the Baltic peoples are free to choose their own form of government and their political and economic institutions is likely to be one which will assure peace, with justice, for all nations, large and small."

The Lithuanians are ever grateful to the American Government for nonrecognition of the Kremlin's incorporation of Lithuania into the Soviet Union and for using its good offices in supporting the efforts of the Lithuanian people to liberate Lithuania and to restore the sovereign rights and self-government to the Lithuanian people. They are also grateful to the American people for their sympathetic attitude and to the press and radio for their just and favorable treatment of the plight of Lithuania and its people. Lithuanians appeal to the United Nations and the people of the free world to support their cause in demanding that the Soviet Union implement

its catch-phrase of "coexistence" and abide by its treaties by withdrawing from Lithuania its troops, police, political agents and colonists, thereby restoring their sovereign rights and self-government to the people of Lithuania, and thus enable Lithuania to exist and coexist as a free and independent nation.

A Tribute to Youth

EXTENSION OF REMARKS

OF

HON. ALBERT P. MORANO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a tribute to three fine young people from my district who have been honored by the Westinghouse Co. for outstanding achievement in the field of science.

All the people of Fairfield County, Conn., which comprises my district, are proud of the fact that one of 40 winners of the nationwide Science Talent Search, conducted by the Westinghouse Electric Corp., three of these gifted students are from the Fourth District.

This is the 12th year that Westinghouse has carried on this search for scientific ability, a program which has done and will do a large part in helping the United States to maintain its leadership in the field of research. Such a program is indeed both patriotic and beneficial not only for those immediately concerned but also for the security of the United States.

It is a distinct privilege therefore for me to pay tribute on behalf of the people of my district to Edward J. Foster, of Bethel, and Robert A. Buccino, of Stratford, both students of Fairfield Preparatory School and to Miss Alice K. Hartley, of Easton, a senior in Bassick High School, Bridgeport.

These three young people are coming here to Washington to compete for Westinghouse scholarships that may carry them on to even greater achievements in the scientific world.

Young Foster, who hopes to enter MIT, has constructed an oscilloscope, an instrument for showing visually on the face of a cathode ray tube the changes in varying electric current, an instrument he uses in his self-operated radio-TV repair business. Miss Hartley, who aims for Radcliffe College, has carried on unique experiments with vegetables to determine changes in color as the result of immersion in solutions of varying acidity. Young Buccino, who plans to begin his medical studies at Holy Cross College, has built and used a spectrophotometer, used to identify the different elements in a metallic compound by the light given off by their vapors when heated to incandescence.

Their selection among the 40 winners nationally is a tribute to the educational system in my State, especially the teaching of science as carried on by the good Jesuit fathers in Fairfield and by the Bridgeport high school system.

These three young people should be an inspiration to all of us because of their desire for greater knowledge and because of their ingenuity and demonstrated abilities. In the vision and determination of our young people, in their faithfulness to hard work, in their sense of responsibility, in these qualities lies the best hope of the free world. I shall be happy to greet these three young students and to wish them well at a crucial time in their lives. I express the fervent hope that they will continue to succeed in the fields for which they are so well qualified.

Independent Electricity

EXTENSION OF REMARKS

OF

HON. THOMAS G. ABERNETHY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. ABERNETHY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial taken from a recent edition of the Commercial Appeal, a newspaper published in Memphis, Tenn., as follows:

INDEPENDENT ELECTRICITY

Hope of selling power from the proposed Dixon-Yates plant to the Memphis market is dead. It has been dead since early December, when Mayor Frank Tobey announced that the city of Memphis would build its own plant rather than buy from Dixon-Yates.

When the Dixon-Yates promoters went on through the motions of preparing to build by filing papers in Washington and Little Rock, Mayor Tobey considered it necessary to reaffirm his stand, which he did this week.

This time the Memphis plans were taken more seriously, perhaps because of the added significance of Memphis independence after weeks of working with other TVA customers who still hope to force Congress to return the policy of Federal money for more TVA generating plants.

Knowing how strongly the Memphis public has supported public ownership of the utility business at every opportunity, it should have been evident that the mayor was speaking in earnest the first time.

With Memphis ready to build a generating plant to supplement TVA power, the whole purpose of Dixon-Yates is gone. TVA will have enough power for the Atomic Energy Commission plant at Paducah without buying from Dixon-Yates.

Through many months of efforts by the AEC to get TVA to accept Dixon-Yates power, TVA officials have withstood efforts to get them to accept extra costs. Their hands are strengthened because Dixon-Yates power would be useless to TVA, with Memphis planning its own generating plant.

For Congress to approved \$6.6 million of Federal tax funds to build transmission lines from the middle of the Mississippi River into Memphis without a customer for the electricity is most unlikely.

There is a certain usefulness in Dixon-Yates to politicians. It is politically profitable for some to attack it and for others to support it. Perhaps it is too useful to both sides to be buried promptly.

There is usefulness for the West Memphis site to the Arkansas Power & Light Co. As Arkansas industries and population expand, more power will be needed, with water power

scarce and natural gas prices rising. Barged coal will be the logical fuel and a generating plant at West Memphis is likely to be built.

But sale of Dixon-Yates power to the AEC, which would sell it to TVA, which would sell it to Memphis, is something else. For lack of this market, it might even be necessary for the Dixon-Yates plant to be truly private enterprise.

Resolution Adopted at the Memorial Service and Rally Sponsored by the American Zionist Council of Los Angeles at Hollywood Temple Beth El, February 13, 1955

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted at the memorial service and rally sponsored by the American Zionist Council of Los Angeles, at Hollywood Temple Beth El, Sunday, February 13, 1955:

We, the 1,000 citizens of Los Angeles assembled at Hollywood Temple Beth El on Sunday afternoon, February 13, for a memorial service, voice our shock and indignation at the brutal murder of 2 Jews by the Egyptian military dictatorship and the torture of 2 more, resulting in their death.

This action was taken in wanton disregard of the forceful representations for clemency made on the grounds of moderation and humanity by many governments, including our own.

Together with the entire civilized world, we express our sense of outrage at the inhuman trials and executions which are a mockery of justice. The Egyptian Government stands condemned in the eyes of all mankind for its brutal disregard for human decency. Events in that country in the past year have shown a striking resemblance to the bloody path by which other dictators have maintained power through a totalitarian regime.

Moreover, we are deeply disturbed by this evidence, pointing to an intensification of the bitter tensions existing between Egypt and the State of Israel. It must be feared that unless the conscience of the civilized world can be aroused to deter the criminal intent of the Arab rulers, they will be emboldened to intensify their attacks upon their own Jewish community and possibly to undertake a full scale attack against Israel.

This sacrifice of Jewish martyrs will not long appease a government which is intent upon diverting the peoples' attention from economic misery and social despotism at home. We shall hold the Egyptian Government eternally responsible for the blood bath which can ensue if scapegoats are to be the technique for appealing to mob passions and for maintaining in power a military dictatorship.

We do urge the continued vigilance of our Government in cooperation with the other governments which view with moral indignation and horror this tragic hanging, in order that the adherence to the principles of justice and respect for civil rights and international law be strengthened in Egypt and throughout the Arab world.

The John Day Project on the Columbia River

EXTENSION OF REMARKS

OF

HON. SAM COON

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. COON. Mr. Speaker, I wish to bring to the attention of the House a joint memorial I have received from the Senate and House of Representatives of my home State of Oregon. This resolution, House Joint Memorial 2, memorializes Congress to provide the necessary funds for preliminary investigations and planning for the John Day project on the Columbia River, and then indicate its intention to build the John Day project promptly and solely with Federal funds by making the necessary appropriation to start construction immediately upon completing the preliminary planning or, in the alternative, enact without delay such enabling legislation as is required to permit local agencies to advance funds, under appropriate arrangements with the United States, so that construction of such project by the Federal Government can be initiated immediately.

This resolution is of great importance, Mr. Speaker, first because it sets forth the vital interest which the Oregon Legislature has in expediting construction of the great John Day Dam. And may I point out at this time that the Oregon State Legislature is representative of the thinking and wishes of the electorate of the State of Oregon. Therefore this memorial presents the wishes of that electorate. I make this point purposely in answer to certain public statements which were made concerning a "mandate" having been given by the voters of Oregon to their United States Representatives to prevent legislation in support of the administration's "partnership plan" from being passed.

The Members of the Senate and House of Representatives of the State of Oregon are necessarily more closely representative of the people, and more sensitive to the views and feelings of the people of Oregon than any one Member of the United States Congress could possibly be. And now they urge that we go ahead with the John Day Dam—in this memorial they say:

Whereas the growth of the region requires over 500,000 kilowatts of new power capacity annually and such multipurpose projects as John Day must be started immediately in order to be completed and to avoid a serious power shortage by the early 1960's; and

Whereas various local public-utility agencies have offered to advance funds toward the preliminary engineering and planning costs of John Day, and have indicated a willingness to advance over one-half the estimated cost of the project to expedite its construction by the United States as a Federal project.

Opposition to new ideas in power development is quick to claim that the people share its prejudices. Those who oppose President Eisenhower's partnership

plan are more willing to try to confuse and propagandize the people than they are to lay the facts before the people and let them make up their own minds. They make the fatal mistake of underestimating the intelligence of the voter. The administration's program for construction of power projects shows both imagination and courage in proposing boldly new approaches, and this memorial which I proudly present to this body shows clearly that the people of Oregon, through their elected State representatives, support it.

The memorial follows:

House Joint Memorial 2

To the honorable Senate and the House of Representatives of the United States of America, in Congress assembled:

We, your memorialists, the Senate and the House of Representatives of the State of Oregon, in legislative session assembled, most respectfully represent and petition, as follows:

Whereas the Federal Government, through its construction of multiple-purpose projects, has become a major supplier of electric power to the Pacific Northwest; and

Whereas the present and continuing growth of the region, including Oregon, requires the further and immediate development of its low-cost power potential in order to provide the energy base for industries, job opportunities, and the needs of its people; and

Whereas the John Day project on the Columbia River between Oregon and Washington is one of the major integral units in the overall plan of comprehensive development of the Columbia River and has already been authorized and approved as such by the Congress of the United States (81st Cong., 2d sess., H. Doc. No. 531); and

Whereas its construction will complete slack water navigation from the mouth of the Columbia River to Pasco, Wash., a distance of some 328 miles; and

Whereas it will provide approximately 500,000 acre-feet of storage for flood-control purposes and will also provide irrigation and recreational benefits; and

Whereas such project will produce in excess of 1,100,000 kilowatts of low-cost power, fully integrated with the Federal grid and the Northwest Power Pool and close to Oregon load centers; and

Whereas the growth of the region requires over 500,000 kilowatts of new power capacity annually and such multipurpose projects as John Day must be started immediately in order to be completed and to avoid a serious power shortage by the early 1960's; and

Whereas various local public utility agencies have offered to advance funds toward the preliminary engineering and planning costs of John Day and have indicated a willingness to advance over one-half the estimated cost of the project to expedite its construction by the United States as a Federal project: Now, therefore, be it

Resolved by the House of Representatives of the State of Oregon (the Senate jointly concurring therein), That the Congress of the United States be and it hereby is memorialized to (a) appropriate immediately the funds necessary to enable the Corps of Engineers to complete the preliminary investigations and planning for the John Day project; and (b) indicate its intention to build the John Day project promptly and solely with Federal funds by making the necessary appropriation to start construction immediately upon completing the preliminary planning or, in the alternative, enact without delay such enabling legislation as is required to permit local agencies to advance funds, under appropriate arrangements with the United States, so that construction of

such project by the Federal Government can be initiated immediately; be it further

Resolved, That the secretary of state of the State of Oregon be and hereby is directed to send a copy of this memorial to the President of the United States, to the Honorable Douglas McKay, Secretary of the Interior of the United States, to the President and Chief Clerk of the United States Senate, to the Speaker and the Chief Clerk of the House of Representatives of the United States, and to each Member of the Congress. Adopted by house January 28, 1955.

E. A. GEARY,

Speaker of House.

Adopted by senate February 8, 1955.

ELMO E. SMITH,

President of Senate.

Filed: February 9, 1955.

EARL T. NEWBRY,

Secretary of State.

STATE OF OREGON,

OFFICE OF THE SECRETARY OF STATE.

I, Earl T. Newbry, Secretary of State of the State of Oregon, and custodian of the Seal of said State, do hereby certify:

That I have carefully compared the foregoing copy of House Joint Memorial No. 2 with the original thereof adopted by the House of Representatives and the Senate of the 48th Legislative Assembly of the State of Oregon and filed in the office of the Secretary of State February 9, 1955, and that the same is a full, true and complete transcript therefrom and of the whole thereof, together with all endorsements thereon.

In testimony whereof, I have hereunto set my hand and affixed hereto the Seal of the State of Oregon.

Done at the capitol at Salem, Ore., this 10th day of February 1955.

[SEAL]

EARL T. NEWBRY,

Secretary of State.

Air Force Justice?

EXTENSION OF REMARKS

OF

HON. RICHARD H. POFF

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. POFF. Mr. Speaker, pursuant to permission to extend my remarks in the Appendix of the RECORD, I quote herewith an editorial which appeared in the February 17, 1955, issue of the Roanoke World-News, a newspaper published daily in the city of Roanoke, Va.:

TWO BRANDS OF AIR FORCE JUSTICE

Noting two items from Texas bases which appeared in the same newspaper Thursday, we are constrained to wonder once again where the Air Force gets its standards for justice.

At Carswell near Fort Worth, two enlisted men were sentenced to 5 years at hard labor by a court-martial. The charge: failure to salute an officer. They also got dishonorable discharges and forfeiture of pay.

The men claimed they were members of Jehovah's Witnesses and their religious beliefs prevented their saluting any person or object. The same sect objects to saluting the flag and to reciting the oath of allegiance.

We have no defense for anyone who cannot or will not assume the ordinary obligations of American citizens, but—

Over at Laredo on the same day another court martial was dealing with a colonel. He had sent an Air Force plane to Harrisburg, Pa., with men and tools to work on ma-

chinery he had purchased for his farm from war surplus.

En route he also had the plane stop at his home at Kokomo, Ind., and at Marion, Ind. This allegedly happened more than once. He admitted it.

So what punishment did he get? Forfeiture of \$150 pay per month for 1 year and a reprimand. No reduction in rank, no time in prison, no discharge—honorable or otherwise—just a fine.

That's what we call putrid justice. The enlisted men get skunked for something that cost nobody anything except damage to vanity and "prejudice to good discipline." The colonel gets slapped on the wrist for mulcting the taxpayers out of gosh knows how much money.

The Department of Defense and its various military boards ought to look this contrasting business over. If it doesn't, some interested Congressman ought to get up on the floor and say a few words on something worth while.

If we were the Air Force we'd go soak our head in a bucket.

National Fine Arts Advisory Commission

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. BURDICK. Mr. Speaker, I have here an excerpt from a radio interview with Mr. Daniel Millsaps, who is interested in promoting an Art Department in the Federal Government. The excerpt is from the Patty Cavin Show of January 28, 1955, broadcast over station WRC—NBC:

EXCERPTS FROM A RADIO INTERVIEW WITH DANIEL MILLSAPS, THE PATTY CAVIN SHOW, JANUARY 28, 1955, NBC (WRC)

Miss CAVIN. Well, Dan, I know the President recently called for the establishment of an advisory commission for the arts, and I wonder if you would like to bring us up to date on this project since this is one of your special pet points.

Mr. MILLSAPS. Yes, we have worked for a long time to get at least a beginning of an art department in the Federal Government. We feel that eventually, there should be a secretary of the arts. The President has asked for an advisory commission in the Health, Education, and Welfare Department. We do hope that eventually we can disassociate the arts from education or any of the other such aspects. Art can stand on its own and can itself contribute to the economy of the country.

Miss CAVIN. I see, you feel that they should have a very decided department all their own. Well, now, aren't there several bills now in the offing?

Mr. MILLSAPS. Congressman Thompson of New Jersey tells me that he has introduced 4 bills; 1 for the Civic Auditorium in Washington, 1 for grants-in-aid to the several States to help their art programs get started, and 2 others. We feel that some of these should get by this year; we came pretty close during the last session.

Miss CAVIN. Do you think if an advisory commission was actually set up that it would lead eventually to subsidized art training?

Mr. MILLSAPS. We do not want subsidization in the arts. We simply want recognition and a point of reference in the Federal Government, to give substance to all of the

arts, not just painting, sculpture and prints, but music, dancing and the whole gamut.

Miss CAVIN. From now on its up to Congress, right?

Mr. MILLSAPS. From now on it is up to Congress, and the people to voice their desires.

Miss CAVIN. Well we hope we've planted a seed of thought in our listeners' minds, and since watercolors are your specialty, here's a Capital By-Line salute to the opening of your one man showing tonight at the circulating gallery in Georgetown. It's the Malequanc version of Waltz in Watercolors.

President's School Proposal Falls Short

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. ELLIOTT. Mr. Speaker, the people in Alabama are concerned with the lack of classrooms for our school children. They are anxious for something to be done. On February 15 the Tuscaloosa (Ala.) News carried an editorial entitled "President's School Proposal Falls Short," which I commend to the House. The editorial follows:

PRESIDENT'S SCHOOL PROPOSAL FALLS SHORT

President Eisenhower probably is wondering what it takes to satisfy the public after proposing a \$7 billion school construction program to Congress that is now literally being ripped to pieces by both Members of Congress and school administrators.

The President had been criticized for failing to come forth with some Federal program designed to relieve the critical shortage of school classrooms over the Nation. The deficit in classroom space has grown to alarming proportions in the United States and all statistics on population show that the situation will get worse in the next 10 years unless something is done on a larger scale than has been taking place in the last few years.

Generally, criticism of the President's \$7 billion proposal is that it is inadequate to meet the pressing needs for school construction. The method proposed by the President to assist in school construction also has come in for criticism. For instance, Alabama Superintendent of Education Austin R. Meadows points out that bonds can be sold for school construction in Alabama at a lower rate of interest than that offered in the President's proposal.

The amount proposed for outright grants to States for new school buildings also is considered inadequate by those who administer school programs.

The President did not go into specific details on his proposed school-aid program in the message to Congress, and there are a number of questions that have developed as to how this program will work. Alabama's Senator HILL, who has been trying to get a school-aid bill through Congress similar to that which he sponsored for hospital construction, has posed these pertinent questions about the President's proposal.

1. How much concern is there for private lenders rather than for the needs of our children?

2. How can the programs possibly meet the needs for the immediate reduction in the present deficit of more than 300,000 classrooms?

3. How will it be possible for impoverished school districts to pay interest and amortize

Federal loans or pay rent without reducing the already inadequate funds for paying adequate salaries to teachers?

4. How long will it take to translate the revolving fund into schoolrooms?

5. How much delay, control, and interference is inherent with the setting up of State building authorities, with the necessary requirement that State constitutions and laws be changed to meet this Federal mandate?

6. How can the \$65 million annual direct aid build enough classrooms to meet pressing current needs?

The President has acted in response to numerous pleas to do something about the educational crisis. He and his advisers, however, do not seem to have a clear insight into the magnitude of the problem nor the method for a workable, fast-moving solution. The result is likely to be another year of debate and wrangle in Congress without definite action and appropriations forthcoming.

Security: Our Common Responsibility

EXTENSION OF REMARKS

OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. DAGUE. Mr. Speaker, it is my firm conviction that what we are seeing in the spectacle of recanting witnesses, and in the sudden frenzy of certain professional liars to rush forward to confess their duplicity, is the manifestation of the insidious menace of communism as it tries by devious methods to save its minions as they are brought to trial.

The Republican Party certainly cannot be charged with creating a Communist bogeyman in the face of the FBI investigations and confidential reports antedating the disclosures which led to the conviction of Alger Hiss and the suicide of Harry Dexter White. And there is no one in his right mind who would even insinuate that the overwhelming majority of loyal Democrats had anything whatsoever to do with such traitorous conduct or liked the situation any more than the rest of us.

What we should realize is that national security is the responsibility of every patriotic citizen and, as the following editorial which appeared in the January 29 issue of the Saturday Evening Post so forcibly emphasizes, it must not become a partisan issue:

OUR SECURITY MUST NOT BECOME A PARTISAN ISSUE

The people of the United States and their political leaders are about to be subjected to tests of their courage, tenacity, and powers of discernment as severe as any they have undergone for many generations. It is difficult to remain "at the ready" when the Nation is being challenged, bullied, and kicked in the teeth by a contemptuous enemy. To keep up the guard under the more persuasive attack described as peaceful coexistence may prove almost impossible. We are offered the outward and visible sign of something all of us want, peace. Few dare even to appear to reject so desirable a boon. And, as time passes, fewer and fewer critics arise to mention the probability that the Kremlin's idea of peaceful coexistence is that we should exist peacefully in the Red orbit. The Communist dove of

peace is a decoy, wired to blow up in our faces.

Simultaneously with the peaceful-coexistence symphony from abroad, the left wingers in our midst plan another campaign equally insidious. Relying on the general distaste for McCarthyism, they hope not only to discredit the results of past congressional investigations but to amend the rules governing such committees drastically enough to make it impossible to probe deeply into the operation of the Red conspiracy. If we can be led to believe that there never was an Alger Hiss, that Harry Dexter White was a victim of a climate of fear, and that thought control has been established in America, then the movement to render Congress impotent to expose Communist penetration may well succeed.

On another sector of the battle, leftwingers attack the security system governing the hiring and firing of Federal jobholders. The gimmick here is that a man accused of being a "security risk" or a "loyalty risk" should have the right to confront his accusers. In 1 case that found its way to the Supreme Court, 4 Justices voted that a suspected employee should have this right, although it has been often pointed out that, when the FBI is the informant, the identification of the agent supplying the information would end the usefulness of the FBI in this field. This, of course, is a blow which the Communists and their fellow-traveling allies could endure without great pain. The proper response to the "right-to-confront-accuser" argument is that a Federal job is not a right. Nor do admitted past injustices in security matters constitute a valid argument for making it impossible to remove a dubious employee without going through proceedings as loud, protracted, and frustrating as the trial of New York's 11 Communists 5 years ago.

The answer to the question: "How far will this softening-up process get in Congress?" lies with the Democratic leaders. It will be tempting to some to treat the subject as a party matter. Many Democrats feel that their whole party membership stands accused of virtual treason by certain GOP campaign orators, and it is natural that this should rankle. However, no responsible Republican leader has made any such charge, although many have rightly pointed out that, during the 20 years of Roosevelt and Truman, it was frequently difficult to move against the Red conspirators.

Either Mr. Roosevelt or Mr. Truman could have prevented communism from becoming a party matter by the simple device of saying to the congressional investigators: "Nobody wants to throw out these scum, if there are any in the Government, any more earnestly than we do. Come in and get 'em." Instead, Roosevelt sent word to Whittaker Chambers that he could "jump in the lake" (inexact quotation), and Mr. Truman mumbled sourly that the whole thing was a red herring. Adlai Stevenson seemed unable to untrack himself from this generally unhelpful attitude, and that is one reason why Mr. Eisenhower is now President.

Anyway, all recrimination to one side, the Democrats in Congress have an opportunity to take the Red issue away from the Republicans and hand it to all patriotic Americans. They can do this simply by refusing to weaken the investigating apparatus of Congress and by continuing it with improvements, especially now that the public is in serious danger of being lulled to sleep by the peaceful coexistence myth. Senator McCLELLAN, who succeeds Senator MCCARTHY as chairman of the Permanent Investigations Committee, has already given assurance that the probes into communism will continue. There is no reason why the security and existence of the United States should ever have been a party issue at all.

District of Columbia Fine Arts Auditorium

EXTENSION OF REMARKS

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before the House District Committee, Wednesday, February 23, 1955, on H. R. 630, District of Columbia Fine Arts Auditorium:

Progress in a democracy has many and varied faces. Sometimes it has a swift look about it which carries action forward by leaps and bounds. Sometimes it has a stubborn look and great effort is required to relax its hold. At other times it has an indifferent look, and endless patience and resolution must be applied before interest can be sparked in it. It is one of our great strengths as a democracy that will and determination are demanded, required and permitted, so that the strides we make are our own and belong inevitably to us all.

These thoughts have been turning around in my mind as I look at the bill we have before us, H. R. 630, to create a Federal Commission to formulate plans for the construction of a civic auditorium in the District of Columbia. This bill is part of a larger program to encourage the growth and development of the fine arts throughout the Nation, which has been the concern of many Members of Congress for the past 20 years. It is only a small part, but a most vital one. And as I consider its provisions, I think of the many times in the past that I have been called upon to speak on the importance of such a program, and the many times I have asked permission to do so. But the patience I spoke about earlier that is demanded of us in a democracy, and the grace that that patience is permitted us, gives me great courage that we are indeed on our way.

We are often spoken of by our many friends from abroad as the country of experts. Give us a material thing and we will plumb the depths of its capacity, and when we have reached those depths we will search even further and our resourcefulness will find greater depths than man could have envisioned. Our friends from abroad respect our known capacity for such imagination and creativity, but in their hearts, and yes, even on their tongues, they belittle our culture and refer to us as crass materialists. Nothing could be farther from the truth. Of course, we have unlimited vision in our industry. Of course, we believe in a high standard of living for all, and of course, we will continue to use our inventiveness to the full in that direction. But we as a Nation love culture. We have respected it since our Founding Fathers wrote the Declaration of Independence in words which ring out forever not only in faith but in beauty as well.

Apparently, we have not had the time as a country to solidify this love of culture into a thing for all to see. But as a people we have demonstrated time and time again that it is deep within our hearts. Our songs are sung all over the world. Our books are read all over the world. But our art, our theater, our opera, our music have not yet found their full rein. They have not as yet become the integral part of our lives which our industrial prowess has already defined. As a Nation so far developed, so great a power on this earth, so responsible to the hope of

peace on earth, we cannot afford to dally any longer on our cultural front. It is not only because we need it for our own happiness and fulfillment, but also because we need it to combat forces in our world today which abuse every lack and feed on it like vultures, deadening hope and spirit wherever they can.

It has been said that democracy is difficult to define to peoples who have not lived under it. The arts, however, have an international language of their own. They speak a universal language which all who live on this earth can understand. They speak to the spirit of man—to his hope and his faith and his longing. They can reach out and spark the hearts, where things cannot even touch them.

Let us begin in the Capital of our great Nation, and build a center for all to see. I have traveled all over the world and have found beautiful cities in beautiful climes. When I return to Washington, I feel great pleasure in the physical beauty which meets my eye, and I am proud that it is often called the capital of the world. But if we wish to be a nation which can speak to the hearts of mankind, we must bring together and plant the fruits of our genius, talent and ability in the fine arts, and let them flourish in our Capital.

H. R. 630, and all the other similar bills which are being discussed at this hearing, is a modest one indeed. It asks for an appropriation not to exceed \$25,000, for a purpose which can do much toward making this city one of the cultural centers of the world. We can afford this sum. Those of us who have spoken repeatedly of building a national theater, of creating a Fine Arts Commission, and other projects to encourage and develop the fine arts in our land, look to this measure as a significant beginning of a great hope.

Electoral Reform

EXTENSION OF REMARKS

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by a well-known reporter and commentator, John O'Donnell, in the New York Daily News of yesterday, February 22, 1955, concerning proposed reform in the method of selecting Presidents:

(By John O'Donnell)

WASHINGTON, February 21.—A hundred years have passed since we Americans changed the method by which we elect our Presidents and Vice Presidents. Vigorous efforts—particularly in the last decade—have been made to get rid of the out-of-date electoral-college system by which all the Presidential electoral votes of each State go to the winning candidate, regardless of the smallness of his plurality.

But all have failed. Now, in this session, there is a better than even chance that Congress will pass a constitutional amendment for submission to the sovereign States. The amendment is designed to credit a candidate with the proportion of votes he receives in each State even if he doesn't win a majority.

In the recent past, these efforts have been killed off on the Hill for a variety of reasons: Uncertainty among the party leaders about who would benefit by the change; personal jealousy among the sponsors; and, of course,

the deep-seated unwillingness of the Nation to tamper with the Constitution.

Back in 1950, the Senate gave a rousing 64-27 vote in favor of the amendment introduced by then Senator Henry Cabot Lodge and Representative Ed Gossett, of Texas, which would prorate a State's electoral vote in proportion to the popular vote cast for the various presidential candidates. An interesting angle of this vote is the fact that the late Senator Taft, of Ohio, led the opposition. Taft was opposed to changing the Constitution for one thing and, as Mr. Republican, also wanted the electoral votes of such important normally Republican States as Ohio, Pennsylvania, Illinois, etc., to continue to go in a block to the presidential candidate who carried the State.

Despite the surprising Senate victory, the amendment met the same fate in the House that its many predecessors had suffered before. Speaker SAM RAYBURN, like Taft, was opposed to any changes in the Constitution. On the Republican side, many Republicans figured that the Democrats under the proposed pro rata system would pick up more electoral votes in the big Republican States of the North than the Republicans would south of the Mason-Dixon line. That, of course, was back in 1950, before Eisenhower had cracked the solid South in the 1952 elections. Now the thinking has changed.

COUDERT BILL ANSWERS CRITICISM

Meanwhile, New York's Representative FREDERICK COUDERT introduced a substitute bill which answered criticisms that proportional representation does not work and encourages the formation of splinter parties. The COUDERT amendment provides that in a presidential election each State be divided into electoral districts with the same boundaries as congressional districts.

Here is how the COUDERT system would work out: the voters in each of these electoral districts would elect a single presidential and vice presidential elector and the entire voting population of the State would select two others at large. In a presidential election in New York, for example, instead of the winning candidate scooping up all of the State's 45 electoral votes it could be figured on the basis of the present House delegation that the GOP candidate would get 26 electoral votes, the Democrat 17. The two electors at large (corresponding to the two United States Senators) would of course go to the vote of the majority.

Now new life has been breathed into the effort to reform the presidential election system. Senator PRICE DANIEL, the famous 1952 Eisenhower Democrat, is pushing a new bill based on the old Lodge-Gossett proportional formula. (Of course, some of the Coudert ideas may be taken over in committee hearings.)

The Texan already has lined up more than 20 senatorial cosponsors which include not only a group of fellow southerners but such Democratic liberals as HUMPHREY, of Minnesota; HILL, of Alabama; and KEFAUVER, of Tennessee, along with such strangely assorted Republicans as the nationalist JENNER, of Indiana, and DIRKSEN, of Illinois, plus IVES, of New York, WILEY, of Wisconsin, and WILLIAMS, of Delaware.

WHY SOUTHERNERS ARE INTERESTED

Each group among the backers has its particular and different reason for backing the amendment. The southern rebels frankly state that they think the amendment would let the South play a more direct part in the outcome of the presidential election and—importantly—in the nominating convention. They are sick and tired of minority pressure groups throwing their weight around under the threat of tipping the election scales in such absolutely pivotal States as New York, Pennsylvania, Ohio, Illinois, etc. They figure that should the power of the minority groups to determine the course of entire blocks of

State electoral votes be destroyed it would be possible to nominate a more conservative Democrat than at present—possible even to nominate a candidate from south of the Mason-Dixon line, such as General RUSSELL, of Georgia, for example.

On the other hand, such liberals as Democrat HUMPHREY and Republican IVES, of New York, are backing the amendment on the basis of a more representative election.

Senator LANGER, of North Dakota, has introduced his bill calling for the election of the President on a straight popular vote without the States figuring in the picture at all. This has no chance. But there is a good chance for the old Lodge-Gossett proposal after the committees have worked it over with the Mundt-Dirksen-Coudert offerings of the last Congress.

Important to note is that Senator KEFAUVER, of Tennessee, is chairman of the Senate Judiciary Subcommittee which will handle the bill. He was an ardent supporter of the Lodge-Gossett amendment in 1950 and has promised to hold hearings on the new Price Daniel resolution.

But again, as in 1950, regardless of how the resolution fares in the Senate, it may again meet heavy going in the House.

A Long Way To Go

EXTENSION OF REMARKS

OF

HON. WILLIAM E. McVEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. McVEY. Mr. Speaker, it is seldom that a public works project evokes support from Members of Congress as non-partisan as that which has prevailed in the case of the Calumet-Sag Waterways development. Last year a memorial was presented at the White House testifying to this support, which was signed by all of the 25 Congressmen who represented the State of Illinois at that time.

It is encouraging and gratifying to have the favorable reaction of the Chicago Daily News, one of the newspapers which serves the territory traversed by the Calumet-Sag Channel. A recent editorial of the Chicago Daily News follows:

A Long Way To Go

A pardonable outburst of rosy statements followed the President's recommendation in his budget message of a \$4 million appropriation for a start on the long-deferred Calumet-Sag Channel improvement project.

Typical was the reaction of Hjalmar W. Johnson, Inland Steel executive and chairman of the Inland Waterway Coordinating Committee, who hailed it as the first step toward an industrial boom for the Chicago-Calumet area, all the Great Lakes, and the broad Mississippi Valley.

There is sound reason to believe that such an era of expansion is on the way.

The Cal-Sag victory comes on the heels of two other highly important projects with which it is intimately linked—the building of the St. Lawrence seaway, expected to be finished by 1958, and the plans of the Chicago Regional Port District to float a \$25 million revenue bond issue as a first step toward building port terminal facilities on Lake Calumet.

As the Cal-Sag Waterways Development Committee has often pointed out, either the seaway or a Chicago world port is only half a project unless the 16.2-mile bottleneck

section of the Cal-Sag Channel is made deep and wider.

The President's recommendation of funds is only a first step toward getting construction underway. It is not a total victory until the Congress has approved and the \$4 million is actually available.

There will be a long way to go on Cal-Sag, which eventually will cost an estimated \$132 million. The initial fund will thus provide only a bare start on the neglected waterway.

The Cal-Sag development committee can rightfully take a major share of credit for progress so far in Washington. It sponsored the Cal-Sag memorial presented at the White House last year and signed by all Illinois Congressmen.

It is working now with these leaders to forestall the inevitable attempts of Cal-Sag foes—chiefly the railroads—to head off the recommended funds. The effort must not be relaxed.

Remarks of Carroll Reece, National Press Club Luncheon, February 23, 1955, Made in Reply to Dr. Robert Maynard Hutchins

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks made by me at the National Press Club luncheon, February 23, 1955, in reply to Dr. Robert Maynard Hutchins:

I

Four weeks ago, many of us gathered here today were honored by the presence of Dr. Robert Maynard Hutchins, one of the Nation's most publicized educators—now the president of a large tax-exempt foundation.

As this man of wisdom spoke, I was somehow reminded of Elbert Hubbard's definition of egotism. He defined egotism as "the anesthetic that nature gives to deaden the pain of being a damn fool."

As he moved into his address, his evaluation of me became quite evident, but, after my 34 years in public life, I do not feel that either my patriotism or intellectual integrity are diluted by Dr. Hutchins disassociating himself from me.

We seem to have only one thing in common: Once, he was heralded as the "Boy Wonder." Once, after obtaining leave of absence from New York University to run for Congress, I was heralded as "The Boy Congressman." Now I am no longer a boy, neither is he any longer a boy or a wonder.

As this great and dedicated man rose to address us, an aura of academic distinction radiated from his person, an aura reinforced by the soft effulgence which radiates from the wealth and power which support him.

Indeed, it seemed to me that there stood before us a knight in golden armor whose high purpose well might be to save a spotless maiden from a foul and fire breathing monster.

II

Alas, our knight in golden armor chose not to draw the 2 edged sword of truth and facts, but rather, in anger and acrimony, brought forward the mace of demagoguery, studded with spikes of vituperation.

We were treated to the horrors of a political abattoir in which personality, character, and integrity are destroyed. It seemed a strange cacophony.

Why should he regale us with obiter dicta—if not in an effort to use you to bolster his case in the press of the Nation? Why stoop to public obfuscation when facts and reason are available.

Testimony and facts developed under oath by a duly constituted committee of Congress cannot be set aside by ridiculing their source or content.

Such factual testimony deserves full consideration and objective analysis.

This point of view was emphasized by Mr. Justice Frankfurter when he said in an opinion in the Rumley case:

"Our Republic will have lost its vitality when the people are no longer permitted to hear the information developed by their legislators. And our scholars, our intellectuals, our great educators hardly justify the confidence reposed in their integrity when they resort to ad hominem arguments and obiter dicta to suppress and discredit information of which they personally disapprove."

Again Woodrow Wilson said, "The informing function of Congress should be preferred even to its legislative function."

What a great shock, a distinguished academician turning politician, before our very eyes. His utterances appear as endless rewrites of a central theme of the professional intellectuals found in the foundations. The artful propagandists, dressed in the attire of an intellectualist, rides again.

III

As a rather reluctant dragon, I come before you today through the courtesy and aid and spirit of fair play of the National Press Club—so characteristic of the members of the press and radio of our Nation.

It appeared to me that you, the purveyors of facts, might prefer me to answer in a more moderate and objective tone. Perhaps if an eminent scholar can turn politician for a day, you will permit me, a politician with some experience, to turn educator again for a day within the limits of my ability.

"Let me say that in advocating a return to reason I do not advocate abandonment of our interest in facts. I proclaim the value of observation and experiment. I would proclaim also the value of rational thought and would suggest that without it, facts may prove worthless, trivial and irrelevant—rational thought is the only basis for education," so said a great scholar.

In this spirit let us examine the speech of this knight in golden armor who came to slay, and to save the virtue of tax-exempt foundations.

Most psychologists, teachers, and advertising men know that repetition fixes an idea or symbol in the mind.

IV

Despite Dr. Hutchins' fervent disclaimer, in the title and first paragraph of his speech, Fund for the Republic is repeated four times, once more than the number of times the sponsor's product needs to be mentioned in a radio commercial.

This disclaimer hardly balances the impression, and, by the way, if he was speaking without even consulting his trustees, he reduces them to the level of impotent wind-dressing.

He avers, however, that the foundations have been doing a good deal of talking lately. Does he mean through their presidents and without consulting their trustees? Does this concerted activity indicate the overt evidence of a hitherto covert condition?

In view of his disclaimer, I wonder who paid for mimeographing his speech, who paid his expenses to Washington—and, you will recall, when a member of the club asked in one of the questions the amount of his salary he said he could not hear him. By

the power of subpoena, it would have been easy for us to have obtained his salary and that of all other foundation officials.

Since tax-exempt foundations are by nature public trusts, the public does have a right to know the salaries and expenses of officials but our committee was interested in getting more significant information. However, if Dr. Hutchins, due to the complexity of figures involved, should forget what his salary is, I shall be glad to inform him.

V

Parenthetically, I might say I received no extra compensation for my laborious assignment, nor did I charge any of my considerable expenses to the committee, except a very few telephone calls.

My efforts were purely a labor of love—if any. Although, I realize the difficulty Dr. Hutchins may have in agreeing that any Member of Congress with whom he may disagree is interested in doing a good job.

After 34 years of public service, what other purpose would he expect a man of my age to have.

Much of Dr. Hutchins' attack was directed at me personally, as though the whole investigation had been my personal plot against Foundations.

The fact is, as painful as it may be to him, the resolution directing the investigation was passed by the House of Representatives by a strong majority vote, both Republicans and Democrats voting for it.

There are some 7,000 foundations at the present time. Their aggregate funds amount to about \$7½ billion and they have annual income in excess of \$600 million.

The foundations of \$10 million capital, or over, comprise 7 percent of the foundations, but comprise 56 percent of the total endowment and 32 percent of the annual income.

The origin and nature of foundations, as well as their effect on our tax structure, gives the Congress ample basis for an investigation of them.

Due to the nature of our tax laws, the birthrate of foundations is increasing at an alarming rate. The possibility exists that a large part of American industry may eventually find its way into foundations.

VI

Because of the tax exemption granted them, foundations are public trusts and must be dedicated to public purposes. Through these tax exemptions an additional tax burden is put on the American taxpayer.

The rest of the people must pay heavier taxes, for example, because the Ford family was relieved of estate taxes upon the creation of the Ford Foundation, and because the foundation itself pays no income tax on 90 percent of the profits of the Ford Motor Co. it receives in dividends.

The duty follows, in Congress, to make certain funds thus provided are not diverted to either unlawful enterprises or any enterprise outside of tax exemption privileges.

Citizens with their own money may promote any cause, good or bad, not forbidden by law, but tax-exempt funds should not be used to propagandize for the theories of either Karl Marx or Mark Hannah.

For instance, the Fund for the Republic is now distributing a one-hour edition of Mr. Edward R. Murrow's teleshow with Dr. Robert Oppenheimer. This would be a perfectly legitimate thing for an individual to do with his own money, but it is not understandable how the tax-exempt foundation gets into it since it is obvious that Mr. Murrow's program was not designed to be an objective study, but an opportunity for Dr. Oppenheimer to make a defense of his conduct.

The directive of the enabling resolution setting up the committee was to "determine if any foundations or organizations are using their resources for purposes other than purposes for which they were created."

This language gives full faith and credit to the high purposes for which the foundations were organized.

The investigation was not directed against foundations as an institution in American life.

I feel honored to have been selected for the presidency of a foundation—now a small one, but which gives every promise of becoming an important one. This foundation, so long as I am connected with it, will always be open to inquiry.

VII

Dr. Hutchins' remarks were intended to convey the impression that the committee had concluded that foundations had contributed nothing of consequence to the public.

Either he had not read the report or he purposely suppressed the statement to be found on page 3 of the report and italicized for emphasis, reading as follows: "The committee was and is well aware of the many magnificent services which foundations have rendered to the people of the United States in many fields and areas, particularly in medicine, public health, and science. Nothing has occurred to change its initial conviction that the foundation as an institution is desirable and should be encouraged. If little time is spent in this report reciting the good which the foundations have done, it is not because this committee is unaware of it or in any way reluctant to acknowledge it. Rather, this committee considers that it is necessarily concerned with the evaluation of criticisms. A fair judgment of the work and the position of foundations in our society must obviously take into account the great measure of benefit for which they have been responsible. At the same time, the power of these foundations is so great that a proper evaluation must give great weight to the dangers which have appeared in their operations in certain areas of activity."

The report makes utterly clear it is not an attack upon foundations as such, and that it is, in general, in one broad area of activity that foundations have been widely criticized, that of the so-called social sciences.

In this area criticism comes from highly credible and qualified persons.

On the nature of these criticisms, Dr. Hutchins spent no time, satisfying himself to toss off the report with nasty personal insinuations and attack by epithet.

VIII

No reasonable man can accept Dr. Hutchins' unctuous suggestion that our inquiry at once brands the esteemed and highly placed directors of all the foundations as either fools or knaves. We all know as a matter of routine these operations are carried on by the paid administrative staffs.

The directors never presume to be in intimate daily touch with administrative decisions. I might say, primarily for Dr. Hutchins' benefit that the Ford Foundation trustees by resolution specifically relieved themselves of this responsibility by organizing in such a manner as to expressly exclude themselves from the detail of selection and then said: "The founders of at least two larger American foundations intended their trustees to devote a major part of their time to the actions and conduct of foundation affairs. Usually this arrangement has not proved practicable . . . for the program of a foundation may be determined more certainly by selection of its top officers than by any statement of policy or by any set of directions."

We cannot escape the conclusion that the trustees of this foundation abdicated their trust responsibility in assenting to this plan of operation under which everything except possibly the establishment of glittering generalities could be left to the employees.

Dr. Hutchins accused the committee of being guilty of fraud, absurd charges, scan-

dalous conduct, wild and squalid presentation, and in a climatic obiter dictum he said the Reece investigation in its inception and execution was a fraud.

These are phrases one hardly expects to hear uttered before such a discriminating audience. Such arrogance does not reflect credit upon academicians.

These blanket charges impugn the integrity of, not only a duly constituted committee and its members, but the integrity of the House of Representatives itself, and I am glad to address myself to these charges and give you an account of the work of the committee so far as time may permit.

IX

In a spirit of fairness, our committee began with what turned out to be a mistake in this instance: We decided to follow one of America's fundamental concepts of justice and procedure, namely, to make known the nature of the inquiry before the hearings began.

The evidence that had been gathered by the staff pointed to one simple underlying situation, namely, that the major foundations by subsidizing collectivistic-minded educators, had financed a socialist trend in American Government.

We informed the foundations in advance that our findings suggested that the foundations had for a long time been exercising powerful, although sometimes indirect political influence in both domestic and foreign policy, predominantly toward the left—to say nothing of the support by the foundations of the Institute of Pacific Relations which lead the movement to turn China over to the Communists and which was admittedly Communist dominated.

The doubts and reservations concerning the validity of the complaints against the large foundations were largely dispelled by the almost hysterical reaction of the foundations to the summary presented to the committee by the committee staff on the opening day of the hearings.

The excitement bordered on panic; as was observed by the demonstrations through the public relations channels of the large foundations and this convinced me, and others of the American public, judging from the letters received and which are still being received in my office, that the general picture which had taken shape, was not very far from the truth.

The foundations, being well aware of the nature of the duties and responsibilities of the committee, set up what might be termed a defensive barrage. This barrage was successful to a degree in smearing the committee and preventing the full facts from getting into the public press.

Concerning the difficulty of our task, John O'Donnell wrote in the New York Daily News:

"From the very start the special House committee created to investigate our Nation's multibillion tax-exempt foundations faced an almost impossible task. This was to tell the taxpayers that the incredible was, in fact, the truth.

"The incredible fact was that the huge fortunes piled up by such industrial giants as John D. Rockefeller, Andrew Carnegie, Henry Ford, etc., were today being used to discredit the free-enterprise system which gave them birth."

X

There is no doubt but that the large foundations and their satellites knew far better than did the committee where the bodies of their collectivism were buried, and as a result, their champion on the committee, the ranking minority member, could be thoroughly briefed on how to frustrate and discredit the various witnesses called before the committee.

The number of interruptions and the intensity of the vituperations heaped upon

these witnesses by the ranking minority member was without precedent in the history of congressional investigations.

And is it not astonishing that Dr. Hutchins, who poses as the great champion of civil liberties and whose fund for the republic was set up as a defender of witnesses before congressional committees, if not to investigate the investigatorial processes of Congress, has not offered one word of criticism of the conduct of Mr. Hays?

Contrast this silence with his slanderous personal attacks upon the committee majority.

On the contrary, Dr. Hutchins joined with Congressman Hays in slandering the critical witnesses, referring to them as "witnesses of dubious standing."

By dubious did he mean Professor Emeritus Briggs, of Columbia; Professor Hobbs, of Pennsylvania; Professor Rowe, of Yale; and Professor Colgrove, formerly of Northwestern?

Did he mean to include also Professors Sorokin and Zimmerman, of Harvard, and Boasard, of Pennsylvania, who gave highly critical testimony by letter?

I suppose the answer is that anyone who resists the foundations' intellectual straight-jacket is of dubious standing and should be publicly discredited.

When the pattern of the opposition tactics became obvious, I, as chairman, made up my mind that the only thing to do was to try to conquer discourtesy with courtesy, and throughout the hectic hearings I tried unsuccessfully to persuade Congressman Hays to a reasonable pattern of behavior.

Mr. Hays repeatedly vilified other members of the committee and questioned their good faith. He publicly, from the rostrum, accused the chairman of lying and being a coward, and accused the gentle Mr. Goodwin of duplicity and cowardice.

XI

The following excerpt which I, as chairman, had deleted from the printed record in an effort to maintain the dignity of the committee, is illustrative of the violent and abusive remarks, exceeding in impropriety, remarks for which a Senator was recently brought up on charges:

"The CHAIRMAN. Now, the gentleman from Ohio, I am sure, is not going to get anybody worked up or irritated here. If he has that in mind he might just as well subside, because the chairman for one has made up his mind that he is not going to let any byplay get him out of temper. That would impair the usefulness of this committee. . . .

"Mr. HAYS. I will say this to the gentleman, that out where I come from we have a saying that if a man doublecrosses you once, that is his fault; if he doublecrosses you twice, that is your fault. I just want you to know you won't get the second opportunity.

"The CHAIRMAN. Even that statement is not going to provoke the chairman, but there is no living man can justifiably say that this chairman—that this man who happens to be chairman at this time—has ever doublecrossed anybody or he had failed to keep his word.

"Mr. HAYS. I am saying both.

"The CHAIRMAN. That is all right.

"Mr. HAYS. Is that clear enough? There is no inference there is there?

"The CHAIRMAN. That does not disturb me a particle.

"Mr. HAYS. I know, you are pretty hard to disturb. I thought they had more guts in Tennessee.

"The CHAIRMAN. You are not going to provoke me. You need not worry; I have already made up my mind on that."

I am told that I demonstrated considerable forbearance, and I believe I did, although that was a difficult moment when Mr. Hays impugned not only my personal integrity but my physical courage.

I was tempted to compare military records with him, but that would not have been a very adult impulse to follow.

XII

By this time most of you gentlemen are probably familiar with the world's record which Mr. Hays has set for marathon interruptions of a witness.

In the case of one highly respected witness who was endeavoring to give the committee some information, Mr. Hays interrupted 246 times in 185 minutes.

And even though the committee passed a rule that a witness should be permitted to finish his presentation before being questioned and cross-questioned, Mr. Hays angrily declared in public session that he would interrupt whenever and wherever he pleased, and to say that he made good his word is an understatement.

Eminent professors among the witnesses were referred to publicly by Mr. Hays during the hearings as "crackpots" and as having been "dredged up by the committee staff," statements now echoed by Dr. Hutchins here.

An eminent Catholic scholar, Sister Margaret McCarran, was characterized by Mr. Hays as incompetent and as having secured her doctorate degree through political influence, presumably that of her father, the then senior Senator from Nevada.

The best answer to this remark which was manifestly made in an effort to discredit damaging testimony is a letter I received from Bishop Bryon J. McEntegart, rector of Catholic University, and which might be said was written with Cardinal Spellman's knowledge.

It is a long letter so I will quote only three sentences:

"It has come to my notice that at a hearing of your committee in early June, the assertion was made that a doctoral degree was granted at Catholic University of America as a result of pressure.

"On behalf of the University I wish to deny that allegation as completely false.

" . . . If the unwarranted assertion referred to above is included in the record of your hearings, may I ask that this letter be given equal prominence in your record."

XIII

Mr. Hays' technique of frustrating the testimony even included heckling the majority members of the committee during their questions and cross-examination.

It became apparent, therefore, that the appearances and testimony of the foundation representatives would be a farce because Mr. Hays would never permit cross-examination, and there was nothing I could do about it because as you gentlemen know, there is no force which governs the behavior of members of congressional committees, except that of self-control and common courtesy.

The majority members of the committee therefore, decided that further hearings would be fruitless.

To those of you who may have been given the erroneous impression by Dr. Hutchins and others, that this cancellation was not a unanimous majority action and that Congressman Goodwin did not concur, I refer you to page 945 of the committee hearings, which contains the following statement sent to me in writing, and I quote:

"I cannot be at the meeting on foundations tomorrow, and in the meantime I want you to know I think there should be an immediate cancellation of all public hearings. Signed, Angier L. Goodwin."

Obviously, the cancellation of the formal testimony of the large foundations and their satellites was all to their advantage from a public opinion standpoint because virtually none of the evidence against them had appeared in public print and the self-cleansing statements which took the place of their

testimony were printed verbatim plus favorable editorial comments in most of the important newspapers that came to my attention.

Dr. Hutchins' speech supports the false statement in Dean Griswold's fifth amendment to the effect that "After developing the case against the foundations, this committee closed its hearings without giving the foundations a chance to present their defense."

Now, here are copies of parts I and II of the hearings. In part I, pages 794 to 865 consist of foundation testimony and practically all of part II is foundations testimony.

In a single issue of the New York Times, July 25, the self-cleansing brief of the Ford Foundation was given 2 feature stories totaling about 4,000 words.

One story praised the Ford Foundation; the other smeared the committee.

I think you gentlemen will agree that that is thorough press coverage.

XIV

I now want to say a few words about America's large tax-exempt foundations—the ones who are at the center of this storm.

Dr. Hutchins, when he was here, ridiculed the committee opinion that these foundations were involved in an intellectual cartel and stated that the committee had indulged in "new wrinkles to the distortions that we have become accustomed to in congressional investigations."

This language of Dr. Hutchins is typical of the vituperation which has been poured on us by the professional operators of foundations.

Realizing the impossibility of controverting the massive evidence which we produced, they have resorted to smear and slander.

They cannot disprove the existence of the intellectual cartel which we so clearly disclosed—a cartel which, using public money, has so effectively influenced academic and public opinion both in the domestic and international fields.

Among many warnings concerning this cartel comes one from Prof. Carl O. Sauer, of the University of California:

"In American social science it has indeed become a dominant folkway to associate progress with putting the job inquiry into large-scale organizations, under formally prescribed methods, and with limited objectives. Having adopted the name 'science' we are impressed by the 'method of science' as inductive, quantitative, and experimental. We are even told that such is the only proper method."

Professor Sauer refers to the top social-science planners as "an elite, fashioning increasingly the direction and limits of our work" and says "a serious and delicate problem is posed by the growing role of the national research council and foundation, the last years having seen a continually increasing concentration of influence."

You know, these planners, of whom Dr. Hutchins is an outstanding example, have cleverly adopted a Communist tactic.

Communists charge that the rest of the world is aggressive.

Similarly, these planners accuse the Committee on Foundations of wishing to suppress freedom of thought.

The fact is that the intellectual cartel which they have created itself suppresses freedom of thought by expending vast millions of foundation money under their control to determine opinion, academic and public, in the leftist directions they favor. There is extensive testimony to this effect by most competent witnesses.

XV

The foundations have placed great stress upon the fact that the amount of money actually spent in the social sciences is not enough to finance an intellectual revolution.

But the fact remains that, working at the fountainhead, it does not take much money

to exercise virtual control over the relatively small number of people and institutions who in turn can control huge areas of policy and public opinion.

This power to impose brainwashing at the key points is against everything America stands for.

Evidence of this power comes from Prof. Charles E. Merriam, of the University of Chicago, one of the Nation's most notable educators.

Professor Merriam, himself inclined toward collectivism, was, at one time, an important dispenser of foundation funds.

In discussing his experience in this capacity, Professor Merriam said to one of his colleagues: "Money is power and for the last few years I have been dealing with more power than a professor should ever have in his hands."

As proof of the atmosphere of fear in which the conservative educator lives and works today, I would like to mention that the most pertinent information the committee received concerning the close-shop that apparently is being imposed on educators came from men who refuse to risk retaliatory action but were willing to give me off-the-record information.

One of them, who is a celebrated classical educator and known to all of you, said: "It is sad but true that it would be a waste of time for any graduate student of mine, however brilliant, to apply for a scholarship from the powers that be. They simply do not conform to the new collectivistic order of modern social science in America today."

Another internationally known professor and economist told us that in the large university where he teaches, no assistant professor would dream of not being a follower of the Keynes theory of deficit spending and the monetization of a public debt because only a supporter of Keynes could hope for promotion to a full professorship.

One of the most brilliant and most courageous social scientists in the country today, Dr. A. H. Hobbs of the University of Pennsylvania, is still merely an assistant professor.

He has been passed over for promotion, and the University authorities have made it utterly clear, ever since he began to point out the limitations of social science as a guide to social reform and began warning against the effect of such efforts upon the American way of life.

XVI

Regarding the question whether the foundations are supporting actual or potentially subversive projects, Dr. Hutchins virtually defeated his own case when he was attempting to point out how absurd these suspicions were.

He said in his speech before you that according to the Reece committee's definition, support of social planning by the foundations could be subversion.

This was said in derision because in Dr. Hutchins' opinion no rational man can take this statement seriously.

This shows the vast gulf between the rationality of Dr. Hutchins and that of the millions of Americans, Democrats as well as Republicans, who have come to realize that the planning of the social scientist reformers for their brave new world is actually or potentially subversive.

It is "subversive" because it seeks to introduce Fabian socialism into the United States.

The word "subversion" connotes a process of undermining; and these planners, these "social engineers" as they call themselves, who deem themselves entitled to lead us common people into better pastures, seek to undermine some of our most precious institutions, one being our unique system of enterprise of free management and free labor.

There is no need to doubt this.

They have been candid among themselves.

To some degree, they even have been candid with us common people.

They have set down their objectives as clearly as did Hitler in his *Mein Kampf*.

One of the documents which frankly discloses their plans is the *Conclusions and Recommendations of the American Historical Association's Commission on Social Studies*, a call to American educators to teach collectivism to our youth.

This project was financed by the Carnegie Foundation.

In his statement on behalf of the Carnegie Foundation filed with the committee, its president, Charles Dollard, sought to deny the socialist nature of this report which became an important influence in education.

He stated: "The worst that can be said is that the authors (of this report) not only reported this trend but appeared to accept it cheerfully. What they were accepting was not socialism—it was the New Deal."

But gentlemen, this was not the New Deal. My authority is none other than Prof. Howard J. Laski, the top philosopher of the British Socialist Party, who said of these conclusions and recommendations: "At bottom and stripped of its carefully neutral phrases, the report is an educational program for a socialist America."

Yet, after the *Conclusions and Recommendations* was published, the president of the Carnegie Corp. stated that the public owed its authors a vote of thanks.

XVII

Those of you who were here when Dr. Hutchins spoke will remember his eloquent closing words: "The Fund for the Republic is a sort of fund for the American dream. I do not think the fund can make the American dream come true, but perhaps it can help keep it alive and clear."

I would like to give you my impressions of the American dream that is now occupying the attention of the foundation-financed intellectual cartel.

Ever since the world began, well-meaning people, lacking faith in the common man to conduct his own affairs, have promoted the idea of government by an elite.

Plato wanted his perfect society run by all powerful, allwise and, of course, incorruptible philosophers.

Francis Bacon wanted his world run by a group of top scientists answering to the same specifications.

Robert Hutchins and the other members of this self-appointed professional intellectual aristocracy dream of an America governed by social scientists, guided by their benign infallibility under a system which frees the people from the responsibilities of freedom.

Mr. Pendleton Herring, of the Social Science Research Council, wrote in 1947 concerning this matter: "One of the greatest needs in the social sciences is for the development of skilled practitioners who can use social data for the cure of social ills as doctors use scientific data to cure bodily ills."

The degree to which this elite penetrated the Federal Government is indicated by the 1947 report of the President's Commission on Higher Education.

I would like to give you a few extracts from that report.

"It will take social science and social engineering to solve the problems of human relations. Our people must learn to respect the need for special knowledge and technical training in this field as they have come to defer to the expert in physics, chemistry, medicine and the other sciences."

I would like to mention that by no valid definition can sociology and economics identify themselves as true science.

Seven years before this report was issued, one of the members of the President's Commission on Higher Education, Horace M. Kallen, wrote a magazine article entitled, "Can We Be Served By Indoctrination?"

I would like to quote two short paragraphs from that article:

"I find within the babble of plans and plots against the evils of our time one only which does not merely repeat the past; this is the proposal that the country's pedagogues shall undertake to establish themselves as the country's saviors."

After some elaboration, Dr. Kallen concludes, "Having taken power, the teachers must use it to attain the central purpose of realizing the American dream. They must operate education as the instrument of social regeneration. This consists of inculcating right doctrine."

Change the word "American" to "Fabian" and you are pretty close to the truth.

Another phase of this American dream might be found in another document for professional pedagogues entitled, "Molders of the American Mind," by Prof. Normal Wolfel.

Here is one of his admonitions: "The younger generation is on its own, and the last thing that would interest modern youth is the salvaging of the Christian tradition. The environmental controls which technologists have achieved and the operations by means of which workers earn their livelihood need no aid or sanction from God nor any blessing from the church."

And he adds this final touch: "In the minds of the men who think experimentally, America is conceived as having a destiny which bursts the all too obvious limitations of Christian religious sanctions and of capitalistic profit economy."

XVIII

I am sure that this particular audience is peculiarly aware of the difficulty of putting into a small number of words any discussion of a subject of the magnitude of this one, particularly because only portions of the ground have been properly explored.

I also realize that many in the audience know more about some aspects of this subject than I do, because it is their business to follow political and sociological trends.

Among these journalists are a number of very fine people who honestly disagree with me concerning the danger of Fabian socialism, and they are entitled to their opinion.

But I do not think that any informed observer of public affairs would disagree with me as to the evidence of its encroachment upon the American economy.

For this reason, it is my opinion that the great majority of the working newspapermen of the United States, were they in possession of all of the evidence concerning the operation of the large foundations, would agree with me that foundation grants have knowingly given very substantial aid and comfort to Fabian socialism in the United States and unknowingly, or otherwise, given aid and comfort to causes which are subversive in a more literal sense.

Whether this is good or bad is, of course, a matter of personal conviction, but in either case, it is not a proper activity for philanthropic foundations.

What are these foundation funds which this intellectual elite presumes to use for their own political purposes?

They are public funds, dedicated to the public and necessarily so because they are the product of tax exemption.

I submit that those who expend these public trust funds should be subjected to the highest fiduciary duty.

For my part, I am not willing to see foundations given tax exemption to enable them to promote ideologies detrimental to the public welfare.

Even with its several faults, the report of the committee is a competent one, and in many ways an historic document.

Long after the pious protestations of its adversaries have been forgotten, this record will stand as the first determined effort to alert the Nation to the presence of a force which, if allowed to persist and grow, could become stronger than the Government itself.

The Man To See

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. FRELINGHUYSEN. Mr. Speaker, it is a pleasure to call to the attention of my colleagues an editorial regarding a good friend, and a most distinguished constituent of mine, Bernard M. Shanley. I am sure many of my colleagues will join with me in extending to Mr. Shanley our very best wishes as he assumes his new and most important task as appointments secretary to President Eisenhower.

This editorial, which appeared in the Newark (N. J.) Sunday News of February 20, 1955, follows:

THE MAN TO SEE

Bernard M. Shanley of Newark and Bernardsville has become one of the most potent officials in the Federal Government. As appointments secretary, succeeding Thomas E. Stephens, he will decide who, including Cabinet members, obtain private audience with the President.

It is 35 years since a Jerseyman stood in such close relationship to the President. Then it was Joseph P. Tumulty, the astute and engaging Jersey City lawyer who, as a young assemblyman, had attracted Woodrow Wilson's attention during the gubernatorial campaign of 1910. For the next 10 years, as governor and President, Mr. Wilson kept Mr. Tumulty at his side.

The presidential secretaryship assumed by Mr. Tumulty had changed little in the half-century since John G. Nicolay and John Hay, with a few clerks in a couple of offices over the East Room, comprised Abraham Lincoln's White House staff. Mr. Tumulty arranged appointments, gave out White House news, managed the clerical force and was the President's personal, political, and legal adviser.

These many responsibilities are now distributed among a dozen members of the President's staff, which was not reorganized to meet modern pressure on the President until Franklin D. Roosevelt's administration. Then six administrative assistants with a "passion for anonymity" were authorized by Congress after a survey of the executive establishment.

Of all the burdens of the President none is more insistent or wearing than demands upon his time. A split-second schedule is needed if he is to do all that he is required to do and still have time left for the recreational interludes without which his office would destroy him.

It is the appointments secretary's job to keep this schedule in line and on time. This is a task requiring political experience and sound judgment, plus the ability to say yes with discretion and to say no with grace.

Interoceanic Canals Commission Recommended

EXTENSION OF REMARKS OF

HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. THOMPSON of Texas. Mr. Speaker, in a statement published in the February 2, 1955, edition of the American Daily—Diario Las Americas—a Spanish-English newspaper of Miami, Fla., with a large circulation in Latin-American nations, Hon. Maurice H. Thatcher, former civil Governor of the Canal Zone during the construction era and sole surviving member of the Isthmian Canal Commission, expressed his views concerning the Isthmian question.

The proposal for the creation of an Inter-oceanic Canals Commission to evolve and recommend a program for increased facilities of the Panama Canal and for future Isthmian waterway projects, as embodied in S. 766 and H. R. 3335 of the present Congress, was commended by him as being altogether wise and appropriate.

Because of Governor Thatcher's long association with the Panama Canal and constructive contributions—first in the Canal Zone Government and the Isthmian Canal Commission, and, later, as a Representative in the Congress from Kentucky, with continuing contacts with and studies of the Panama Canal and Isthmian problems—his opinions command due weight and consideration.

The subject news story follows:

NEW WATERWAY ACROSS THE ISTHMIAN SEEN NECESSARY—CANAL EXPERT FAVORS IMPROVEMENT OF PANAMA CANAL

WASHINGTON.—Maurice H. Thatcher, renowned specialist in interoceanic canals, said that it would be "wise and opportune" for the United States to study without delay the problems of how to improve the Panama Canal or construct a second waterway between the Atlantic and the Pacific.

Thatcher, ex-Civil Governor of the Canal Zone, was a member of the Panama Canal Commission during the time of its construction. As representative from Kentucky he sponsored many laws relative to the Panama Canal.

In an interview with the United Press, Thatcher praised the bill presented last week in the Senate by Senator THOMAS E. MARTIN, from Iowa, to create an interoceanic canal Commission which would be made up of 11 members to be appointed by the President.

The commission would study the possibilities relative to a canal at sea level across Panama, to improve the lock system of the canal or to build a completely new canal, in addition to the political questions relative to that work.

"The question of bettering the Panama Canal is of such importance and things change so rapidly in this atomic age, that I think the creation of a special commission would be wise and opportune," he said.

"In that way the whole matter could be studied, until reaching the recommendations which Congress and the President should consider before making decisions," he continued. "The moment will come, although I

don't know when, when another canal will be needed across the Isthmus, and we can well consider that the Isthmus extends from Mexico to Colombia.

"When the moment arrives, I think that a second route, in Panama or Nicaragua, will have to be considered, though, this is a matter that needs a great deal of study."

Thatcher said that a canal at sea level in Panama would necessitate tidal locks on the Pacific side, in addition to deep and costly excavations. He predicted a counterproject for the betterment of the present route of the canal, with 3 sets of locks in Miraflores and in Gatun, with a maximum level of 85 feet between the 2 sets. The locks would be widened to allow the passage of the largest ships.

When questioned as to why he mentioned Nicaragua as one of the possibilities, Thatcher answered:

"The route through Nicaragua has a long history. It has been considered for years. Previously it was almost chosen for the construction of the canal. There are some favorable geographic characteristics in Nicaragua. An elevation of 33 meters will be needed, but the lake makes a large stretch of water available."

Thatcher said that he doubted whether Mexico would be favorable toward construction by the United States of a canal across the Isthmus of Tehuantepec. He added that he thought a country as large as Mexico would insist on having complete control of any waterway within its territory.

He also said that the new canal across the Atrato route in Colombia is "feasible but very costly."

Thatcher insisted that the construction of a new canal, through whatever route, would be extremely costly and that, as a result, he thinks that the most economical solution would be to better the existing canal in Panama.

He made it clear that he was not expressing a conclusion about any route, apart from the fact that he thinks that a detailed study of the situation is an urgent matter.

Twenty Dollars a Head

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wall Street Journal of February 23, 1955:

TWENTY DOLLARS A HEAD

Whenever anyone comes along and suggests cutting people's taxes he is going to get a pretty wistful reception. Taxes in this country have been so high for so long that many people can hardly remember when they were anything else, but everybody can dream.

So we suspect that Speaker RAYBURN struck a responsive chord in the voting public—and well thought he would—when he promised that the Democrats were going to get taxes down. On Monday the House Ways and Means Committee voted to carry out the promise, and the House itself is expected to consider it tomorrow.

But in view of how the taxes got up so high and what the Democrats propose to do about them, it seems to us that it was a pretty shabby promise.

The Democrats haven't said a thing about getting the Government's expenses down; the present administration has taken a bigger bite out of the Government's costs than any Democratic administration of the previous 20 years. And the Democrats aren't promising to distribute this tax largess on the basis of need, equity, or justice. They are simply going to hand every taxpayer a \$20 bill.

Well, there's going to be an election next year, and the Democrats are going to want a lot of votes from the taxpayers.

And as Mr. RAYBURN knows, the \$20 bill is the only piece of folding money the voter sees that carries the picture of a Democrat.

Vocational Education

EXTENSION OF REMARKS

OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. TRIMBLE. Mr. Speaker, one of the greatest programs ever authorized by this Congress is that of vocational education. I could take a lot of time extolling the virtues of this great program, with particular reference to what it does for our great State. I am deeply interested in the appropriation for that work by this Congress. I hope the full amount which the agency needs can be appropriated.

I have just received the following letter from J. Marion Adams, assistant commissioner for vocational education for Arkansas, who is doing a grand job in Arkansas. This letter explains in some detail just what our problem is:

DEPARTMENT OF EDUCATION,
DIVISION OF VOCATIONAL EDUCATION,
Little Rock, Ark., February 21, 1955.

HON. J. W. TRIMBLE,
United States House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN TRIMBLE: Since I wrote you last concerning the need for additional Federal funds for vocational education, we have made a careful study of our needs, keeping in mind practical limitations as to buildings, trained teachers, etc., and have made an estimate of the expansion we could make in the very near future if increased Federal funds can be made available.

We estimate that Arkansas local school districts could add right away 191 vocational teachers and an additional 200 lay teachers to offer courses to adult farmers (not regularly employed teachers, but teachers for short-unit classes only, paid about \$200 per class). Such expansion would cost approximately \$361,400. The additional teachers would be distributed in the various vocational fields as follows: agriculture, 21 plus 200 lay teachers; distributive, 20; home economics, 50; trade and industrial education, 70; and guidance, 30 counselors.

During the past year a committee of 25 citizens of Arkansas have worked vigorously studying the "needs, deficiencies and extent" of vocational education programs in Arkansas public schools. They established as Arkansas' ideal program of vocational education: appropriate courses in vocational education available to every person in Arkansas, whether in school or out of school.

Of the 425 school districts in the State of Arkansas 319 have at least one type of vocational course offered to high school students. A total of 107 local districts offer no courses

in vocational education. We feel that an outstanding program of vocational education for students in these schools (whether offered locally or on an area basis) would be a major asset to the social improvement, industrial development, and total economy of this State.

This year Arkansas is putting approximately \$1 million from State funds into its programs of vocational education and receiving \$601,431 in Federal funds. Local districts bear all costs of physical equipment, buildings, operational costs, and 50 percent of the salary of the local vocational teacher. You know, of course, that the need for additional funds for schools here at home is terrific. We do hope that Congress can provide increased funds for the vocational phase of our educational program.

Very truly yours,

J. MARION ADAMS,
Assistant Commissioner for Vocational Education.

Then and Now

EXTENSION OF REMARKS

OF

HON. HAROLD O. LOVRE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. LOVRE. Mr. Speaker, many times during each session we are given many opportunities to hear our colleagues speak outside the Halls of Congress. We all receive many invitations, and, time permitting, we usually attend. I had the pleasure yesterday of hearing one of the finest such talks I have heard since coming to Congress. It was delivered by our very esteemed colleague from Ohio, Representative CLARENCE J. BROWN, I call this talk to your attention because it serves as a caution to all of us:

ADDRESS BY HON. CLARENCE J. BROWN, OF OHIO,
BEFORE THE DISTRICT OF COLUMBIA SOCIETY,
SONS OF THE AMERICAN REVOLUTION, FEBRUARY 22, 1955, WASHINGTON, D. C.

Mr. Chairman, ladies, and gentlemen, when my good friend, Colonel Baxter, extended the invitation to me to be with you here today I broke a rule established some time ago not to make public appearances such as this while Congress is in session and promptly accepted. I did so, not only because of my high regard for the colonel, and my recognition of the Sons of the American Revolution as one of our greatest patriotic organizations, but also because I have reached the place where it has become virtually impossible for me to sit quietly on the floor of the United States House of Representatives while some Member goes through the mockery of reading George Washington's Farewell Address to a legislative body which, in recent years, has consistently failed or refused to heed, or to pay attention, to the advice and warnings given by the Father of our Country in that address.

So, on this 223d anniversary of the birth of the immortal Washington, I shall not devote my time to, or bore you with, repeating the usual tributes to the Father of our Country. Instead I have chosen the subject Then and Now, and shall attempt to give a rather condensed comparison of our beloved country and its Government, as it existed at the end of Washington's first term as President, and as it exists today.

Washington, as you will recall, took office as President, under our newly created sys-

tem of representative Government as defined by the Constitution, in April of 1789.

At the end of his first term, in 1793, the United States was made up of 15 States, 2 of which had been added to the original 13. They were—Connecticut, Delaware, Georgia, Kentucky, Maryland, Massachusetts, New Hampshire, New Jersey, New York, North Carolina, Pennsylvania, Rhode Island, South Carolina, Vermont, and Virginia. Of these only Kentucky lay west of the Alleghenies. Today, as you all well know, the Union consists of 48 States, embracing all of the land and territory between the Atlantic on the east, the Pacific on the west, Canada on the north, and Mexico on the south. But even now legislation is pending in the Congress to admit into the Union, two additional Territories as States—Hawaii and Alaska—neither of which is contiguous to any of the 48 States. And in addition, of course, Texas has the right, under the Annexation Agreement, to divide into five States any time that great empire may wish to do so.

The first United States census was taken in 1790, and fixed the population of the United States at 3,929,000. By the time the 1800 census was taken the fledgling Republic, had grown in population by 1,400,000—or by more than 34 percent—to a total of 5,308,000 people.

According to the first census and during Washington's Presidency, Virginia was the most populous State, having a population of 748,000, almost twice that of any other. Pennsylvania was next in population, having 434,000 persons within its borders. North Carolina was third, with 394,000, and New York—believe it or not—ranked only fourth, with a population of 340,000.

Back in Washington's time the Federal Government had its national headquarters in Philadelphia, the city of brotherly love, although the Father of our Country was even then planning the establishment of a new Federal City which was later to bear his name, in the District of Columbia—a 10-mile square area to be carved out of the States of Maryland and Virginia—along his beloved Potomac and near his home at Mount Vernon.

Under the Constitution, upon which the new system of government headed by Washington was established, and which, of course, is still in effect, each State has two Senators representing it in the United States Senate.

So, during Washington's administration the membership of the Senate totaled only 30, as compared to the present-day membership of 96. The House of Representatives consisted of 105 Members, based upon the census of 1790. Today, and for more than three decades past, the United States House of Representatives has had 435 Members, also apportioned on a population basis.

During Washington's first term the individual Member of Congress represented an average district population of about 40,000 people. Today each Member of Congress represents an average of nearly 400,000 persons—somewhere around 380,000 to be more accurate.

Back in the days when the new Republic was just getting underway, a Member of Congress did not have as many duties and responsibilities, or as much correspondence to handle, or messenger work to do for his constituents, as during the present time, but he certainly had a great deal more difficulty getting to his job at the Nation's Capital. It may be of interest to know that in journeying to Philadelphia for the meeting of the first Congress in 1790, 1 Member of Congress was shipwrecked, 2—and I quote, "were forced to land with considerable difficulty on Cape May and travel the remaining way to Philadelphia in a wagon"—end of quote; 2 Members suffered grave injuries when a stagecoach upset; and 1 reported he was—and again I quote, "forced

to travel by ship for 16 days through perpetual storms with serious and painful effect upon my digestive apparatus."

Those who served in the early Congresses of Washington's time did not need as much clerical help as we do today, for the only means of communication between Philadelphia and the various congressional districts of the United States, as well as the rest of the world, were: (1) The new and negligible postal service, (2) by special messenger, (3) quote, "any trustworthy person who happened to be traveling in the right direction," unquote, and, (4) masters of sailing vessels.

In fact, the postal service was, not only new, but most irregular, in those days. At the very best, according to the records, it took from 4 to 7 days to get a letter from Boston to New York, around 13 days for a letter mailed in Philadelphia to reach Georgia, and at least 20 days for a Kentucky Congressman to get a letter from Philadelphia back to his home district in the blue grass State. Such time schedules were kept, of course, only if everything went right, and quite often there were long and serious delays. For instance, a letter written by Governor Telfair of Georgia to Thomas Jefferson, posted January 2, 1791, did not reach its destination until March 4—61 days later.

Of course, foreign communication was even more difficult, for to complete an exchange of correspondence between America and Europe, back in those days, required an average of about 6 months. And difficulties often arose through capture, pirating or shipwreck, which resulted in the loss of much overseas mail.

While George Washington was President, Members of the House and Senate of the United States received the munificent salary or pay of \$6 a day for their services, as compared to the \$15,000 annual salary now paid Members of Congress, and to the \$25,000 salary provided in the new Federal pay legislation which cleared the House last week.

So, perhaps many of us who now serve on Capitol Hill should be grateful, not only for the difference in pay, but also for the difference in travel conditions, which now permit a Representative or Senator from California to leave his western home in the early morning and arrive in Washington in time for the opening of the Congressional session at 12, noon, of the same day.

But many present-day Members of Congress may be none too appreciative of the great improvement which has taken place in the Nation's postal service since the time of Washington. For instance, our modern postal service brings an average of 400 communications of different types to my office each day, all requiring the attention of myself and my secretarial staff. And believe it or not, there are times when my congressional mail reaches a grand total of 1,500 to 2,000 pieces in a single day.

During his first term as President, Washington had a cabinet consisting of 4 members, as compared to the 10 in the Eisenhower Cabinet. They were the Secretary of State, Thomas Jefferson; Secretary of the Treasury, Alexander Hamilton; Secretary of War, Henry Knox; and Attorney General, Edmund Randolph. In addition, President Washington had a Postmaster General, Timothy Pickens, who was not a member of the Cabinet. Vice President John Adams had little work to do, and did not encounter too much difficulty in presiding over the Senate, with a membership of 30, for the short time it was in session.

The executive branch of the Government, under Washington, was made up of three departments—State, Treasury, and War. Today, as I mentioned a moment ago, President Eisenhower has ten members in his Cabinet, representing as many departments, and in addition the Director of Mobilization,

the Director of the Budget, and the Director of Foreign Operations Administration, sit with the Cabinet regularly, while the Secretaries of the Army, Navy, and Air Force, frequently join the group.

So actually today, on this Washington's birth anniversary of 1955, our Government is made up of 13 departments and 48 independent agencies, boards, and commissions, which, in turn, include another 2,133 different operating components to which personnel assignments are made.

You may be interested to know that, when Washington was President, the Treasury Department maintained the most extensive establishment, with agencies and officials in every large town, and in every section of the country. There were tax collectors then, even as now, though not in nearly as great a number. Our original Treasury Department, of course, had the responsibility, not only for the routine conduct of the young Nation's fiscal affairs, but also for such diverse functions as the collection of customs and tonnage dues; establishment of light houses, beacons, buoys, and public piers, registration and clearance of vessels; carrying of mail; surveying of public lands in the western territory; supervision of the banks of the United States; the granting of bounties on fish; and the collection of excise and other taxes.

Washington's War Department, besides operating and managing the Army, handled payment of pensions to disabled war veterans; regulated trade with the Indians; made grants of land to veterans, and regulated the militia of the several States.

The Department of State, then had as its primary duty, the conduct of our foreign affairs, as it does now. But it also granted patents and copyrights, supervised Federal marshals and attorneys, helped govern the Western territories, managed the Mint, took the census, and performed other miscellaneous functions.

The United States Attorney General, although he attended Cabinet meetings, had almost no administrative and few legal duties. It was not until the end of Washington's service as President that the Congress became magnanimous and furnished an office for the Attorney General, and generously appropriated funds to hire a clerk for him.

By the end of Washington's first term the Federal Government had established some nine different field services, outside of the Military Establishments and territorial governments. These services included Customs, Lighthouses, Attorneys of the United States, Federal Marshals, Post Offices, Revenue Cutter service, Indian Superintendents, Commissioners of Loans, and—believe it or not—the Internal Revenue Service.

Even back in those days, the United States had a so-called civil service covering civilian employment totaling 780 persons, not including the Deputy Postmasters of whom about 660 worked for the Department of Treasury. It may be interesting to note that as of last December the total number of civilian employees of the Federal Government, according to our mutual friend Senator Brannan, and his Joint Committee on Federal Expenditures, stood at 2,368,073.

But back in Washington's time the central Government's office staffs, located in Philadelphia remained small, and most Federal employees worked out in the field. For example, the largest Department of Government at that time—the Treasury Department—had only 70 persons employed at its departmental headquarters in Philadelphia. State Department personnel consisted of 5 clerks, 1 interpreter, 1 doorkeeper, and 1 messenger, in addition to the Secretary of State himself.

At the end of Washington's service as President, the War Department had grown to where it had a central staff of 17 people—believe it or not—while Postmaster General

Pickering performed all of the duties of his governmental position in 2 rooms of his own home, with the aid of 1 assistant and 1 clerk.

President Washington and the United States had diplomatic representatives in just five major foreign capitals—London, Paris, The Hague, Madrid, and Lisbon.

Most Federal officers of that time received their official income from two main sources, salaries and fees. Today the fee system, as far as the Federal Government is concerned, as well as in most States, has been entirely eliminated. President Washington drew the highest salary of all the Federal officials of his day—\$25,000 annually, plus some expenses, which amounted to much less than his salary. The Secretaries of State and Treasury each received a salary of \$3,500 annually; while the Secretary of War drew but \$1,500. Perhaps the Secretary of War's low pay was accounted for by the fact that the United States was not then trying to feed, finance, and police the entire world, and uniformed Americans were not serving in more than 75 different lands outside continental United States. Under Washington, who appears to have been a frugal man, the Comptroller of the Treasury of the United States and the Governor of the Northwest Territory, each drew salaries of \$2,000, while the Clerk of the House and Senate received the magnificent yearly amount of \$500 each.

Most Federal officials of that period—outside of the ones just mentioned—were compensated for their services through fees. Some did quite well. For instance, a number of the collectors of customs had higher annual incomes from fees than the Secretary of the Treasury received in salary. At the other end of the line, however, many postmasters in small towns were paid as little as \$25 per year.

As Commander in Chief, Washington had under him an Army of about 5,000 men, but no Navy or armed ships of any kind, until 1794. And I have been unable to find, from sources I believe to be reliable, where George Washington had any kind of an Air Force at all. Today our Army, Navy, and air services consist of well over 3 million men. But when George Washington, in his first term, moved to put down the so-called Whisky Rebellion in western Pennsylvania, he was compelled to enlist the aid of State militiamen, at a time when the States maintained complete control over the activities of their military units.

The Father of our Country, during his two administrations as President, did not have too much money with which to "play around," and certainly not the \$60 to \$100 billion yearly budgets which have been available to recent Presidents. During the 8 years of Washington's Presidency, Federal revenues averaged \$5,717,000 annually, while—believe it or not—annual Federal expenditures during the same period averaged \$5,776,000, which indicates that even the Father of our Country had to worry about "red ink," and Treasury deficits.

Most of the revenues of that day came from customs duties, and, later, from the first excise taxes which were imposed by Congress in 1791 on spirits distilled in the United States. It was this excise tax, by the way, which touched off the Whisky Rebellion. The Federal Government received only meager funds from postage, sale of public lands, fines, penalties, and forfeitures. And at the end of Washington's first term, the public debt of the United States totaled \$70 million, or perhaps a few dollars more. Today our public debt stands at approximately \$280 billion—or, to put it another way—280 thousand million dollars.

But to turn to our Government of today. You may recall it was my original idea and legislative bills which created both the First and Second Commissions on the Organization of the Executive Branch of the Government,

better known as the First and Second Hoover Commissions. You may also be aware that I served as a member on both Commissions, and have devoted more than 4 years of my life to the study of the organization and functions of the Federal Government, especially the executive branch.

You may be interested in knowing that, in comparison with the 3 postal workers of Washington's time, the Post Office Department now has 8,688 employees here in metropolitan Washington alone, and a total employment of 508,519 throughout the country; that the State Department now has 5,106 employees in Washington, and a total overall personnel of 21,061; that the United States, through its State Department, maintains 68 embassies and 9 legations in 77 foreign countries, in addition to the 106 consulates, which are administered in 105 foreign colonies, territories, and directorates. The Defense Department alone, including the Army, Navy, and Air Force, employs 1,144,994 civilians, of which some 340,000 are nationals of other nations, working overseas. In addition, of course, we have 3,300,000 Americans serving in our Armed Forces.

The Treasury Department has grown from its original 70 to where it now has 13,115 employees in Washington, and an overall employment of 79,459.

Of course, in addition to all of these departmental employment figures I have given you, the legislative branch of our Government has 4,113 employees, and the Federal judiciary 22,125.

You may also be interested in hearing some other facts which have been developed by our Hoover Commission and its task forces. Earlier I talked of travel in Washington's day. Well, today our Federal officials travel much farther and faster, and in more safety and comfort. According to the best information I can gather, not a single Government employee has been injured recently in a stagecoach upset—at least not during the present administration. But the latest reports do show that we have a little more than 261,000 motor vehicles being used by officials of the Federal Government, with an annual consumption of 29,418,577 gallons of gasoline. These vehicles, according to the General Services Administration, traveled the equivalent of 70,000 trips around the world during the past year—or about 1,800 million miles.

The Federal Government is doing something about the health of our citizens. At the present time we have 26 Federal departments and agencies engaged in one or more health programs, at an aggregate cost of approximately \$4,200 million during the present fiscal year. Under them some 27 million Americans are receiving free medical service from the Government. Approximately 10 percent of all American doctors and dentists now work for the Federal Government.

And, of course, we have 104 different Government agencies loaning your money and mine, under one arrangement or another, not only to our own citizens, but to almost every foreign Government or activity in the world, wherever we can find anyone to take our cash. All of this, despite George Washington's warning against foreign entanglements. Yet we are now giving away free to other nations and peoples each year 1,000 times as much money as the entire Government cost to operate in Washington's time.

But before I close my remarks, I think you may be interested in knowing that our public debt, which I mentioned to you a moment ago as standing at \$280 billion, equals the value of all taxable property of every kind and description west of the Mississippi River—and then some. Yet, at the same time our Federal Government owns considerable more property than it did when Washington was President. On June 30, 1954, the

issuable personal property held and owned by the Federal Government amounted to \$66,250,000,000, and this amount, of course, did not include such items as naval vessels, military weapons, vehicles, furniture, and other equipment in use; nor did it include our Government industrial installations—all of which are estimated to be worth an addition \$48,500,000,000.

The overall inventory of the Federal Government's personal property actually totals, at cost price, more than the total inventory of our entire free-enterprise system, all combined.

And on top of all this, outside the public domain itself, our Federal Government today owns real property, purchased at the taxpayers' expense at one time or another, having a total estimated value of \$30,500,000,000. So, all together our Government owns and possesses some \$145 billion worth of property—which is a fairly good offset against our public debt—were it not for the fact that our Government has also incurred secondary obligations, or made promises to pay if someone else does not, an additional grand amount of \$255 billion.

So, I cannot help but wonder, as I suspect you may be doing, just what the Father of our Country—the man whose anniversary and memory we honor here today—would think and say if he were to come back to earth this day, and look about him in this city bearing his name—look at the Government and the country he did so much to create and to establish. Would he think we had made real progress and, if so, in what direction? Would he find our present-day life better, more enjoyable, and less troublesome than in his day?

George Washington had his problems, as did the new Republic he headed. Modern-time Americans have their troubles and problems, too. What do you think? Are we, as Americans, doing as good a job of making free and representative Government work, all things considered, as did George Washington and his compatriots of 160 years ago?

Regardless of your views on the questions I have just propounded, I am sure all of you will agree there is a great difference between then and now.

Housing for Aging Families

EXTENSION OF REMARKS OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. McCORMACK. Mr. Speaker, in my extension of remarks I include an interesting and challenging statement Housing for Aging Families written by John Carroll, vice chairman of the Boston Housing Authority, of Boston, Mass., relating to the housing needs of elderly persons in the United States.

Mr. Carroll has devoted years of unselfish service in trying to improve conditions of low-income groups and underprivileged persons, particularly in trying to improve their condition in the field of improved housing. Mr. Carroll has done this without compensation. He is one of the finest persons I have ever met—progressively unselfish.

His views on the subject of Housing for Aging Families are worthy of serious consideration:

HOUSING FOR AGING FAMILIES

(By John Carroll, vice chairman, Boston Housing Authority)

The problems of the aging are of continually growing importance throughout the whole country. Medical science has made it that more and more persons are living to an advanced age while pension plans, both public and private, are, and will increasingly give greater independence to the elderly. Of great importance is the question of housing of the aging. Housing specifically designed for them is minute compared with their overall needs. Throughout all the cities of the Nation elderly persons are jammed into substandard housing for which they are paying sums large enough to pay the rent for decent federally aided housing of a nature similar to that under presently operated developments.

Old-age assistance recipients in Boston receive as much as \$43.75 a month for gross rent for apartments, which amount is sufficient to pay the required gross rent for federally aided developments in the city. Because so many of them are in one-person families they are ruled out from residence in Federal developments and instead of having decent housing they are forced to live in hovels in slum sections of the city. This rent money is coming out of the public treasury and thus public funds are being used to subsidize dumps instead of making possible residence in safe, sanitary housing.

Thus we find that while pension plans are of ever greater importance, housing plans are not keeping pace with the program in other directions. Not only do we now have social security on the public level, but we also find that private pension plans have grown tremendously in the past 20 years, particularly with the growth of labor unions. But all this progress comes to naught if the pension recipient still has no decent house in which to spend his declining years. The house is of great importance to all, but is of greatest importance to the elderly because they must spend so much time in it.

Housing for the aged is of marked importance in New England because of the large percentage of elderly persons living in the area and the antiquated housing in which so many of them reside. Whereas in 1950, 8.1 percent of the country's population was over 65 years of age, in 4 of the New England States the percentage was 10 or more, and in each of the two other States the national average was exceeded. Specific percentages of population over 65 years were as follows in 1950:

	Percent
Nation.....	8.1
New Hampshire.....	10.8
Maine.....	10.5
Vermont.....	10.5
Massachusetts.....	10.0
Rhode Island.....	8.9
Connecticut.....	8.8

The national average increased from 4 percent in 1940 and studies in population trends indicate that it will ultimately be stabilized at 13 to 14 percent.

In Boston in 1950 the percentage of persons over 65 years was 9.7 in 1950 and is constantly growing. Moreover, the number of aged persons living by themselves is greatest in the area where urban redevelopment is to be undertaken. There aged single persons, together with other single persons, are not eligible for federally aided public housing irrespective of the fact that their present homes are to be destroyed.

There were 82,800 persons over 65 years of age resident in Boston in 1950. About 20 percent of these were old-age assistance recipients. The Boston Housing Authority conducted a survey of these recipients and received over 1,800 returns signifying interest in public housing. These returns were heavily weighted in favor of single persons

presently not eligible for Federal housing. All of these persons would be eligible income-wise for such housing.

The problems of these and other elderly persons may be approached from the point of view of what has been done and what is being done for them in Boston. Lack of adequate income of a great percentage of elderly persons has made the group unattractive to private enterprise and thus almost nothing has been done by private groups toward producing housing architecturally designed and economically planned for the elderly. Thus far statutory limitations defining a family for admission to a Federal development have effectively barred any aid to single persons in federally aided housing, yet almost 3 out of every 4 households headed by a person over 65 years are single-person households.

In the Federal program little provision has been made toward designing units for 1- to 2-person families comprised of elderly persons. Admittedly Federal public housing, under the 1949 act, was set up chiefly for low-income families with children, relegating the childless couples to a position of minor importance. At present, limits are based upon room costs rather than on household unit costs, so that the small units become more expensive and are discouraged.

Nevertheless, in Boston we have built a considerable number of 1-bedroom units, 25 percent of the low-income units in the city are 1-bedroom—and we have built 84 units specifically designed for elderly people. Those units have electric rather than gas ranges; they have stall showers with hand grips to minimize accidents.

Recently the State of Massachusetts has given recognition to the needs for elderly people in the form of legislation designed particularly to make available to single persons units not needed for veteran family use and to allow for the construction of new units for use of veterans of 60 years of age and nonveterans over 65 years of age. It is proposed that these units be built for single persons and couples in a 3-to-1 ratio, favoring smaller units for single persons. Under this legislation it is expected that 1,800 units may be built in Massachusetts, which number is, of course, small considering the overall needs.

Utilizing the allowed admission of 1-person families, 92 such families have been admitted to 1 of the Boston Housing Authority's State-aided projects. It must be borne in mind, however, that such single person families can only be admitted where there are no available veteran families of larger size. In all other developments other than the one to which these single persons were admitted, the list of applications is such as to rule out admission of any single persons.

It is proposed by the State legislation to build new units in 25- to 50-unit developments accommodating a maximum of 75 persons. This size is thought to be the optimum since older persons dislike being segregated in large numbers. Experience elsewhere indicates that projects for the elderly can be too big as well as too small. A goal for such housing should be to provide a social unit which is large enough to provide a variety of friends and a large amount of self-help. At either extreme of project size these benefits are denied. Above all, it is important that the aged be housed in circumstances most closely approximating their natural pattern of life. The housing must have safety factors necessary because of infirmities of advancing years but at the same time be based upon a realization that most of the needs of people in the 65 to 75 year range are not too different than those of other people. It is recognized that there are three groups of aging persons to be considered: (1) Those who are members of family groups including younger persons; (2) those

who live by themselves or with another old person in good enough health to take care of their own needs; and (3) those so handicapped as to require special care. The first group will be housed in housing of common use to all, the third group will be institutionalized. It is the second group with which we are concerned.

Structurally for this middle group the dwelling, according to American Public Health Association standards, must be "oriented for maximum light and sunshine, have no dark corners, stairs or passage and would be equipped with accessible light switches for sufficient artificial light. It would have no slippery surfaces nor changes in floor levels; and the kitchen, bathroom, passageways, closets, cupboards and shelves would be located and arranged to simplify housekeeping and prevent accidents. It would be large enough to accommodate an ill person without disrupting the household." In other words, it would be the exact opposite from so many of the dwellings in which the aged persons are now living in crowded parts of Boston.

Not only are we concerned with what is to happen to aged persons who do not qualify family wise for federally aided housing but we are also bothered by site costs of developments which we plan to build for elderly persons. For best emotional and mental health it is likely that the elderly person should be housed in good units within the environment with which he is familiar. No matter how good the physical structure, if housing in it forces the elderly person to tear up roots and move to a new neighborhood, it may not be good.

This means that in Boston new housing designed for aged in many cases can only be built on sites obtained through demolition of substandard dwellings. This is generally a costly procedure, but most advisable. Specifically, what do we propose that the Federal Government do?

First, we strongly recommend that the definition of a family unit for admission to presently built developments be changed to provide for the admission of 1-person families age 65 years or more. If full relief is not to be given, then at least those aged single persons displaced by urban redevelopment projects should be eligible for admission if qualified income-wise.

Second, money received for old-age assistance should not be counted when computing income for eligibility for admission to federally aided projects. Thus it would be possible for a son or daughter to have a parent on old-age assistance live with them without thereby eliminating his or her needy family from possible residence in a low-rent development.

Third, a liberal policy relating to unit costs should be followed permitting the construction of more small units for housing single persons in developments designed for overall population needs.

Fourth, a housing program specifically for elderly should be adopted supplementing inadequate State programs and designed particularly to aid single-person households. In this program special concern should be given to site costs and a large amount of housing constructed should be on slum sites requiring costly demolition.

Cooperative housing has been proposed as a solution to the ills of housing of the elderly. For some income levels a strong cooperative program would be beneficial but for a great mass of old-age persons nothing other than well-subsidized housing such as the federally aided public housing would be any solution. In this mass are the old-age assistance recipients, holders of small public and private pensions, and those reduced to employment on low-wage jobs. It is likely that the top gross rent (including heat and utilities) which these latter people can afford in Boston is about \$10 a month, which approxi-

mates the top amount allowed under old-age assistance.

No new cooperative housing has been coming on the Boston market and the small amount of private rental housing which was built in the past few years has been at rents in excess of \$100 a month. Actually new rental housing in the Boston area in the past 2 years has been almost nonexistent.

All offerings of new sales housing—generally physically and geographically not adaptable to the needs of the elderly—have been at prices far out of the reach of the families with which we are here concerned.

There would seem to be ample evidence that, in common with all other low income families, no new private rental housing is being made available to elderly persons of low income and there is no evidence of any interest by private enterprise in such housing. There is, however, ample evidence as disclosed by a survey made for the Housing Association of Metropolitan Boston that there are a large number of older people living in decrepit rooming houses in Boston and that tremendous sums in Federal, State and local taxes, paid to old-age assistance recipients for their housing, are actually subsidizing slums, substandard dwellings and decrepit boarding houses in the Boston area.

Welcome to Premier Mario Scelba

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. RODINO. Mr. Speaker, we are anticipating in March a visit to our city by the Premier of Italy, Mario Scelba. Premier Scelba comes to Washington at a time when the friendly spirit and co-operation between our two countries has reached an unprecedented level. We welcome this visit as an opportunity to pay honor to Premier Scelba—for in a short period as head of his country's Government, he has, indeed, won the respect and esteem of us all.

Scelba has been Premier a little more than a year—and in that short time he has guided his Government to notable achievements both at home and in its relations toward Italy's neighbors and allies. Scelba was De Gasperi's Minister of the Interior for 6 years; his experience in that office may be said to have prepared Scelba uniquely for the premiership. As Minister of the Interior for 6 years, Scelba became the scourge of Italy's strong Communist following. On becoming Premier, Scelba ejected the Communist organizations from many of the office buildings they had seized from former Fascist owners after World War II. He has forced their press to conform to libel and slander laws and has transferred many Communists out of sensitive positions in the civil service. He has also reduced Communist Party revenue from such sources as businesses run by Communists for profit. In numerous ways he has met the challenge of Communist subversion and infiltration by practical countermeasures.

Some of the other tasks being tackled by Scelba's government are—a public works program which it is hoped will

alleviate Italy's unemployment; an impressive housing program; and new income tax enforcement laws. It is very difficult for the Premier to get such legislation passed in the Parliament, for Communists and fellow-travelers, who hold more than a third of the seats in Parliament, continuously sabotage and delay measures put forward by the center coalition which he heads.

In his government's foreign policy, Premier Scelba has inaugurated a new phase of trans-Adriatic cooperation. For 9 years the Trieste issue set Italians and Yugoslavs against each other and stirred bloody riots and demonstrations. In October of last year, the Italian-Yugoslav agreement returning the port city of Trieste to Italy and giving part of the Trieste territory to Yugoslavia, was signed. Since then Scelba has forthrightly held out the hand of friendship to the Yugoslavs and called for an end to the suspicions and recriminations that long poisoned relations between the two neighboring countries. This was a bold act on the part of Premier Scelba because it brought violent attacks from the extreme right and left in his own country. He has assumed the political risks, however, in order to show clearly his eagerness for peaceful cooperation with Italy's neighbors. The benefits of Rome-Belgrade cooperation extend far beyond the boundaries of the two countries. There have recently been reports that Italy may join the Balkan Entente which already unites Greece, Turkey, and Yugoslavia. Italy's adherence to this group would give the entente additional strength and would add Italy's 10 divisions to the approximately 60 of the 3 Balkan states.

Italy has recently signed the Paris Agreements which bring Italy and West Germany into the Brussels Pact. The Italian Chamber of Deputies has approved ratification of these agreements. This is but one more indication of the marked progress Italy has made in the last year, under the statesmanlike leadership of its Premier, Mario Scelba.

Next month as Premier Scelba visits our city—he may be assured of our high regard and of a very warm welcome.

Immediate Direct Public School Aid

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the Record, I include a telegram from Carl J. Megel, president of the American Federation of Teachers, which I believe accurately states the feeling of many prominent educators throughout the country. It is for that reason that I bring it to the attention of my colleagues in this House.

The telegram follows:

CHICAGO, ILL., February 17, 1955.

Eisenhower administration has been exceedingly reluctant to provide leadership toward enactment of legislation to provide Federal relief for America's schools.

The President's proposal might better be termed Federal aid for bankers since they set up machinery for "lending" not "granting" funds to distressed school districts. School districts throughout the country are already overburdened with debt and most of them are either close to or over the legal limit on their bonded department.

The President's proposal remedies the situation by offering to increase the bonded debt of school districts. Most school districts financially able to issue bonds can find these bonds saleable. If we want to adequately educate our children we must have immediate direct public school aid of a practical nature. Senator LISTER HILL's bill proposing \$500 million a year for 2 years in outright grants is a practical approach even though much more than that amount is needed.

CARL J. MEGEL,

President, American Federation of Teachers.

Address by Gen. B. W. Chidlaw, Commander in Chief, Continental Air Defense Command, at Air Force Association Banquet, Colorado Springs, Colo., February 11, 1955

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1955

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address by Gen. B. W. Chidlaw:

Mr. Allison, distinguished Members of Congress, National Guard and Reserve, members of the Air Force Association, and honored guests, having been in Madison, Wis., last night for a talk at the Wisconsin annual airpower banquet, winding up with a midnight surprise inspection of our alert aircraft and crews at Truax, with the temperature standing at a balmy seven degrees below zero, should my voice come forth this evening as something of a cross between that of radio's Rochester and Andy Devine's gravel growl, I ask that you good folks bear with me.

We, of the Continental Air Defense Command, are genuinely delighted that you gentlemen have been able to avail yourselves of this most gracious action on the part of the Air Force Association in arranging this timely meeting—to let us talk together on air-defense matters here in the hometown of CONAD Headquarters—and additionally to have you here in this beautiful setting in which soon will be built the Air Force Academy—the seat of learning and the cradle of tradition for the future of air power in this country.

Air power has, of course, been a living, breathing thing in the imagination of many people—old and young—for years, but it is today striding ever more and more into world consciousness as the tremendous factor in all military schooling and planning—in the economic future of the world—and more and more into the daily lives of each of us.

I think it can be said that air power is no longer considered so much just an equal participant in the family of military serv-

ices, but has become an overall field of the military potential affecting all services. A military potential possessing such a devastating capability that the threat of its use alone might prevent a world commitment to open warfare.

The world's past wars have shown generally that nations' so-called military roads to glory have often taken them along some pretty gloomy trails, milestoned by the skulls and skeletons of man's failures to bail himself out of his dilemma by all other means.

Through airpower, growing evidence indicates that its very existence affects the atmosphere and attitudes at the world's conference tables. Through airpower any imbalance in favor of a possible aggressor—even though local or temporary—frequently shows in the arrogance, the ruthlessness, the baldness of his demands.

Airpower—taken in the larger sense of the complete gamut of missiles and aircraft using the avenue of the air—can now be sent on a terrifying mission of destruction by our enemies—and it could come just as unannounced as it would be uninvited with such a mission.

For no longer do we have the leisure of the chess player to study—then unhurriedly counter action with reaction.

In airpower circles, action calls for action. The attackers—and the nuclear bomb loads or warheads set in motion by them—must be challenged by our own weapons systems as close to their bases of origin and sustenance as is possible, and our challenge must be decisive.

To reckon unleashed airpower in the hands of the enemy as any less than a disastrous capacity, or to leave it unopposed, instantaneously and without quarter, is to die miserably, to die individually, even possibly to die nationally.

Not long ago a story came to me of an old clock which had been placed in a national museum as a relic of one of the early wars on this continent. It was of that rich, deep, brown color, common to aging walnut wood. It showed signs of having been hacked by either a tomahawk or knife, and imbedded in the wood was part of an old flint arrowhead.

This old clock really belonged in this collection of times past.

It still had grace. It had beauty. It was decorative. It was definitely tied to the infancy of our country, and bespoke some of the turmoil in which our Nation grew to its present maturity.

For this reason, it had a place of honor in the museum.

The important lesson this old clock had for me, however—and for my people—who must live alert to each day's problems and be preparing always to meet that greater emergency which might come on any tomorrow was that it rested absolutely on the past.

It had one great defect. It could no longer perform the function for which it was originally built, because the hands of this clock were stilled forever, the mechanism inside clogged with rust and dust. And although it was still referred to in the museum guidebook as a timepiece—it was no longer that. It couldn't tell time.

All our military services are constantly making adjustments, orienting themselves toward today's blunt military facts of life and away from museum thinking. Nationally, we are, I believe, gradually weaning ourselves from the thinking that the next war will be fought—if ever we must fight one—as the last one was fought.

In my many trips about the country I sense that the man in the street—Mr. Average American Citizen—is becoming more and more aware of the fact that America will have to abandon her time-honored role of the protected and secure arsenal of men and weapons and take on the much

more alarming role of being the first and principal target.

No military force can ever afford to become a museum piece, and if there is one thing in the world which will disclose it as one—it is its failure to keep in step with the threat and be truly up to date—better well ahead of it.

Certainly, in this air-defense business the Continental Air Defense Command cannot afford a failure to be completely realistic.

For us, no crystal ball, no ivory towers.

We know that for the Continental Air Defense Command, there is no place of, nor time for sanctuary.

Defense of the United States from air attack is today a No. 1 preoccupation of the American people, and that defense is the mission of the Continental Air Defense System.

Our command is perhaps the first major organization of the few in our whole military structure which must meet its acid test on D-day—in fact, on H-hour on that D-day—and D-day could come tomorrow.

Therefore, the shadow of reality is always as close to us as our own shadow.

And the Continental Air Defense Command must work, tirelessly and ceaselessly. It must undergo constant test—and revision based on the showing of those tests. It must be re-equipped to be ever new—and ever newer. It can never be truly effective if any portion of our system is approaching museum status nor is it ever safe to view or inspect it from the attitude of veneration for past achievement. Rather, it must be continually assessed for vigilance—for virility.

In this vein, I am frequently asked the question, "Since our scientists, our research, and development people, anticipate many major improvements at somewhat later time periods, why should it be necessary to spend large sums of money modifying and improving the present system since ultimately much larger gains in effectiveness can be anticipated at that later date?" Well, gentlemen, viewing the world situation as it is today, I think the answer to that question is pretty obvious. Remembering always in this business that our D-day may be tomorrow, we cannot—we dare not—risk less than achieving the maximum kill effectiveness possible, employing the tools we have presently at hand.

Knowing all these things as realistic and to keep in a realistic vein, I wish to say, here and now, that true air defense is not, in my opinion, confined solely to the erection of a so-called fortress-type weapons system around a particular critical area. Such an approach would resemble that of a boxer who confines himself merely to slipping or warding off his opponent's punches. The boxer, to win, must be prepared to throw a few healthy knockout punches himself, so I include the counterpunch, the left cross, and the good old roundhouse haymaker right all in my definition of defense.

Air defense is then, in the truest sense, the whole tricky, razzle-dazzle, and flexibility of the air weapon used in its full multiplied force and as far out from our homeland as time and circumstances permit.

True air defense takes in the complete array of the offensive and defensive capacities of all services to make up this effective air defense—everything to keep the enemy guessing, everything to keep him off balance—to make him puzzle and pause, attempting to figure our air power out and make him doubtful of his own ability to cope with it.

Thus, I believe our continental air defense system starts with a formidable couplet of the Strategic Air Command with its long-range, atomic packhorses; the Navy's carrier task forces, wherever it is possible for them to contribute; and also those air forces, tactical in nature, which are based far out from

this country and on the fringes of the Iron Curtain, represented in our own commitments to the North Atlantic Treaty Organization and those of our partners in this alliance.

We have this partnership with the free world in recognition of the immediacy of the times; that should the free world be struck, our responses would be total, from close in and far away, and be now.

Concerned as we all are that we keep this far-out extension of our defenses and improve them daily, and concerned as we all are to preserve and ever strengthen the mighty fists of our strategic striking air arms, we of the Continental Air Defense Command are also concerned that our assigned mission—that of defending the skies over and the aerial approaches to our homeland—be likewise fully understood and fully appreciated. Appreciated as the Nation's blunting force which may have to endure its greatest battles while the enemy is at full strength and while the enemy effort is freshest.

Facing squarely up to the problem, I feel sincerely, as do all military commanders, that little has altered that old military truism that "the best defense is a strong offense." I am certain that a purely defensive system alone would never be the one single force which would deter—forestall—forever a Russian decision to strike us.

We must, at all costs, maintain our own long-range striking forces, our Strategic Air Command and those other forces which are capable of striking at the vitals, the heartland, of any aggressor. And they must be kept at the highest levels of efficiency and size to do their job, once their mission is ordered.

But, I'm equally just as certain that a major deterring factor lies in being able to guarantee that our striking forces will not be caught in their lairs—be caught in their bases with their planes down. If that aggressor, specifically, if Communist Russia, knows that while she is fighting her way toward her targets over here, that the golden opportunity of easy destruction on the ground has passed and the visitation of death and destruction to their homeland is but a few, very few, short hours away, then a decision by them to launch their first aggressive blow must be born only of sheer desperation.

The objective of our present and any future air defense system is thus, to ward off or reduce to the maximum possible extent the impact of enemy air attack, should our national aim of prevention of war itself fail. I feel—as do my people—that the market value for air defense will undoubtedly be at its highest—at its very peak on D-day. We hope, we pray, that our offensive and defensive efforts will jointly cause it to taper off markedly from that point on.

We know that nuclear armament has revolutionized not only air-defense thinking, but military strategy in its entirety.

We know that A-bombs and H-bombs, plus the means of carting them accurately to and over a target complex for release, compel considerations of national survival itself as the number one mission of our country's military action.

Enemy capabilities—weighed against the cost and effectiveness of a blunting defensive force to put in the way of those capabilities—outline the general dimensions of our air-defense problem.

Dozens of factors; i. e., possible enemy approach routes, his likely target selections, his delivery equipment, prevailing winds and weather, and the like, dictate our defensive deployments.

And always the question of national economics is before us. For example, must we or should we try to add a couple of fighter interceptors, or a new guided missile position to our defenses as the Russian adds new types

or numbers to his long-range air army inventory?

And in these considerations, there is always the thought that there may be, somewhere along the line, a "point of diminishing return" in this air-defense business as we currently know it or visualize it and that—in light of the constantly increasing threat—it is and will be extremely difficult to determine just exactly where this point lies.

One thing we can be sure of, however, is that to willfully stop short of this admittedly somewhat indeterminate point could be disastrous.

Stopping short is like the old story of throwing a 20-foot rope to a man who has fallen down a well 30 feet deep. It wouldn't bail him out. It wouldn't save him. And only a gesture has been made in the right direction. And whatever was spent for the rope represents a loss since it did not accomplish the mission.

Obviously, though, if we assumed complete desperation and tried to completely blanket the Nation with radar in overlays and layers—at the same time providing the well over 3 million square miles of our country with maximum intensity fighter-interceptor and guided-missile coverage, we would run into economic and manpower impossibility.

It is up to us, therefore, to go about the job of doing the most we can—and the best we can—with those present and programed forces of men and weapons which can be made available to us.

Our national sense of morality—our tradition of never having struck the first aggressive blow—would, I imagine, cause the enemy to assume—and we must assume—that he will have on his side the initial advantage because of his ability to select the time (and place) of attack and start unmolested the takeoff for delivery of what he hopes will be the first great blow.

He patently will have many avenues of approach which gives him great flexibility in choosing and charting his hydrogen highways—as it correspondingly confronts us with multiple problems in blocking any aerial power play he initiates.

He undoubtedly assumes—and we must assume—that he will have to go for a package deal in target arrangements—a veritable bag of varieties. In a civilization and defense system as complex as ours, he must know that there is no one solar plexus—no single touchpoint—which when struck could leave us totally paralyzed—broken—completely subdued and subjugated.

Therefore, his offensive efforts would logically have to be as big as the target bag, and be designed to put us in an atomic vise.

In such a packet, we must figure that he would undoubtedly attempt to neutralize or wipe out our counteroffensive capability such as our retaliatory forces and their bases and the origin of our atomic stocks—certain of our major population, communication, Government centers—and our industrial capacity for military production.

In the language of the poker player or crap shooter, if he were ever to set off on this package-deal expedition, he would truly be, as the expression has it, going for broke.

He would be shooting the works and trying to break the bank.

It would perhaps be comforting to say that very few who shoot the works and go for broke actually ever break the bank, or that few real gamblers would go up against such odds. We should never be foolish though and not consider that there is more than an outside chance that such a course could or might be taken.

There is grave reason for us to respect the outside chance with Russia.

Over there they originated the game called Russian roulette. In this game a man puts one cartridge in the cylinder of a revolver, gives the cylinder a spin to obscure the exact

location of the bullet, points it at his head, and pulls the trigger. If it doesn't fire, his partner in this interesting parlor game then takes the gun and duplicates the feat. You will admit that this is a pretty fair test of nerve and somewhat indicative of the way they look at things. The fact that these playful antics usually take place at the height of a vodka bout doesn't necessarily dim the light it throws on its practitioners.

Who would have thought that a train ride from Switzerland to St. Petersburg, sponsored by the enemies of his own homeland, would pay off for an expatriate conspirator by causing the overturning and taking over of a government and deifying the man who took that long-chance ride?

Yet, it happened to a man named Lenin and he was a Russian.

Who would have had the nerve, the political ruthlessness, to gamble away the lives of his own people, give up rich land space, order a scorched earth, and draw in—mouse-trap—the forces of his enemies until he had them in the position where his counteraction would be decisive and on this would build a character and debt in blood which made him well-nigh all-powerful at councils of nations?

Yet, it happened to a man named Stalin and he was a Russian.

Who would have had the audacity to face up to the greatest and most entrenched secret police system the world has ever known, its leadership and position seemingly invulnerable, and pull off a successful denunciation of that leadership, topped by a firing squad party for the opposition.

Yet, it happened to a man named Malenkov and he is a Russian. Anyhow, we have new names to ponder over; Khrushchev, Bulganin, Kaganin, Mikoyan, and the ever-articulate Molotov. Names which, to some observers conjure up a reversion to the policies of Stalin—a get-tougher attitude toward the West, a new all-out drive for heavy industry and arms production. More guns, less butter? Again, who knows?

I believe we can safely and wisely assume, though, that any nation which produces leaders like this, who rise to its leadership on taking the long chance, have not laid aside the tendency toward Russian roulette when it has proven successful on occasion or when there may seem to be no other course.

For these reasons, we must seek constantly for outward extensions of our warning and tracking capability to take maximum advantage of area defense weapons in the Continental Air Defense Command. Our action must start with his action, so our forces must be so disposed in depth as to make him run a gauntlet of continual harassing and destructive attack as soon as we make contact with him.

To be certain that our response is instantaneous and rapid toward any hostile threat, our controls must be decentralized. Our full national potential in air defense must be available and have its well-defined place in the Continental Air Defense Command system, the organization which will probably fight its major battle on the day and hour the fight starts.

All usable fighters of other Air Force commands—those based in this country—must be slotted into usable places in the system. All Navy and Marine Corps fighter aircraft based coastally or inland—even those on carriers in or near port—figure in the system. The shore-based radar equipment of the Navy and various proving ground and guided missile test centers can make their contribution. The antiaircraft guns of naval vessels in port must have their place alongside the guns and missile batteries which our strong right hand, the Army, contributes to the regular defenses. The National Guard and certain parts of the reserve forces strength must come into the bag with us.

The contribution of these forces—taking their control and operational direction from the Continental Air Defense Command—can be an enormous help in CONAD. We are now going forward rapidly with the planning which will make thorough use of all these augmentation elements and to make sure that the control machinery is fully ready.

Our first and most pressing need is that we obtain the greatest possible advance warning of any attack. To achieve this, we are shoving our radar detection nets further and further to the north—further and further out to sea—extending our detection, identification, tracking, and control capabilities as rapidly as circumstances permit. Our second, and nearly as pressing need, is for streamlining the processes by which we put into motion all the vast resources of those strengths I have mentioned, and putting them into motion toward the places in the system where they will contribute the most, the quickest, and to maximum effect.

As I said before, all military services today are engaged in a fight to stay out of the museum and to be in step with what must be done to make certain our national survival.

Developments in science and engineering are so fast and furious—the struggle to stay out of the museum—that to avoid being categorized as the clock which would no longer tell time is demanding on all of us.

We must be sure at the first flicker that the enemy is taking to the high aerial road, that we set up a series of toll gates—barriers—in his way as soon as he gets on that road. These toll gates, these barriers, should be all the missiles and jet-propelled carriers of destruction we can put out along that road to regulate or halt that travel as he comes on his atomic outing.

He must pay heavily at those toll gates. He must be fought to a standstill there—shot down out there—and God willing, his whole effort die out there. Because every uninterrupted second that we let him come on and every mile we let him penetrate our borders to get in reach of his strike position makes the cost ratio in blood, in life, and treasure of this country mount.

If we have the means to erect these toll gates when it has to be done, the Nation lives.

If we do not, the Nation could die.

To those of us who wrestle with this enormous problem—who live with it every minute of every hour of the day and night, it is just as simple, just as cold turkey, as stark as that.

There are mighty few gray areas left to consider in this business. It is possible now in this atomic age to see mostly only in black and white.

I know that this problem is on the minds of you gentlemen of Congress and other of our highest Government leaders and our top military commanders.

My feeling on Air Defense is that it amounts to the sum total of all the things which can be brought to bear on any enemy who would see in an all-out air attack the most lucrative, the quickest, and the most decisive way to get at our vitals and to knock us to our knees. The Continental Air Defense Command is a complete rationalization of that Air Defense potential in terms of making every mile—every yard—every foot of an attacker's thrust count for us and against him.

In a measure, we are blessed with God-given geographic depth for our defenses, removed some distance from the bases of any aggressor's birds of prey.

We would indeed be profligate with our responsibilities—and going against all military lessons and training—if we did not figure on making every mile of that intervening distance pay dirt for us and a place for our enemy to bite the dust.

Looking back, we can all remember the time when those of us in the military were somewhat removed from the so-called plain American citizen. We didn't know too much about each other—we didn't give each other too much thought. They went about their business—we went about ours. They sent for us when they needed us, and we sent for them to give us the increased strength we needed in time of a national emergency.

This is not true today.

Today we are in each other's business right up to our necks, because no matter what any man or woman thinks his or her business is today, it is really the business of insuring individual and national survival.

Because of this feeling, we have been able to get with us in the Continental Air Defense Command some 400,000 civilian volunteers in the role of ground observers. They have become interested in what they can do to help and are willing to give us that help because they wanted to know a role into which they can fit smoothly should D-day ever come. Because of this growing awareness and desire in American people to know a place to do volunteer duty, I feel we are stronger than we have been for a long while. Because in addition to what these ground observers do in plane spotting, they have provided the first ripple in the great wave to come as Americans become more and more conscious of what each man and woman must do if we are to be safe and remain safe.

By coming into our family of air-defense weapons freely and as volunteers, they have put their apathy and complacency into the museum alongside that old clock. Complacency today is just as useless as that old clock—the clock which could not tell time.

Let us all make certain—civilian and military man alike—that we discard now and forever any semblance of complacency.

Let us not believe that because we have never lost a war that we couldn't lose one.

Let's make certain we don't lose it.

Let us never rest on today's weapons system or be content that what we are doing today is just good enough. We all must dig deep to pull out that little something extra in us.

Gentlemen, as I look out over this audience tonight I see many friends with whom I have worked over the years. Hal Stuart, Joe McNarney, Bill Kepner, Pop Powers—my old bosses in the Air Force. I see the leaders of our aircraft industry, men with whom I grew up, worked with, played with, frequently argued with, more often had to agree with during the many service years I spent on the materiel side of the fence. I see here tonight many distinguished Members of Congress, men who daily grapple with the major domestic and foreign problems of our country.

Thus, I realize, gentlemen, that I possibly have been presumptuous in discussing at such length our Nation's air defense problem here tonight, because I know that, in some respects, you are just as close to many of the facets of that problem as are we in the Continental Air Defense Command.

However, in these few closing sentences I am going to presume still further and ask that you consider and take back a message to your people. This message:

That, working together, we must see to it that our military clock is ever kept cleaned, oiled, conditioned, and adjusted to that split-second accuracy demanded by today's troubled old world.

Because in these perilous times, should a mainspring snap—a jeweled bearing give way—and our military clock slow down and grind to a stop, chances are that it might never start again.

And, if our military clock stopped, it quite probably would never even find its way into a museum.

There could be no museum left to put it in.

Thank you.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the official reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix, but this rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD Appendix the full report or print of any committee or subcommittee when said report or print has been previously printed.

10. *Official reporters.*—The official reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this restriction shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. The Public Printer or the official reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Illustrations.*—Pursuant to section 182b, title 44, United States Code (as shown above), requests for authority to insert an illustration in the RECORD should be submitted to the Joint Committee on Printing through the chairman of the Committee on Printing of the respective House in which the speech desired to be illustrated may be delivered. Illustrations shall not exceed in size a page of the RECORD and shall be linecuts only. Copy for illustrations must be furnished to the Public Printer not later than 12:30 o'clock p. m. of the day preceding publication.

13. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

Appendix

The Office of the Legislative Branch in the Formulation of National Security Policy

EXTENSION OF REMARKS

OF

HON. PAUL J. KILDAY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. KILDAY. Mr. Speaker, on February 24, 1955, it was my honor and privilege to deliver an address at the National War College, Washington, D. C., on the subject: The Office of the Legislative Branch in the Formulation of National Security Policy. Under leave to extend my remarks, I include a copy of that address, as follows:

THE OFFICE OF THE LEGISLATIVE BRANCH IN THE FORMULATION OF NATIONAL SECURITY POLICY

(By PAUL J. KILDAY, Member of Congress)

In discussing the office of the legislative branch of our Government in the formulation of national security policy, I believe it would be of value to review some of the basic principles of political science. The key word in all forms of government is "sovereignty." That is, in whom does it lie? In whom is vested the supreme power of the state? For centuries, because of the doctrine of the divine right of kings, sovereignty reposed in the monarch. In 1776 the colonists, as British subjects, lived under a system of government which recognized this philosophy, except insofar as the power of the king had been circumscribed by historical rights wrung from him in such great accomplishments as the Magna Carta of 1215.

So, in 1776 Thomas Jefferson proclaimed, and the Continental Congress confirmed by adopting the Declaration of Independence, that:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed."

The divine right no longer exists in kings, it now reposes in the people. The sovereign people. This has remained and still is the theory of the American form of government.

THE DECLARATION OF INDEPENDENCE

On our subject for today, among the facts submitted to a candid world by that declaration were:

"He has kept among us, in times of peace, standing armies, without the consent of our legislatures."

"He has affected to render the military independent of and superior to the civil power."

And the Continental Congress also complained of pretended legislation: "For quartering large bodies of armed troops among us: For protecting them by a mock trial from punishment for any murders which they should commit on the inhabitants of these States."

THE CONSTITUTIONAL CONVENTION

After an unsatisfactory experience, during and subsequent to the Revolution, the Congress approved the suggestion for a convention at Philadelphia "for the sole and express purpose of revising the Articles of Confederation and reporting to Congress and the several legislatures such alterations and provisions therein as shall when agreed to in Congress and confirmed by the States render the Federal Constitution adequate to the exigencies of Government and the preservation of the Union."

In accordance therewith the convention met and, on May 30, 1787, went into secret session, as a committee of the whole, for the consideration of propositions for a plan of government.

This convention was composed of delegates from the several colonies fully aware of the causes of the Revolution and fully informed of the facts submitted "to a candid world" by the Declaration of Independence. After approximately 3½ months the convention produced, not a revision, but a new plan of government.

THE CONSTITUTION

The preamble of this new plan of government declared as one of its objects to "provide for the common defence." By its express delegation of powers in article 1, section 8, this Constitution delegated to Congress the power "to pay the debts and provide for the common defense and general welfare of the United States." And thereafter, in that article, committed to the exclusive jurisdiction of the Congress, in clauses 11 to 16, both inclusive, the following powers in this language:

"To declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water."

"To raise and support armies, but no appropriations of money to that use shall be for a longer term than 2 years."

"To provide and maintain a Navy."

"To make rules for the Government and regulation of the land and naval forces."

"To provide for calling forth the militia to execute the laws of the Union, suppress insurrections and repel invasions."

"To provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the States respectively, the appointment of the officers, and the authority of training the militia according to the discipline prescribed by Congress."

Notwithstanding the clear knowledge possessed by the members of the Convention, and generally understood by the people through the publication of the Federalist, that this new Government was one of limited powers delegated to it by the sovereign people, fear of an all-powerful Federal Government persisted. Therefore, as a condition precedent to the ratification of it, those same foreign people demanded the submission of the first 10 amendments which constitute our cherished Bill of Rights. Pertinent to our subject, they provide:

Amendment II: "A well-regulated militia, being necessary to the security of a free State, the right of the people to keep and bear arms, shall not be infringed."

Amendment III: "No soldier shall, in time of peace be quartered in any house, without the consent of the owner, nor in time of war, but in a manner to be prescribed by law."

Amendment V: "No person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia, when in actual service in time of war or public danger; nor shall any person be subject for the same offense to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use, without just compensation."

I have included all of the fifth amendment simply to keep before us the fact that even in these confused times it contains provisions of great value to all of us.

By article 2, section 2, it is provided that "The President shall be Commander in Chief of the Army and Navy of the United States, and of the militia of the several States, when called into the actual service of the United States." And by the same article and section: "He shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur; and he shall nominate, and by and with the advice and consent of the Senate, shall appoint ambassadors, other public ministers and consuls, * * *, and all other officers of the United States, whose appointments are not herein otherwise provided for, and which shall be established by law; * * *." And by section 3 of article 2 (the President, "Shall commission all the officers of the United States."

It is clear, therefore, that our Federal Government is a government of powers delegated to the Congress and to the President. With each power goes its limitation. It is essential to the orderly process of our Government that each branch of government know the powers it possesses and the wise limitations placed upon those powers. That each operate within the area provided by this basic charter. That neither attempt to exceed the powers actually granted and possessed by it. In my opinion, it is equally important that each jealously guard the exercise of its powers that there be no usurpation by the other branch. Though I am a member of the legislative branch, I beg that you believe me to be sincere when I state that it is essential to our well being and our continuance as a Nation that there be no trespass upon the powers of the executive by the legislative branch. In comparatively recent times we have heard many protests of usurpation of legislative power by the executive. We have heard little of the intrusion of the legislative upon the executive. Such there has been, as I expect to show. Both are equally to be avoided.

It is now my purpose to consider these various functions, the exercise of which constitutes the office of the legislative branch of our Government in the formulation of national security policy.

TO PROVIDE FOR THE COMMON DEFENSE

The common defense is stated by the preamble to be one of the reasons for the establishment of the Constitution; the power to provide for it is committed to the Congress. Only Congress can levy and collect taxes, only Congress can pay the debts. Therefore, only Congress can provide those things necessary for the common defense. As with individuals, so with States, self-preservation is the first law of nature. Only

the State which can preserve itself can be a State. In this Federation of States, the defense of all of them, the defense common to all of them, the common defense is committed to the Federation of the people. As Joseph Story has said (1 Story, Commentaries on the Constitution, sec. 462), "For example, the preamble declares one object to be, 'to provide for the common defense.' No one can doubt that this does not enlarge the powers of Congress to pass any measures which they deem useful for the common defense." The preamble is, rather, the declaration of basic rights. It does not establish those rights. They already exist. This document then is to form a more perfect Union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty, the only thing ordained, the only thing established is "this Constitution for the United States of America." Thereupon the Constitution commits the provision of that defense to the only branch of Government which can provide it, the Congress which lays and collects taxes and pays the debts.

ONLY CONGRESS CAN DECLARE WAR

The President is Commander in Chief in time of peace, as well as in time of war. Therefore, the power of Congress to declare war and the power of the President as Commander in Chief, become very closely entwined.

As the people must fight wars, and despots increase their power over their own people and other peoples by war, it is only natural that the sovereign people would express their new-found sovereignty by vesting in the direct representatives of the people the sole power to declare war. Even today the people are quite vocal in their desire that only Congress declare war. On the other hand, a review of the 166½ years since the adoption of the Constitution will show rare indeed have been the occasions upon which Congress alone has declared war. As a matter of fact, Congress has never in its history declared war except as a consequence of the President's acts or recommendations. It has never refused a request from the President that war be declared.

On five occasions this Nation has participated in formally declared wars. However, in four of those instances the declarations of war recognized the prior existence of war. The fifth, being the War of 1812, stated—"War be and the same is hereby declared to exist" (2 Stat. 755).

On May 13, 1846, Congress declared: "Whereas, by act of the Republic of Mexico, a state of war exists" (9 Stat. 9). As to the Spanish-American War, Congress on April 25, 1898, provided: "... that war be, and the same is hereby declared to exist, and that war has existed since the 21st day of April ... between the United States of America and the Kingdom of Spain ..." (30 Stat. 364). The First World War was declared to exist by the declaration of war of April 6, 1917, which provided "that the state of war between the United States and the Imperial German Government which has been thrust upon the United States is hereby formally declared" (40 Stat. 1). The day after the Japanese attack on Pearl Harbor, Congress, on December 8, 1941, declared: "Whereas the Imperial Government of Japan has committed unprovoked acts of war against the Government and the people of the United States of America: Therefore be it resolved ... that the state of war between the United States and the Imperial Government of Japan which has been thrust upon the United States is hereby formally declared ..." (55 Stat. 795). The action of the German Government caused the language of the declaration of war against her on December 11, 1941, to read: "Whereas the Government of Germany has formally

declared war against the Government and the people of the United States of America: Therefore be it resolved ... that the state of war between the United States and Germany which has been thrust upon the United States is hereby formally declared" (55 Stat. 796). On the same day Congress declared war against Italy in the same language (55 Stat. 797).

The courts have recognized the fact that war actually existed from the moment the Japanese attacked Pearl Harbor and that legally it was not necessary to wait for the formal declaration, the language being: "We can discern no demonstrable difference in the supposition and the actual facts, and we, therefore, conclude that the formal declaration by the Congress on December 8 was not an essential prerequisite to a political determination of the existence of a state of war commencing with the attack on Pearl Harbor." (*New York Life Insurance Company v. Bennion* (1946), 158 F. 2d 260.)

PRESIDENT IS COMMANDER IN CHIEF

Turning now, to the occasions upon which the United States has engaged in serious and extended campaigns or uses of force against other nations without a declaration of war, we find that very early in our national life such campaigns became necessary. While we had previously engaged in the undeclared naval war with France during 1798 to 1800, the best known early action of this character was Thomas Jefferson's move against the Barbary Pirates. Even though the Bey of Tripoli declared war on the United States in 1801, and a bitter debate ensued as to the necessity for Congress to declare war, no declaration was made. Jefferson dispatched a squadron of frigates to the Mediterranean, but its mission was limited strictly to defense and the protection of commerce. Even though this debate had such great authorities as Jefferson and Hamilton on opposing sides, Congress took the position that a declaration of war was not necessary. It did actually pass a statute authorizing the President to instruct the commanders of our armed vessels to "seize and make prize of all vessels, goods and effects, belonging to the Bey of Tripoli, ...; and also to cause to be done all such other acts of precaution or hostility as the state of war will justify, ..." (2 Stat. 129).

In the intervening period there have been many instances of the use of the Armed Forces by the Commander in Chief. You, above all others, are familiar with them. I mention such instances as the second Barbary War, 1815; the American-Mexican incidents between 1914 and 1917; the Boxer uprising in 1900 and 1901; the almost innumerable instances of intervention in Latin America; Haiti; the Dominican Republic, and Nicaragua. We should not ignore the almost providential presence of our Army in the area which became the Panama Canal Zone, "to protect the American-owned Panama Railroad," when Panama was engaged in the revolution which established her independence, to be followed so quickly by President Theodore Roosevelt's recognition of the new republic and equally quickly by the treaty for the construction of the Panama Canal.

Within my own memory, and area of some responsibility, are those instances immediately prior to World War II, when President Franklin D. Roosevelt dispatched elements of our Armed Forces to many parts of the world. You recall those instances as well, or better than I, because no doubt some of you participated personally in those expeditions. Naturally, as a Member of Congress throughout that period, my interest in the right and power of the President to do those things was more than casual. That interest caused me to give some thought and study to the subject, and lead me to the same conclusion as that reached by the Judge Advocate General of the Army when he stated:

"He (the President) may not raise armies. This the Congress is responsible for doing ... Once raised, an Army of the United States is under the sole and exclusive direction of the President. Their movement and implementation is at the President's discretion, limited only by whether or not an intended use would constitute an initiation or declaration of war by the President, if carried through." (Memorandum to the Adjutant General, June 17, 1940).

At an earlier time one able to speak with more experience than even the Judge Advocate General had expressed the same conclusion. Moreover, he spoke at a time when the country was not torn by conflicting views and sharp debate, nor the threat of war. Former President William Howard Taft, after he was President and before he became Chief Justice of the United States (in 1925) stated:

"The President is the Commander in Chief of the Army and Navy, and the militia when called into the service of the United States. Under this, he can order the Army and Navy anywhere he will, if the appropriations furnish the means of transportation. Of course, the instrumentality which this power furnishes gives the President an opportunity to do things which involve consequences that it would be quite beyond his power under the Constitution directly to effect." (Our Chief Magistrate and His Powers, p. 94).

There can be no doubt of the power of Congress to limit appropriations, as former President Taft recognized. While some commentaries would indicate that Congress has some power to restrict the use of forces in the active service under its power to raise armies, the existence of such congressional power is certainly not clear. The Supreme Court has discussed such varying powers, but has not, to my knowledge, in any instant case enforced any such distinction. (Selective Draft Cases, 1918 (245 U. S. 366); *Coz v. Wood* (1918, 247 U. S. 3)).

I would not presume to discuss with this group the nature of the activities in Korea. Too many of you were there. Whether it was a police action, a deployment of the Armed Forces, or war, you will know. In any event we know that Congress did not declare war, that there was much fighting, and there were many battles. We also know that Congress responded with appropriations of billions in money and millions of men.

As I stated earlier, there have been some attempted intrusions by the Congress. In the Selective Training and Service Act of 1940, Congress included a provision that none of the persons inducted into the land forces should be used outside the Western Hemisphere, except in the Territories and possessions of the United States and in the Philippines. This provision was subsequently suspended for the period of the war and finally repealed. (Public Law 783, 76th Cong.; Public Law 338, 77th Cong.; Public Law 473, 79th Cong.) However, in the extension of the act in 1945, Congress included a restriction of the use of persons under 19 years of age in combat until they had received 6 months of training. (Public Law 54, 79th Cong. Also intruding upon the executive branch and of doubtful validity are provisions for coming into agreement with the Committee on Armed Services of the two Houses on Defense Department acquisitions and disposals of real estate, the submission of certain contracts to the Joint Committee on Atomic Energy, and others.

I know of no instance in which any of these restrictions was violated. Still the power of Congress to raise an army, which must of necessity pass to the control of the Commander in Chief, and at the same time restrict his use thereof, remains most doubtful. The danger of legislation of this character lies in the fact that in some quarters the inclusion of this restriction is

being used as precedent for the right of Congress to control the deployment of the Armed Forces by the Commander in Chief. The President's power in this regard has always been essential to our national welfare. Its necessity in these days of undeclared wars and the concept of instant retaliation cannot be overemphasized.

Precedents are all-important to the lawyer, customs and traditions of the service to military men, and our historic and traditional form of government to all of us. The fact that certain things have always been done in a certain way lends sanctity to the form of procedure. It comes down to the fact that because a certain thing was done in a certain way on one occasion, it should be done that way on all occasions. It is difficult for foreign nations, even democratic nations, to fully comprehend freedom of speech and of the press as recognized in the United States. Unlimited subjects for debate in both Houses of the Congress and the freedom with which that debate extends into areas which are not within the legitimate field of activity of the Congress, is bound to be confusing to other nations, friendly or otherwise. Therefore, the value of the display of unity in the prompt adoption of the Formosan resolution after it was requested, was, no doubt, of great value with our friends and potential enemies. It is to be hoped that that display of unity was not bought at a price which might handicap us in providing for our own welfare and safety because of any precedent which it could be construed as forming. My views on this matter are more fully expressed in the debate upon that resolution in the CONGRESSIONAL RECORD of January 25, 1955, at page 552.

The request having been made by the President, it was essential for Congress to act and act immediately; and it did so. We must hope that President Eisenhower, or any subsequent President, in future instances of necessity will not feel that he is required to submit the question to Congress, and that the free and untrammelled authority of the Commander in Chief will be maintained inviolate. The stationing of our troops in Iceland presented a not dissimilar situation. The occupation of Greenland was of similar character. In the latter case, the Secretary of State announced the conclusion of an agreement signed by himself and the Danish Minister that Greenland would be occupied. As to Iceland, the President concluded an agreement with the Prime Minister of Iceland and transmitted the documents to Congress for information. He asked for no action by Congress. In his message the President said:

"As Commander in Chief I have consequently issued orders to the Navy that all necessary steps be taken to insure the safety of communications in the approaches between Iceland and the United States, as well as on the seas between the United States and all other strategic outposts." (H. Doc. 307, 77th Cong., 1st sess.)

The debate on the Formosan resolution seems to make it clear that had President Eisenhower done as President Roosevelt did in the case of Iceland, and reported to Congress, for its information, the action he had taken would have met with comparable unanimity.

Finally, it resolves itself into the situation that no matter how theorists may discuss the question, what debate there may be or what fine distinctions might be drawn, the Commander in Chief is still the Commander in Chief. Where or how he deploys the Armed Forces, in either peace or war, is limited only by so practical a thing as the availability of money. It also seems quite clear that there has never been a President so lacking in perspicacity that he could not find that filthy commodity in some desk drawer or some appropriation bill if the accomplishment of his purpose depended upon it.

TO RAISE AND SUPPORT ARMIES—TO PROVIDE AND MAINTAIN A NAVY

The Declaration of Independence made complaint against "standing armies" and "armed troops." There was no complaint against "a navy" nor against "sailors." Obviously, the commingling of ground forces with the population produced the irritation. As in the Declaration, so in the Constitution, there is a difference in language as to the two services. For instance, there is the power "To raise and support armies, but no appropriations of money to that use shall be for a longer term than 2 years." There is the power "To provide and maintain a navy," but no limitation of appropriations is included. "No soldier shall, in time of peace be quartered in any house, without the consent of the owner, nor in time of war, but in a manner to be prescribed by law." If the language be taken at its face value, apparently a sailor can be quartered in any house, in either peace or war, and the manner thereof need not be prescribed by law.

These provisions serve to emphasize that the Constitution reflects the spirit of the times in which it was written. It provides against the abuses with which the people were familiar. It reflects their knowledge of the history of Britain, of which they had been loyal subjects, until it became "necessary for one people to dissolve the political bands which have connected them with another, and to assume among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them." These provisions were not lightly included. They were not simply to give the new plan of government the power to "raise and support armies and to provide and maintain a navy." There could reasonably have been an inherent power in a sovereign nation, sovereign in that the sovereign people had delegated a portion of their sovereignty to the federation, to have both armies and navies. The overriding reason for these provisions is to make it clear that this power existed in the Congress and not in the President. Blackstone had said that under the British Constitution the king had "sole power of raising and regulating fleets and armies." (I. Blackstone, Commentaries 263, Wendell's ed. 1837.)

Story in his Commentaries on the Constitution, puts the matter in proper perspective when he says:

"Our notions, indeed, of the dangers of standing armies, in time of peace, are derived in a great measure from the principles and examples of our English ancestors. In England, the king possessed the power of raising armies in the time of peace according to his own good pleasure. And this prerogative was justly esteemed dangerous to the public liberties. Upon the revolution of 1688, Parliament wisely insisted upon a bill of rights, which should furnish an adequate security for the future. But how was this done? Not by prohibiting standing armies altogether in time of peace; but . . . by prohibiting them without the consent of Parliament. This is the very proposition contained in the Constitution; for Congress can alone raise armies; and may put them down, whenever they choose." (II Story, Commentaries, sec. 1187, 4th ed., 1873.)

There can be no doubt but that Congress can establish the military policy of the Nation by authorized strengths for the Armed Forces and by appropriated strengths. However, these can only be maximums. It is quite impossible for Congress to establish a minimum. Actual military strengths are completely beyond the control of Congress. Should Congress establish an unrealistic maximum which could not be supplied by the manpower pool available for induction, in time of draft, or willing to enlist when there is no draft, of course that maximum could not be reached. Equally, if the executive branch of the Government should be un-

willing to maintain that maximum by failure to enlist, draft, or retain on active duty, Congress has no machinery by which it can impose its will upon the Executive, and it should not have. In only one instance, so far as I am informed, and surely only once in recent times, has Congress attempted to provide a minimum. That is the law of the 82d Congress (Public Law 416), providing that the Marine Corps shall consist of not less than 3 combat divisions and 3 air wings. Though I have great admiration for the Marine Corps, I am afraid I lost some friends therein when I opposed that law. My opposition was based entirely upon my theory of our Government, and that it is a fallacy to attempt to fix minimums. It is an attempt to delude ourselves and, I am afraid, an attempt to delude the Marine Corps.

We all remember quite well the fight during the administration of President Truman as to whether the Air Force should consist of 70 groups, notwithstanding the position of the President that it should have a lesser number. We won that fight in Congress by appropriating more than \$800 million more than the President requested. The President signed the appropriation bill, but the same day he froze the extra funds.

Currently we have the question of whether the Army should be reduced by 70,000 men during the present fiscal year; and whether it should be reduced an additional 70,000 men by the end of the next fiscal year. As to the remainder of this fiscal year, the funds are already appropriated, and the numbers they provide are within the authorized strength. If, however, the President should insist upon failing to provide replacements for those whose terms expire, or if he should grant early releases to come within his contemplated reduction, that is his power, and with it goes the responsibility. The Congress and the President in this instance should assume their own full powers and responsibilities. The Congress by making the means available for what it regards as the proper number to accomplish the military policy of the Nation; and the President assuming his full responsibility for the safety of the Nation. Only time will then justify the one or the other.

The fear of standing armies is reflected in the limitation of appropriations to a period of 2 years. There is no other provision in the Constitution limiting the time during which appropriations may remain available. It is true that the vast majority of appropriations expire with the fiscal year for which made. It is not uncommon, however, for appropriation bills to provide that sums appropriated shall remain available for an additional period of time, or until expended. In 1904 the Solicitor General ruled that the appropriations limited by the Constitution "are those only which are to raise and support armies in the strict sense of the word 'support,' and that the inhibition of that clause does not extend to appropriations for the various means which an army may use in military operations, or which are deemed necessary for the common defense. . . ." (25 Opinions Atty. Gen. 105). Thus quarters, ordnance equipment, or anything which could be construed as other than strict "support" are not subject to the limitation. The Navy has never been subject to any limitation in this regard. Under the National Security Act of 1947 (61 Stat. 495) the Air Force was established as an executive department within the National Military Establishment. In 1948 the Attorney General ruled that there was "no legal objection to a request to the Congress to appropriate funds to the Air Force for the procurement of aircraft and aeronautical equipment to remain available until expended." (40 Opinions Atty. Gen. 555.) Some were apprehensive, at one time at least, that all legislation for compulsory training or service being based upon the power to raise and sup-

port armies and to provide and maintain a navy, a question might arise as to the induction of men into the Air Force, should it be construed to be neither an army or navy. No difficulty in this regard has been experienced, but there has been no authoritative disposition of the question. During the 80th Congress (1948) a joint resolution was introduced in the House of Representatives, proposing a constitutional amendment to provide and maintain an air force, to make rules for its government and regulation, and to designate the President as Commander in Chief. (H. J. Res. 298, 80th Cong.) Congress took no action on that resolution, and some feel such nonaction might be construed as a belief by Congress that the Constitution already conferred ample power for that purpose.

THE PRESIDENT AND CONGRESS IN FOREIGN AFFAIRS

The military power of the Nation has always had a most intimate relationship to, and connection with, foreign affairs and foreign relations. The power of the President as Commander in Chief and his most sweeping authority in foreign relations complement each other. We have seen that his power to deploy the Armed Forces is limited only by the availability of appropriations for their transportation. We now see that the President makes treaties and appoints ambassadors, other public ministers, and consuls. The only mention of either House of the Congress is the requirement that two-thirds of the Senators present advise and concur in the making of treaties; and that the Senate advise and consent to the appointment of ambassadors and other foreign representatives. Indeed, past history has shown little participation by the House of Representatives in any matter having to do with foreign affairs. Until the foreign-aid programs were instituted with the lend-lease program of World War II, the House was concerned with the pay of ambassadors and consuls, provision of embassies, entertainment funds for the embassies, and such matters of management only. The use of public funds in international relations has greatly enhanced the role of the House of Representatives in such matters.

In 1936, the Supreme Court, in an opinion by Justice Sutherland, gave expression to the proper view of the powers in foreign affairs and also the war powers, saying:

"As a result of the separation from Great Britain by the Colonies acting as a unit, the powers of external sovereignty passed from the Crown, not to the Colonies severally, but to the Colonies in their collective and corporate capacity as the United States of America. Even before the Declaration, the Colonies were a unit in foreign affairs, acting through a common agency—namely, the Continental Congress—composed of delegates from the Thirteen Colonies. That agency exercised the powers of war and peace, raised an army, created a navy, and finally adopted the Declaration of Independence. . . . It results that the investment of the Federal Government with the powers of external sovereignty did not depend upon the affirmative grants of the Constitution. The power to declare and wage war, to conclude peace, to make treaties, to maintain diplomatic relations with other sovereignties, if they had never been mentioned in the Constitution, would have vested in the Federal Government as necessary concomitants of nationality." (*United States v. Curtiss-Wright Export Corp.* (299 U. S. 304.))

TO MAKE RULES GOVERNING LAND AND NAVAL FORCES

This is the practically all-inclusive power of the Congress. It controls the entrance into the service, promotion, pay, and retirement. These are the provisions which reach the individual as such. They are the ones which require the larger portion of the time,

attention, and concern of the Congress. There is practically no limitation upon them. Their proper enactment is committed to the sense of justice, fairplay, and a proper concern on the part of Congress for the well-being of our national defense system.

Included in this power, also, is the great body of military law. The Congress has passed and placed into operation a uniform code of military justice. I am fully aware of the view of some officers of our Armed Forces that this code has constituted a severe handicap in performing their duties and functions of command. The code has been in effect long enough now that Congress should take another look at it. We should evaluate how effective it has been, how restrictive it has been, and what amendments may be necessary or desirable. On the other hand, I know of many criticisms leveled at the code which should be pointed elsewhere. I fear there is a tendency to charge to the code restrictive departmental regulations which were not promulgated because of the code. Likewise, it may be that the code is an easy scapegoat for some deficiencies of command. I make you a fair proposition: While Congress is reappraising the code and its work in formulating the same, you reevaluate the criticisms you have made of it, and determine how many thereof should be directed elsewhere.

OTHER POWERS

Questions having to do with the militia, its calling, organization, arming, disciplining, the power of the States with reference to it, need little further elaboration. Its favored position under the Constitution might be pointed out and the fact mentioned that the governors of the several States possess unlimited power with reference thereto, should they, or any of them, decide to do without Federal recognition. Provisions with reference to appointing and commissioning officers need no elaboration, except to point out that notwithstanding our many provisions for the appointment of officers, the power of the President to nominate is unabridged, if he can secure the advice and consent of the Senate in any individual case.

APPROPRIATIONS

We now come to the one all-powerful question of appropriations. Other than the limitation of appropriations for the support of the Army to a period of 2 years, there is no restraint on the power of Congress. It can be niggardly or generous, capricious, vindictive, or forthright. Jefferson spoke of the checks and balances of our Government, and here is the all-powerful check of the Congress. Armies may move on their stomachs, but without appropriations they move on empty stomachs and they walk on bare feet, without arms or ammunition, and that capitulating word of the military, "logistics," loses its meaning. The great handicap of our military policy has always been our periods of feast or famine and peaks and valleys. The American people are the easiest in the world to frighten; and when frightened the military cannot be expanded rapidly enough, nothing is too good for them. No demand for numbers is ever too large. There should be no limitation of divisions of ground forces, wings for the air or naval tonnage afloat. Unfortunately, our people are reassured as quickly as they are frightened. They seize upon the first moment of relaxation to indulge in wishful thinking that all is right with the world. They demand cutbacks and demobilization. The money we have lost through rash programs of preparation and demobilization, which was actually disintegration, would have maintained an adequate military force for a long, long period of time. But this is a democracy. We can have in government only what the people will provide. With the present unstable con-

dition of the world no one is in a position to say for what period of time the present tension will continue. No one is so sanguine as to believe that stability in world affairs will return in so short a period as 10 years, many feel that prudence requires that we plan for a period as long as 50 years. We cannot tell and, perhaps, we must take calculated risks, but we must remain strong. Militarily, yes, but economically also.

The national budget for fiscal year 1956 amounts to \$58.6 billion. It forecasts expenditures of \$2.4 billion in excess of anticipated receipts. Of that budget \$32.9 billion is for the military services. That is 56.1 percent of the total. There is demand, yes, insistence, that the budget be brought into balance without delay and that it then be reduced. Experience shows that the people always get what they want in this country; it may take a long time for them to get what they want, but they finally do get it. The people want the budget brought into balance, and they want it reduced. You can be sure they will finally get what they want.

You can neither balance nor reduce a budget of which 56.1 percent is devoted to the military without reducing the amount apportioned to the military. The military budget must be reduced. It should be reduced by the friends of the military and those who know the necessity of the military for our national survival. Therefore, it should be done by the military themselves. But this much I know, because I know the American people. I am in contact with them. I go to them every 2 years for election to the office I hold. I can assure you if the military does not reduce its own budget, the enemies of the military will surely do so. The pacifists, and worse, will seize upon the desire of the people for a reduction. When the enemies of the military and the others go to work on the military budget, they will do a job of it, and they will do it with a meat ax. I don't pretend to know how to reduce the military budget, and do the least harm; I am a civilian. You are not only military men, but the best of our military; we all expect the most of you. You either know or can find out how that can be done. Perhaps it can be accomplished by a number of things, including reduction of the division slice, elimination of numbers from the pipeline, interservice inventories, consolidation of procurement of standard items, standardization of weapons, transport, and other things which are better known to you than to any civilian. What I say here is not in criticism, but in fear of the type of retrenchment I have seen in my own time. This deserves and should have the full attention of the very best minds in all of the services.

CONCLUSION

In discussing the office of the legislative branch in the formulation of national security policy, I have deemed it best to go to the fundamental documents of our Government, rather than speaking in general terms of my own. These grants of power must be construed in connection with the limitations upon them and the actions taken in accordance with them. Precedent and tradition are all-powerful in any government, in fact they constitute the only constitution of our great sister democracy, Great Britain, from whom we acquired our basic ideas of government and its form. By taking advantage of the lessons of history and impingements upon liberty by unworthy governments of the past, our forefathers were able to create here the best form of government yet known. So good in fact that a great Englishman was inspired to say that our Constitution is the most nearly perfect instrument of government ever stricken off in a given time by the mind and purpose of man. It is our sincere desire to keep it that way. You have devoted your lives and your talents to its preserva-

tion. Your capacity and your patriotism have been tried in many lands, on many fields of battle, in many forums, and in many pursuits other than the military; you have never been found wanting. You constitute the group in which the American people have the greatest confidence. If at times it seems there is lack of appreciation, or criticism is just a little too barbed; remember that there is no one too high in the democratic system to escape therefrom.

If at times it seems that some of us who constitute the legislative branch fail to understand your problems, remember the opposite is also true; some of the military fail to appreciate our problems. As a matter of fact, the powerful Secretary of War of times past, Elihu Root, said of the great work "Military Policy of the United States," by Gen. Emory Upton: "The work was written from a purely military point of view, and in some parts shows a failure to appreciate difficulties arising from our form of government and the habits and opinions of our people with which civil government has necessarily to deal in its direction of the military arm."

At the termination of World War II, Sir Winston Churchill paid a visit to the Pentagon, and to the officers assembled there he recited some lines he attributed to a veteran of the campaigns of his illustrious ancestor, the Duke of Marlboro; they will bear repeating here:

"God and the soldier we adore,
In time of danger, not before.
But danger past and all things righted,
God is ignored, the soldier slighted."

Shall We Allow Our Schools To Become Overcrowded, Broken-Down Firetraps

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following radio address I delivered over WMEX, Boston, Mass., on Saturday, February 19, 1955:

We say that nothing is too good for our children.

We work hard to give them opportunities that we never enjoyed.

In fact, most of our lives are dedicated to this purpose. So that they will become happy and constructive citizens for their own fulfillment and that of the Nation.

As they leave home for school each day, we take it for granted that the classrooms in which they spend so many of their formative years will be fit for this great responsibility.

Like our churches, however, we sometimes expect our schools to get by on spirit alone.

Forgetting that our teachers are entitled to a living wage, and that they and the children have a right to schoolhouse accommodations that will produce the best results.

How long is it since you visited the school where your children are being trained to meet the eventual responsibilities of life?

In some areas you would be shocked to find that our schools are fast degenerating into slums because of public neglect.

Consider these facts.

The school population is increasing at the rate of 1 million each year.

Present elementary and high-school enrollment is well over 30 million students.

There is both a building shortage and a teacher shortage.

States and communities are finding it impossible, for a number of reasons, to meet the problem.

The present building rate is 60,000 classrooms a year, requiring an investment of \$2 billion annually, but even at this rate we are falling behind in the job of providing adequate school facilities for our growing population.

How much does it cost us for educational outlays, figured on cost per pupil per year? This varies from State to State, ranging from \$83 in Mississippi to \$328 in New York.

The average person thinks nothing of spending \$800 or \$900 a year for the ownership and operation of a motorcar. It would seem that the education of his children would be worth at least half this cost per child.

Our failure to meet the educational obligations we owe to our children is a disservice to them.

Seven hundred thousand are now in schools operating on a 2- or 3-shift schedule; 800,000 are in buildings that are so ancient that they have become firetraps; 300,000 are in flimsy, temporary shacks that look more like hastily assembled military barracks than schools; 400,000 are assigned to garages, halls, and churches that have been rented for school purposes in the emergency that hard-pressed authorities are striving to overcome.

The problem has become so acute that the President of the United States delivered a special message to Congress last week on this subject.

His school-aid plan can be condensed briefly as follows:

1. The Government would purchase school bonds if the communities could not sell them at a reasonable rate of interest, set at 3½ percent. The United States Government would appropriate \$750 million over a 3-year period for the purchase of these bonds.

2. The States would be encouraged to build \$6 billion worth of schools within the next 3 years. Districts that had gone beyond their borrowing powers, would be able to get additional funds. The State agencies would build the schools and rent them to the local communities, eventually repaying the original Federal and State grants through rents.

3. Hardship communities would be able to draw on a Federal fund of \$200 million over a 3-year span. This help would come on a matching basis. The States would contribute the same amount as the Federal Government. Only genuine hardship communities could qualify.

4. The United States would also provide \$20 million to pay half the administrative costs of studies by the States to plan long-term financing programs along modern lines.

The President stressed that his program of Federal aid would not result in Federal control or interference.

Educators, Congressmen, and the general public, are grateful for the President's recognition of the problem.

Many of us, however, do not believe that it goes far enough.

We question whether it will bring enough help and in time to meet the school crisis on the local level where the battle for adequate school facilities is being fought.

The situation in many States and communities is not far from desperate. The President's program is little more than a loan fund when direct and substantial aid is imperative.

Apart from overcrowding which handicaps teachers and pupils, a survey of all school plants in the Nation reveals a shocking situation that would never be tolerated by American industry in its buildings. On the basis of structural adequacy, sanitation facilities, and safety, schoolhouses get very poor marks. The ratings show that one-

third of all school plants are unsatisfactory, 27 percent are barely satisfactory, and the remainder are only fair.

In Massachusetts, we have always taken pride in our locally administered schools. It comes as a shock to learn that overcrowded elementary schools are forced to use corridors, halls, libraries, and even basements as classrooms for the younger children. Yes, even in Massachusetts.

Eighty percent of the support of our public schools comes from local taxes, which is 20 percent more than the national average. Clearly, the local tax rates cannot be increased to meet the deficit. Aid must come from the Federal Government and from the vast revenues it collects from all citizens. When we think of the tens of billions of dollars that have been given away to other nations, we rightly ask why a small percentage of this cannot be channeled to meet the pressing needs of our schools upon which the future of our democracy depends.

Although this is not the place to go off on a tangent, I sometimes wonder if there is not some possible connection, among other factors, between the increase in juvenile delinquency and the rundown condition of our schools.

A survey by the United States Office of Education reveals that public-school enrollment will be one-third greater by 1965. Due to the bumper crop of babies born since World War II, high-school enrollment will be even greater, up 58 percent.

Recalling that school construction almost reached a dead stop during the years of World War II, we have the double problem of replacement and increase.

Both Government and private studies have come to the following conclusion: "Many communities are finding it impossible to build their share of these classrooms on a current-account basis; and, even though they might be willing to borrow to finance such schools as they need, this would be impossible because of existing debt limits and the difficulties of changing them. Classroom construction is, therefore, being delayed."

Federal aid for education is not without precedent.

In fact, before the Federal Constitution was adopted, the Continental Congress, in 1785, set aside the 16th section of every township in the Northwest Territory for the support of public schools. Over 175 million acres were finally set aside for this purpose in addition to money grants ever since.

Testimony given before Senate and House Committees from all sections of the country agree that a serious situation exists, and the solution for it cannot be postponed.

I want to bring you part of the statement given by Mrs. Clifford N. Jenkins, chairman of legislation, National Congress of Parents and Teachers, before the House committee, on the subject of Federal aid for education.

Mrs. Jenkins, speaking for 9 million members of 39,000 PTA's in every State of the Union, the District of Columbia, and Hawaii, said, and I quote:

"All across this Nation communities are faced with makeshift classroom, building shortages, and unsafe structures. This has become a national emergency, and emergencies require special consideration.

"I would call your attention to a headline in last night's paper in my neighborhood entitled 'Children Attend Classes in the Strangest Places.' One was listed as a reconverted garage being used for five classrooms; another is an 1890 frame house which is now being used to house kindergarten classes. There are all kinds of buildings being used today in many areas.

"In this all-important crisis we cannot overlook the health menace nor the safety hazards that are involved in makeshift housing. Many classes are being held in cellars, cellars for children, unspeakable I think. In Buffalo last winter a number of

children were burned to death because they could not be reached, nor could they get out of the cellar.

"There are many examples of Federal-aid programs that have been, and still are, going forward admirably, without control by the Federal Government. To name but a few: The land-grant colleges, the school-lunch program, the GI bill of rights, the vocational programs, hospital construction, and many others.

"The shortage of classrooms is an immediate need. Together, you, the lawmakers, the representatives of the people, and we, the parents and teachers of the land, ought to be able to make our efforts count. An emergency is upon us. Let us be alert to the challenge."

The Office of Education reports that the school-facilities survey reveals a current need for public elementary and secondary school facilities equivalent to a single-story structure 50 feet wide extending from the Statue of Liberty to the Golden Gate Bridge.

The Democratic Party believes that the States and the communities are doing their best, but are just unable to do the whole job alone.

We believe that the Federal Government, which collects most of the tax revenues, should make actual grants to finance a big school-building program with a minimum of Federal control.

The needs of our school, all our children, will permit no delay.

I Speak for Democracy

EXTENSION OF REMARKS

OF

HON. WILLIAM K. VAN PELT

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. VAN PELT. Mr. Speaker, under leave to extend my remarks, I include an address by Miss Barbara Faris, of Fond du Lac, Wis. Miss Faris was one of a number of students competing in a program initiated by the Fond du Lac Junior Chamber of Commerce to have students express themselves on their understanding of our Republic and what it means to be a citizen.

The many speeches that were delivered were outstanding, and it was extremely difficult for the judges to make a first choice. However the address of Miss Faris was chosen as No. 1.

Participation in a program of this nature indicates to me that the youth of this country do have a full understanding of the responsibilities they must shoulder within a few years.

The address follows:

I SPEAK FOR DEMOCRACY

"Nothing is big enough to scare me."

Pretty bold words aren't they? Yet not too bold to be heard from the lips of Woodrow Wilson. Are they too rash—for me?

After all, who am I to be boasting like that? That's it. Who am I? I repeat, "I pledge allegiance to the flag of the United States of America and to the Republic for which it stands, one nation under God, indivisible, with liberty and justice for all." I sing, "My country, 'tis of thee, sweet land of liberty, of thee I sing. Land where my fathers died, land of the pilgrims' pride, from every mountainside let freedom ring." Why just I or me; why not we or they?

Once Wilson said: "Gentlemen, we are not working for our own interests, we are not

working for today, we are all going to pass away. But think of what is involved. Here are the tradition, and the fame, and the prosperity, and the purity, and the peace of a great nation involved." That's where I fit in.

I am that generation nurtured in the heart of George Washington; nurtured by the vigilance of Paul Revere and by the courage of Nathan Hale in 1775. I am that generation suffered for in 1812 with Washington in flames. I am that generation ransomed in American blood on American soil at Gettysburg, Vicksburg, and Savannah. I am that generation fought for in 1893 at Santiago Harbor and San Juan Hill. I am that generation that was given life through the death of 126,000 Americans in World War I, where in the Meuse-Argonne Forest one dead body was left for every foot of ground conquered. I was given life through the death of America's fathers, and husbands, and sons who forged their bloody way to victory at Chateau Thierry and Belleau Wood. I am that generation born in the blood of 323,000 dead in World War II; and sadly glorified in the cross-studded cemetery overlooking Omaha Beach and the unnumbered fields in France, in Italy, in Germany, and in England. The names of the millions dead to give me life and liberty are known only to God.

Nothing was big enough to scare them; scare them enough to forsake liberty and justice for all—for me.

Was I worth it? They trusted me, these men of death-courage, with the destiny of their nation. They trusted me to speak for democracy; not only today—when we, the youth of America, stand in competition to resound in robust prose or in delicate poetry the glories that make America; that make American democracy the ideal form of government for man, a creature of intelligence and free will, a creature with an eternal destiny, a creature with a mission among men—but every day.

I can speak for democracy every hour of every day when I think. I can think as an American; not as a Jew, or Italian, or Swede, or German, or whatever nationality I may be, but as an American. We are all one. I can be patriotic to democracy through my love of God, love of country and love of fellowman. Is it too much to ask that we who speak for democracy join with care-worn Lincoln to pledge again on every battlefield " . . . that we here highly resolve that these dead shall not have died in vain; that this Nation, under God, shall have a new birth of freedom; and that government of the people, by the people, for the people shall not perish from the earth."

Nothing is big enough to scare me because I am the living foundation of democracy under God. I am the nucleus of freedom and the core of justice. My ideas and my ideals add to the formation of a great nation.

I am the life or I am the death of a democracy under God. May I be all that I should be.

The Springfield (Mass.) Daily News, a Great Newspaper, Celebrates Today Its 75th Anniversary

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks, I wish to include a tribute to one of the great

Democratic newspapers remaining in the United States, the Springfield (Mass.) Daily News, which today is celebrating its 75th anniversary.

The first issue of this paper was published on February 24, 1880, by two great brothers, whose names have been marked for their achievements in the fields of journalism, literature, and their contribution to the spread of democratic ideals. They were Charles J. and Edward Bellamy, whose newspaper was one of the earliest selling for a penny. Both were lawyers, but they were much more interested in writing novels and essays than in drawing writs and addressing juries.

Soon after the founding of the Daily News, Edward retired to his home where he wrote Looking Backward, one of the most influential books of all time. Charles remained to build the Daily News into the city's largest newspaper, and one of the most influential Democratic papers published. Edward's son, Paul Bellamy, left newspaper work in Springfield in 1907 to join the staff of the Cleveland Plain Dealer. He recently retired from the editorship of that paper. Charles' son, Charles, Jr., is still a member of the staff of the newspaper his father founded.

In 1915 the Daily News was sold to the Republican Publishing Co. Sherman H. Bowles, a member of the famous Springfield publishing family, became head of the Springfield newspapers, but permitted such complete latitude to the editors that the Daily News never changed its character, nor abandoned the course set by Charles J. Bellamy.

Three great editors have directed the editorial operation of the Daily News since the founder and first editor, Charles J. Bellamy, Sr., died in 1910. They are the late John B. Callaghan and George M. Doyle, and the present editor, Frank H. Kelly.

Mr. Callaghan, who died last July 15, retired in 1939 after an active editorship of 30 years. He was succeeded by Mr. Doyle as editor. Mr. Kelly was named executive editor in 1941, and upon the death of Mr. Doyle on June 21, 1946, Mr. Kelly became managing editor.

The present editor joined the Daily News staff upon graduation from high school at the age of 17. While rising to the top editorial position on the Daily News, Mr. Kelly was also attaining prominence as a Catholic layman. He is trustee of the Republican-Daily News employees beneficial fund, a member of the Associated Press Managing Editors Association, and an incorporator and director of several leading civic organizations in the Springfield area.

Under the editorship of Mr. Kelly, the Daily News has not veered from the ideals set down by the Bellamy brothers 75 years ago this week. It is still the people's newspaper, and it has grown rich in esteem with each succeeding year.

Today I sent the following telegram to Mr. Kelly:

Heartly congratulations to the Daily News on the occasion of its 75th anniversary. On this February 24 I salute a great newspaper, one that has lived up to the glorious traditions of the American press. In its span of 75 years the Daily News has given distinguished news service and contributed im-

measurably to the public good of our community. My best wishes to your entire organization.

Mr. Speaker, I also call to your attention the following greetings to the Springfield Daily News from LeRoy Keller, vice president of the United Press Associations, New York City, as follows:

DEAR MR. KELLY: It affords me real pleasure on behalf of the United Press to salute the Springfield Daily News on the glorious occasion of its 75th anniversary February 24th.

Noting this, I was prompted to dig back into the files. I discovered with pride that we had begun service to the News on September 8, 1897, nearly 58 years ago, so that together we have recorded all of the history of the 20th century thus far. It goes without saying that there is even greater news ahead for both of us.

Hearty congratulations. Long may you wave in Springfield.

Sincerely yours,

LeROY KELLER.

Thirty-seventh Anniversary of Estonian Independence

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. CANFIELD. Mr. Speaker, it is perhaps difficult for Americans, who enjoy the fruits of religious freedom, to appreciate what life is like under the rule of a regime that denies the existence of God and seeks all ways to destroy religious belief. The 37th anniversary of Estonian national independence provides an excellent occasion to illustrate not only the severe conditions under which the Estonian people live but to demonstrate particularly their energetic efforts to keep alive the faith of their fathers.

In all areas of the world where they rule the Communists have as their long-range objective the complete destruction of religious life. The campaign to destroy religion in Estonia began immediately after the first Soviet occupation and was resumed after the second Soviet occupation in the autumn of 1944. The Soviet attack on Estonian religious life came from all sides. Churches no longer enjoyed protection under law. The economic base upon which all religious institutions were built was undermined by the imposition of such policies as expropriation of land and property, inordinate taxation of the clergy and church institutions, and prohibition of voluntary contributions. Religious institutions were, moreover, stripped of their educational function and all means for propagating religious ideas were curtailed or destroyed. Deportations of many Estonians during the first Soviet occupation and the escape to the West of many clergymen from almost certain persecution or even death as the second Soviet occupation was about to envelop the nation further weakened Estonian religious life.

However, if past experience is any guide, Estonians can look to the future

with confidence that, however severe the antireligious onslaught of the Soviets may be, Estonian religious life will survive. So strong is the attachment of the Estonian people to religion that any success the Russian Communists might have can be no more than transitory.

On this 37th anniversary of Estonian independence, let us, therefore, join in spirit with those Estonians now imprisoned within the Soviet Empire and in prayerful solicitation to the Father of us all ask that the strength of this unfortunate people neither be diminished nor their will to resist be unabated. We must never lose faith in them, for if we do, where else will they turn?

Foothill Electric Corp., of Oakland, Calif.

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. MILLER of California. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter from the Atomic Energy Commission commending the Foothill Electric Corp., Oakland, Calif., located in my district for the excellent job it has done as electrical subcontractor to Kaiser Engineers Division of the Henry J. Kaiser Co. at the AEC's Hanford, Wash., project.

The AEC through the chief of its Engineering and Construction Division praises Foothill for its "high quality of workmanship while performing on schedule and within estimated costs." Performance of this type should generate a high sense of satisfaction on the part of the American people in view of the vital role of the atom in the defense plans of this country.

The letter follows:

UNITED STATES

ATOMIC ENERGY COMMISSION,

Richland, Wash., December 1, 1954.

FOOTHILL ELECTRIC CORP.,
Oakland, Calif.

Attention: L. H. Misner, Corporation manager.

Subject: Electrical construction performance on 100-K reactor area, contract No. AT(45-1)-638.

Gentlemen: We want you to know that Foothill Electric Corp. has done an excellent job as electrical subcontractor to Kaiser Engineers on our 100-K reactor area. Foothill has maintained high quality of workmanship while performing on schedule and within cost estimates.

Mr. Walter W. Tohlen, project manager at Hanford for Foothill Electric Corp., has maintained complete control of labor relations throughout the job. Jurisdictional disputes and other complaints have been settled within the organization. In 2 years of construction there has been only one brief labor stoppage for Foothill when all other trades were out simultaneously, and the issues were completely in the hands of AEC.

The electrical engineering accomplishments of Foothill Electric have included extremely complex reactor controls, large power generation plants, and a highly critical electric power system for water pumping purposes.

Industrial relations have been maintained smoothly and effectively with the AEC area engineer's forces, General Electric Co. and Chas. T. Main, Inc., 7 AEC prime contractors operating within 100-K area and 55 Kaiser Engineers subcontractors.

We express our appreciation for the commendable job accomplished by Foothill Electric Corp.

Very truly yours,

J. I. THOMAS,

Chief, Engineering and Construction Division.

The Late Dwight L. Rogers

SPEECH

OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 5, 1955

Mr. JOHNSON of California. Mr. Speaker, when I heard of the sudden death of DWIGHT L. ROGERS I was shocked. I had just left him several weeks before this occurred. In fact, I believe that he and I played the last game of golf in which he participated at the Burning Tree Club. When we left the clubhouse he told me he was going home to Fort Lauderdale to help his sons in their law practice and also to play some golf at Fort Lauderdale, Fla. Little did I think that this would be the last time that I would see my friend. He looked like a person in perfect health, both mentally and physically.

During our service in Congress, DWIGHT ROGERS and myself became very good friends. He was an able pleader for the things that he thought were right. I never saw him exhibit any acrimony in debate, but he zealously and effectively pleaded for legislation which he supported.

He was a member of the great Interstate and Foreign Commerce Committee, and I have personal knowledge that he was very highly regarded by his colleagues on the committee. A man's legislative life in the House of Representatives revolves around his committee assignment.

Mr. ROGERS also was a Christian gentleman in every sense of the word. He was a man who had a keen sense of humor. He had a fine family life, and in every way was an excellent citizen. His sudden death reminded me of the expression "Nothing is so certain as death and nothing so uncertain as the time of death."

He died the way I hope I may die. He was in perfect health and had his full mental vigor up to the last minute of his life.

DWIGHT L. ROGERS was a true representative of his people. He listened to his constituents, he studied the proposals on which he was called upon to vote, and he made his decision as to what course of action he should take by his vote. Knowing him as I did, I know that whatever his vote was it was for what he believed to be for the best public interest.

It is very pleasing to us who admired DWIGHT L. ROGERS to have one of his sons

with us in the House. We are sure that he will carry into his work the high standard of service that his distinguished father practiced.

Soil-Conservation District Reports

EXTENSION OF REMARKS OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. GATHINGS. Mr. Speaker, soil conservation is one of the great challenges of our generation. The work of saving the soil, rebuilding eroded and depleted land, and the conserving of water on the ground is a task that is worthy of the greatest honor—and those men and women who are active in their local soil-conservation districts and who serve as supervisors and officers have earned the gratitude of both the rural and the city dweller. For, without their efforts, the basic resources of America would be lost or wasted and the future of our Nation would be doomed.

For this reason, it is pleasing for me to receive and study each year the annual reports of the local soil-conservation districts from the area I am privileged to serve. Eastern Arkansas, and the first district in particular, is fortunate to have strong, aggressive soil-conservation districts with active and able supervisors.

Although the first district did not participate in the district program prior to 1937, today there are 2,650 soil-conservation districts in the United States, covering four-fifths of the Nation's farmlands and almost 90 percent of our farms. Each county in the First Arkansas District is fortunate in that each has an active soil-conservation district.

As an example of the kind of work that they do, let it be pointed out that the Central Crowley Ridge Soil-Conservation District, with offices at Jonesboro, reported:

Nine group jobs were completed this year. This is a record for us, and we believe for this part of the country. Twenty-seven thousand three hundred and seventy-seven acres were planned for soil and water conservation, and more people learned more about their soil-conservation district than in any other one year that we know of.

This fine report is signed by the board of supervisors, consisting of Chairman Frank Barton, Joe C. Willett, Dr. Ralph Sloan, L. C. Stark, and J. W. Crafton.

The splendid work of the St. Francis Soil Conservation District, headed by Supervisors Homer Towns, W. W. Campbell, V. O. Turner, Burt Sulcer, and Thomas McDaniel, has resulted in great savings on the 407,040 acres inside the district. The 1954 annual report states:

In 1954 there were 83 new agreements covering 18,461 acres. This makes a total of 913 agreements covering 271,417 acres. Conservation surveys (soil maps) have been completed on 348,726 acres.

The Lee County Soil Conservation District, which covers an area of 396,300

acres under the direction of Supervisors Harvey Wilson, Lon Mann, Tom Gist, R. H. Lindsey, Jr., and Carl Nash, states in the 1954 report:

During 1954, 80 farms were planned with a total of 13,241 acres, making a total of 887 farms and 199,618 acres under agreement.

The Greene County Soil Conservation District has issued a fine report for 1954 stating their accomplishments and also containing an excellent philosophy of soil conservation. It is a credit to the good men who are supervisors for this district, Chairman George Wadley, King O'Neal, Earl Gramling, Curtis Cruse, and Judge J. Ed Thompson.

The Clay County Soil Conservation District, under the direction of supervisors W. H. Irby, Charles Smart, Fred Ahrent, Ed Bellmeyer, and Roy Barnett, has issued a fine 1954 report which shows that the district now has 1,129 cooperators covering some 159,379 acres. This is an increase during 1954 of 100 new co-operators and 16,137 acres.

The Phillips County Soil Conservation District, under the leadership of supervisors George Brandon, Earl Wells, F. F. "Happy" Kitchens, F. A. Clements, and Weldon Jackson, states in their 1954 report:

We now have 312 cooperators working with us, and they have 139,642 acres in their farms. Twenty-four farmers signed cooperative agreements in 1954, bringing in 34,032 acres. Sixty cooperative agreements were changed to basic conservation plans during the year. Three farms had 7,946 acres in them.

Space is not available to list all of the districts in eastern Arkansas, but each of them could show, through their reports, the fine work that is being carried on. It must be remembered, that these supervisors work without compensation, each district operates under its own financing, and is a legal subdivision of the State of Arkansas.

I am very proud of the fine men of Arkansas who give their time and effort to the work of soil and water conservation. It is a pleasure to salute them—supervisors, cooperators, and those public-spirited individuals who, by their efforts, support the work of the districts. This list would include the newspapers of the district, the radio stations, the banks, the merchants, and public officials. The crusade for conservation moves ahead.

Postal and Federal Pay Increase

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following statement I made before the House Post Office and Civil Service Committee, endorsing legislation providing for an adequate and justifiable increase in pay for our postal and Federal employees:

POSTAL AND FEDERAL EMPLOYEES DESERVE A RAISE AND A SUBSTANTIAL ONE

Why the heavy turnover in Federal employment?

Because there is not enough appreciation of the work done by our civil servants and not enough recompense.

There was a time when men and women would devote their lives to a civil-service career, because they saw opportunities for promotion and for gradual increases that would keep them ahead of the rising cost of living.

Consider, for instance, the responsible work done by the staffs working for Members of Congress, and consider what Congressmen would do without the knowledge and dependability of these employees?

The Congress, which is in the favorable position of voting a pay increase for itself, has just done so, and in a very impressive way, while a proposed pay increase for all Federal workers was given exhaustive hearings in the last session of Congress, without overcoming the final hurdle, and is going the rounds again in this session.

All the facts are in, and they make a convincing case, but they are being prejudiced by political maneuvering.

Our only recourse, then, is to hammer away with the facts until reason and conscience break through the artificial logjam that impedes the progress of these bills, and with the aid of public opinion, put into effect pay increases that will boost the income of Federal workers and also boost their morale.

General Motors Corp., peace setter of our private industries, pays an average wage of \$96 a week, under a formula that provides for increased productivity and for a cost-of-living allowance.

The Federal Government, which dwarfs General Motors, in number of employees, in its progressive effect upon our economy, and in its worldwide responsibilities, still considers its faithful workers as poor relatives who should be content to work overtime in some cases without extra compensation, and without any bargaining rights.

The average weekly wage paid to Federal employees is far from \$96 a week, even though the Federal Government tries to enlist the best brains in the Nation for its service.

Here is a shocking fact.

More than half of our post office clerks cannot get by on their present salaries. Some of them are even giving up their so-called job security in favor of the more rewarding work they find in private industry.

A 10-percent increase is the very minimum that will raise them from a deficit income to a break-even level.

One of the arguments advanced to justify a whopping increase for Members of Congress, is relevant here.

In fact, an \$800 yearly increase would be necessary for postal employees in order to regain for them the 1939 standard of living.

Even on a 10-percent increase they are only asking for a part of what is due them.

Because taxes have soared.

Because the living standards of all other workers have improved.

And because the increased productivity of Federal workers has not been given its economic recognition.

Statistics reveal that the post office clerk, since 1939, has received increases ranging from 18 to 135 percent less than the rest of American workers. And this is representative of the economic loss suffered by all Federal employees.

At this life-or-death crisis in our history, a struggle that may go on for decades, we cannot afford to skimp on the wages paid to career personnel of the Federal Government upon whom we depend in the overall picture to service the Nation and to maintain our strength and security.

The leaders of the United States Government, in positions of burdensome power and responsibility, are only as good as the sum of all the talents, and energy, and devotion of our public servants.

To strengthen that essential core of Federal employees with pay incentives that will make them the equal of their fellow Americans who are working for private enterprise, we should authorize a 10 percent across-the-board increase in wages.

The Congress saw fit to make its own major salary increase retroactive to the beginning of 1955.

I believe that this is an additional and compelling reason why a pay increase for all Federal workers should be passed, retroactive to January 1, 1955, and without delay.

We cannot afford the resentment and the loss of faith which failure to take this action will precipitate.

I hope, and I am confident, that the Congress will appreciate and recognize the valuable services of our post office and Federal employees by granting them a generous increase in wages and salaries.

Tomorrow's Leaders Look at 300 Years of Jewish Life in America

EXTENSION OF REMARKS

OF

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. ADDONIZIO. Mr. Speaker, from September 3 to 9, 1954, the seventh annual assembly of the National Jewish Youth Conference met at Cejwin Camps, Port Jervis, to discuss Tomorrow's Leaders Look at 300 Years of Jewish Life in America. The sessions were interesting and thought-provoking, and I am pleased to direct to the attention of the Congress the following resolutions on national issues adopted by the delegates from more than 300 Jewish centers and councils:

NATIONAL JEWISH YOUTH CONFERENCE RESOLUTIONS, 1954 ANNUAL ASSEMBLY FREEDOM

Whereas we are now celebrating the 300th anniversary of Jewish settlement in the United States under the theme of "Man's Opportunities and Responsibilities Under Freedom"; and

Whereas we believe that today the dangers to freedom of thought and speech have multiplied and the protections which guard these freedoms weakened; and

Whereas the liberty to examine, to discuss, and to evaluate in all fields of learning is basic to the further development and preservation of our democratic institutions and way of life; and

Whereas these threats to our liberties and freedoms result in equating conformity with patriotism: Therefore be it

Resolved, That we reassert our traditional opposition to all threats to freedom, including communism, fascism, McCarthyism, and others; be it

Resolved, That the 1954 annual assembly of the National Jewish Youth Conference condemns any effort to curtail civil liberties and opposes any threats to basic democratic principles of our free society; and be it further

Resolved, That we call upon the American Jewish community to reexamine and re-evaluate its role in American life so as to

determine how we as Jews, and Americans can best preserve democratic liberties within the framework of man's opportunities and responsibilities under freedom.

UNITED NATIONS

Whereas unreasoned attacks are continually being made upon the United Nations and its specialized agencies by a small group who seek to destroy public confidence in these fortresses of freedom, peace, international good will, and humanity; and

Whereas there is no other international organization available to mankind to prevent the scourge of war: Therefore be it

Resolved, That the 1954 annual assembly of the National Jewish Youth Conference reaffirms its faith in and support for the efforts of the United Nations to achieve peace for our time; and be it further

Resolved, That we commend the United Nations and its specialized agencies for its efforts to secure for all people their fundamental human rights * * * to establish the kinds of conditions under which justice, progress, and a better standard of living can be achieved for all men regardless of race, creed, or color.

SUPREME COURT DECISION ON SEGREGATION

Whereas the National Jewish Youth Conference recognizes the common brotherhood of man: Therefore be it

Resolved, That the seventh annual assembly of the National Jewish Youth Conference actively support the recent Supreme Court decision to eliminate segregation and calls upon all Jewish centers and council groups to cooperate in the implementation of this decision.

OPPOSITION TO THE M'CARRAN IMMIGRATION LAW

Whereas the United States from its birth has been the haven of the persecuted and the oppressed; and

Whereas an immigration policy which is consistent with traditional American ideals should be founded upon a basis of need, rather than national origins; and

Whereas the McCarran-Walters Immigration Law is firmly imbedded in an inflexible, unrealistic and un-American concept of quotas based on national origins rather than on present needs; and

Whereas the McCarran-Walters immigration law has proven to be ineffective and oppressive in its execution and, in addition, has served to lower the prestige of the United States in the free world: Be it

Resolved, That the seventh annual assembly of the National Jewish Youth Conference urges that the American immigration policies be revised and rewritten in accordance with the highest concepts of equity and justice, which are part of our tradition as Americans and as Jews.

NATIONAL JEWISH WELFARE BOARD

Whereas the National Jewish Welfare Board during the past 7 years has rendered a service to the American Jewish community and to all American Jewish youth by its continued support of the National Jewish Youth Conference; and

Whereas the National Jewish Welfare Board has unselfishly provided during this time the framework in which to work together; and

Whereas it has continued its unqualified support of the goals of the conference in times of financial burden: Therefore be it

Resolved, That the 1954 annual assembly of the National Jewish Youth Conference express not only its appreciation and gratitude to the National Jewish Welfare Board for its steadfast support during the past years but congratulates and commends our sponsoring body for its assistance, sponsorship, and sincere cooperation.

I know the Members will also be interested in the following excerpts of addresses and messages delivered to the assembly:

TOMORROW'S LEADERS LOOK AT 300 YEARS OF JEWISH LIFE IN AMERICA

(By Dr. Oscar I. Janowsky, professor of history at the City College of New York; editor of the American Jew; chairman, Commission for the Study of Jewish Education in the United States)

The vitality and adaptability which enabled Jews to master destructive forces in the past are still strikingly in evidence. Frustration there is aplenty, but despair is unwarranted. There is a future for American Jewry, but the positive and constructive elements must devote themselves to the fashioning of that future.

The morale of American Jewry is high. The fears and insecurities engendered by nazism in the 1930's have faded. The feeling of impotence in the face of the gross injustice to the refugees and to Jewish Palestine has been mastered. This psychological security has been enhanced by the rise of Israel and by the certainty that the existence of the Jewish state involves no conflict of loyalties for American Jews.

There is a keen awareness of the deficiencies and shortcomings in the functioning of Jewish institutions. The anarchy in Jewish organization life has been and will continue to be challenged. But the most urgent need of the American Jewish community is an overall body, broadly representative of the various strands in American Jewry and responsive to public opinion. Our needs may soon outrun our means, if they haven't already done so. Priorities will have to be determined and every cause will be called upon to establish its prior claim to public support. Such determination must not restore competing pressures. The whole Jewish community should have the opportunity to discuss in full democratic review its needs and its services, and that can be done only through an overall representative body of American Jews.

WORLD JEWRY

(By Dr. Judah J. Shapiro, director of cultural and educational reconstruction of the Conference on War Claims Against Germany)

The lesson of the history of the Jews in America is the parallel development of the American Jewish community and its service to Jewry in other lands. The leaders of tomorrow will be required to supply resources for Jewish survival at home and abroad. Dr. Shapiro urged "strong identification by the National Jewish Youth Conference with programs of service to Jews overseas." He pointed out that not only fund raising was necessary, but active participation in the efforts at Jewish cultural reconstruction in Europe, north Africa, and Israel.

Continued requirements are for the reestablishment of Jewish communities in Western Europe; for emergency aid to Jews in north Africa and their political protection; and for the building of Israel and the establishment of its security. A program of material assistance is, however, meaningless without a concurrent effort at cultural reconstruction.

WHERE DO WE GO FROM HERE?

(By S. D. Gershovitz, executive vice president, National Jewish Welfare Board)

Live with the fact of an atomic world with all of its potential horror but work for the peaceful and constructive use of its great powers for the benefit of all mankind. Don't be obsessed with the need for excessive security. Live adventurously, carry on the historic and natural role of youth in society of looking and attempting new horizons.

Think for yourself. Listen, observe, and learn all there is to learn, but don't become

a member of a group or team because it is the thing to do. Do so only because you have seen through your own thought processes that what the group is doing is sound and wholesome and constructive and what you personally believe in. Bring to that group personal clarity of belief and conviction. Don't join because you expect, by some magic, to have someone give you the answers you vaguely feel a need for. Take a vigorous role as a young adult in the community.

YOUNG ADULTS SERVE THE LOCAL COMMUNITY
(By Sanford Solender, director, Jewish center division, National Jewish Welfare Board)

American youth today are indicted in many quarters for a loss of their traditional idealism, a cynicism, and a preoccupation with having a good time and making money. They are condemned for a lack of community interest and for failure to assume their share of responsibility for community affairs.

These charges, while often exaggerated, contain too much truth for comfort by any of us. Many factors in the present scene explain this condition. Youth's natural concern for personal adjustment and the uncertainties of the times in which we live play their part. In many ways, youth mirrors the apathy of the adults and reacts to the failure of adults to recognize the capacity of youth for responsibility.

An American way of life has a great stake in the bestirring of youth today. Our society relies upon intelligent participation by all its citizens, the capacity for which must be built into their personalities as they mature. We need the idealism, courage, creativity, and optimism of youth in meeting the perplexities confronting our Nation today. Our Jewish tradition of social responsibility provides a vital inspiration for such activity by Jewish youth.

We must strive to give youth a feeling of being an integral part of the community. We must help them to link their deep personal concerns, for personal self-realization, marriage, and economic adjustment, to the possibilities for intelligent and dignified participation in their community.

This is a major task, a vital challenge for youth leaders and adults alike.

EXCERPTS FROM MESSAGES TO THE SEVENTH ANNUAL ASSEMBLY, NATIONAL JEWISH YOUTH CONFERENCE

Secretary of State John Foster Dulles:

"I am pleased to note that the program for the seventh annual assembly of the National Jewish Youth Conference stresses leadership and participation of young people in community and world affairs. These are significant factors in a free society at any time, and in the age of crisis in which we seem fated to live, it is particularly appropriate that maximum emphasis be placed upon both."

Senator HERBERT H. LEHMAN, of New York:

"I am extremely pleased to note the growing importance of the role which the National Jewish Youth Conference is playing in improving the community leadership among the youth and young adult groups of our Nation. The participants in the seventh annual assembly have an opportunity to discuss and to plan for the many challenges facing the young people of America."

Hon. Abba Eban, Ambassador of Israel:

"It gives me great pleasure on behalf of myself and the Israeli Government to convey to the seventh annual assembly, National Jewish Youth Conference, best wishes. The work in which the conference is engaged is of greatest importance to Jewish youth. I sincerely hope that your organization continues as a strong factor in existing cooperation between great American Jewish community and the people of Israel."

Gov. Thomas E. Dewey, of New York:

"The activities of the National Jewish Youth Conference represent a notable contribution to American life by helping Jewish youth to become an even more vital force in the community. The young people of American Jewry, by their conduct, their fidelity to the precepts and noble traditions which they have inherited from their fathers, as well as to the principles and aspirations inherent in the free institutions of our country have well entitled them to the respect and friendship of their neighbors, regardless of creed."

Dr. Martha M. Elliot, Chief, Children's Bureau, Department of Health, Education, and Welfare:

"Best wishes on the occasion of your seventh annual assembly. Your program is an important one as are the young people who in carrying it out will make such a rich contribution to their country and to their own communities."

Who Has Guarded Freedom?

EXTENSION OF REMARKS

OF

HON. J. L. PILCHER

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. PILCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the following editorial entitled "Who Has Guarded Freedom," which appeared in the Moultrie Observer, Moultrie, Ga., February 19, 1955:

WHO HAS GUARDED FREEDOM?

President Eisenhower's trips to Georgia may be responsible for such a statement, but the Chief Executive has told the Republican National Committee that Democrats should not be put in the same class with Communists when they line up to fight their enemies.

Mr. Eisenhower has, since becoming President, visited in the Augusta and southwest Georgia area several times. He has come to know and like the people. Many of them have been lifelong Democrats—the kind of Democrats that would die for their country and will remain loyal to democratic principles and the Democratic Party as long as they eat and breathe.

So when Mr. Eisenhower goes before his own party's policymakers and gives voice to a warning against referring to Democrats as Reds, he is displaying a courage born of knowledge and respect for those who do not subscribe to Republican ideals, but have strong and worthy ideals which would maintain American freedom and produce progress for the masses.

"Let's not build up a picture that the worst enemy anyone can have is a Democrat," the President has told the GOP national committee. "Far from it. We just don't think they can do as good as we do. As a matter of fact, we know it."

Democrats won't go for these latter statements. The Republicans haven't convinced any Democrats yet that they have better policies or can do a better job of administration. That is a mere matter of opinion, to be shared or rejected.

The fact that Democrats are not to be classed as Communists, however, is indisputable. It is still shocking that certain of the Republican leaders, in their intense desire to win election and control of Government, have resorted to such low and loose phrases which are entirely false.

We need only to point to the South as a positive illustration. Nowhere can be found a people more patriotic or more loyal—or more ready to fight to preserve the basic freedoms. There would be no problem of Communist infiltration if all Americans were as solid as those of the South.

Tribunes of the People

EXTENSION OF REMARKS

OF

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. FASCELL. Mr. Speaker, I wish to call my colleagues' attention to the condensation of an article, *Tribunes of the People*, by James Burnham, appearing in the February issue of *Reader's Digest*.

Discussion of congressional investigations has stirred many comments. It has been suggested by some that because of alleged abuses there should be a curtailment of power, or, at least, more rigid rules.

Because investigations are one of the more important arms of Congress, the review, analysis, and conclusions contained in James Burnham's article are interesting and necessary in helping to achieve a proper perspective on the subject.

I unhesitatingly and earnestly recommend it for your consideration.

The article follows:

TRIBUNES OF THE PEOPLE

(By James Burnham)

When the Founding Fathers established our government structure of liberty under law, they borrowed from the ancient Romans a remarkable device—the tribunes of the people. The job of the tribunes, officials elected from the ranks of the Assembly of the People, was to see that the laws were enforced, that justice was done to the ordinary citizen. The fathers of our country, realizing that this function of the tribunes was indispensable to liberty, assigned it to the investigating committees of Congress.

Like the Roman tribunes, congressional investigators are immune from arrest or prosecution. They are, therefore, able to challenge without fear of reprisal the immense power of the police, the Army, and the executive. Congress—our own Assembly of the People—charges its investigators with the task of finding out whether our laws are being enforced and whether new laws are needed. On the basis of facts unearthed by its investigators, Congress is also empowered to impeach and expel from office any member of the executive and judicial branches of Government—even the President or a Justice of the Supreme Court. Short of impeachment, the investigating committees can check executive action by appeal, through public hearings, to the final court of a democracy: the citizen voters.

Congressional investigators can reflect the ignorance and the passions of the people as well as the people's traditional wisdom, loyalty, and strength. But they are irreplaceable champions of our liberty. In 1936 Hugo Black, now a member of the Supreme Court, then a Senator, wrote: "The probe is one of the most powerful weapons to restrain the activities of groups who can defy every other power. Public investigating committees exist always in countries where the people

rule. They have always been opposed by groups that seek or have special privileges." The first congressional investigation took place in 1792, just 3 years after adoption of our Constitution. The Indians of the Northwest Territory had all but annihilated a Government force led against them by Gen. Arthur St. Clair, and popular opinion demanded an explanation.

When the House of Representatives selected an investigating committee, one Congressman argued that an inquiry would be insulting to President Washington, who had appointed St. Clair, and that Congress should merely request the President to look into the matter himself. The majority insisted, however, that Congress make its own investigation in its own way.

The inquiry, as it turned out, absolved General St. Clair of personal blame, but made constructive criticisms that led to improved organization of the War Department.

All but 3 of our 84 Congresses have authorized investigations. The areas investigated have included every department of the executive branch of Government; every war except the Spanish-American; all sorts of election scandals; railroads, shipping, oil, banking, housing, insurance, utilities—in fact, nearly every major industry. Investigations of conspiracy and espionage are by no means a 20th-century novelty. Even before 1800, espionage—in behalf of France and Spain—was investigated. Subversive conspiracy was the issue in inquiries of 1808 concerning Aaron Burr's associates.

Violent controversy has always swirled around congressional investigations. In the 1920's a variety of individuals and organizations denounced Senators Borah, La Follette, Wheeler, and Walsh for the inquiries that brought to light the shocking scandals of the naval reserve oil leases. Owen J. Roberts, later an Associate Justice of the United States Supreme Court, speaking before the American Bankers Association, condemned the oil investigation as propaganda for nationalization. The Wall Street Journal dismissed it as only a political smokescreen. Discussing this and the parallel investigation of Attorney General Daugherty, the New York Times declared in February 1924 that Congress was investigation mad, and was trying to introduce government by clamor. The Times upheld Daugherty as one who was defending decency and honor.

Within 6 months Daugherty had resigned in disgrace—after the investigators had shown that during his 2½ years in Washington on a \$15,000 salary, his personal financial position had shifted from \$19,000 in the red to \$100,000 in the black.

At the time of this Teapot Dome probe, the Senate investigators were termed "scandalmongers," "mud gunners," "assassins of character." Their inquiries were described as a lynching bee, poison-tongued partisanship, twittering hysteria. But as a result of their disclosures, one corrupt Cabinet member (Harry Daugherty) and one who winked at corruption (Edwin Denby) were forced to resign. Albert Fall, along with oil magnate Harry F. Sinclair and a variety of lesser figures, went to jail. Four oil millionaires skipped the country.

The scandalous leases of naval reserve oil at Teapot Dome, Elk Hills, and Buena Vista were canceled, with a saving to the taxpayers of hundreds of millions of dollars. Reorganization of the Justice Department, another consequence of these investigations, brought major benefits to the Nation through stricter, more equitable law enforcement.

Only congressional investigation could have produced such results. Individual citizens were helpless. The courts were powerless to initiate action. The executive agencies were either unaware of what was happening or conniving at it. Tribunes of the people, armed with sufficient power, were required to expose the wrongdoing, arouse public opinion, and force remedial action.

The first bread-and-butter function of investigating committees is to assist Congress in its constitutional task of making and changing our laws. In order to make laws wisely, Congress must have before it the relevant facts. But Congress cannot simply take the alleged facts of a situation from some other agency, or from the executive branch. It must take the full, independent responsibility itself for the information upon which its lawmaking decisions will rest. Congress gains this information by conducting its own investigations in its own way.

A related function of congressional investigations is to check up on what happens to laws after they are passed. Committees like the watchdog committee of World War II, in which Harry Truman made his mark, have saved billions of dollars by keeping a critical eye on the Government's military contracts and administrative methods.

Nearly every important reorganization of governmental structure has come as a result of congressional inquiries. Repeated 19th-century investigations of frauds in private mail contracts, for example, led to the formation of the General Post Office.

Time and again investigations have been used to clean Congress' own house, from as early as 1797 when William Blount was expelled from the Senate for stirring up the Indians to rebellion. Only a congressional probe was able to penetrate the vast Crédit mobilier scandal which by 1872 has engulfed both Europe and this country, and involved even the United States Vice President and former Speaker of the House, as well as many of the Nation's leading financiers.

In our own day congressional investigations were the first agency to inform the public concerning totalitarian threats to liberty. Beginning in 1938, the House Committee on Un-American Activities exposed first the Fascist and Nazi groups that were then actively conspiring against our security, and next the Communist apparatus that continues to conspire. It was this committee that dug out the case of Alger Hiss, along with the operations of the Silvermaster, Perlo, and Ware espionage cells. In recent years its work has been supplemented by the Senate's Internal Security and Permanent Investigations Subcommittees.

These committees, granted their excesses, deserve chief credit for the fact that today, both by more adequate laws and through sterner administrative action, we have at last begun to deal effectively with the subversive conspiracy against our survival as a free Nation. Despite the attacks to which they have often been subjected—and which they have sometimes deserved—congressional investigations have thus proved themselves an essential part of our system of government.

The new Congress now has before it a number of proposals for the "reform" of investigating committees by the establishment of strict rules of procedure. Undoubtedly there have been abuses in the conduct of investigations—great power is always liable to abuse and corruption. But can they be corrected by detailed rules laid down in advance? The reputation of an author may be damaged by an unfair review, but we do not demand a law that would prescribe in detail the methods of book reviewing. A committee hearing is not a trial. It cannot take away a man's life or liberty. Many of the meticulous rules of the courtroom are inapplicable.

Recent discussion has invariably arisen in connection with the committees investigating Communist subversion. Although honest liberals are now advocating reforms out of a concern for civil rights, we should remember that the aim of the Communists is to put an end to all investigations of subversion, treason, and espionage.

The procedures of the committees are governed by congressional tradition, by special rules adopted by each committee, and by the

personal influence of leading members, particularly the chairmen. As a matter of tradition and privilege they accord to witnesses nearly all the rights that would be made a matter of inflexible law if the bills now before Congress are passed: for example, the right to have counsel, to submit a written statement, to answer accusations by other witnesses, and so on.

The effect of transforming these privileges into law would be to obstruct or even paralyze the work of committees. If the law required the presence of counsel for a witness, a Communist lawyer could stop a hearing merely by becoming so obstreperous that it could not continue. If the committee threw him out, it would then have to adjourn until the witness produced another lawyer—who could start the whole ruckus over again.

There has been objection to one-man hearings. It does seem fair that at least 2 committee members, 1 from each party, should be present when a witness is questioned. But under a rule requiring the presence of two members, many Senate investigations could never be finished. With all they have to do, there are just not enough Senators to go around, particularly when many committee hearings must be held in distant parts of the country. Furthermore, if an investigation were hurting one of the political parties, the committee members belonging to that party could bring it to a halt merely by staying away from the hearings.

In reality, the only requirement on this point that is both fair and practicable is that all members of a committee should have advance notice of every meeting, so that they may attend if they wish. The basic problem of one-man hearings is the man, not the rules.

Some critics have said that we should copy the responsible and objective investigating techniques of the English Royal Commissions. However, those Royal Commissions are composed of laymen chosen for their interest in the subject, and they question only volunteers who desire to give information.

It does seem desirable that Congress should eliminate the overlapping of its committee jurisdictions, so that there will no longer be the wasteful spectacle of 3 or 4 different committees competing, and interfering, with each other in the investigation of some problem. These investigations should doubtless be confined to one committee in each House. Some Congressmen go further, and have introduced bills to set up a single Joint (Senate-House) Committee on Internal Security, modeled after the Joint Committee on Atomic Energy.

In general, however, abuses by investigating committees are not going to be corrected by enactment of a code of rules. When a congressional committee attempts to cite an individual for contempt, the individual has the right to bring forth all facts and circumstances in support of his assertion that his constitutional rights had been violated.

And if a congressional investigator blatantly disregards truth, dignity, and justice, Congress may at any time bring about his removal from committee assignment, his censure or his expulsion. Moreover, the people in their turn will have the opportunity to vote him out of public life.

Thirty years ago a clamor for changes in procedure arose in connection with the Teapot Dome investigations, just as today they arise in connection with the investigations of Communist subversion. At that earlier time perhaps the most eloquent defense ever made of congressional investigation came from the pen of the young Felix Frankfurter, who was destined for later membership on the Supreme Court:

"Critics seek to shackle the future by suggesting restrictions in the procedure of congressional investigations. No limitations

should be imposed. The methods and forms of each investigation should be left for determination of Congress and its committees, as each situation arises. The safeguards against abuse and folly are to be looked for in the forces of responsibility which are operating within Congress and are generated from without."

Textile Industry and New England

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Pilot, Boston, Mass., February 19, 1955, which clearly shows why it is so necessary for New England to fight and retain its textile industry:

REVIEW OF OUR TEXTILE INDUSTRIES: WHAT'S HAPPENING TO NEW ENGLAND?

(By Dr. J. Laurence Phalan)

The number one employment problem in New England is in the textile industry. The big question is should the industry be written-off as far as New England is concerned and should we take steps to speed substitution of newer growth industries, or, should we make strenuous efforts to hold the industry within the area?

Despite the decline in New England of total textile-mill employment since World War I, the industry remains the most important source of industrial employment in the area. Textile employment accounted for slightly more than 5 percent of the total nonagricultural employment in New England in September 1954. About 1 out of every 8 workers in manufacturing was at work in a textile mill, 172,800 workers were thus employed in September 1954.

FIGURES

As large as these figures are they are small compared with those of 30 or more years ago. Following are figures showing what has happened to textile employment over the past years.

New England employment in textiles

Year	
1919	439,600
1929	355,600
1939	281,300
1947	282,100
1954	172,800

The New England textile industry defined in computing these figures includes many different types of manufacturing plants which are generally classified as woolen and worsted, cotton, rayon and silk, dyeing and finishing, and miscellaneous groups. These plants process natural fibers such as cotton and wool or man-made fibers such as rayon or nylon. The industry turns out products which consumers may use directly or which go to the garment, shoe, automobile, millinery, or other industries. The industry is most complex because of its thousands of products and the possibility of having integrated manufacturing processes in one mill or having the individual stages in production performed by a number of plants, each specializing in a particular process.

REASONS FOR LOSS

The loss of industry to other sections of the country has been chiefly due to labor costs differentials, disadvantages in power

rates and taxes and antiquated plants. Moreover, the net effect of much Federal legislation has been unfavorable to the New England mills.

While it is dangerous to generalize on such a heterogeneous industry as the textile industry, it seems that there will be some further decline in total overall textile activity in New England or at least continuing strong pressures toward such a decline.

In view of these circumstances there has grown among some a negative attitude toward the industry. Such feeling is based upon thinking that the loss of the industry in New England has been beneficial and a blessing in disguise and that industry in the area has been upgraded as a result of the textile losses. That is, that the lost textile industries have been replaced by industries which in the long run may be more rewarding than those which have lost.

This position places emphasis on adjustment of the community and workers to a new type of enterprise. The assumption being that workers can transfer readily from one type of occupation to another. Information on the subject indicates that only under the most favorable circumstances is that optimistic assumption justified.

The adjustment of a community to industry loss is often difficult and slow. It often entails hardship and heartbreak for the workers involved. Many of the older textiles workers are reluctant to enter other industries, even if they have the opportunity. They would have to abandon their years of experience and start over in a new type of work, usually at lower wages.

While loss in the textile industry has forced communities into aggressive action toward recruiting replacement industries, that is not the same as to say that the loss of textile jobs has created an economic vacuum which has automatically drawn other jobs into New England. More often than not, lost textile jobs have left empty spaces which still need to be filled.

NECESSARY STEPS

It would seem essential that new growth industries be attracted to New England and that strenuous efforts be made toward retaining those textile companies which we now have, thus minimizing the drift of the industry toward the South. Attempt at retention of the textile industry requires numerous steps.

1. All efforts must be made toward elimination of labor cost differentials between the North and South. Reduction of the differentials may be accomplished to some extent through further wage cuts to northern workers. However, this method is not very satisfactory and will meet with tremendous resistance. Better ways are through increased productivity in New England and more equitable wages in the South. A definite step in the right direction is contained in the proposal by President Eisenhower to raise the minimum wage to 90 cents an hour from the present 75 cents.

2. Increased productivity will be greatly aided through an accelerated modernization of plant facilities. Yankee ingenuity has accomplished much but is rather helpless in competing with modern plants, and mills which have failed to modernize have passed and will continue to pass out of existence.

3. Modernization of plants and methods, of necessity, leads to changes in job operations, and it is required that such changes be appreciated by union leaders. The industry is highly unionized in New England and union leadership must cooperate in the acceptance of the challenge of such changes.

4. The use of manmade materials, contrasted with pure cotton and wool, must be encouraged. This calls for increased emphasis on research. This research should be directed toward providing new methods of processing and using old materials as well as discovery of new materials.

5. Methods must be found to offset tax and power rate differentials drawing mills to the South. While these differentials are perhaps of markedly less importance than are labor cost differentials, they nevertheless are important. Particularly so, when in some instances southern communities have furnished migrant companies with completely new tax-free plants.

6. All of the above requirements must not be used as a screen behind which poor management may hide. There is ample proof that an aggressive, well-managed mill can operate successfully in New England.

The importance of the textile industries makes it imperative that much thought be given to the above-outlined requirements and to the importance of further decline in textile employment in the Boston archdiocese. Within the archdiocese, Lowell is classified by the United States Bureau of Employment Security as an area of substantial unemployment while Lawrence is classified as one of very substantial unemployment. These classifications are contrasted with the employment situation for the entire metropolitan Boston area. In the latter overall area, unemployment is not overly large and fairly approximates the national average.

These classifications for Lowell and Lawrence give firm evidence to the fact that displaced textile workers are not being absorbed by growth industries. It is thus amply shown that the expansion of nontextile industries in New England has not been of direct advantage to some displaced textile workers. Most of the expanded employment in the electronics industry, for example, has apparently come from new entrants into the labor force. Employers often prefer young people who are accepting employment for the first time.

Although there is evidence that displaced textile workers can adapt themselves to a wide variety of occupations, often the location of New England's expanding and contracting industries do not coincide, as shown in Lowell and Lawrence. When a major textile mill closes in a principal textile center, such as those two cities, the opportunity for easy transition to alternate employment is often slim. The same is also true in the small town, particularly so, if it is rather isolated from a large metropolitan area.

Thus, we feel safe in concluding that New England must fight with all fair means to retain its textile industry, whose migration does not create a vacuum into which new industry automatically flows. Our unemployment ills will be best cured by adding growth industries to a strong textile industry. Thereby, we have growth by addition and not by subtraction.

Thirty-seventh Anniversary of Lithuanian Independence

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Resolution unanimously adopted, after due deliberation, by the executive board of district seven of the Lithuanian Alliance of America, of Luzerne and Lackawanna Counties, Pa., in conjunction with the 37th anniversary of the declaration of independence of

the Republic of Lithuania commemorated on February 16, 1955:

"Whereas exactly 37 years have passed since February 16 when the Council of Lithuania, meeting in Vilnius, the historical capitol of Lithuania, proclaimed to the world the determination of the Lithuanian people to embark on an independent life; and

"Whereas for us Lithuanian Americans it was a source of special satisfaction to observe that our brothers and sisters in Lithuania were ably managing the affairs of their country, successfully raising their welfare, and elevating their cultural and educational standards; and

"Whereas as American citizens we were proud of the quick and decisive action on the part of the Government to condemn publicly the flagrant Soviet acts of violence against Lithuania and the other Baltic States of Latvia and Estonia; and

"Whereas the people of the world are putting their hopes and the destinies of their future in the steadfast and unconditional adherence by the free democracies to the principles of justice and humanity: Therefore be it

"Resolved, That Americans of Lithuanian descent of the counties of Luzerne and Lackawanna, Pa., affiliated with the Lithuanian Alliance of America, district seven, being aware of the graveness of the international situation and concerned over the fate of the Lithuanian nation, urge the Government of the United States to combat the forces of aggression until peace is achieved."

MICHAEL KUPRIS,
President.
JOSEPH MACKINA,
Secretary.

The Commercial Appeal

EXTENSION OF REMARKS OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. GATHINGS. Mr. Speaker, in last Sunday's edition of the Memphis (Tenn.) Commercial Appeal there appeared a very fine article concerning the production of rice in the Midsouth. The article was written by the newspaper's Washington representative, Mr. Morris Cunningham.

Because of the excellence of the article, and because it gives one of the best pictures of the Midsouth rice production, as well as an indication of the difficulties encountered by these growers under the 1955 rice-acreage allotment program, the article should be read by every Member of the Congress.

Mr. Cunningham gives figures on production and shows graphically the rising importance of rice on the Nation's economy. The article reads as follows:

MIDSOUTH LANDS NOW GROW 54 PERCENT OF ALL THE RICE PRODUCED IN UNITED STATES—ARKANSAS' OUTPUT APPROACHES 1.5 BILLION POUNDS LOUISIANA RAISES ANNUALLY—MISSISSIPPI'S CROP TOTALED 221 MILLION POUNDS LAST YEAR

(By Morris Cunningham)

WASHINGTON, February 19.—This may come as a surprise, but the Midsouth is now producing more than 50 percent of the Nation's rice crop.

Agriculture Department figures show that Midsouth farmers raised 3.2 billion pounds of the 5.9 billion pounds of rice produced in the United States last year. That's 54.2 percent of the national output.

Last year's rice crop put an extra \$150 million into the pockets of Midsouth farmers. And though that's still far short of cotton income, it's still a sizable amount of cash.

Memphis, for years the Nation's cotton capital, may soon be an important rice market if the trend continues.

Southern Louisiana and a few counties in Arkansas, particularly Arkansas County, have long been rice producers.

But in recent years—stimulated in part by forced cutbacks in cotton acreages—the production of rice has spread into new areas of the Midsouth.

All of eastern Arkansas, from Randolph and Clay Counties in the north to Ashley and Chicot Counties in the south, and westward to Perry, Faulkner, and Pulaski Counties, is now listed by the Agriculture Department as a rice-producing area. The Department also lists Hot Springs and Clark Counties in the south central section, and Little River, Miller, and Lafayette Counties in the extreme southwest corner.

And in Louisiana, immediately south of Ashley and Chicot Counties in Arkansas, the Department lists production in the Louisiana parishes of Morehouse, Richland, and East Carroll. This is in addition to the traditional producing areas in southern Louisiana.

Meanwhile, production has been rising across the river in Mississippi. The Agriculture Department now lists these Mississippi counties as rice producers: De Soto, Tunica, Tate, Panola, Quitman, Coahoma, Tallahatchie, Bolivar, Sunflower, Leflore, Washington, Humphreys, Sharkey, Issaquena, and Hancock.

Arkansas, where production has grown most rapidly, last year produced more than 1.4 billion pounds. This was only slightly behind Louisiana, which had a crop of 1.5 billion pounds.

Mississippi, no match for these States, had a crop of 221 million pounds.

Missouri produced 18 million pounds and Tennessee 1 million.

Increasing Midsouth production has contributed greatly to a general upward swing in American rice output. Prior to World War II, American production averaged about 2 billion pounds a year. During the war it advanced to about 3 billion pounds. Since the war it has moved forward rapidly, setting one record after another, to last year's 5.9 billion pounds.

Mississippi produced only 13 million pounds in 1947, compared to last year's 221 million pounds.

Arkansas production was 765 million pounds in 1947; jumped to 1.4 billion pounds last year.

Louisiana produced slightly less than 1 billion pounds in 1947; last year had 1.5 billion pounds.

With the increased production has come many of the same problems that are besetting cotton—acreage allotments, marketing controls, and surpluses.

The term "inequities and hardships," previously restricted to small cotton farmers, is now being applied to rice producers as well.

Many Midsouth Congressmen whose interest in farm commodities formerly was restricted almost solely to cotton now are having to spend an increasing amount of time on rice problems and legislation.

Representative E. C. GATHINGS, Democrat, of Arkansas, is one of these; and Representative JAMIE L. WHITTEN, Democrat, of Mississippi, whose position as chairman of the House Agriculture Appropriations Subcom-

mittee gives him a broad view of the farm economy, obtained and supplied some of the statistics in this article.

Though American production of rice has been increasing, the United States still is not one of the large rice-producing nations.

Free-world production last year is estimated at 262 billion pounds. This excludes production in Communist China, North Korea, and Russia.

Of the free-world total, America produced 5.9 billion pounds.

However, American production has increased faster than the rest of the world, and this country now commands a bigger slice of the market than before World War II.

Mr. Speaker, from this it may be seen that Arkansas, as one rice-producing State, contributes more than 1.4 billion pounds of rice each year, although only a few years ago the State produced just about three-quarters of a billion pounds.

H. R. 4304

EXTENSION OF REMARKS OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. ROOSEVELT. Mr. Speaker, I believe that all of the Members of this House who voted for the passage of H. R. 1 did so with the conviction that the advantages which it will bring to labor and industry within the United States, as well as the assistance it will give to those conducting our foreign policy, outweigh the disadvantages in unemployment and the harmful effect it will have upon certain areas and industries.

However, I believe that Members of the Congress who support the principle of reciprocal trade agreements are not blind to the human problems and the economic difficulties which this act creates. I am equally sure that the vast majority of my colleagues do not want to leave any impression that we are callous or unwilling to try to do something to solve these difficult situations.

It is in this spirit that I introduced yesterday a bill, H. R. 4304, which will, if the matter is not taken care of on the Senate side or in conference, require the President to report to the Congress—by including in his report, provided for by section 350 (e) of the Tariff Act of 1930—such data and statistics as will be useful to the Congress in ascertaining the amount of unemployment and economic disability which has resulted from actions taken under the Trade Agreements Extension Act of 1955. It would also require him to include such recommendations for legislative action as he may deem wise in order to (a) preserve the vitality of industries needed in the national defense and (b) make the necessary economic adjustments to alleviate unemployment and to assist those industries whose operations have been substantially curtailed as the result of executive action authorized by the Congress.

In other words, if the Government, through its action, creates undue hard-

ships on certain groups within labor and industry, I believe that the Congress will also feel that it has a responsibility to lessen these hardships and to assist in the necessary relocations that have been thus required.

I hope that my colleagues will give their support to this legislation, believing, as I do, that it will make the people of our country far more understanding and sympathetic to the principle of reciprocal trade agreements.

The Flow of Goods

EXTENSION OF REMARKS OF

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following column by George Sokolsky entitled "The Flow of Goods" from the Washington Post and Times Herald under date of February 8, 1955:

THE FLOW OF GOODS
(By George Sokolsky)

I walked into a hardware store a few days ago and picked up a chopping board. It was made in Yugoslavia. The same day, I read an item that a Hollywood motion-picture company is planning to produce Tolstoy's War and Peace, and that the production would be made in Yugoslavia. Maybe the chopping board could be made more efficiently in Tito's realm, but has Hollywood sunk so low that thousands of American workers have to be kept out of jobs because there are superior technicians in Yugoslavia? The picture will be shown in this country; its profits, if any, will be earned here. Why, then, do this job in Yugoslavia?

Now along comes a release from the American Knit Handwear Association which reports that in 1953 there were 30 American firms in this industry; today, there are only 22. In 1952, more than 4,000 Americans were employed in it; today, there are less than 1,500, which means a decrease of 63 percent.

From the standpoint of the free market, these American firms, if they cannot compete with British and Japanese manufacturers, ought to go out of business. In terms of strict capitalistic theory, no one should be protected against the consequences of competition. But from the standpoint of social conditions in the United States, the peril is that we shall have unemployment and we shall have ghost towns and we shall have disturbed conditions. The economic doctrine of the free market here comes into conflict with the social doctrine of full employment and must be resolved politically. John L. Lewis is already making the telling point that the enormous unemployment in the coal industry, partly due to the import of residual oil, be met by distributing food surpluses to American miners instead of foreign governments.

Wool handwear imports have increased from 32,000 dozen pairs in 1946-48 to an estimated 1,200,000 dozen pairs in 1954. In the United States wages in this industry average \$1.13 an hour; in Japan, the same industry pays just under 12 cents an hour. A protective tariff could be devised to keep Japanese knit gloves out of this country, but then we have political problems with Japan

such as the necessity of providing a market for Japanese goods in the United States to keep the Japanese from moving into Red China's corner.

Unless we open our markets to Japan, they will have to cultivate trade with Red China and even with Soviet Russia, if they can get it. The danger to the American manufacture of products with which Japanese products can compete in American markets is that politics rather than economics will prevail. There is no free market as long as the determining consideration is not competition but politics.

This, then, is the peril that the small American manufacturers face and they go before the Ways and Means Committee to present their case knowing full well that their arguments are going to fall on deaf ears because so many of our legislators have become statesmen who forget the needs of their constituents in the face of the deterioration of our relations with foreign countries.

TVA Yardstick Helps Competitors Reap Sound Profits

EXTENSION OF REMARKS OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. EVINS. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD an editorial from the Louisville (Ky.) Times which has been reprinted in the current March issue of the Democratic Digest.

This editorial, while brief, tells a dramatic, factual story of how the electric utilities have benefited most profitably from the very agency they would destroy, the TVA.

The question arises in my mind, Mr. Speaker, as to the reason behind this ruthless enmity in the face of proven benefits. Could it be that greediness knows no bonds and now, having been enhanced with fat profits through the means of the low TVA yardstick, the utilities would move in to set a higher yardstick and gorge its coffers further at the expense of the consumers of the Nation? It is something on which we should think clearly and give attention to where our first loyalties lie—with the public interest.

The editorial, which speaks so eloquently, follows:

TVA YARDSTICK HELPS COMPETITORS REAP SOUND PROFITS

Citizens for TVA, Inc., has released some statistics to refute the oft-repeated contention that the Tennessee Valley Authority is in unfair competition with private power.

These show that between 1937 and 1952, the first 16 years of large-scale TVA power production, the common-stock earnings of the Nation's larger electric companies more than doubled. Rates came down—an average of nearly 60 percent—but more electricity was sold.

This fact alone might signify nothing more than that the power business has shared in the vast industrial expansion that began with World War II. Everybody has earned more, sold more since 1937. This, however, is significant; while earnings in the power industry generally were doubling, those of

the 9 private utilities surrounding the TVA area, according to "Citizens," multiplied 5 times. The statement goes on to say:

"Why? Because the utilities surrounding TVA are most exposed to the TVA example of low cost and high use of electricity. Under pressure from the TVA example, these companies were induced to cut their rates the deepest, increase their service the greatest, and take in money at a faster rate than all the other utilities in the country."

What better evidence that TVA has fulfilled its original purpose as a power yardstick?

Not a Business

EXTENSION OF REMARKS OF

HON. LEO W. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. O'BRIEN of New York. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I should like to submit for the consideration of the Members an ably written and pertinent editorial which appeared in the Albany (N. Y.) Times-Union on February 17, 1955. It raises a significant point in connection with the question of whether the Post Office Department is or should be operated as a commercial enterprise or as a public service.

The editorial follows:

NOT A BUSINESS

Postmaster General Summerfield's proposal to put the Post Office Department on a self-supporting basis has raised the question: Can the Department really be operated as a business activity?

Many businessmen believe not, for the simple reason that the Department does not exist as a commercial enterprise. An excellent presentation of this point of view has been made by Mr. Cranston Williams, general manager of the American Newspaper Publishers Association, in a published letter to the Washington Post and Times Herald. Mr. Williams wrote:

"Much is being said about putting the Post Office Department on a break-even basis, which means it should take in as much money as it pays out.

"I am wondering how it would be possible to put the Post Office on a break-even basis when the cost ascertainment report for the fiscal year 1953 (last available) shows that rural free delivery mail service for salaries and transportation alone cost \$192,430,334. Creation and maintenance of rural-free-delivery service was voted by the Congress as public policy in the general welfare. I see no possible way for the rural-free-delivery service ever to carry enough mail to pay even a small portion of the cost of maintaining that service.

"Furthermore, the Post Office Department operates more than 40,000 different post offices, and no business expecting to break even would try to operate that many outlets. You can imagine what would happen to the Great Atlantic & Pacific Tea Co., with a volume of nearly \$4 billion for its fiscal year ending March 1, 1954, compared with Post Office Department volume for fiscal year ending June 30, 1953, of a little over \$2 billion, if A. & P. tried to operate through 40,000 retail stores. A. & P. operates about 4,300 stores."

The breakdown is convincing. And another fact is worth keeping in mind. The Post Office Department was established by the Federal Government out of necessity. For much of its work it collects and should collect revenue; but much of its work cannot be put on a fee basis.

The Post Office Department is considerably like the Coast Guard and the Public Health Service. Nobody expects either of them to be conducted on a break-even basis.

Detroit Payrolls at All-Time High

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to include an article taken from the February 21 issue of the *Detroit Free Press*, the weekly publication of the Detroit Board of Commerce, entitled "Detroit Payrolls at All-Time High." This article, which predicts a very prosperous 1955 for the city of Detroit, should be an emphatic rebuttal to those who claim this city is still in the throes of recession.

The article follows:

DETROIT PAYROLLS AT ALL-TIME HIGH (By John R. Stewart)

Detroit is headed for a long and impressive list of "firsts" in 1955. Average earnings of wage and salary employees in this area appear certain to reach a new peak. With employment second only to that of 1953, total payroll should top that of any previous year. Spendable income likewise should be at all-time high.

Retail sales at an expected record level of over \$5 billion, peak activity in service industries and an all-time high in construction, will mean higher employment in non-manufacturing occupations than ever before. Wage and salary rates of these workers should top like figures for all previous years.

Peak population should insure higher counts of utility customers and greater consumption of electricity, gas, and water, than in any preceding year. Bank activity should be at record high.

Part of Detroit's high level of business and industrial activity this year may be credited to the automotive industry's strong showing. Thus far in 1955, phenomenal popularity of 1955 passenger cars and high truck sales have boosted retail deliveries to record high for this season of the year. To meet this unprecedented demand and also build up sufficient dealer stocks for spring selling needs, production has been pushed to a level which seems certain to give the industry its biggest first quarter in history. Car and truck production for the 12 months ending December 31, 1955, is estimated at 7 million units, or about one-third more than in any year prior to 1949. Only 1950 and 1953 topped this year's expected figure.

Other types of manufacturing in the Detroit area in 1955 should be at or near peak levels. The machinery industry, Detroit's second largest, should have its biggest year. Manufacture of nondurable goods was at peak in 1954—a new record should be set in 1955.

Employment in the Detroit area in 1955 is expected to average about 1,300,000 wage and salary workers, or 60,000 more than in 1954. Only 1953 enjoyed higher employ-

ment. Of the 1955 total, 630,000 will be in nonmanufacturing, a new peak; 320,000 will be employed in automotive factories; and 350,000 will be working in other types of manufacturing. Gains over 1954 are expected to be 15,000 for nonmanufacturing, 30,000 for nonautomotive manufacturing, and 15,000 for Detroit's automobile industry.

A nearly constant level of nonautomotive manufacturing employment and a rising trend in nonmanufacturing employment throughout the year should offset a possible dip in automotive payrolls in the second quarter and cushion the usual decline in automotive employment at model change-over time. All major employment groups should end the year on a rising trend.

If wages follow the upward trend of recent years, and if average earnings of other employees in the area equal or exceed those of hourly rated factory workers, both reasonable assumptions, workers in the Detroit area should receive over \$6 billion in wages and salaries this year, an historic high.

With taxes lower than in the previous peak year of 1953 and with living cost virtually unchanged, this tremendous payroll should insure a prosperous 1955 for Detroiters.

Reciprocal Trade Agreements Act

EXTENSION OF REMARKS

OF

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following letter from the president of the Mohawk Carpet Mills in Amsterdam, N. Y., under date of January 20, 1955:

MOHAWK CARPET MILLS, INC.,
Amsterdam, N. Y., January 20, 1955.
Hon. BERNARD W. KEARNEY,
House of Representatives, House Office
Building, Washington, D. C.

DEAR PAT: The renewal by President Eisenhower of his request for a 3-year extension of the Trade Agreements Act, with power to reduce tariffs another 15 percent, and the introduction of H. R. 1 designed to implement the program, again casts uncertainty on the future of the American carpet industry. I would be remiss in my responsibilities to the owners and employees of the Mohawk Carpet Mills, to the carpet industry in the United States, and to those charged with the responsibility of making and administering equitable and progressive laws, if I did not question the desirability of authorizing (with or without receiving reciprocal concessions) further reductions in the tariff on imported carpet.

My reasons for questioning the fairness and desirability of further tariff reductions on machine-made carpet were outlined in some detail in my May 4, 1954, letter to you. These reasons are equally valid today and for your convenience in reviewing our position I am repeating substantially my earlier letter. Minor changes have been made in it in recognition of more recent information.

Under the Reciprocal Trade Agreements Act, the tariff on foreign-made carpets has already been progressively reduced from 60 percent ad valorem to 25 percent—a reduction of 58 percent. As a result of the reductions, imports of machine-made carpets have been increasing—since 1946 the rate of increase has been 26 percent per year. Last year, about 2,800,000 square yards of machine-made carpet were brought into the

United States. Every yard of this carpet represents the loss of 1 hour's work to an American workman—the 2,800,000 yards mean a loss of more than 2 weeks' work for each of the 30,000 workers in the United States carpet industry.

The desirability and the propriety of further opening our market at this time to foreign competition through additional tariff reductions such as are possible under H. R. 1 must, it seems to me, be seriously questioned. I should like, in the following paragraphs, to outline some of the issues and the responsibilities which those who advocate further reductions must face.

1. FULL EFFECT OF PAST REDUCTIONS STILL UNKNOWN

The tariff reductions which have been made under the Trade Agreements Act cannot as yet be appraised, for the United States has had no experience for any extended period of time under normal conditions. The act was passed when we were in the midst of a depression. Later trade was distorted by World War II, by the Korean war, and by the vast rebuilding programs in which we engaged. All this while tariff reductions were being made. Only very recently has our humane gesture of rebuilding war-torn European economies—a program to which the carpet industry has contributed millions of dollars in taxes—been reflected in increased competition from abroad.

Carpet imports may continue to expand even under present tariffs, particularly if wage rate increases or wool price increases force adjustments in our retail prices. Under these circumstances, it would seem desirable to withhold opening our market still further through additional tariff reductions until the effects of the extreme reductions already made can be appraised.

2. EFFECT OF FURTHER TARIFF REDUCTIONS ON CARPET INDUSTRY

Further reductions in tariffs will inevitably encourage additional imports of machine-made carpets. Such a further division of the market will reduce the opportunity for employing American workers and for operating profitably in the carpet industry.

These inevitable consequences would be inflicted upon an industry which is already extremely competitive and which, because of these conditions, is offering quality merchandise to American consumers at prices too low to provide a reasonable return on invested capital. Currently, too, most of the carpet mills are operating far below capacity—increased imports at this time could only accentuate these layoffs and work reductions that have already taken place.

Work reductions would not present the serious human and economic problems they do if the freedom of movement so glibly assumed by many free-trade theorists in fact existed. But today alternative opportunities are not abundant, particularly in a number of areas where carpet mills are located, and where these mills represent the major industrial activity in the town. There is entirely too much at stake in human and economic considerations to pass over the problem lightly.

The seriousness of this problem is well illustrated by Amsterdam, whose livelihood is almost entirely dependent upon the Mohawk and Bigelow-Sanford mills. At one time last year, unemployment rose to over 20 percent. Currently, it is probably about 12 to 15 percent. Local citizens, in an effort to reduce this hardship, have contributed over \$370,000 to encourage a nontextile manufacturer to locate here and offer employment opportunities. Further tariff reductions on carpet could only contribute added unemployment to Amsterdam, and to other carpet producing localities as well.

3. THE FAIRNESS OF FOREIGN COMPETITION

The inroads which imports of machine-made carpet have and can make into the

United States market are not the result of inefficiency in the United States carpet industry. Mills in Belgium and England, our major foreign competitors, have no technological or natural resource advantages—they must also import raw carpet wools and jute, their workers are no more efficient, and their looms and other machines are substantially the same as ours. (In fact, these countries have reached their present productive capacity through the plants, machines and technical assistance given to them since the war.) Their competitive strength emanates almost entirely from wage—not physical productivity—differences.

Wages of industrial workers in Belgium and Britain, the major foreign sources of carpets, are the highest of the carpet industries' foreign competitors, yet they average only about 48 cents per hour. This is less than one-third the average hourly wage of United States carpet workers, yet it is against such and lower wage levels that the carpet industry in the United States is being asked to compete. In addition, foreign competitors copy the styles and patterns developed and tested by American manufacturers, and capitalize without cost to them on a market developed, through advertising, by American concerns.

Competition of this type would not be condoned within the United States. Compensatory use taxes protect merchants in one area from the competition of merchants in bordering areas that do not have sales taxes. Minimum-wage laws (and other laws of similar purpose) prevent a concern from gaining a share of the United States market through the exploitation of its workers. It seems only consistent with the American conception that, to be desirable, competition must be fair, and to ask that a fair tariff be maintained on foreign carpets—a tariff high enough to compensate for payments the United States carpet industry is making to American workers and to our Government which are over and above those made by the carpet manufacturers in foreign countries.

At present, this is the only way to enable unionized firms in the carpet industry to compete with low-wage foreign firms, and thus preserve the jobs and living standards of the American workmen in the industry. Failure of our Government to provide this support would seem to make a mockery of our Government's dedication to fairness in competitive relationships.

4. TARIFF REDUCTIONS ALSO REDUCE IMPORTS

The aim to increase our total trade with foreign countries is desirable—the emphasis that has been placed upon tariff reductions to achieve this end has probably been exaggerated.

In the carpet industry, increased imports of foreign-made carpets will result in decreased imports of raw wool (the major raw material in carpet production) and jute. All wool and jute now used in carpet manufacture is imported from foreign lands—in 1953, these imports amounted to over \$100 million. To the extent that the American carpet industry is supplanted by foreign producers, the raw material supplying nations will lose their markets in the United States—in effect, through tariff reductions on carpets, we are opening our market for carpets and closing our market for raw materials. The increased volume of carpet imports (and larger foreign credits) that would result from lowered tariffs on carpets would, therefore, at least in part be offset by reduced imports (and smaller foreign credits) of carpet wool and jute. In effect, the only increase in our imports is the labor and

profit lost to workers and firms in the United States carpet industry.

Aside from the fact that the increase in imports made possible through reduced tariffs on carpets will be offset by the reduction in raw material imports, the desirability of the changes produced in our trade seems open to question. The countries supplying carpet wool and jute are primarily South America, New Zealand, India, and Iraq—none highly industrialized. Trade with them should be most productive of the mutual advantages that are ascribed to free trade. If, through tariff reductions on carpets, we reduce our domestic production of carpets and consequently our purchases of their raw materials, we will deny to these countries a market they have enjoyed, and we will also reduce their ability to purchase the products of our industry. In effect, we will be transferring to the industrialized nations of Western Europe which manufacture carpet, the purchasing power which formerly went to South America, New Zealand, India, and Iraq—all predominantly rural areas which should be good markets for products of American industry.

In presenting these specific consequences of further reductions in the tariff on foreign-made carpets, and the issues of principle they raise, I want to make it clear that I am not in disagreement with the objectives of the President's recommendations on foreign policy. There can be no question that increased trade such as will promote the security and the economic prosperity of the United States is desirable.

There are, however, two serious questions in my mind as to whether a tariff-reduction program will in fact contribute to these nationwide objectives. Under the present conditions of world trade and finance and international monetary instability, it seems utterly unrealistic to expect that further tariff reductions by (or unilateral trade for) the United States can be a material factor in correcting the current instabilities and imbalances in the western world. Other impediments should first be corrected. Secondly, under our system of private property and our standards of fair competition, it seems unfair to continue a program which mean sacrificing one group of industries in order to maintain or expand the market for another. Tariff reductions are now being urged primarily by our mass-production industries and by industries without foreign competition, as a means of increasing foreign purchasing power, to compensate for expected reductions in American aid. To achieve this objective, they belittle the serious effects on the import-vulnerable segment of our economy—a segment which undoubtedly employs many more workers than are dependent upon exports for employment. Possibly some of the sacrifices needed to balance international payments without aid, and to make our allies strong, should be borne by these, and by our growing industries, and not shifted entirely to those who have invested their skills and equipment in industries which, by chance, now exist in foreign countries.

I make no apology for supporting the carpet industry in its request for fair tariff protection. I sincerely believe that the inclusion of carpets among the commodities selected for negotiation of further reductions in tariff rates would be harmful both to our economic prosperity and to our national security.

Thank you very much for giving consideration to this letter.

Very truly yours,

HERBERT L. SHUTTLEWORTH II,

President.

Electoral Reform

EXTENSION OF REMARKS OF

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article appearing in the New York Times today, February 24, 1955, written by a distinguished commentator and reporter, Arthur Krock, concerning proposed reforms in the method of electing Presidents. It will be noted that Mr. Krock characterizes House Resolution 4 and Senate Joint Resolution 3, proposing the district system, as follows:

This would be the true electoral reform, and it reflects early American thinking.

The article follows:

BLOCS IN THE PATH TOWARD ELECTORAL REFORM

(By Arthur Krock)

WASHINGTON, February 23.—The merger of the two great sections of organized labor which their leaders say is impending—despite John L. Lewis and Michael J. Quill—has alarmed disorganized masses of the people by evoking a vision of the largest and most effective pressure group in our history. Since (runs this reasoning) the AFL and the CIO demonstrated under recent Democratic Presidents that separately they could exchange political support for the highest favors of Government, in unity they raise the threat of absolute control of the economy.

Those who for this reason view the merger project with alarm realize that labor leaders cannot ever be sure of delivering their rank and file to specified candidates for office so long as the ballot remains secret. On the record of past performance they suspect that the vaulting ambitions of Walter Reuther may at any time disrupt the ranks of the trades unions after they have formally merged. Therefore, if organized labor were as amenable to the laws as industrial groups are, the fears of the projected merger would be minimized.

But organized labor has legal privileges and immunities denied to all other groups in national production. These are the potentials of an industrial monopoly and a political pressure mass that could dominate the American system.

Through protective statutes, friendly judicial decisions and the favoritism of political administrators organized labor has been granted special rights in the United States. And the Taft-Hartley Act has left uncurbed the two principal ones. The first is general immunity from the antitrust laws for actions which would be illegal if performed by employers. The second, specifically, is freedom to bargain on a nationwide basis and to strike, if desired, a nationwide industry vital to the general welfare.

ORIGINS OF PRIVILEGE

The origins of these immunities are threefold. One was the social need to redress the long-sustained condition in which the rights of workers were spurned by selfish capital interests. Another was the rise in the Democratic Party of doctrinaires who favored union labor domination of our capitalist

economy. The third was the political strategy of the Roosevelt and Truman administrations—to attract by official favoritism organized labor groups which, voting solidly, could tip the electoral balance in great States closely divided in popular allegiance to the 2 major parties. Until President Eisenhower's personal appeal broke this latter combination it operated powerfully to keep the Democrats in national control.

It was able so to operate because of the laws which give the entire electoral bloc of a State to the party candidates who acquire a plurality of the voters, however small. Two examples are enough to illustrate this. In 1884 Grover Cleveland was elected President by getting all New York's electors because of a plurality of 1,149. In 1948 Ohio helped to assure President Truman's election by giving him its electors on a plurality of 7,107 of almost 3 million votes cast. In each instance the victor polled a minority of the total vote.

This system provides all sizable pressure blocs with their opportunity to tilt the scales for the candidates of the party which they think or know will respond to their pressures for special consideration. Organized labor leaders, when their followings were divided, made the most of this opportunity. It is hardly to be expected that, united, they won't hope to do even better; consequently, they look coldly on the revived effort in Congress to reform the electoral system.

TWO PROPOSED REFORMS

For this there are currently two principal proposals. The first, advanced by Senator DANIEL, of Texas, and a group of senatorial cosponsors, would change the law to provide a pro rata division of a State's electors. If, for instance, the Democrats got three-fourths of a State's votes and the Republicans a fourth, the electors would be proportionately allotted. And so on. The other reform proposal, originally advocated by Lucius Wilmerding, Jr., of Princeton, N. J., is again being pressed by Representative COWERT, of New York City. Electors of the President and the Vice President would be chosen in the same manner as Senators and Representatives are. Each congressional district would choose 1 elector by a majority or plurality of its resident voters; each State would likewise elect 2. Thus each State would have the same weight in the choice of the President and the Vice President that it now has in Congress, making the executive and the legislative political base the same. Also, the great State delegations would lose their immense bloc power in the national conventions.

This would be the true electoral reform, and it reflects early American thinking. But the Senators will probably stand by their partial remedy; the House remains indifferent to change, and for obvious reasons the pressure blocs cordially approve that indifference.

Our Debate Tournament

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Wilkes-Barre Herald:

OUR DEBATE TOURNAMENT

Thanks to the willingness of King's College to play host, an intercollegiate debate tournament of impressive scope will be held on the campus on February 19. The fact that

30 colleges and universities from the North, the South, and the East will be represented is enough to command keen interest. Fully as arresting is the fact that the topic will be one of nationwide, even worldwide concern: *Resolved, That the United States should extend diplomatic recognition to the Communist government of China.*

Heated controversy has been boiling around the question wrapped up in the topic chosen for this year's debate at King's.

So heated has been this controversy many colleges and universities are not debating the issue. Such institutions as the United States Naval and Military Academies are among them.

We are reminded by our friend, Robert E. Connelly, director of forensics at King's, that newspapers such as the New York Times have commented upon it editorially, such periodicals as Time and Newsweek have covered it, and TV programs like Edward R. Murrow have televised actual debates.

We join in the sentiment that it is encouraging to note once more that free discussion and debate are allowed in our great Nation and can be pursued in good temper, however vital the issue—something that Russia and her sisters in suppression would never tolerate.

Congress Gets a Prayer Room

EXTENSION OF REMARKS

OF

HON. E. KEITH THOMSON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. THOMSON of Wyoming. Mr. Speaker, we see daily increasing indications that our Nation and its leaders are turning to a divine source for guidance and counsel in troubled times, but all too often this wholesome fact goes unnoticed.

It is gratifying, therefore, to see that a Wyoming newspaper has taken editorial note of the prayer room in the House, and I commend it to your attention. The editorial is taken from the Wyoming State Journal at Lander, Wyo.:

CONGRESS GETS A PRAYER ROOM

For the first time in more than 150 years Members of Congress have been provided with a prayer room at this session. The prayer room, which was authorized last year, is open to Members of Congress only, and is not to be used for any other persons or groups.

The idea is to provide the legislators with one room in the Capitol where they can find seclusion, peace, and quiet. The prayer room's special window was built by volunteer labor from California's 21st Congressional District.

Clergymen of all faiths were consulted about furnishing the prayer room, and a large oak altar was finally selected. The room is covered with green carpet, there are chairs along the walls, in front of which are wooden screens to furnish privacy. Adequate copies of prayer books, Bibles, and other literature are available in the room.

Anyone who ever worked in the Capitol, amid the tensions and pressures which are exerted on the legislative branch, knows there has long been a need for a prayer room such as this. We hope that on more than one occasion, in the future, this room of meditation and inspiration will be useful in helping to guide decisions made by the highest elected legislative officers of our country in these critical times.

Does Distribution Cost Too Much?

EXTENSION OF REMARKS

OF

HON. CHARLES B. BROWNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. BROWNSON. Mr. Speaker, at noon on Tuesday, February 8, and again that evening I was privileged to attend the meetings of the National Wholesale Distribution Clinic sponsored by the National Association of Wholesalers and held at the Shoreham Hotel.

I am a small wholesaler myself, president of a very modest size wholesale wallpaper and paint corporation, but as I listened to the greeting from NAW President George Wedemeyer, of Ann Arbor, Mich., and the luncheon address by Warner S. Shelly, president of N. W. Ayer & Son, of Philadelphia, on the subject Advertising and Wholesaling Are Handmaidens, I began to realize how very infrequently we who are in Congress recognize the importance of the wholesaler, or, in fact of our highly specialized distribution system.

The voices of the representatives of producers, farmers, and manufacturers alike, are often heard in these Chambers. The spokesmen for labor are properly articulate. With the possible exception of the consumer, those engaged in the distributive trades receive the least attention directed to the solution of their problems. As a means of distribution wholesaling involves bringing goods from places too distant or too numerous for the retailer to deal with and in quantities too big for him to handle, in order to bridge the gap between the producers and the consumer. It seems obvious that our economy, based as it is on mass production and mass consumption, could be seriously crippled if a gap existed anywhere along the line between producer and consumer. As Mr. Warner S. Shelly said in his opening address:

The reason for talking about advertising and wholesaling in the same breath is that they have certain things in common. The most obvious of these is the fact that both are less understood by the public, and more frequently criticized, than almost any other operating parts of our economic system. They are often neglected, frequently criticized, and nearly always given hard chores to do. The wholesaler is often called a grasping middleman, and the shout goes up "Let's eliminate the middleman." Advertising gets the huckster label in some quarters, and the slogan here is: "Let's cut out advertising." The producer blames advertising and wholesaling if sales are poor. The consumer blames them if prices seem high.

It is interesting to explore the reasons why there has been such a limited appreciation of the problem of distribution, especially wholesale. I suppose one reason is that wholesaling with only about 250,000 firms, employs a relatively small number of people. As a minority group wholesalers have not been either consistent or vigorous in keeping their congressional representatives informed of the problems which they face individually. As Mr. Shelly noted, public ignorance of the nature of wholesaling and

the confusing terms by which the wholesaler tries to explain his business to the public adds to the difficulty.

He stated:

Public ignorance is intensified by the fact that people have been encouraged to think in terms of stock phrases and pat labels. Thus we have the poor but honest farmer, and the oppressed consumer, both under the thumb of the grasping middleman. As any thinking person knows, these labels do not fit. There are good and bad people in all lines of work and all classes of society. There are farmers and consumers who will steal your eyeteeth and then complain because there aren't any good fillings in them, just as there are advertising men and wholesalers who will do the same. But mostly people of any type are a pretty good sort.

During the evening meeting, after the pointed observation of Herb Shriner, the clinic heard an address, the American Economy Is Cushioned by 250,000 Wholesalers, by Herb R. Askins, immediate past president, National Standard Parts Association, and former Under Secretary of the Navy. I was particularly impressed by this discussion but the remarks of Joseph Kolodny, managing director of the National Association of Tobacco Distributors, seemed to me to be those which would be of the greatest interest to Member of Congress.

Mr. Speaker, under unanimous consent, I include the following address of Mr. Kolodny, a dynamic influence in distribution, whom I have known personally for several years:

DOES DISTRIBUTION COST TOO MUCH?

(By Joseph Kolodny, managing director, NATD)

Let us, at the very outset, endeavor to clear the atmosphere by dissipating the fog arising from the endless and contentious arguments relative to the cost of distribution.

The air has been acridly contaminated ever since the 20th Century Fund stirred up the emotions of both protagonists and antagonists by propounding the question, "Does distribution cost too much?" and thus casting a cloud on the efficiency and proficiency of the distribution instrumentalities.

It seems foolhardy, in a dynamic society, to indulge in vainglorious pronouncements accentuating the ultra efficiencies of any operations, be they manufacturing, distributing, or servicing. Propelled by the impact of scientific and technological creations we are constantly either on the alert or forced to entertain and attune our operations to new ideas, new devices, and new developments. The distribution system, though somewhat tardily, has made notable progress in that direction.

To the "know-it-all" segment of our populace, who may never have taken the time to study the contents and conclusions incorporated in this exhaustive 20th Century Fund document, the question seemingly implied that "distribution did cost too much." It occurs to me, however, that we can consider the subject matter with infinitely more realism if we change the question to, "What does the consumer want or require?" In the final analysis, the consumer—and only the consumer—is the arbiter of our economic destiny. He and he alone dictates and determines the direction of our pursuits. No form of distribution can be superimposed upon him. He accepts that which he approves and rejects—that which does not meet his fancies. In exploiting "consumer appeal" and catering to "consumer demand," the advertising fraternity shows itself to be especially conscious of this phenomenon.

The influence of consumer attitudes has acquired potent significance in recent years. The emergence of 2- and 3-color automobiles, as epitomized by the 1955 models, vividly underscores the lively attention paid by the manufacturer to the wishes of the consumer.

Since the word "distribution" has, rather, little meaning for us when applied in the strictest "dictionary" sense, and only acquires animation and vitality when wedded to the product and related services, that the whole issue can be more accurately examined by linking the product with the user and determining what sort of service he expects or desires at the time he is ready to acquire it.

At this point, it is essential to dwell, if only briefly, on the circumstances which have contributed markedly toward bringing about a sharp change in our thinking and actions in recent years in relation to the far-flung sphere of distribution. The amazing technological achievement of this Nation in mass production and its corollary—mass advertising—together with its concomitant, "pre-selling"—have vastly altered the relationship between the entrepreneur and the product. Prior to the fantastic mass production achievements, the product came principally from the hands of the local craftsman. It was a personal activity and the product was closely identified with the man who made it. Today, such local craftsmen are almost nonexistent and the mass-produced article has lost that touch of personal identity.

It is not an exaggeration to assert that the public, except in rare instances, doesn't know and, moreover, doesn't care who heads the firm or who is the directing genius of the manufacturing entity which produces the article. The product itself has become supreme and the consumer is guided in his purchase by what he learns of its quality and dependability. Before embarking upon a shopping trip, Mrs. Consumer has predetermined, to a large extent, what products she intends to buy. When by virtue of modern packaging and display she is exposed to and enticed by the known branded product, she responds almost impulsively. As an inescapable result, the product and the method employed in gratifying the consumer's needs and wishes becomes wholly subordinate to the consumer's thinking and action.

Let's not be unmindful that the consumer, informed or uninformed, influences, controls, and even dictates the cost of distribution. She—and I say "she" advisedly because it is axiomatic that women control the Nation's pursestrings—can make or break any system or method of distribution ever devised or contrived. And, by the amount and extent of service she demands, she controls the factor which, more than any other, determines the ultimate cost of distribution.

Nowhere in the world is the consumer placed on such a high pedestal as in our own country. Not only is she catered to as if she were a queen, but she is shielded on all sides from exploitation. She is served by many agencies of the Federal Government and a multitude of laws protect her from dishonest or monopolistic operations and manipulations, including the Pure Food and Drug Act, the Clayton Act, the Federal Deposit Insurance Act, the Robinson-Patman Act, the Securities and Exchange Commission, the Federal Trade Commission and many others. The States also exercise their police powers in the consumer's behalf, especially in the area of fair business practices, and the local governments control the activities of the predatory schemers through the operation of their license bureaus and racket and bunco squads. Add to these the watchdog alertness of the better business bureaus and other organizations set up by private business to root out dishonesty and foster ethical conduct.

Our being a free economy, the consumer has an unrestricted choice as to what she

shall buy and where she shall buy it. The price she pays will be influenced by whether she demands full service, minimum service, or no service at all.

Mrs. Consumer may choose to drive to the market. Although she disregards it, the cost of operating her car is inseparably linked with the cost of distribution. Arriving at the market, she grabs a pushcart and manipulates it interminably up and down the length of the aisles, fetching from the neatly arranged shelves her food and sundry household requirements.

Mrs. Consumer then elects to cart or carry the heavy bags of groceries to her car—as a tacit manifestation of domestic economy. Upon arriving home, and staggering under the burden of her packages, she carries them into the kitchen or pantry—again mindful that she has saved a few pennies.

In sharp contrast, another housewife merely lifts her phone and leisurely speaks to the grocer or other merchants, placing her order for an assortment of products and admonishing the merchant that it must be delivered by a specific time. Upon receiving the call, the grocer or his clerk sets about to assemble the order, which involves a cost of time and effort. They then load it into a delivery conveyance to transport it punctually to the customer's home and, upon arrival, carry the packages into the house or apartment and place them on the kitchen or pantry table. This store-to-door operation involves the cost of the clerk's time, the use of the vehicle, and the services of the delivery man.

How are we to properly differentiate between basic distribution costs and optional service costs? Obviously, certain elements of cost are stationary, such as—

(a) The warehousing of the merchandise, which is prerequisite in both cases.

(b) The transportation of the goods to the retail outlets—again an inescapable cost in both instances.

(c) Placing the merchandise on the shelves for easy accessibility and handling—likewise required in both cases.

At this point, there is a parting of the ways. The cost of conveying the goods to the home must be assumed either by the consumer, who elects to drive her own car or carry her own parcels, or by the retailer who provides delivery service.

Also, in selecting the type of service she desires, the consumer has to choose between—

(a) Allotting time and effort in shopping on a cash basis in nonservice stores, or

(b) Taking advantage of the conveniences of the service stores—including delivery and credit.

Instead of phoning the dry cleaner, she can take the garments to him and earn a discount of 15 to 20 percent. She can have a bottle of fresh milk or fresh bread delivered to her doorstep by the milkman or baker's man, or she can get them cheaper at the store. If she needs a new appliance, and is willing to forego the servicing advantages afforded by her local or neighborhood dealer, she may effect a saving by searching for a discount house. Mail-order houses also offer numerous savings if she is willing to wait an indeterminate period for delivery. If she has the patience, she can also wait for seasonal clearance sales by the department stores.

In the matter of cost, differences are relatively slight. The product costs exactly the same to produce and advertise, whether it is destined for the chief of the service store or nonservice store. In the item of carrier transportation costs, there is a slight differential in carload versus less-than-carload lots, but this is a very minor factor in the aggregate cost of distribution. For all practical purposes, the cost of goods to merchants is almost identical.

The impact of the consumer is virtually nonexistent until the merchandise com-

mences its movement into the wholesale and retail outlets. It is at that stage that the consumer first begins to exert the terrific force of her power of selection.

There are types of stores and types of services to meet the wants of every consumer. The merchandise may come to rest in a fashionable shop catering to the carriage trade, which relies on this type of merchant to satisfy its whims at a moment's notice. It may involve a rare food delicacy from a distant corner of the earth. It might be a costly item of jewelry or any other product for which the demand is uncertain and inconstant. When the merchant stocks such a product, he does so with the knowledge that he may have to retain it in stock for weeks or months before it is sold. If a large portion of this shop's capital is tied up in slow-moving inventory, there obviously must be an unusually high markup, which translates itself into high distribution cost.

On the other hand, certain merchandise comes to only a momentary halt in the retail store, such as cigarettes, where the frequency of turnover is almost daily and the cost of handling far less. It is almost axiomatic that the ultimate price of any product is governed very largely by the rapidity of its turnover.

The consumer of limited or less-than-average income, who is obliged to seek out sources of supply which will enable him to stretch his dollar farthest, has many avenues open to him. For the most part there are retail establishments which provide a minimum of service and where overhead cost is also kept at a minimum. A typical example may be found in the type of men's clothing store which operates in a low-rent district and on virtually a self-service basis. The customer selects his own suit or coat from the racks with little or no assistance from a clerk. He gets a makeshift fitting or he may find it necessary to take the suit to his own tailor to have it fitted properly. The whole process is a test of patience and fortitude. But he finally gets a suit for what he believes he can afford to pay.

The consumer who is less economy-minded goes to a conveniently located establishment where he knows he can obtain clothing of excellent material and workmanship, where attention is showered upon him by the floorwalker, the manager, the clerk, and the fitter. He can look over dozens of suits at his leisure without being shoved or pushed around. All this comes under the heading of service, the cost of which is incorporated into the price of the suit.

I have mentioned only some of the distribution devices available to the consumer which offer money-saving opportunities. The fact that these channels are able to compete successfully for a share of the consumer's dollar attests to the elasticity of our free economy.

The conventional patterns of distribution, fortunately for us, continue to find by far the greatest favor among the Nation's consumers. America today enjoys the highest standard of living in all the world's history and that high standard is based, in substantial part, on the enjoyment of the conveniences and even the luxuries of service.

The rapid development of the self-service grocery store, notably the supermarket, is perhaps the outstanding merchandising phenomenon of the postwar era. There is nothing basically new in the idea because self-service has been with us ever since the advent of the cafeteria. Do these supermarkets offer customers noteworthy savings? The most detailed study relating to supermarket sales was made recently in 5 Cleveland, Ohio, supermarkets over a period of 13 weeks. Records were kept on every item accounting for five one-thousandths or more of the total store sales.

The 5 stores averaged \$45,520 sales per week. Customer purchases averaged \$6.63.

In round figures, grocery items accounted for 44 percent of total sales, meats 28 percent, produce 13 percent, frozen foods 4 percent, and baked goods 3 percent. The average gross margin of profit was 17.9 percent, but the survey revealed striking variations in the profit rates, ranging from about 5 percent to more than 40 percent. The lowest markups applied to fast-moving staples such as cigarettes, sugar, coffee, butter, flour, soap, baby foods, shortening, gelatines, etc., on which the gross profit ranged from 5.4 percent to 9.8 percent, an average of 7 percent.

While the growth of chains and supermarkets has been huge, it must not be assumed that American consumers are exerting their power to make or break any type of distribution to the detriment of the conventional type of grocer who provides more service. Nothing could be farther from the truth. The so-called independent grocer in 1953 accounted for slightly more than half of total food sales, with chains doing about 30 percent and the remainder represented by sales of food products by stores other than grocers.

Quite frequently, in evaluating distribution processes, the claim is made that the multiplicity of distributive outlets, both wholesale and retail, result in a duplication of effort which pyramids distribution costs. Such an assertion belongs to that category of superficial arguments that lack authentic support. In the first place, this Nation is the strongest bastion of free enterprise, preserving the right of any aspiring individual to embark on a business career of his own—with all its attendant risks—and either succeeding or "losing his shirt." Secondly, there is not one iota of evidence that because there are a number of grocers, druggists, or haberdashers in one neighborhood, the consumer is saddled with greater costs. On the contrary, it is the very existence and presence of these coterie of competing merchants that is the best safeguard against unwarranted hiking of prices.

Since I am associated with the tobacco industry, it is, I feel, not inappropriate to use the experience of my industry as a point of illustration. Here are some of the basic facts about the principal tobacco product—cigarettes.

In the 1940-53 period, the combined net sales of the five largest cigarette manufacturers increased from \$1,014,000,000 to \$3,100,000,000 or 206 percent. At the same time the sale of cigarettes by units expanded from 157 to 391 billion, or 150 percent. But the cost of leaf tobacco soared 337 percent in crop value and Federal excise taxes jumped from \$640 million to \$1,614,000,000 or 152 percent. Federal and State income taxes spiraled from \$33 million to \$181 million—an astonishing 444 percent. The result was that net income increased only 39 percent and common dividends only 15 percent, in each case less than the depreciation in the value of the dollar. In short, the industry in 1953 handled a cigarette business which had tripled in dollar volume and increased 2½ times in physical volume, at a profit which was less in actual value than in 1940.

Actually, considering the depreciation in the value of the dollar, cigarettes are relatively cheaper today than 15 years ago. Since 1940, the retail price of standard cigarettes, exclusive of State or local stamp taxes, has increased on the average of only 4½ cents a package and of this 2 cents was made mandatory by increases in the Federal excise tax from 6 cents to 8 cents per package. The other 2½ cents has been entirely absorbed by increased costs of tobacco, labor, packaging, shipping, etc.

In 1940, the prevailing average price of the popular standard brands was 18 cents a package, including all excise taxes. The Government estimates that on the basis of what the dollar would buy in the 1947-49 base period, it would have bought \$1.669 in

1940 but only \$0.87 in 1954. On a comparative basis, therefore, the same cigarettes should retail for 34 cents, instead of the prevailing average of 23-24 cents. The fact that the operating costs of tobacco wholesalers are approximately 5 percent, coupled with a very modest retail profit, is another item on the credit side of the consumer's ledger. This, therefore, is a sound explanation why the consumer today is spending less, proportionately, for cigarettes than in 1940.

What about the availability of these cigarettes to the consuming public? Notwithstanding the shrinkage of profit to the manufacturer, the modest and barely-break-even margins to wholesalers and retailers, cigarettes are more easily available and more readily accessible than at any other time. They are handled and dispensed by 1,300,000 retail outlets, which accounts for more than two-thirds of such outlets.

The portrayal of the cigarette picture does not even remotely imply that the experience depicts any outstanding exception. To a larger or lesser extent, a similar example can be applied to drug toiletries, blades, many confectionery products, and chewing gum, numerous food products, including cereals, and many other commodities.

It candidly does not entail the erudite propensities of auditing or accounting experts to realize that the combined costs of wholesale and retail distribution on these products, exclusive of transportation, ranges around 20 percent and that certainly is an exceedingly modest figure.

Present-day exigencies dictate a careful reexamination of all elements of cost. The keenness of competition forces us to draw on every resource at our command in striving for the goal of irreducible costs. Let us not be unmindful, however, that in appraising the cost of distribution it is the consumer who governs the character and type of services he or she demands, and that with the advent in recent years of all sorts of distributive media, the consumer does not have to be too much perturbed about anyone's ability to mulct him or her with exorbitant costs of distribution.

Pennies for Freedom

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. RODINO. Mr. Speaker, I wholeheartedly subscribe to the sentiments expressed in the following editorial which appeared in the Newark (N. J.) Star Ledger, of February 23, 1955:

PENNIES FOR FREEDOM

If you've got spare nickels and dimes in your pocket, we can't think of a better place to send them than to the Crusade for Freedom.

The crusade's on a \$10 million fund-raising campaign now. It uses the money to let the people behind the Iron Curtain know what their masters don't want them to know. The crusade's main instrument is Radio Free Europe, which beams the truth to Eastern Europe, but it also uses other devices.

It was the Crusade for Freedom which drew an official protest from Hungary last December. It dropped millions of leaflets, via balloons, telling the Hungarians to fight for freedom. Hungary complained to Washington. Washington replied sweetly that it couldn't do much about this, because the

Crusade for Freedom is a private organization and it's free to do what it pleases.

The protest proved that the leaflets are being read, and that the crusade's work is fruitful. Every penny it gets is needed, and well-spent.

Democratic Leaders Attempt To Buy Voters for \$20 Head Seen

EXTENSION OF REMARKS

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. REED of New York. Mr. Speaker, under leave to extend heretofore granted, I am inserting in the Appendix of the RECORD the following article which appeared in the New York Herald Tribune of February 23, 1955:

DEMOCRATIC ATTEMPT TO BUY VOTERS FOR \$20 HEAD SEEN

(By David Lawrence)

WASHINGTON, February 22.—There's an even more penetrating way to "share the wealth," as the late Huey Long phrased it, than the Democratic Party leaders have thought of with their \$20 cut in taxes, for everybody. It's equally logical and it could mean an even bigger potential in vote getting.

Thus there are about 55 million citizens with incomes under \$5,000 a year. This is a sizable number of voters and enough to win an election if they vote solely on selfish grounds.

A scheme could be devised to free this entire group from the payment of any Federal taxes whatsoever. It would cost the Treasury of the United States \$8.5 billions. But if demagoguery is to be the rule, then there's a simple way to make it up—just increase the taxes on the persons with incomes of \$25,000 a year or more. They're paying \$8.7 billions a year already. The addition of \$8.5 billion in tax payments would, of course, virtually confiscate the incomes of the most thrifty and the most successful citizens. Confiscation, however, is the eventual goal of the Socialists, and the Democratic Party is rapidly becoming the socialistic party in America anyway.

It so happens that there are about 800,000 taxpayers in this country whose incomes are \$25,000 a year or over. They pay more in total taxes than do the 55 million who have incomes under \$5,000 a year. They are carrying the heaviest tax burden already.

LABOR STANDS TO LOSE

If the share-the-wealth doctrine is to become dominant, it would mean the eventual destruction of incentive and a consequent drop in the incomes of all persons now earning incomes over \$5,000 a year. The goal of communism—as well as of its twin brother, socialism—is to do away with the managerial class or so to weaken its spirit as to cause the whole private enterprise system to collapse.

Union labor, which has thrived under the system of risk capital, would not be able to get the increases in wages or pension benefits now enjoyed if the management class in America were wiped out as it has been in Soviet Russia or in countries where state capitalism is in vogue.

It is a paradox that the labor-union leaders in America have lined themselves up politically with the Democratic Party, whose latest program confirms a suspicion that the party is bent on impairing the very economic system that has benefited labor so widely. But

the rank and file of the workers do not have much to say about the political maneuvers of the labor bosses. Their dues, which are supposed to be used for union benefits, are applied to pay big salaries to executives of the unions who spend a large part of their time in political activities.

WHAT DEMOCRATS PROMISED

Also, by the use of the compulsory unionization law, the union bosses hold the power of economic life or death over the worker and, unless he goes along with the political campaign programs, even though they lead to socialistic ends, the ordinary union member can lose his job as a punishment for failing to conform.

The Democratic Party in the last election said through its leaders that it would support the President and promised also to favor policies of fiscal soundness. But the Democratic-controlled Congress has been here less than 2 months and it is becoming crystal clear that such campaign pledges have already been abandoned.

A pattern of strategy is emerging. The Democratic leaders favor more and more spending—more billions for all kinds of socialistic adventures, including a program of Government-owned electric-light-and-power projects. They also favor more and more exemptions from taxation for the maximum number of voters. Both approaches, while contradictory from any standpoint of fiscal soundness, mean a budget unbalanced by a wide margin. Then the Democratic Party spokesmen will claim that the Eisenhower administration has failed to balance the budget as promised in 1952.

It is beginning to look as if the 1954 election was very costly to the American people because it was influenced by the most deceptive piece of campaigning that the country has ever witnessed. The Democratic argument was that a depression was coming and that the number of unemployed would increase. It turns out now that the mild recession was short-lived and that business is booming because, in making 1955 plans, businessmen have had confidence in the fiscal policies of the Eisenhower administration. They expanded facilities after making a remarkable adjustment to the post-Korean war shrinkages in Government spending.

If, however, the budget is to be heavily unbalanced and the Democratic Party in Congress—which never balanced a budget in 20 years—is to continue in power after the next election, the country will experience a real inflation. That would come from a rapid increase in the cost of living and a severe drop in the purchasing power of the dollar. That threat apparently has no terrors for the Democrats, who are out to win in 1956 by what Representative DANIEL REED, of New York, a veteran member of Congress, describes as a scheme for buying the electorate. It remains to be seen whether the electorate can be bought by a \$20 tax cut per voter, and whether socialism, as offered by the Democratic Party leadership, is going to be accepted in preference to a sound dollar and a system of private enterprise.

Votes at \$20 Each?

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. KEATING. Mr. Speaker, I would like to call the attention of the membership to an editorial from the Rochester

(N. Y.) Democrat and Chronicle which I believe succinctly expresses the attitude of the majority of our people with reference to the proposal to reduce taxes by \$20.

I expect to support the President's plan to give further tax relief at the proper time, but the proposal which is now before us is ill-timed and unsound. We have not yet passed a single appropriation bill this year, and we do not yet know how much money we are going to have to spend to run the Government. It would certainly be no service to the people to hand each of them \$20 if we must borrow this money from the same individuals in order to make the gift.

Under leave granted, I include the following editorial:

VOTES AT \$20 EACH?

Twenty dollars is not much for an American citizen to contribute to his country. It is a trifling amount these days. It means 3 or 4 gasoline fillings for the car. A night at the races. A weekend party. Twenty dollars just doesn't go far. That is, it doesn't go far for the individual. Multiplied by many millions, it means more than a billion dollars, which still remains quite a sum even for our expensive Government.

The proposal to reduce everyone's taxes by \$20 is a cheap bribe, the child of cheap politics. It is an insult to the average man, who must put a higher price than that on his vote. It is an insult to any citizen who is not only expected to contribute to his Government, but is eager to do so.

Higher Pay for Congress

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the Daily Tribune, of Royal Oak, Mich., dated February 21.

This paper is one of the outstanding publications in the State of Michigan. It is my hometown paper. It serves a great portion of the people of my congressional district, the 18th Michigan.

The Tribune has published some comment on the present proposal for increased pay to Members of Congress. The view that it takes in pointing out that more than one-third of an increase in the salaries of Members of Congress would have to be paid back to the Federal Government in taxes is sound and correct. We all know that the salaries of Members of Congress are all taxable.

The editorial reads as follows:

HIGHER PAY FOR CONGRESS

The House bill would make the pay of Senators and Representatives \$25,000 a year, of which \$2,500 would be an expense allowance. A bill reported favorably in the Senate calls for \$22,500 as the total.

The present \$15,000 stipend with the \$2,500 expense allowance was set in 1946. In the following 9 years average consumer prices rose by more than one-third, and \$15,000 in 1946 dollars would be around \$20,000 in 1955 dollars.

But most Members of Congress insist that, because of their special expenses, they need more today than in 1946. Representative VICTOR WICKERSHAM, Democrat, Oklahoma, 49-year-old father of 4 children (2 under 20), reported on February 9 that he is now going into the red by \$4,900 a year and that in his dozen years in Congress his outlay has exceeded his salary by \$39,000.

But don't overlook the Federal income-tax bite. It would absorb about \$3,400 of a \$10,000 raise for Representative WICKERSHAM even if he had no outside income of any kind (he used to be a real-estate operator), and the Oklahoma State income tax would take \$600 or so more.

And most Members of Congress have outside income, so that the Federal income tax alone would take more—in many cases, much more—than \$3,600 out of a \$10,000 pay increase for them. So we shouldn't expect a raise of \$7,500 (as in the Senate bill) or even \$10,000 by itself to tempt hordes of better men to run for Congress or by itself to keep all the best Members there.

George F. Kennan

EXTENSION OF REMARKS

OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. QUIGLEY. Mr. Speaker, the 19th Congressional District is the home of a number of distinguished men. These include the President of the United States, Gov. George M. Leader, of Pennsylvania, and a man whose distinguished diplomatic service has been recognized by all save the present administration. I refer to the Honorable George F. Kennan, widely recognized as one of the most authoritative experts on Russia.

Under leave to revise and extend my remarks, I include the following article about Mr. Kennan from the Washington Daily News of February 23:

CONSULTANT GOES UNCONSULTED—KENNAN'S LINE SEEMS TO HAVE A SHORT

The State Department has not consulted George F. Kennan, former Ambassador to Moscow, on American-Soviet relations for almost 2 years, it was disclosed today.

One of the Nation's top Soviet experts, Mr. Kennan's retirement from the State Department was announced April 6, 1953, after he and Secretary of State John Foster Dulles had feuded openly over American policies toward the Soviet Union.

AGREEMENT

When Mr. Kennan left the State Department, it was announced that plans had been worked out for him to serve as a regular consultant to the Government. This agreement, it was said, was satisfactory to both Mr. Kennan and Mr. Dulles.

However, administration officials said today that Mr. Kennan had not been asked, since his retirement, to give the State Department his views on Soviet affairs. This was confirmed by Mr. Kennan at Princeton, N. J., where he has been working in the Institute for Advanced Studies.

"I have talked over these matters from time to time with friends in the Government, but I have had no consultations with the Department of State," Mr. Kennan said.

Diplomats said Mr. Kennan had stopped by from time to time on an informal basis to

chat with old friends. There was no indication, however, that he had even seen Mr. Dulles since April 1953. It is possible, however, that Mr. Kennan has had some contact with the super-secret Central Intelligence Agency headed by Allen W. Dulles, younger brother of the Secretary of State.

AUTHOR REJECTED

During the 1952 presidential campaign, Dwight D. Eisenhower and Mr. Dulles strongly criticized the Truman Administration's "containment of Russia" policy. Mr. Kennan was the author of the policy. Mr. Eisenhower and Mr. Dulles urged a more "dynamic" positive but peaceful policy of "liberation" of millions enslaved under communism.

Mr. Kennan made no bones about his fears. He warned against what he called the danger of misunderstanding and bitterness which could flow from such policies. He predicted that the competitive power of freedom would prove itself and that "totalitarian despotism will prove in the end to be self-destructive."

The question of Mr. Kennan's postretirement service with the State Department came up in connection with the latest Moscow power fighting. Ousted Premier Georgi M. Malenkov openly admitted his "guilt and responsibility for the unsatisfactory state of affairs which has arisen in agriculture." Diplomats recalled that Mr. Kennan had written 3 years ago that forced collectivization of Soviet agriculture was probably "the greatest single cause of discontent in the Soviet Union." "Agriculture," he said, "is the Achilles heel of the Soviet system."

Rotary's 50th Anniversary

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. CANFIELD. Mr. Speaker, Rotary clubs around the world are looking forward to continued "service above self" as they observe Rotary's 50th anniversary this month.

The world-encircling nature of this organization, which started modestly a half century ago, emphasizes the growing importance of the advancement of international understanding, good will, and peace through world fellowship of business and professional men united in the ideal of service.

It is with profound pride and a deep sense of obligation that I regard my membership in the Rotary Club of Paterson, N. J. It is good to know that the same warm, friendly atmosphere, the same high idealism that exists in the Paterson Rotary Club exists in more than 8,400 Rotary clubs with some 400,000 members in 89 countries.

Although Rotary has become worldwide, it has managed to keep its warmth, its helpful community spirit, its ideals of service to others, and a goal of peace.

Recently the board of directors declared that Rotary International "has declared unequivocally for the liberty of the individual, for freedom of thought, speech, and assembly, freedom of worship, and freedom from persecution."

It is obvious—

Said the board—

that everything for which Rotary International stands is the very antithesis of communism. * * * Where freedom, justice, truth, sanctity of the pledged word, and respect for human rights do not exist, Rotary and the ideal for which it stands cannot survive.

Rotarians will not rest on the yeoman service they have performed since 1905, but look forward to another half-century of community aid and promotion of international understanding.

Unemployment

EXTENSION OF REMARKS

OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. QUIGLEY. Mr. Speaker, I have again received a monthly review of employment developments and prospects for the York, Pa., labor market, covering the situation in January 1955 and issued by Leroy W. Gohn, manager of the York office of the Pennsylvania State Employment Service.

The January data shows that unemployment rose 37 percent to a new high of 7,400, more than double the number of unemployed a year ago. The report states that this high level is expected to be only temporary and will level off to about 5,600 by mid-March.

This would appear to be a scant ray of hope since it represents more than 6 percent of the civilian labor force available.

January unemployment is 2,000 greater than the figure for November of 1954 and the expected leveling off in March will be 200 greater than actual unemployment in November.

Despite the glowing reports about the prosperous condition of the national economy which the Congress continues to receive from the administration, and which the American public continues to receive from administration public statements we have a difficult time convincing the 7,400 idle workers in the York labor market.

It is imperative that the Congress act upon conditions it knows exist rather than upon ephemeral visions of prosperity conjured by the administration hucksters. A step in the right direction, Mr. Speaker, is the proposal to grant income reductions to individual taxpayers. This should add approximately \$1 billion to the Nations purchasing power and it should be considered as merely one phase of a program designed to provide a full employment economy.

As I understand the mandates of the Full Employment Act of 1946 the Congress has no choice but to adopt a program for full employment. I believe the administration is also mandated to establish and maintain such an economy. It is up to the Congress then to step into the breach created by administration failure.

The report follows:

TEMPORARY EMPLOYMENT REDUCTION

A sudden drop in employment beginning in December caused total employment to fall from 93,150 in November to an estimated 90,700 in mid-January, a decrease of 2,450,

or 2.6 percent. However, most of the personnel reductions were seasonal, with mid-March employment levels expected to return within 400 of the November figure.

The following table presents a quick glance at current and anticipated trends:

Item	2 months ago, November 1954	Current, January 1955	Net change 2 months ago	Estimated 2 months hence
Civilian labor force available.....	99,050	98,100	-950	+250
Unemployed, total.....	5,400	7,400	+2,000	-1,800
Workers in industrial dispute.....	500	0	-500	0
Employed, total.....	93,150	90,700	-2,450	+2,050
Wage and salary workers.....	78,450	76,350	-2,100	+1,800
Other workers (including agricultural).....	14,700	14,350	-350	+250

The decrease in nonagricultural workers was evenly divided between manufacturing and nonmanufacturing industries, with a drop of 1,050 recorded in each. Layoffs of a seasonal nature, totalling 2,200, were included with the following industries affected: Food products, fabricated metal (tire chains), tobacco products, roofing materials, con-

struction, and retail trade. A reduction of 400 in furniture was attributable chiefly to insufficient orders. The only substantial gain in any industry was 600 in nonelectrical machinery, of which nearly 500 constituted return of workers who had been out on strike for 3 months.

SUBSTANTIAL INCREASE FORECAST

Based upon reports from 267 establishments, it is estimated that some 92,750 workers will be employed by March 15. This would be a gain of 2,050 over current levels, bringing total employment within 400 of the November 1954 level. Factors influencing this development will be recall of laid-off workers by the tobacco and construction industries, plus moderate expansion in several other industries. Highlighting the latter will be forecast expansion of 600 in the nonelectrical machinery industry, with the resumption of production of domestic air-conditioning equipment.

UNEMPLOYMENT SURGES UPWARD

Unemployment rose by 2,000, or 37 percent, to a new high of 7,400 (2,900 female). This was more than double the 3,600 unemployed a year ago. There are indications that this high level will be only temporary and will drop to about 5,600 by mid-March. In fact, the number of continued claims for unemployment benefits during the week ending February 10 were already 480 below the mid-January level.

Estimated employment, earnings and working time in manufacturing industries,¹ York labor market area,² January 1955

	Employment			Average weekly earnings			Average hourly earnings			Average weekly hours worked		
	January 1955	Month ago	Year ago	January 1955	Month ago	Year ago	January 1955	Month ago	Year ago	January 1955	Month ago	Year ago
All manufacturing.....	42,600	43,850	47,150	\$62.15	\$62.85	\$62.53	\$1.55	\$1.55	\$1.57	40.2	40.6	39.8

¹ Estimates of employment include production and nonproduction workers in non-Government establishments. Average earnings and hours cover only production workers.

² County included: York.

Note.—Figures for current month are preliminary.

Infiltration Into Reputable Labor Unions

EXTENSION OF REMARKS OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mrs. ST. GEORGE. Mr. Speaker, the two appended articles are by two distinguished columnists, Roscoe Drummond and George Sokolsky, who certainly never consulted each other before tackling this most important and dangerous subject.

Both men sound a sharp warning that we in Government should give great attention to, namely, the possible, nay very likely, infiltration into reputable labor unions of the A. F. of L. and CIO by Communist unions who are looking for a cloak of respectability behind which they can pursue their labors and capture unions and influence policy from within.

This is a serious matter and one which the Attorney General's Office should go to work on before it is too late. Time is of the essence, and time is growing short:

The articles follow:

OUSTED UNIONS FACE REGISTRATION

(By Roscoe Drummond)

The labor unions which were expelled from the CIO because they were Communist-dominated now are trying to barter and badger their way into the American Federation of Labor in an effort to acquire a new cover of respectability.

From recent editorials in the Daily Worker it is clear that directions have gone out from the Communist Party that now is the time for the expelled unions to renew their efforts to get under the umbrella of one or another of the big labor organizations, and as soon as possible.

There's a reason for this urgency on the part of the Communists.

The reason is that time is rapidly running out on Communist-front and Communist-infiltrated organizations in the United States. This means that if the expelled unions do not find shelter soon the law will catch up with them; the law requiring such organi-

zations to register and thus to function openly for what they are.

The circumstance is that the Attorney General now is authorized under the Communist Control Act of last year, to institute proceedings before the Subversive Activities Control Board against Communist-infiltrated organizations as well as against Communist fronts and Communist action groups.

Obviously the unions—such as the United Electrical Workers, the United Mine, Mill, and Smelter Workers, the American Communications Association, Harry Bridges' International Longshoremen's and Warehousemen's Union, and the International Fur and Leather Workers—which were voted out of the CIO for the very reason, that is, Communist infiltration, that the new law requires such unions to register, are going to feel the force of this new law as soon as the Attorney General can assemble all the needed evidence.

But the expelled unions have a potential lifeline which they hope to grab, if they can possibly make it. That potential lifeline is the provision in the 1954 act which gives any union affiliated with the A. F. of L., the CIO, the United Mine Workers, the Railway Brotherhoods something near to immunity. It is written into the law that such affilia-

tion gives a presumption of non-Communist infiltration, whatever the past record.

This is why the Communist Daily Worker is exhorting labor-union progressives, which is the Communist term for Communists, to try to grab hold of the developing merger between the A. F. of L. and the CIO and get the expelled unions into it.

An important test of the merger, says the Daily Worker, "is whether it will be expanded to embrace . . . the workers of the progressive-led independents"—that is, the expelled unions.

That is the visible Communist Party line. The Communists want the unions, expelled for Communist infiltration, in the new merger in order to get the maximum immunity from the Subversive Activities Control Act. They know that a Communist-dominated union can make no appeal to American labor unless its Communist domination is substantially concealed. If it has to operate in the open for what it is, namely, a Communist Party tool and agent of Moscow, its effectiveness is undercut.

No wonder the Communist Party wants to get the expelled unions under this protective shield before the Attorney General can begin prosecution.

There is every reason to believe that George Meany, president of the A. F. of L. and designated head of the superunion, will be an alert and earnest opponent of the Communist-infiltrated unions. But because of the independence of the separate units of the A. F. of L., it cannot be taken for granted that its national leadership can prevent the Communists from getting in.

Already negotiations are well advanced by which the A. F. of L. Amalgamated Meat Cutters and Butcher Workmen would take in the CIO-expelled International Fur and Leather Workers. While Meany is warning against it, the project is nearing completion. Nothing could be more harmful to the American labor movement nor to the A. F. of L.-CIO merger than to allow the Communists to use either as a seeding ground for subversion—and that's what the Communists now are trying to do.

LABOR'S BIG MERGER

(By George Sokolsky)

There was a time in the middle 1930's when it was possible to argue over the future of trade unionism in the United States. In the middle 1950's, that is no longer a moot question. The strong, well-financed, politically powerful trade union has become a norm of American life. About one-quarter of the American labor force, 15 million workers, belong either to A. F. of L. or CIO unions. To argue that these members are coerced into paying dues and striking against their will is to raise an unsolvable issue. There has been no demand on the part of any large group of workers that unions be abolished.

The new A. F. of L.-CIO will not only represent an enormous concentration of manpower but several billion dollars of reserves, much of which is being invested in common stock, often in the particular industry which the union serves.

The new national labor organization will be more powerful than either international union was during the period of competition between them. But with power must come responsibility. The agreement was correct in excluding racketeers and subversives, but that is not good enough. The racketeers need to be excluded actually and physically. All labor leaders know who they are and what unions they have invaded and which they control.

Similarly, the trade union leaders know who the Communists are and they do not strengthen public confidence by permitting unions expelled for having been led by subversives to return to American trade union-

ism by the back door of amalgamation with decent unions. That can only mean an open door for infiltration.

That many unions are accepting their responsibilities seriously is apparent in the publication of annual reports. But the democratic method of choosing union leadership is still to be hoped for and will undoubtedly come as the unions become more stabilized and businesslike.

The criticism of the labor union therefore shifts from theorizing as to whether they should exist at all to objections to racketeering, subversion and unstable practices. The course fixed in the middle 1930's of a recognized American type of trade unionism regulated by act of Congress and supervised by the National Labor Relations Board is now fixed in the American industrial system. The remaining independent unions are not very different from A. F. of L.-CIO unions and often are as great a trial to management. No large industry in the United States is without some type of union organization.

The fear of the merger then is unrelated to the industrial aspects of trade unionism but does arise from the uncertainty of the use of manpower and cash for political manipulation. While tight limitations are placed on political contributions of corporations and individuals, practically none are placed on the trade union or their related organizations. They could corrupt the entire electoral process with their abundant tax-free dollars if they so chose. Furthermore, they could develop a class-conscious political system which might be modeled after the British Labor Party or become affiliated with international communism.

This fear could not have existed in the era of Samuel Gompers; it merits thought and study these days when a doctrinaire socialist, such as Walter Reuther, may be the effective leader of 15 million men. It is not altogether impossible that by 1960, this may be the prevailing issue in a presidential campaign.

Brotherhood Week

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared in the Kearny (N. J.) Observer under date of February 17, 1955:

BROTHERHOOD WEEK

Brotherhood Week is the vehicle designed by the National Conference of Christians and Jews for the advancement of justice, democratic principles, understanding, and good will among all peoples.

All men are created equal, they are endowed by their Creator with certain inalienable rights. As Americans we believe that—however imperfectly we may carry it into practice.

It is wise that a week be set aside for the eradication of prejudice in our thinking, for the betterment of social justice, and for the promotion of harmony.

It should not be a week of mere superficial attention to nice gestures toward brotherhood. It should be a week of renewed devotion to the great underlying principles which make brotherhood attainable.

Patience with one another, love of neighbor as of self can cement the people of America into a spiritual force with an effort beyond our power to appraise. In the very

nature of things such a force cannot be confined to the borders of America.

Brotherhood Week carries the wholehearted endorsement of leaders of every faith, of business figures, labor chiefs, educators, Government officials, men and women in every line of endeavor.

Brotherhood Week gives the impetus for intensive interest in human values that should carry through all the weeks of the year. Emphasizing its theme helps to bring to reality the highest type of idealism. Let us be thankful for the National Conference of Christians and Jews.

Brotherhood is the common bond among children as they play together, unaware of any chasm between them. It is the link that makes buddies of soldiers who fight together. Brotherhood impelled the chaplains of three different faiths to give up their lives at sea for the men they served.

Let us therefore practice this brotherhood in our everyday contacts, as we transact our business and as we kneel in our sanctuaries. Let us export it in such quantities as people beyond our borders will accept.

Matusow Lies Raise Question About Ex-Reds' Testimony

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include herewith the following editorial from the Reading (Pa.) Times:

MATUSOW LIES RAISE QUESTION ABOUT EX-REDS' TESTIMONY

In confessing that he had perjured himself when he was a witness at Communist trials, Harvey Matusow, former member of the Communist Party and former aid to Senator JOSEPH R. MCCARTHY, spoke about the strange kind of glamour the ex-Communist has in this country. Matusow may be a very mixed-up man and may one day find himself in durance vile, but in this remark he spoke truly. But he spoke only part of the truth.

The other part of the truth about ex-Communists is that some of them are execrated as greatly as some are glamorized. Elizabeth Bentley, Louis Budenz, Whittaker Chambers—these are all former Communists and these are the names the professional anti-Communists conjure with. As Matusow says, their synonym is glamour in many a bright lexicography. Whatever they say about communism and its practitioners is taken as gospel.

Matusow forgets former Communists like James Wechsler, editor of the New York Post. He's a member of the ex-Communist lodge in just as good standing as Miss Bentley, Budenz, and Chambers. Yet when he got before the McCarthy committee, his recantation was tossed aside by the junior Senator from Wisconsin, who sought to picture him as one who was still playing the Communist game, though under the cloak of anti-communism.

The answer to Matusow's half-truth would seem to be that being a former Communist really doesn't matter. What's important would seem to be the kind of ex-Communist you are and whom you play ball with after you are converted from the mass psychosis that is communism.

In the meantime, it will be interesting to see what the grand jury that has summoned

Matusow, the confessed perjurer, will do with this unsavory specimen and how such men as Owen Lattimore, who was accused by him, will fare now that Matusow is dealing from another deck.

Ambassador to Washington

EXTENSION OF REMARKS OF

HON. JAMES G. DONOVAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. DONOVAN. Mr. Speaker, under leave to extend my remarks, I should like to include the following editorial from the Manila Chronicle of January 25, 1955, entitled "Ambassador to Washington":

AMBASSADOR TO WASHINGTON

For almost 2 years now our government has had no representative in Washington, D. C., the most important diplomatic center in the world today. As a matter of fact, Washington may well be called the diplomatic capital of the free world.

Major decisions are formulated and proclaimed from this nerve center of world diplomacy that, because of their impact on international affairs, cannot but influence our own national interests.

We render ourselves proud in saying at appropriate times that we have special relations with the American people by reason of our tutelage in the democratic way of life under the United States and, consequently, that we have special interests to foster and serve. Yet it is strange that we have not come around to naming our own Ambassador up to this time to fill the post vacated by Gen. Carlos P. Romulo early in 1953.

Our Government has lately named ambassadors and ministers with the personal rank of ambassadors to less important diplomatic posts, the maintenance of which would entail great expense without expectation of any immediate or tangible benefits to our Government and people.

In most of the countries where we have sent diplomatic representatives, there are at present only a handful of Filipinos whose business and other interests, if they have any, could effectively and at relatively small cost be handled by consuls or commercial agents.

And yet we have opened embassies and legations, with large staffs, in the capitals of these countries when what our Government should have done was name our Washington Ambassador first. Were these posts created to accommodate lame ducks and political proteges?

Even Soviet Russia and the Iron Curtain satellites maintain full-fledged ambassadors in Washington to take care of their respective national affairs and interests. Yet the Philippines, it seems, would allow this awkward situation to continue notwithstanding our irrevocable ties with the democracies by relying solely on the services of Presidential Envoy Romulo.

What we need in Washington today is a full-time ambassador, not a special envoy which, to all appearance, is but a special accommodation.

The need for the immediate appointment of a regular ambassador is understood by the fact that the United States Congress is now ready to consider the Laurel-Langley agreement on the revision of the Bell Trade Act. His presence there at this crucial moment would also stifle persistent calls for

President Magsaysay to visit Washington so that his popularity could be availed of in the performance of a purely ambassadorial job.

Moreover, the Government's continued failure to name an ambassador to Washington could be misinterpreted to mean that for all practical purposes we have severed our diplomatic relations with Washington ahead of the Soviet Union.

Bureaucrats at Your Kitchen Range

EXTENSION OF REMARKS OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mrs. ST. GEORGE. Mr. Speaker, the following article by the very brilliant publicist, Alice Widener, appeared recently in the magazine U. S. A. I commend it to the thoughtful consideration of the Congress and citizens of our great country.

The Supreme Court's decision of June 7, 1954, may well wreck the natural gas industry and end by pricing it out of the market. This economical fuel on which our people have come to depend should be encouraged and not hampered with bureaucratic regulation under the Supreme Court decision of last June. This may soon happen.

BUREAUCRATS AT YOUR KITCHEN RANGE

(By Alice Widener)

If you want to cook the family dinner and heat your home with plenty of cheap natural gas, you had better learn the bad news that you might be in for trouble due to unwarranted Government interference in your domestic affairs.

On June 7, 1954, the Supreme Court ruled that the Federal Power Commission has the right to regulate the price of natural gas at the wellhead in the fields. This bureaucratic control is ostensibly designed to keep down the price of gas. But—as any American woman who bought meat at a butcher shop during the nineteen forties can tell you—Government price control results in eventual scarcity of supply and high prices.

If housewives in the United States don't want to queue up in the future for scarce, expensive cooking and heating gas (as housewives are forced to queue up for expensive necessities in many Socialist-dominated foreign lands) they must see to it that this new fangled right of regulation granted to the FPC is quickly taken away.

How can this be done?

In the good old American way. As an alert citizen you can get the facts about natural gas supply and price, then ask Congress to enact legislation nullifying the bad situation created by the Supreme Court decision.

What are the facts? Following is a record of the main ones:

In 1938, Congress passed the Natural Gas Act which recognized that the industry falls into three parts:

1. Production and gathering of the gas.
2. Transmission in interstate pipelines.
3. Local distribution and sale.

The act didn't materially affect part 3 because distribution and sale were previously regulated by State public utilities commissions or local authorities.

Concerning part two, most oil and gas companies readily acceded to the need for

regulation because pipeline transmission is a kind of necessary monopoly exercised through right of a single franchise. Nobody in his right mind would be prodigal enough to build parallel pipelines to a single destination, or locally to residential and industrial areas.

But in dealing with part one of the industry, which involves many complicated intrastate and interstate transactions, the Natural Gas Act specifically stated that its provisions "shall not apply . . . to the production or gathering of natural gas."

HEADS, I WIN—TAILS, YOU LOSE

A basic reason for this wise exemption is that in the United States of America most exploring for gas, and most of its production, is done by intrepid wildcatters and by other independent men and companies with courage enough to take big risks of total financial loss, and with ingenuity and gumption enough to cope with the strongest kind of competition. There are 5,000 large and small producers looking for gas. They find it in only one out of every nine exploratory wells drilled.

In regard to exploration for new supplies vitally needed as fuel for increasing home and industrial consumption, and also for the national defense effort, the Federal Power Commission regulation of prices actually amounts to a ukase to producers and gatherers: "You can take all the risk of losing your only shirt when you go out exploring. But if you strike it rich, you can't make money enough to buy more shirts than we say you can have."

Offered such a deal, even the wildest of wildcatters is likely to declare: "No exploring for me. I'd better stay home and hang on to the shirt I've got."

If the gas explorers do stay home, then millions of American families waiting to install new home cooking and heating equipment adapted to the cheapest and best fuel are going to wait and wait and wait. The lucky families already using natural gas will pay more and more for scarcer and scarcer supply.

FUEL OF THE FUTURE

How badly does our country need new sources of gas?

Last year the Empire Trust Co. of New York City stated: "In 10 short years natural gas achieved something of a miracle of progress. It now supplies about one-fourth of the Nation's energy needs." Nevertheless, in 1946 we had only an estimated 32 years future supply of gas. In 1953, despite new discoveries and increased productivity, the known reserves in the ground had dropped to a 23-year supply. Yet today 25 million families cook with natural gas, 18 million families rely on gas to heat water, 4 million families own gas refrigerators, 14 million families heat their houses with gas.

What part of our country does this fuel come from?

Mostly from fields in Texas, Kansas, Louisiana, Oklahoma, Arkansas, New Mexico, and Mississippi.

How do consumers residing in other States get gas?

Through pipelines. And it is the cost of pipeline construction and maintenance, plus the cost of distribution to the customer, that accounts for at least 90 percent of your household gas bill if you live in one of the nonproducing States.

As a matter of fact, a 10-percent cut in the price of gas at a Southwestern wellhead wouldn't reduce an easterner's or a midwesterner's gas bill by as much as 1 percent.

THE FEDERAL INTRUDER

Then how and why did the Federal Power Commission get this harmful new right of regulation at the gas wellhead?

A major part of the real explanation lies in the story of "creeping socialism" in our country. It is a story about the long and

slow growth of a huge regimenting Federal bureaucracy which has been foisted on the Nation by a group of determined men with plenty of Marxist ideas and very little plain commonsense.

Extremely conceited, these men believe themselves to be the wisest possible planners for a planned society controlled from Washington, D. C., and are convinced they know better than anybody else what is wrong and right for America. Most of them don't dare use the word "socialism" today because they know it is obnoxious to Americans. Therefore these planners double-talk about "a new social order" and "a better democracy" and "a welfare state."

One of their number is a longtime New Deal favorite, Mr. Leland Olds. In 1939, only a short while after Congress passed the Natural Gas Act, he was appointed Chairman of the Federal Power Commission. During his 10 years occupancy of this important post, Mr. Olds waged war on the oil and gas companies in a struggle which he invariably characterized as "the conflict between the public and the private interest."

COURSE OF A LONG CAREER

But what is Leland Olds' view of the American public and private interest? Clearly, it is based on the Marxist slogan "Production for use and not for profit."

As a youthful member of the Intercollegiate Socialist Society, for example, he wrote an article for the April-May 1919 issue of its official magazine in support of a proposal "that the Government turn over to the railway employees the entire management of the railroads of the United States." He defined the issue as "between national capitalism and industrial democracy," and advocated a form of guild socialism which was gaining momentum in England.

Pleased that this "ism" was "in line with even deeper social movements," Olds explained that "it is to all extents and purposes the Anglo-Saxon expression of the Russian Soviet principle."¹

Using his own particular brand of expressions, Olds then indiscriminately smeared "financial interests which have milked the [rail] roads for so many years."

Olds always remained extremely close to the Intercollegiate Socialist Society which in 1923 altered its title to "The League for Industrial Democracy." The membership evidently believed that under a new and deceptive name, a bunch of red roses might smell sweeter to the American public.

In 1952, still using his own brand of Anglo-Saxon expression of the Soviet principle, Leland Olds wrote an article for the League for Industrial Democracy on "the need for a moral awakening in America."² In a stale, rabble-rousing diatribe, he vilified all American business and accused "the great corporations" of having bred in our country "a great impersonal, amoral system of irresponsible ownership."

Parroting Stalin, Vishinsky, Molotov and company, Mr. Olds branded the entire ethics of American business corporations as based on "maximizing profits after taxes" and declared that he himself often witnessed the corporations' "enthronement of selfishness above patriotism or religion." Then he talked about "the many phases of western life which are repulsively materialistic. . . . The spirit of business gain . . . the utter selfishness of uncoordinated activity."

THE SENATE REBELS

Precisely what kind of western life does Leland Olds want? The bureaucrat-controlled type that leads inevitably to the self-

less, coordinated activity existing in the eastern life of the Soviet slave empire?

Evidently, the United States Senate found the answer to the foregoing question. Tired of Olds' fulminations against American business in general, and the oil and gas companies in particular, the Senate in 1949 refused his reappointment as Chairman of the Federal Power Commission.

Immediately, certain leftwing newspapers and columnists tried to make a national martyr out of Olds. The general public, however, remained coolly skeptical of the New York Post series of articles, "My Fight With the Power Lobby, by Leland Olds."

But the hard core of Marxists in the League for Industrial Democracy and their leftwing spokesmen and fellow travelers never say die. And so, October 8, 1951, Columnist Joseph Alsop tried to absolve Olds from senatorial charges of Socialist bias, and also took up the prejudiced leftwing hue and cry against the oil and gas companies.

Under the title, "The Big Potatoes," Alsop told a tale of how Senator ROBERT S. KERR, of Oklahoma, "a millionaire, the owner of vast oil and gas properties of his own" had started a fight in 1945 to relieve the natural-gas industry of Federal Power Commission ratemaking. Alsop charged that the Senator had tried to pack the FPC with members of his own choosing, but was frustrated by the incorruptible and determined Commission Chairman, Leland Olds who organized protest deputations to the White House.

Continuing the tale, Alsop wrote: "The temporary setback did not discourage Senator KERR. Olds' term as Power Commission Chairman expired, and his re-nomination had to be approved. KERR, now transferred to the Senate's larger sphere, organized an intense attack on Olds as a sinister Socialist, offering in evidence the more foolish utterances indulged in by Olds as a very young, excessively idealistic Congressional minister. Outraged by the threat to free enterprise, the Senate rejected Olds. Meanwhile, the Oklahoma Senator also offered the Kerr bill, giving the natural-gas producers legal protection against Power Commission ratemaking."

POWER BEHIND THE THRONE

Goaded by Olds, President Truman vetoed the Kerr bill, after Senator PAUL H. DOUGLAS, of Illinois (another Olds-ter member of the Intercollegiate Socialist Society and/or the League for Industrial Democracy) had stirred up what Alsop described as a big row on behalf of the gas consumers, whose gas prices were about to be inflated.

Joseph Alsop and his cronies were not, however, able to veto justifiable criticism of the hardened Socialist Olds-ters.

It is true that some misguided, idealistic Americans who embraced socialism during college days should not now be harshly rebuked. Their subsequent careers show plainly that they grew wiser as they grew older, and they abandoned sophomoric naivete.

But a discerning public should not be fooled by Alsop's whitewashing the pink past of a person who verbally denies present attachment to marxism but acts according to its tenets.

Naturally, the leftwingers were displeased by the appointment of former Gov. Mon C. Wallgren, of Washington, to succeed Olds as chairman of the FPC. According to Joseph Alsop's slanted version of this replacement:

"Wallgren gave KERR what he wanted, control of the Power Commission. In a case started by KERR's old friends, the Phillips Petroleum Co., the Wallgrenized commission immediately reversed itself, briskly enacting the vetoed Kerr bill by simple administrative ruling."

What Alsop failed to tell is that the FPC itself had many times disavowed any power

to regulate the producers and gatherers of natural gas, in rightful defiance of Chairman Olds' opinion.

LEFTWING WINNER TAKE ALL

At the end of Alsop's left-leaning column, he declared that the stakes in the Power Commission struggle are really almost incalculable.

They certainly are. And every American has a stake in finding out what are the facts. For if the right of regulation by the FPC over natural-gas producers and gatherers should remain unchallenged or unaltered (as it was acquired through the Supreme Court's 5 to 3 decision in the Phillips Petroleum case June 7, 1954), then the legal precedent is set for establishing a price-controlled economy in the United States.

On November 9, 1954, the New York Times carried a headline, "U. S. Control of Natural Gas Held Forerunner of Widened Socialism," and reported that Mr. A. M. Rippe, manager of the Phillips Petroleum Co.'s natural-gas department, said at a Chicago meeting of the American Petroleum Institute: "It is no more logical to regulate the producers of gas than to regulate the producers of coal, the growers of wheat and cotton, or the miners of iron ore."

In Tulsa, Okla., last fall, Mr. L. F. McCollum, president of the Continental Oil Co., explained in a human, simple way:

"The American housewife has become accustomed to using gas for heating, cooking, and even for drying her washing. Is she going to be happy to have to give up the clean fuel that provides her with convenience and comfort?"

"Our job is to let Mrs. America know what Federal regulation of field gas prices will mean to her—not in technical, legal terms, but in terms of her own everyday experiences of cooking, cleaning, washing, and keeping warm."

Mr. McCollum wasn't crying wolf about the danger of severe shortage for housewives' use. If interstate sale of gas becomes unprofitable, the producer will abandon it and sell his product in his home State to increasing numbers of industrial consumers.

NEEDED: CLOSER CONGRESSIONAL LOOK

What all Americans need to know in non-technical terms is that the Supreme Court decision on natural gas was reached in opposition to Congress, and in spite of 11 adverse rulings by the Federal Power Commission itself.

Unfortunately, many patriotic and high-minded municipal officials and legislators now support the Court's decision in the mistaken belief that they are protecting the best interests of consumers in nonproducing, gas-served areas. But when Congress takes a closer look at the real situation of the natural-gas industry, and at the activities of a Marxist-minded minority pressure group, the legislators will surely act according to the best interests of our country as a whole.

Surely, Congress will examine carefully the views of those oldsters inside and outside Government who advocate excessive bureaucratic control.

A SUPREME EXAMPLE

For example, there is Supreme Court Justice Felix Frankfurter who wrote a special assenting opinion in the Court's decision in the Phillips case last June.

At a League for Industrial Democracy birthday banquet for materialist philosopher John Dewey in 1949, Justice Frankfurter paid tribute to the guest of honor by quoting the words of a dead poet: "For man is omnipotent."³ And though Harvard University's professor of English recently described Dewey's thinking as the "philosophy

¹ The Intercollegiate Socialist, April-May 1919, New York City, pp. 22-23.

² Needed: A Moral Awakening in America, League for Industrial Democracy, New York City, 1952, pp. 17-18.

³ John Dewey, At Ninety, League for Industrial Democracy, New York City, 1949, p. 11.

of barbarism," Justice Frankfurter admires it so much that he wrote:

"Not the least of his (John Dewey's) insights is his realization that civil liberties draw only limited strength from legal guarantees. Constant preoccupation by our people with the constitutionality of legislation or executive action rather than its wisdom tends to preoccupation with a false value. . . . The ultimate reliance for the deepest needs of civilization must be found outside their vindication in courts of law."

Surely these are most unusual views for a Supreme Court Justice to hold. Did Justice Frankfurter find justification outside of law for his decision in the Phillips case?

One thing is clear: If his seeming belief that man is omnipotent is correct, then God pity humankind. For Sir James Fraser pointed out in his classic masterpiece, *The Golden Bough*, that there is a solid layer of savagery beneath the surface of society which is a standing menace to civilization.

"The deepening sense of religion," wrote Fraser, "affects only those higher intelligences who have breadth of view enough to comprehend the vastness of the universe and the littleness of man. Small minds cannot grasp great ideas; to their narrow comprehension . . . nothing seems really great and important but themselves."

THE FINAL ANSWER

Thus Fraser furnished a final answer to the oldsters who believe in "Government ownership and control" as a remedy for all the ills of society. They never are willing to face the fact that "the state" is merely an ever-changing assembly of fallible human beings to whom the least possible degree of power should be entrusted.

Chances are that the chairman of a Federal Power Commission is a human being very much like the chairman of the board of an investor-owned power company. People being what they are, society needs restraints. The most just and effective ones are based on natural and divine laws.

Leftwing economists and bureaucrats are rash indeed to tamper with the laws of supply and demand, of diminishing returns, and of a heavenly bounty so miraculous that man can find a share of it in the form of a fuel under the ground.

Happily, the average American housewife recognizes the littleness of herself and of her own family, and she cherishes the greatness of traditional American principles. If one of them is weakened, all are endangered.

Free, competitive enterprise is a basic American principle. If it was damaged last year for reasons "outside of law" by the Supreme Court in the Phillips case, then Americans will this year exert their constitutional right of congressional redress.

No Help, Thanks

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. FEIGHAN. Mr. Speaker, under leave granted, I wish to insert in the RECORD the following editorial from the *Geneva (Ohio) Free Press* of January 19, 1955, which presents a novel and refreshing point of view, entitled "No Help, Thanks":

No Help, Thanks

The following story, which happens to be true, would be better on St. Patrick's Day. But, at a time when Washington is debating how many millions to give away in Asia, it really won't keep.

Two weeks ago, a series of torrential gales swept over Eire. Now gales are anything but a novelty in Ireland, but these were something special. The River Liffey at Dublin rose far above its banks, flooded thousands of homes, and paralyzed all nearby businesses. Naturally, there was great distress.

Before the official guardians of the United States purse could get to work, the Washington branch of the Ancient Order of Hibernians sent a cable to President O'Kelly at Dublin, offering to send material assistance to flood victims. Immediately he got a reply: "Thanks, but the Irish Government can cope with the damage without outside assistance and will do so."

The demands on Uncle Sam's purse are infinite. The amount of American money thrown away in the past dozen years would pay off the national debt of most countries on earth. But every once in a while a nation comes along—usually a small one, like Finland or Eire—which not only can stand on its own feet but insists upon doing so. More power to them.

Urge Congress To Intensify Fight Against the Pink Bollworm

EXTENSION OF REMARKS

OF

HON. PAUL C. JONES

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. JONES of Missouri. Mr. Speaker, I am happy to call to the attention of the House of Representatives and particularly to the members of the Appropriations Committee a resolution adopted by the House of Representatives of the Missouri General Assembly and urge that every favorable consideration be given to the problem posed by the pink bollworm.

The resolution follows:

House Resolution 59

Whereas a committee created by the house of representatives of the Missouri General Assembly known as the special pink bollworm committee was designated and authorized to ascertain the danger of the pink bollworm invasion into the cotton-producing areas of Missouri; and

Whereas said committee was composed of members of the house of representatives, Missouri General Assembly; entomologists representing the State department of agriculture; the University of Missouri; and the Missouri Cotton Producers Association; and

Whereas said committee has made a personal investigation of the pink bollworm menace in the infested areas of several States and has consulted with persons in charge of control and research measures of the States of Arkansas, Mississippi, Louisiana, Oklahoma, Texas, and the Republic of Mexico; and has carefully considered the evidence obtained; and

Whereas, in the light of the information gathered by this committee, the house of representatives concludes that the pink bollworm constitutes a serious threat to the continuance of the South's basic industry which is raw-cotton production; and

Whereas the pink bollworm, following in the footsteps of the boll weevil, has been steadily invading the Cotton Belt and in recent years there has shown an ominous acceleration in its rate of spread in the face of quarantine and application of all known control measures; and

Whereas that the pink bollworm, if allowed to get out of hand, will rival or surpass the boll weevil in destructiveness; and that it constitutes a real and immediate threat to the cotton industry of the State and of the Nation: Now, therefore, be it

Resolved, That the House of Representatives of the General Assembly of the State of Missouri recommend and urge the Congress of the United States to authorize and direct the intensification of research and control practices now current throughout the South, and that particular emphasis be placed on the work now being done at the United States Department of Agriculture Pink Bollworm Research Center at Brownsville, Tex.; and be it further

Resolved, That the Congress be requested to authorize and implement a comprehensive research and control program with which the Department of Agriculture and the control agencies of the various States may cooperate and coordinate in the fight against the pink bollworm to the end that with adequate research, a successful weapon against the pink bollworm may be found; and be it further

Resolved, That the advancement of said research be fostered by adequate appropriation and by any other possible means; and be it further

Resolved, That a copy of this resolution be sent to the Secretary of the United States Department of Agriculture, and to each Senator and Representative from Missouri in the Congress, and to the chairman of the Appropriations Committee of the House of Representatives of the United States Congress.

Lithuanian Declaration of Independence Day, February 16, 1918

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter embodying resolution adopted by the Lithuanian Americans of Brockton, Mass., during their program in observance of the 37th anniversary of Lithuania's Declaration of Independence, sponsored by the Catholic Federation of St. Casimir's Parish:

BROCKTON, MASS., February 20, 1955.

Hon. RICHARD WIGGLESWORTH,
House of Representatives,

Washington, D.C.:

The Lithuanian Americans of the city of Brockton, during their program in observance of the 37th anniversary of Lithuania's Declaration of Independence, sponsored by the Catholic Federation at St. Casimir's Parish Hall, unanimously resolve:

1. Their wholehearted support to achieve lasting peace and justice throughout the world.

2. Respectfully urge the United States Government to develop an overall dynamic program against the international Communist conspiracy.

3. To incorporate into this program as an integral and inseparable part, the restoration of full sovereignty to Lithuania and other Soviet-enslaved nations.

Respectfully submitted.

LEONARD KUMPA,

President.

SUSAN K. BOROSKAS,

Secretary.

Return of Servicemen Now in China

EXTENSION OF REMARKS

OF

HON. WILLIAM C. CRAMER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. CRAMER. Mr. Speaker, I request permission to extend my remarks and include in the RECORD a statement and letter addressed to me by the national commander of the National Association of Korean War Veterans of the United States. This letter pertains to and expresses the opinion of this Korean veterans' leader in opposition to the diplomatic recognition of Communist China and seeks support of all the citizens of this great Nation to return our servicemen from captivity in Red China. These, too, are matters of great concern to me; and I would call them to the attention of this House of Representatives for I feel these opinions of men who have offered their lives in far-eastern conflict to protect the shores of our own Nation and the opinion of the great majority of Americans are one and the same.

The matter follows:

HOLLY HILL, FLA., February 17, 1955.

The Honorable WILLIAM C. CRAMER,
United States House of Representatives,
First Congressional District of Florida,
House Office Building,
Washington, D. C.

DEAR REPRESENTATIVE CRAMER: In reviewing world history between 1933 and 1950, it can be found that international communism under the leadership of the Soviet Union was enabled to take over 14 independent nations, including the Republic of China.

In 1933 we find that international communism was, in fact, a very minor threat to the United States or to the world in general, when President Franklin D. Roosevelt granted the Soviet Union diplomatic recognition. It is noted that the Soviet Union was granted \$12 billion in lend-lease during World War II and another \$3 billion through UNRRA. For our friendship and help throughout the past 22 years we now find that the Soviet Union supports and directs the activities of Communist China, which is showing every sign of being an enemy to the United States.

Evidence of what is going on in the minds of the leaders of Communist China and the Soviet Union can be easily seen when we observe that our servicemen are being held in Communist Chinese prisons and denounced publicly as spies, when they were actually captured in the uniform of the military forces of the United States. It can be seen that our patriotic servicemen are being held by Communist China as a pawn to help in their campaign for diplomatic recognition by the United States and to obtain a membership in the United Nations.

Let us ever oppose diplomatic recognition of Communist China, as we can now see that by recognizing Soviet Russia in 1933 we made a great mistake, and by recognizing Commu-

nist China we shall be favoring an enemy who would stop at nothing to overcome the nations of Asia and place them in the orbit of international communism.

We can now easily see what caused the downfall of Nationalist China. The Honorable Patrick J. Hurley, who was sometime President Franklin D. Roosevelt's special ambassador to the Republic of China during World War II, has eloquently said:

"Our diplomats surrendered the territorial integrity and the political independence of China in a secret agreement at Yalta. The Yalta secret agreement is a blueprint for the Communist conquest of China. Every step in the Communist conquest of China has been engineered by our own diplomats, in cooperation with the Chinese Communists and Russia. Yalta is the most disgraceful chapter in the history of American diplomacy."

Let us sincerely hope that the blunders of our leaders during the period 1933-50, which resulted in World War II, the Korean conflict and the fall of many nations, including the Republic of China, will ever be criticized and that the United States will again assist those enslaved nations to regain their individual sovereignty.

It is believed that the Korean conflict was the result of an international Communist plan to undermine the prestige of the United States and the free world in the eyes of all the world. It is sincerely believed that if Gen. Douglas MacArthur had received the support of his Commander in Chief in his hour of need that the Korean conflict would have been ended much sooner and with less loss of life. We are indeed thankful to President Dwight D. Eisenhower and his assistants for being instrumental in bringing the Korean war to an end.

It is our hope that all citizens of our great Nation will earnestly pray for the return of our servicemen now in the Communist Chinese prisons and that the day will come when our great prestige will no longer be undermined by such activities as the Korean conflict unveiled.

Thanking you for your continued cooperation, I remain,

Sincerely yours,

VIRGIL VASCOE HARTON, Jr.,
National Commander, National Association of Korean War Veterans of the United States, Inc.

Ukrainian Independence

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. PHILBIN. Mr. Speaker, in connection with the annual observance of the proclamation of Ukrainian independence, a noteworthy event in the history of human freedom, I desire to extend my best wishes and encouragement to the people of that afflicted land and reaffirm my active faith in the eventual liberation of that nation and all the nations now embraced in the tyrannical Red Communist orbit.

The Ukrainian Nation has struggled for centuries against great odds for its freedom and independence. Of impressive historical interest is the old Ukrainian Kivan State which existed from the 9th to the 14th century, the Ukrainian Kozak which extended from the 17th to

the 18th century, and of more recent memory, the Ukrainian National Republic established in 1917 and smashed by Bolshevik tyranny in 1920.

The area embraced by this Nation is large and vital to the Soviet Union since it is the so-called breadbasket of Russian economy. Since Soviet domination the people of the area have undergone intensive suffering and trials embracing the destruction of its nation's churches, famines by governmental edict, mass murders of its innocent and helpless citizens, and cruel purges and deportations engineered by Red leaders. This territory embraces Kiev, noted in history and tradition for its rich culture and high state of civilization.

Although the Ukrainian people were visited during the Second World War by the scourge of nazism, their will is indomitable and unshakable, and their courage in the face of oppression and tyranny undeniably tenacious. The mailed fist of communism has descended upon their heads, but the people have never ceased their resistance in spite of the ruthless brutality of tyrants which steadily rains down upon them.

Ukraine is the largest non-Russian nation behind the Iron Curtain and because of its spirit, independence, and devotion to liberty, it is a natural ally of all nations opposed to dictatorship, totalitarian government, and marxism.

This nation and its suffering, gallant people, is entitled not only to our sympathy and encouragement, but to our affirmative assistance in sharing their aspirations and making every contribution we can to promote and advance them toward the goal of liberation.

Let us hope and pray that the day is not too far distant when all enslaved nations will enjoy the liberation they seek and struggle for, and Ukraine will again be acknowledged as a sovereign and independent nation associated with that great partnership of free nations which is struggling to forge a free world, unfettered by the shackles of oppression, and untouched by the abominable curse of tyranny.

Twenty Dollars for Everybody

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to include the following editorial from the Newark Evening News of February 23, 1955, entitled "Twenty Dollars for Everybody":

TWENTY DOLLARS FOR EVERYBODY

Apart from its political origin, the mischievous thing about the \$20 tax-reduction scheme concocted by House Democrats is the form in which they propose to send it to President Eisenhower.

Speaker RAYBURN and the Ways and Means Committee refuse to let the \$20-for-everybody proposition stand on its own. Instead

Democrats plan to write the provision into a bill providing for necessary extension of excise and corporation taxes. Unless these levies are specifically continued by Congress, some will expire and others will be automatically reduced by 5 percent on April 1 at a total cost of nearly \$3 billion.

Thus President Eisenhower would have to kill the whole bill in order to veto the \$20 reduction for every taxpayer and dependent. Congress could, of course, reenact an extender for expiring excise taxes and continue corporate imposts at prevailing rates. But the resultant confusion and possible loss of additional revenue further validate the effective indictment of Secretary Humphrey who said the House plan represents Democratic abandonment of responsible financial management of the Federal Government.

Poor management it is, but House Democrats obviously think it is good 1956 politics to cut income taxes by \$2 billion and to strike nearly 5 million taxpayers from the rolls. No doubt they have the votes to pass the bill. In the Senate, however, there are indications of more responsible leadership by such Democrats as Byrd, of Virginia, and George, of Georgia. Mr. George, describing the House scheme as unwise and unfortunate, confirms Secretary Humphrey's estimate.

Everybody likes the idea of paying less money to the Government, and it is certainly new and novel to find Democrats after all these years so suddenly solicitous about the taxpayer. Mr. Eisenhower has promised relief when it can be given without harm to defense, the budget, and other commitments. But orderly reduction has no appeal for House leaders. With them politics gets priority over prudence.

The Upper Colorado River Basin Storage Project

EXTENSION OF REMARKS OF

HON. HENRY ALDOUS DIXON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. DIXON. Mr. Speaker, it is of some concern to me that the upper Colorado River basin storage project is being viewed by many as benefiting only the upper basin States. I am pleased to have the privilege of placing in the CONGRESSIONAL RECORD a letter from Mr. Alan E. Brockbank, of Brockbank, Inc., Salt Lake City, Utah, which pictures the project in its true light; namely, as an economic asset of inestimable value to the entire Nation as well as an unmitigated blessing not only to the Upper Basin States but to every State.

The letter follows:

SALT LAKE CITY, UTAH, February 12, 1955.
HON. HENRY ALDOUS DIXON,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: I have been watching the articles very closely that have appeared recently in the newspapers and in periodicals concerning the Echo Dam project. It seems to me that we are still not quite telling the entire story. We are not appealing to the whole United States to show the necessity of this great project.

Recently I had an opportunity to spend a little time with Byron H. Mock, who is retiring, I believe, the 15th of February, as a western head of the Bureau of Land Management.

Mr. Mock drew a little diagram on a piece of paper, of the area of western Colorado, southern Wyoming, and eastern Utah. He then drew a sketch of the area where the oil shale was located and told me there was more oil in that area in the shale than there is in any oil field in the world and likely more than there is in all of the oil fields of the world. Now this may be a little exaggerated, but it tends to indicate the terrific possibilities of that piece of ground.

He then drew another sketch of the Colorado Plateau and told me in that area was the greatest amount of uranium presently known to exist in the free world under private enterprise ownership and control.

Then he drew a third sketch on the map of the coal of Utah, Colorado, and Wyoming, and told me that in the Utah-Colorado area were the greatest deposits of coal, in his opinion, that existed in the hands of a free nation, and he felt water was the main ingredient to the development of these three great national resources, all of which are the very lifeblood of this or any other nation, and an asset that could mean the difference between loss or winning of a great national conflict.

This puts the area into an entirely different category from that of an area stewing as to whether it is more important for people to have drinking water than it is to have a great scenic project. I think all of the people of the United States are interested in the natural resources of this country and in the preservation of the greatest sources of energy there are in this country.

Mr. Mock even went so far as to say it could easily happen that within the next 50 years, there would be a city in southeastern Utah of half a million people, if they could get water.

Now it seems to me it is important for us to try to interest all of the people in this great project, if this is the greatest source of energy that exists in the free world. Therefore I want to call it to your attention and suggest that, if possible, our plan of attack be adjusted so we indicate the importance of this project to all of the people—not just a few—in which case I would say, we have a very good chance of success.

I would appreciate your thinking in this matter.

Yours very truly,

ALAN E. BROCKBANK, INC.

ALAN E. BROCKBANK, President.

Tampering With Soil Conservation Service

EXTENSION OF REMARKS OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. REUSS. Mr. Speaker, this Nation's soil-conservation program has saved precious topsoil from being washed into the sea. Many generations will profit from the foresight of those who planned and administered this program.

The little money spent by the Federal Government to maintain an adequate soil-conservation program is repaid many times by the preservation of adequate soil and water resources for all the people of America.

Those who would tamper with the soil-conservation program and play poli-

tics with the workings of the Soil Conservation Service, are doing a disfavor to this Nation.

A resolution adopted by the supervisors of 67 countywide soil-conservation districts in Wisconsin, the Wisconsin Association of Soil Conservation District Supervisors, at its annual meeting in Madison, Wis., on February 3, 1955, follows:

RESOLUTION ADOPTED BY WISCONSIN ASSOCIATION OF SOIL CONSERVATION DISTRICT SUPERVISORS, FEBRUARY 3, 1955

In looking back over accomplishments of the Soil Conservation Service in soil conservation districts in Wisconsin, real progress has been made. Cooperation between this agency and others working in the field of soil and water conservation in the State is most excellent.

Wisconsin has long recognized the wise use and vital importance of our natural resources and has helped develop soil and water conservation and good land use for the agriculture within the State.

We recognize the sound farmland and water policies adopted by Congress in the past and would very much like to see it continued.

Whereas the Soil Conservation Service has demonstrated its ability to serve with outstanding efficiency and skill in soil conservation districts of America; and

Whereas any transfer of responsibilities or change of organization of this agency would delay and decrease progress in our soil and water conservation efforts: Now, therefore, be it

Resolved by the Wisconsin State Association of Soil Conservation Districts, in annual session, That it favors:

1. Continuation of the Soil Conservation Services under the present financial and administrative form with responsibility for carrying out programs developed by the locally administered soil conservation districts and for furnishing technical assistance in the development of small watershed conservation projects.

2. Appropriation of Federal funds for the Soil Conservation Service in sufficient amount to permit accelerated progress in the important work of protecting and saving our vital soil and water resources and for additional responsibilities under the small watershed act; further

Resolved, That a copy of this resolution be sent to each Senator and Representative in Congress.

Thriving Europe and American Prosperity

EXTENSION OF REMARKS OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein a very pertinent and interesting release recently issued by the United Nations concerning the increased and increasing production rate and general prosperity of Western European nations.

This is a very significant document and should be read by every Member of Congress. It clearly demonstrates that the charts all indicate that a European economic health continues on its post-war upgrade; in fact, the pace of the

steady upward climb is faster than the world rate. In the 6 years just past Europe has pushed its industrial production index to 157, well above the world figure of 133.

According to this source, Western Germany has taken the greatest strides since 1948 with its production index climbing from 100 in 1948 to 275 for the first three quarters of 1954. Statisticians at the U. N. state that the figures they are working on now show that the upward trend in Europe is continuing into this year.

There is little doubt that heavy United States financial and economic aid under the various relief and rehabilitation programs authorized by the Congress is reflected in this climb. Our outlays and grants have been most generous and without any precedent in history. The staggering amounts out of the pockets of American taxpayers poured by the billions into Europe since the end of World War II invaluable contributed to her economic recovery. Our Nation is happy to note that our associate nations in the free world have successfully emerged from war and postwar maladjustment and depression and are now stronger economically than ever before. In some respects these statistics show that many of these nations are in better economic condition than the United States in that they do not have the huge debt hanging over their taxpayers and peoples.

They are industrially strong, economically vigorous, competitively alert, strengthened by reconstruction and new construction of their industries by American grants and accommodated by the reciprocal trade treaties by broad access to American markets.

As I have pointed out before these nations are therefore in a position where they can compete successfully with American industry and business for foreign trade and domestic trade alike. To what extent this situation will further depress some of the sick industries of America and cause further unemployment throughout our country is highly speculative. That the enlarged European potential of production and trading coupled with low tariffs in the United States will cause deep repercussions in our economic life hardly any well trained economist or informed realistic student of government could possibly deny.

We rejoice in the prosperity of our European friends but we hope that it will not be used under the reciprocal trade treaty to promote less favorable economic conditions in this country.

The matter follows:

EUROPE ECONOMY ON UPGRADE—HEAVY UNITED STATES AID REFLECTED IN PRODUCTION RATE

UNITED NATIONS, N. Y.—Europe came whirling around the corner into 1955 after its most prosperous holiday season in years. And the charts here indicate European economic health continues on a postwar upgrade.

In a dozen different countries in a dozen different categories providing sign-posts of recovery, the figures show a steady upward

climb. Their pace is faster than the world rate.

WELL ABOVE WORLD FIGURE

Europe began in 1946 at a lower point in industrial production than the world average.

As the bar graphs on the accompanying map show, Europe's industrial production index—with 1948 equalling 100—stood at 76 in 1946. The index for the world (not including the Soviet bloc) was 7 points above at 83.

In the 6 years since then, however, Europe has pushed its score to 157—well above the world figure of 133.

Figures available here at the U. N. are up to date in 1954 and they pinpoint the elements in European recovery.

As indicated by the figures of the map, West Germany has taken the greatest strides since 1948 in industrial production. That country's production index has climbed from 100 in 1948 to a whopping 275 for the first 3 quarters of 1954.

Unofficially, statisticians at the U. N. say the figures they're working on now show the uptrend in Europe is continuing into this year.

UNITED STATES CONTRIBUTED \$55 BILLION

Heavy United States aid is reflected in this climb.

From July of 1947 through June of 1954, United States aid to Europe in recovery programs, point 4 technical assistance, and contributions to U. N., infant aid, refugee, and other programs totaled a little over \$55 billion. Approximately \$3 billion had been distributed in 1946 and early 1947.

The programs kept people alive, provided scarce materials for industry, and provided the necessary priming for Europe's industrial pump.

President Eisenhower has made new predictions of continued American prosperity, lower United States tariffs, and continued foreign aid. The tariff and aid programs still must hurdle Congress. These, if approved, plus American tourist trade growth promise to keep the European economy expanding in 1955.

Here are a few of the happy figures in West Europe's statistical tables: In 1946, European freight railway traffic was counted at a little above 100 billion ton-miles. In 1953, it climbed without one setback to 174 billion.

In 1946, Europe loaded 67 million tons of goods for shipping; in 1953, 189 million. In 1946, it unloaded 179 million tons of goods; in 1953, 330 million.

The pattern of European economic progress can be plainly seen in the steady rise of its industrial-production index. The first quarter of 1954 was 8 index points up over the first quarter of 1953.

The third quarter was up 9 index points over the same quarter of 1953, which in turn was 8 points above the third quarter of 1952.

In several individual countries it shaped up this way, in each case the advance being over the corresponding quarter of 1953:

Austria: First quarter up 9 points, second quarter 16 points, third quarter 15 points.

France: First quarter up 3 points, second quarter up 8 points, third quarter up 14 points.

West Germany: First quarter up 10 points, second quarter up 16 points, third quarter up 11 points.

Italy: First quarter up 10 points, second quarter up 16 points, third quarter up 11 points.

Britain: First quarter up 7 points, second quarter up 8 points, third quarter up 5 points.

Who Pulled the Wool Over the President's Eyes?

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. REUSS. Mr. Speaker, the people of every State from Wisconsin to Washington along the northern tier of the Nation have been wondering who it was that pulled the wool over the President's eyes, on February 1, when he issued his order cutting Northwest Airlines out of the Seattle-Hawaii run, giving a monopoly to Pan American Airways.

The staff officer in question who gave his Commander in Chief such dubious advice is indicated by the following news articles:

[From the Washington Post and Times Herald of February 19, 1955]

IKE HAVING AERONAUTICAL HEADACHES

(By Drew Pearson)

President Eisenhower is having aeronautical headaches. He's just had a terrific headache over an air route between Seattle and Hawaii, and he's about to have more over a route to Alaska. Part of the trouble is the present White House system of staff work whereby the President, following the general staff system in the Army, takes the recommendation of his staff without knowing too much about the facts behind their recommendation.

Here's the inside story of what's been happening.

After long study, the Civil Aeronautics Board recommended that Northwest Airlines continue its present operation between Seattle and Hawaii in competition with Pan American Airways, and that Northwest be given a permanent license to fly the great circle route over the Arctic to Tokyo.

This decision against Pan American, the pet airline of both the Truman and Eisenhower administrations, automatically went to the White House for confirmation. And this is where Ike's headache began. For his Secretary of Commerce Sinclair Weeks immediately moved in, together with Under Secretary of Commerce Robert Murray, even though Murray had just submitted his resignation.

They recommended that the President reverse the findings of his CAB and rule for Pan American. Trusting his two Commerce Department executives, that was exactly what the President did. He ruled that Northwest Airlines could no longer fly the route between Seattle and Hawaii, leaving Pan Am to fly that route without competition; also refused to give Northwest a permanent route over the Arctic to Tokyo, thus opening a possibility for Pan Am to get that route later.

EXTRA SATURDAY SESSION

When this news broke, things really began to pop around the White House.

First, Senator HUBERT HUMPHREY, of Minnesota, phoned Governor Orville Freeman, new Democratic Governor of Minnesota, requested that the Minnesota Legislature pass a resolution demanding that Ike follow the advice of the CAB. The legislature promptly did so.

Simultaneously, also, Senator HUMPHREY phoned Assistant President Sherman Adams,

"The President's ruling will jeopardize one of the most important enterprises in the Northwest," he said. "He should be better informed before he reverses experts who have been studying this question for months."

HUMPHREY, a Democrat, asked for an appointment to see the President but was told Ike couldn't possibly see him for about a week. This was on Thursday, February 3.

However, as protests began to roll in, Adams hastily called Republicans to a conference for a Saturday morning, February 5. Ordinarily Ike goes away on Saturdays. But Adams knew that on the following Monday mayors of Minneapolis and St. Paul, plus the Governor of Minnesota, would be descending on the White House.

To head this off and to take the play away from Democrat HUMPHREY, Ike held an emergency meeting with two Minnesota Republicans—Senator Ed THYE and Congressman WALTER JUDG. Secretary Weeks and Under Secretary Murray, who originally caused the trouble, also attended.

At the meeting Ike complained that he hadn't been given all the facts. He had been told that Northwest Airlines had received a greater subsidy than Pan Am, a piece of information based on an outdated report and definitely not the case. Pan Am's total subsidies are greater than any other airline's.

Result: The President completely reversed himself, came out for Northwest as originally recommended by the CAB.

[From Time magazine of February 21, 1955]

PRESIDENTIAL ERROR

President Eisenhower got caught in the propwash of an airline battle last week. As a result, he came within an ace of knocking Northwest Airlines off one of its most prized routes. The dogfight was between Northwest and Pan American World Airways over which should fly the Pacific between Seattle-Portland and Hawaii, a profitable run that both have been operating on a temporary basis since 1948. The Civil Aeronautics Board finally reached a unanimous decision: Northwest should have the route alone. But when the CAB recommendation went to the White House a fortnight ago, it ran into opposition.

Commerce Secretary Sinclair Weeks, under whose department CAB operates, advised the President to reverse the CAB decision, drop Northwest, and give the route exclusively to Pan American. Pan American has lower Government subsidies than Northwest and in the past 2 years carried more passengers to Hawaii—18,192 to 11,671 for Northwest. The President, who is interested in saving money on airline subsidies, decided to reverse CAB and signed a letter giving the route to Pan American alone.

In the uproar that followed, the President soon learned that there was a lot more to the case. Northwest's scrappy, 42-year-old President Don Nyrop flew to Washington. A onetime CAB chairman who knows his way around the Capital, Nyrop got Minnesota's Republican Senator EDWARD THYE to call on the President with a new sheaf of facts and figures supplied by Nyrop and CAB's Acting Chairman Chan Gurney. Pan American had indeed led in passengers for the last 2 years, but most of its bulge came in 1953, when plane-short Northwest had to shift its Boeing Stratocruisers from the Pacific to domestic and Orient runs and fly DC-4's to Hawaii. In 1954 Northwest made up most of the loss, ran almost neck and neck with Pan American. Over the entire 6-year test period, Northwest was the real leader, having flown 31,038 passengers to Pan American's 30,700. As for subsidies, Northwest had previously said that it would fly the route without Government subsidy, expected to be self-supporting by 1956. From other sources Ike also got a quick inkling that his decision against Northwest was highly unpopular in

Minnesota and the Northwest, with Democrats ready to capitalize on it.

Last week Ike fired off a new letter to CAB, reversing himself and giving back Northwest its Honolulu run for 3 more years, in competition with Pan American. At his press conference, Ike said bluntly that he had made an error. Said Minnesota's THYE: "As soon as he got the facts, he changed his decision."

The President, the CAB, and States-Alaska

EXTENSION OF REMARKS OF

HON. DON MAGNUSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. MAGNUSON. Mr. Speaker, it has been reported that the CAB has recommended or will recommend to the President that certain air service from the States be denied to some of the major communities of Alaska. This is a matter of vital concern to my constituents and to the economy of the Pacific Northwest. I have registered with the President vigorous protest to the possible discontinuance of this air service, and wish to register it again. I include the following House Joint Memorial 6, approved by the Washington State Legislature on February 3, 1955, in the Appendix of the RECORD:

House Joint Memorial 6

To the Honorable Dwight D. Eisenhower, President of the United States, and to the Senate and the House of Representatives of the United States of America, in Congress assembled, and to the Honorable Chan Gurney, Chairman of the Civil Aeronautics Board:

We, your memorialists, the Senate and the House of Representatives of the State of Washington, in legislative session assembled, most respectfully represent and petition, as follows:

Whereas it has been reliably reported that the Civil Aeronautics Board has voted to issue a decision in the States-Alaska Case, Docket No. 5756, et al., which would reduce the number of air carriers now operating between the Pacific Northwest and the Territory of Alaska from 4 to 2 carriers; and

Whereas the continuance of adequate air transportation services to Alaska is of vital importance to the further economic development of the Territory, the State of Washington, and to the national defense interests of the entire Nation; and

Whereas the Board's decision would deprive every major city in Alaska of competitive air services, except the city of Anchorage; and would further deprive such important communities as Nome, Cordova, Kenai, Homer, Kodiak, and Bristol Bay of through services by any air carrier operating from the State of Washington and would thus require time-consuming and costly transshipment of all passenger, cargo, and mail traffic destined to these communities; and

Whereas Alaska is almost wholly dependent upon air transportation facilities because of the recent discontinuance of passenger steamship services and because there is no railroad linking the Territory with the State of Washington, nor any satisfactory highway network; and

Whereas Alaska is almost entirely dependent upon the State of Washington and other areas of the continental United States for its

labor force and for virtually all of its foodstuffs, supplies, and materials, and is therefore peculiarly in need of adequate air transportation facilities especially tailored to its own needs; and

Whereas the Territory is now on the threshold of significant business and industrial development which would be seriously impaired by any curtailment of air services as now contemplated by the Civil Aeronautics Board; and

Whereas the board's decision has resulted in an unprecedented storm of public protest throughout the entire Territory and the Pacific Northwest, resulting spontaneously in the sending of thousands of letters and telegrams to the board and to the White House; and

Whereas this public protest has been vigorously supported by the entire congressional delegation from the State of Washington, by virtually all of the other public and civic leaders in the Pacific Northwest, by newspapers, radio and television commentators, and by most of the business concerns and labor unions in the State of Washington having trade interests with Alaska: Now, therefore, be it

Resolved by the Senate and the House of Representatives of the State of Washington, in legislative session assembled, That we respectfully memorialize and petition the President of the United States and the Chairman of the Civil Aeronautics Board to reconsider the pending decision in the States-Alaska case to insure that existing air transportation services to the Territory of Alaska are not curtailed, that competitive air services be maintained from the State of Washington to all of the principal gateway cities in Alaska, that through services by air from the State of Washington be preserved and expanded to as many Alaskan communities as possible, that the selection of the individual air carriers to perform such services be determined solely upon the basis of merit, and that paramount consideration be given to the vital need of Alaska for a system of air transportation services especially tailored to the peculiar requirements of the Territory and which will fully utilize the integrated operation of air carriers indigenous to Alaska, whose primary and exclusive interests are in serving the Pacific Northwest and the Territory; and be it further

Resolved, That copies of this memorial be immediately transmitted to the President of the United States and to the Chairman of the Civil Aeronautics Board; and be it further

Resolved, That a copy of this memorial be sent to all Members of the Senate and the House of Representatives of the United States.

Passed the house February 2, 1955.

JOHN L. O'BRIEN,
Speaker of the House.

Passed the senate February 3, 1955.

EMMETT T. ANDERSON,
President of the Senate.

Rayburn Saves the Trade Act

EXTENSION OF REMARKS OF

HON. FRANK M. KARSTEN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. KARSTEN. Mr. Speaker, under leave to extend my remarks, I enclose the following editorial from the St. Louis Post-Dispatch for February 21, 1955:

RAYBURN SAVES THE TRADE ACT

To be fully effective, the Reciprocal Trade Agreements Act should be relieved of the crippling clauses which protectionists have succeeded in adding over the years. Yet the House on Friday barely defeated a move to add yet another crippling clause to the law.

The newcrippler, which would have narrowed the President's freedom to overrule proposals of the Tariff Commission, lost by just seven votes. Republicans voted overwhelmingly for it, 119 to 66. Democrats, responding to a personal appeal by Speaker RAYBURN, voted strongly against it, 140 to 80.

So President Eisenhower saw illustrated within 24 hours his earlier statement to the GOP National Committee that the Republicans can't have better allies than the Democrats. On this occasion, had there been no alliance undoubtedly there would have been no House passage of tariff legislation in substantially the form requested by the President.

The measure now goes to the Senate, where we hope a concerted effort will be made to remove the crippling clauses already in the law.

The House in its present mood may not consent. But the Senate should write the kind of law it regards as best, and then settle any differences in conference. If nothing else, a heavy vote for liberalization of the present law would put the Senate in a strong tactical position to resist further House efforts to add new cripples.

Congressional Pay Raise

EXTENSION OF REMARKS

OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. GWINN. Mr. Speaker, this debate regarding pay raises for ourselves gives me an opportunity to say something that I could not say at any other time.

During the past few days, as I thought about this raise, I was able to build up a good case for it. But our constituents are not aware of all the things we do. The folks back home just do not know how tough the modern legislator's job is. Of course, they know about our campaigns and all the work and sacrifice that entails. They know too of all the letterwriting, speechmaking, handshaking, and backslapping a Congressman must engage in. Some of them realize, I am sure, that banquets, cocktail parties, political dinners, and the like can become an awful bore. However, the folks that send us here figure that is all part of the job, and if we are not satisfied with the pay we can stay home the next time and let the other fellow come and take our place.

But as I say, there is a whole lot of things we legislators do that the home folks never hear about. For instance, how could they ever know how many hours we discuss, debate, and labor over just how much money we will give each year to the folks in Tennessee so that they can get electric power at half price? Or what do our constituents know about the time and effort we devote arriving at wonderfully complex formulas which spell out for us what price we can guar-

antee to the corn and wheat farmer for their produce? The public is not conscious of the great amount of testimony we must hear or the literature we must read before we can determine what wages an employer must pay his employees. Unless they sat in the galleries each day, the home folks cannot begin to realize how difficult it is to provide homes for the folks in the city, electricity for those in the country, and social security for everybody.

And then there are taxes. The folks that elect us always complain about the taxes. But all they have to do is to pay them. We must figure out whether taking nine-tenths of a man's income or over three-fourths of his estate leaves him too much money.

Another thing the folks at home do not know much about is the added duties we have taken on in the last few years. We not only provide money for dams in Tennessee but also in France; we authorize school construction in California and Ethiopia; we appropriate money for our own Army and one in West Germany; we build airfields in Texas and in French Morocco; we pay our own salaries and those of the United Nations. In short, we Congressmen legislate not only for ourselves but for all of Adam's children.

When you stop to think about it, Congress is in much the same position as a father. He arranges for his children's shelter, food, electricity, education, and the other necessities of life. But they never comprehend how much he is doing for them and they always demand more. One of his toughest jobs is to see that all get their share, for if any are not included in the distribution of his bounty, he is not a good father.

And as I have pointed out the family of Congress has grown awful big and the job of taking care of them all is tremendous.

One difficulty is, whom are we going to soak to provide the money for this raise? It doesn't seem democratic to charge the general taxpayer since at least one quarter of his estate has already been conveyed to the Federal Government. We can't hit the Government because it is heavily in debt and broke. I don't see how we can assess the folks at the subsidy trough because how could we decide whom to pick on? Perhaps the thing to do is to ask all the foreign folks whom we have helped when they were in need, to return the favor by digging into their pockets now to help us out. They are our constituents too and it is to their own interest that the legislators of the world's greatest democracy are sufficiently paid for their labors and good works.

Some Congressmen have qualms about this raise. There might be some people in the Nation who would look at it as an attempt by Congress to elbow its way into the public trough to get its share. But on reflection, their earlier fears are unfounded because the people for whom Congress provides food, shelter, power, education, loans, gifts, pensions, and so forth, make up the majority of the voters in the country. In case any one is not sure about that I refer him to the January 25, 1955, issue of Look magazine where it is shown that 76,276,110 people

receive \$60,688,037,000 annually from the Government. Now, these people are not going to begrudge Congressmen a few thousand dollars more a year. In fact, they will be glad for Congressmen to get theirs as long as they get theirs. Besides our checks will not be noticed in the 300 billion that are written annually by the Government and rushed out at the rate of 400 a minute.

Therefore, Mr. Speaker, on the showing made above that all the folks the Congress supports are getting theirs, how can there be objection to Congress getting theirs?

Reciprocal Trade Agreements

EXTENSION OF REMARKS
OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. GWINN. Mr. Speaker, I voted against the reciprocal trade bill for two reasons. First, because I believe that America's trade policies abroad should be determined in relation to the cost of manufacture in the United States and, secondly, the decisions must be made by the Congress as required by the specific provisions of the Constitution. Its responsibilities cannot be shifted to a single person, not even to the President. I want as most Congressmen want, reciprocal trade instead of aid with the other nations. But nearly half of Congress voted against the present bill and voted to send it back to committee for correction.

We want free trade among the nations somewhat as we have it between the various States of the Union. Free trade has undoubtedly made a great contribution to the tremendous prosperity and high living standard enjoyed by the American people. The constitutional prohibition of trade barriers between the States has benefited both business and the public.

Our success as free traders amongst ourselves is proof that free trade is the best trade in the conduct of commerce. We all believe that. But before it can be applied to international trade, certain political conditions must be present. These are: First, there must be peace among the trading parties so that none is denied vital raw materials and manufactured products. The United States could well have used a tariff-protected synthetic-rubber industry during the Second World War after the Japanese had gained complete control over most of the world's supply of natural rubber; second, there must be a common currency, unrestricted in flow and not subject to political manipulation that stops much of our world trade today; and third, there must be a reasonably uniform wage and hour scale, which determines the cost level of all goods produced entering into trade. These conditions are met, of course, within the United States. But they are not met as between the nations of the world. Because of the grave dan-

ger of war nearly all countries are building up their own defense industries and they are protecting those industries with tariffs and other trade barriers against goods from the United States. Many nations restrict international movement of their currencies so that if we sell goods to them we cannot get paid. The fixed rates of exchange are frequently punitive in effect against us. Trade with them is on a one-way street. There is no uniformity of wage and hour standards throughout the world and that results in a great variety of cost and price levels. As long as the foregoing conditions exist, free trade among the nations like that enjoyed among our States is impossible.

The most objectionable feature of the 1955 tariff legislation is the delegation of arbitrary, unreviewable and absolute authority to the President to fix tariffs. We do not mean President Eisenhower. We mean any President before or after him. This was the original objection in 1934 to the first Reciprocal Trade Act. Prior to that time Congress had always fixed tariffs. Tariffs have been considered more as matters of local concern than of national policy. As a practical matter, the Congress better reflects the attitude of the people than the Presidency does because the Congress is closer to the people. Accordingly, it makes sense that Congress should retain its powers to control the tariff level. Besides all this, the Constitution itself provides that Congress must do so.

Reciprocal trade legislation has been on the books for 20 years. It has not accomplished much as an incentive to lowering trade barriers of foreign countries as pointed out above. On the other hand, considerable injury has been sustained by American industry. Some firms have gone out of business such as the Alexander Smith Carpet Co. has done in Yonkers. Others are operating on a marginal basis, and in some cases, whole industries are threatened with extinction. There were 10,000 skilled watchmakers employed in the United States in 1948. Today there are only 4,000. Whole States, such as West Virginia, where coal mining is the chief industry, are prostrate because of the importation of cheap residual oil. In New York State, the glove industry, the hat industry, and others are practically out of business. The chemical industry has testified that it has been hurt by previous tariff cuts and that any more may finish them off. The necessity for a strong domestic chemical industry was demonstrated in World War I. At that time the United States was completely dependent on Germany for chemical products, and when the war broke out, our only source of supply was gone. The pottery industry in the United States and in New York State is virtually extinct. Since 1948, imports of China tableware has increased 138 percent so that 86 percent of all China tableware purchased in the United States is foreign made. Since 1950 imports of foreign bicycles has increased 1,300 percent and now absorbs more than one-third of the American market.

In theory, the reciprocal trade legislation provides an opportunity for relief to these stricken industries. Under the law a lowered tariff may be raised if it is found the domestic industry is being severely hurt. Upon an application from the aggrieved industry, the Tariff Commission holds public hearings and then may report to the President with recommendations for relief if it finds relief is necessary. The President may or may not act as he sees fit and there is no appeal from his decision. This provision for relief is called the escape-clause procedure. However, relief by this procedure has seldom been realized.

Since 1948 there have been 59 applications by American firms for relief. The Tariff Commission, the agency set up by Congress to act as a court in tariff disputes, took action on 15 of these applications and made recommendations to the President for relief. In only five of these cases did the President take action to protect the domestic industry against injury from foreign competition. In the remaining cases, the President, acting on the advice of some State Department bureaucrat, ignored and overruled the recommendations of the Tariff Commission. This is permitted under the past and present proposed law. The President can make his decision on facts that were never before the Tariff Commission and which the industry involved has had no chance to refute. And, as I have already pointed out, there is no appeal from the Presidential ruling.

Now consider what that means. The jury, which in this case would be the Tariff Commission, hears the pleadings and the evidence and then renders a verdict. The judge, viz the President, can then, on the basis of facts not presented to the jury, reverse the verdict and no appeal is permitted. This is bad law, bad procedure and outrageous politics in dealing with American industry. It is in utter violation of all the basic tenets of Anglo-Saxon jurisprudence and of the concept of constitutional representative government. The American tradition prefers the wisdom and experience of jury verdicts instead of verdicts by a single judge.

There is another danger inherent in this unprecedented procedure. Those who may have access to the President's ear through some State Department bureaucrat, may ignore the proceedings before the Tariff Commission and present their case directly to the President. This amounts to government by personal rule rather than by law. This is not intended to be derogatory of the present Presidential incumbent. My use of the word "President" is entirely impersonal.

When tariffs are subject to congressional control; when tariff disputes are resolved by court procedures; and when American businessmen whose business lives are threatened, may have their day in court, then I shall vote for reciprocal trade legislation. I believe in the principle of it.

Five Proposals To Amend the Refugee Relief Act

EXTENSION OF REMARKS OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. ANFUSO. Mr. Speaker, there is unquestionably widespread dissatisfaction and no small degree of disappointment concerning the operation of the refugee relief program. Enacted just about 18 months ago—August 7, 1953, to be exact—this law authorized the admission of 214,000 aliens to become permanent residents of the United States by the end of 1956, with preference being given to refugees, expellees, escapees from Iron Curtain countries, and certain close relatives of American citizens.

After 18 months, what are the results?

Mr. Speaker, I regret to say that the results to date of this refugee relief program are very meager, indeed. Here are the latest available official figures:

Number of visas issued, 18,936—as of January 23, 1955.

Number of refugees admitted, 15,034—as of January 28, 1955.

Such is the dismal result of this program after about half of its effective period has elapsed. It is clear by now that the goal of 214,000 refugees to be admitted will never be reached in the time specified. While I dislike to speculate on the number finally to gain entry under this program, it does not seem to me that we will even fulfill half the program by the time it expires.

Such was not the intention of Congress when it enacted the refugee relief program in 1953. When Congress set a figure of 214,000 to be admitted over a 3-year period, it was done so in the belief that this goal could be reached. Unfortunately, certain sections of the act and administrative interpretations have made the law unworkable and the whole program has become a travesty.

Mr. Speaker, I do not see eye to eye with Judge Francis Walter, the distinguished gentleman from Pennsylvania, on matters of immigration. Yet even Judge Walter, who is opposed to liberalized immigration, recently stated in a public address:

I consider the Refugee Relief Act of 1953 a fraud and a phony.

He also referred to it as an example of sloppy legislation, an ill-conceived and half-baked proposal, and an unworkable law. And he is so right about it.

There is also tremendous dissatisfaction among church groups and voluntary agencies which are active in obtaining housing and employment assurances for the aliens and helping them to meet other requirements of the law. In fact, some of them are considering giving up their programs because of the great difficulties involved. On January 30, 1955,

the Washington Post and Times Herald published an Associated Press report from New York which stated that church agencies were on the verge of junking huge programs for bringing refugees to this country because they could not get them through the redtape. The report then added:

So far, church officials said, the requirements for admission of refugees have been so complicated that only a mere trickle have gotten through the maze of checks and doublechecks.

By way of example, the report cited the meager accomplishments of these church groups due to the complications of the act:

Up to the end of 1954, Church World Service had 115 refugee arrivals. The Roman Catholic War Relief Service reported 147, the Jewish United Hias Service about 50, and the Lutheran Service 9.

This would be less than 500 refugees brought here in the act's first 18 months. In comparison, under the old Displaced Persons Act whose terms were less restrictive, 114,494 DP's were resettled in the first 18 months.

Mr. Speaker, the Refugee Relief Act of 1953 needs to be amended drastically, and it needs to be done as soon as possible while there is still sufficient time to complete the program successfully. Each month, each week that we wait will mean the loss of thousands of visas going to waste when the program ends in 1956.

Consequently, I am now introducing a bill containing five important amendments to the act which, I feel certain, will speed up the flow of refugees in the short time that is left and will make possible the successful completion of this program.

The five changes recommended in my bill are the following:

First. Age limit for admittance of orphans: Under the Refugee Relief Act of 1953 a total of 4,000 orphans are permitted to enter the country as nonquota immigrants, but they must be under 10 years of age. Because of the age limitation and other difficulties, less than 500 orphans have gained admittance to date. I, therefore, propose to raise the age limitation to 14 years. This should make possible the successful completion of this part of the program.

Second. Elimination of employment and housing assurances: It is generally admitted by all concerned, including State Department and immigration officials, that the greatest factor in delaying the flow of immigrants under the refugee relief program is the requirement that certain assurances must be submitted in behalf of an alien before he is granted a visa. Section 7 (a) of the Refugee Relief Act provides that three assurances must be given by an American citizen on behalf of the alien seeking a visa:

(a) That the alien will have suitable employment without displacing some other person from employment;

(b) That the alien will have housing without displacing some other person from such housing; and

(c) That the alien will not become a public charge.

I propose to eliminate the employment and housing assurances and to leave only the requirement that the alien is not to become a public charge. The housing shortage has eased up considerably in the country and is no longer as acute as a few years ago. Employment, too, is holding up in recent months and the general economic situation does not appear to be threatening. There is no need to retain these requirements in the law. By eliminating them it will be possible to increase greatly the entry of immigrants under the refugee program.

Third. Elimination of readmission guaranties: Another factor contributing to the slowness of the refugee-relief program is the requirement that an alien must present an unexpired passport or other suitable travel document and a certificate of readmission from the country where he obtained the visa guaranteeing he will be readmitted to that country in the event he is later found to be deportable from the United States. This has been a real bone of contention and aroused much dissatisfaction and protests from a number of European countries. I propose that this section be eliminated from the act.

Fourth. Refugee relief commission: Under the present act, the refugee-relief program is administered by the Bureau of Security and Consular Affairs of the Department of State. There has been considerable criticism of the Administrator of this Bureau, Mr. Scott McLeod, for the manner in which he is administering the whole program, his rigid interpretations of the act, and his general approach to the problem.

I propose to take this program out of the Department of State and set it up as a separate and independent Government agency to be known as the Refugee Relief Commission. The commission is to consist of three members, appointed by the President, each of whom shall receive a salary of \$17,500 annually. The commission shall formulate regulations in compliance with the Refugee Relief Act, and it shall report annually to the President and to Congress on the operations of the program. This commission and its operations would be similar to that of the Displaced Persons Commission which administered the Displaced Persons Act of 1948 with such success.

Fifth. Termination of the act: The termination date of the refugee-relief program has been set for December 31, 1956, after which no visas are to be issued under this program. In view of the small number of visas issued under the act to date and the fact that nearly half of the time has already expired, it is generally conceded that the program's goal of 214,000 immigrants, as envisioned by Congress originally, will not be reached by the end of 1956.

Therefore, I propose that all visas authorized under the Refugee Relief Act which remain unissued after December 31, 1956, shall be redistributed proportionately among the countries and categories established in the act, and that these visas be issued only to relatives of American citizens. I further propose that the time be extended for the issuance of the unused visas for a period of 1 year until December 31, 1957.

My purpose for extending the termination date is twofold: First, so that more time is allotted for the unification of families; second, so that as many of the unused visas be utilized in the extra time allotted. The unification of families has always been a traditional and humane principle with the American people. The extra time allotted is to make up for the slow start of the program in setting up its administrative machinery, which is another factor in the delay of entries until now.

CONCLUSION

Mr. Speaker, I feel reasonably certain that if these amendments are enacted the Refugee Relief Act of 1953 will be administered in the spirit in which Congress intended it to be administered. I also feel certain that these amendments will enable the program to be successfully completed and the full goal of 214,000 immigrants to be reached.

We must correct the early errors committed under this program, particularly the lapse of valuable time and the unnecessary requirements for housing and employment assurances. Let us consider the people who stand to benefit from these changes, the very people for whom the whole program was initiated. I mean the relatives who desire to join their families in this country and cannot do so because the regular immigration quotas in their countries are oversubscribed, the refugees and the escapees who are the victims of religious and political persecution.

I call upon all my colleagues to support these changes. The Refugee Relief Act of 1953 was overwhelmingly supported by both parties. Let us amend it so that the Congress and the people of America will be proud of this act and its accomplishments, instead of regarding it as a fraud and a phony. Let us make it a workable act.

Where Is the Promised Policy of Liberation?

EXTENSION OF REMARKS OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. FEIGHAN. Mr. Speaker, many of our citizens possessed with retentive memories of the campaign promises of 1952 are raising the significant question, "Where is the promised policy of liberation?" Sooner or later, some sort of answer must be given to it.

In an address delivered before the New York affiliates of the Ukrainian Congress Committee of America, Dr. Lev E. Dobriansky, who is the president of this dynamic national organization, and also a professor of economics at Georgetown University, raises this fundamental question and proceeds to demonstrate that our foreign policy of the past

2 years is patently not the one promised. He points out, too, the fallacy of the simplistic notion deliberately circulated these past few months that the only alternative to what is euphemistically called peaceful coexistence is preventive war.

Most important perhaps is the impregnable logic of his address, showing the certain long-run trend of the basic variables in the Russian Communist calculus for world conquest. If his analysis is correct, then the outcome of our present policy action of containment by threat of massive retaliation will be global war itself—paradoxically, the very thing we seek to avoid.

I am convinced that the most effective way of clearing the atmosphere of the many confusions of thought regarding our foreign policy is to initiate a great debate in Congress on this issue. Reasoned analyses, such as outlined in this address, would dissipate such confusion and lack of distinction in thought with the net advantage of showing the real gravity of our present position. With regard to these points, I wish to insert into the RECORD, under leave obtained, the pertinent excerpts of Dr. Dobriansky's address, as follows:

**WHERE IS THE PROMISED POLICY OF
LIBERATION?**

In the presidential campaign of 1952 the American people were promised a realistic, sound, and courageous policy of liberation. Since then, there hasn't even been a whisper of this new policy originally advocated by the present administration. Instead, we have been treated to slogans of "massive retaliation," "peaceful coexistence," and others which belong to the same old containment species. For millions of Americans who are not deluded by the illusions of short-run peace and peaceful coexistence, the time has come to raise the appropriate question, Where is the promised policy of liberation? Our policy today is merely containment by threat; it is not the policy of liberation which alone is capable of preventing a third world war and maximizing the real possibilities of freedom everywhere, including those of the non-Russian nations in the Soviet Union.

It is a grave error to maintain, as our President has, that the only alternative to peaceful coexistence is preventive war. A moral policy of liberation is the realistic alternative to both the Moscow-created illusion of peaceful coexistence and preventive war. Many who uttered the liberation policy in 1952, and those who opposed it, failed to understand its meaning and content. They failed to see that it is in essence a continuous process of political warfare waged on the terrain of the Russian Communist Empire to obstruct, above all, the genocidal consolidation that is now going on from East Germany to Northern Korea. Our present policy permits this vast consolidation, and enables Moscow to form its chief springboard for world conquest and domination.

The three essential and irreducible factors in the Russian calculus of world conquest are consolidation, adequacy in arms, and fear of retaliation. Once Moscow succeeds in consolidating its empire it will not even need a superiority in arms, which it now enjoys in several military areas, to attain to a reasonable expectation of success in its drive for world conquest. This consolidation through genocide destroys nations both within and outside the Soviet Union, prepares a robotic and servile mass of 800 million people as fodder in a gigantic war machine, and thus lays the basic groundwork of estimated suc-

cess for Moscow's fixed and unalterable world design. With the achievement of this consolidation, and with the additional advantages of a world conspiracy and the guaranteed opportunity of the initial attack, Moscow will need only a strategic adequacy of arms to create regional Pearl Harbors in the free world that might well neutralize the massive retaliatory power about which we now boast. Its fear of retaliation from us decreases in inverse proportion to its ability to consolidate its empire and produce arms in adequate amounts, not even with overall superiority.

This massive consolidation for the next and, perhaps, decisive step toward world dominion is rapidly advancing behind the whole facade of Moscow-sponsored coexistence which is being built upon intentions for liberalized East-West trade, planned student visits to the Soviet Union, extensive Soviet participation in international bodies, the entertainment of members of the British Parliament, the 6 months' celebration of the Pereyaslav Treaty between Ukraine and Russia, and now even the contemplated transfer of the Soviet Government from the blood-soaked Kremlin. The Pereyaslav celebration has been staged on the hoax of Ukraine's union with Russia in 1654 in the same manner as these other events are staged on the hoax of peaceful coexistence. While Moscow celebrated this fabricated union with much fanfare about Ukrainian independence and brotherhood, it continued to perpetrate genocide in Ukraine by shifting masses of youth to Kazakhstan and other areas of central Asia. While it stages its current show of peaceful coexistence, neatly calculated to lull the free world into a false sense of security, it is feverishly engaged in its program of genocidal consolidation without which its own security cannot be founded and its ultimate objective cannot possibly be realized.

The tremendous work of the Select House Committee on Communist Aggression, under the chairmanship of Congressman CHARLES J. KERSTEN of Wisconsin, has revealed the scope and depth of this diabolical program. Our present policy of containment by threat stands in virtual acquiescence to the realization of this program and thus to the eventual loss of the captive nations as our natural allies. Only an imaginative policy of liberation can forestall this systematic excision of the patriotic sinews of these nations and impede the formation of this primary basis for world conquest.

An American policy of liberation is both sound and practicable. Much of practicable worth can and must be done to launch this political offensive by peaceful means in order that global peace itself will be maintained. Practical aid to the still existing national undergrounds in Poland, Ukraine, Slovakia, Hungary, and East Germany should be given for their expansion and the conservation of the national interests of their countries. Impeded in its efforts at consolidation, Moscow would hardly embark upon the next step of aggression with a feeling of growing insecurity within the empire that only a political offensive can produce. Also, the President has the power to implement the Kersten amendment to the Mutual Security Act, and should take the necessary steps to form free national military units of Poland, Ukraine, Slovakia, Lithuania, and others in the free world as an electrifying symbol of freedom to their enslaved brethren in the satellite and Red armies. In quality and significance, these units would bear greater value than even a score of French divisions.

The dynamics in a policy of liberation necessitate a complete reappraisal of our diplomatic relations with Communist-dominated governments. There are two measures in Congress that pose this reappraisal which the State Department cannot, as it has done in the recent session, avoid. If there is intelligence and symbolic freedom

value in maintaining American Ambassadors in Communist capitals, then let us be rationally consistent by extending our representation to the two most restive areas in the Russian Communist Empire—Ukraine and Byelorussia—as called for by House Concurrent Resolution 58. If the State Department cannot demonstrate these values, then let us withdraw all of our representatives from behind the Iron Curtain, as urged by the Jenner-McCarran resolution in the Senate. The State Department exerted pressure to do nothing about these measures in a wait-and-see vein while Moscow is at work planning for our destruction.

These are only a few of the many things that can be done to wage the necessary political offensive to prevent the Russian empire consolidation for war. The overwhelming forces of enlightened nationalism in the Red Empire, especially in Ukraine, Poland, Slovakia, and elsewhere, are yet to be harnessed to the incalculable detriment of Moscow's plans for world domination. Our present policy exposes these nations, our natural allies, to doom; it exposes our Nation to a grave disadvantage in the event of an armed showdown. Words about their eventual liberation become hollow where no practical deeds are performed to fortify their hopes and efforts toward the goal of national freedom and independence. In preparation for their bleak future, they, too, have every right to ask, "Where is the promised policy of liberation?"

**The Office of the President of the United
States**

**EXTENSION OF REMARKS
OF**

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I insert herewith the following speech I delivered before the Consular Law Society on February 23, 1955:

It is a singular honor to be appearing before the Consular Law Society. I say "singular" advisedly, since here I am facing the soul-chilling scrutiny of the expert. The Congressman envies the expert, and I often believe that the Congressman is called upon to have opinions on everything, conviction on nothing, and the little learning the poet Pope has dubbed dangerous.

Nonetheless, I secretly confess to holding a dozen or so convictions, and it is on one of these to which I would like to address myself tonight. That is, the Office of the President of the United States.

During my 32 years in Congress, I have watched 6 Presidents, each in his own way, define the Office of President: Harding, Coolidge, Hoover, Roosevelt, Truman, and Eisenhower. It is in this definition of the line that both weaves together and at the same time separates the executive and legislative branches of the Government, the line that is most generally and, I might add, most loosely, called checks and balances, that each has differed; and it is in this difference of personal definition that has set, and continues to set, the course of the ship of state.

Where the President is fully aware that his office is the governing office of the country, he accepts both the tones and the overtones of power and the awful responsibility that goes with the possession of such power. Particularly is this true in the conduct of foreign affairs. He in the office of the Presi-

dent is charged with that responsibility. The ultimate decisions must be his. You can no more separate the loneliness and the loneliness of the man in this office than you could separate the tides of the ocean from the pull of the moon. The President who seeks to divest himself, in all good faith, from the loneliness and loneliness of the office, deserts the charges of responsibility that office has placed upon him.

Undoubtedly today we have in our Chief Executive a man with the will to peace. If sincerity were the only quality the office of the Presidency demands, we could then say, without reservation, that the office had found its man. But I have come to believe that the office of the Presidency, as it is being defined by Mr. Eisenhower, has been invested with a much narrower meaning than was ever intended by the Founding Fathers. The office of the President is not that of adjudicator, conciliator, or merely administrator in the sense of delegating authorities and duties. It is not the echo of short-term public opinion. Nor is it merely the coordinate branch of the Government.

In the relationship, for example, with the Congress, the Executive must realize that the Congress has many more explicit ways of curbing the Executive than the Executive has of curbing the Congress. The Congress, through its control of the purse strings, can check the Executive. Another check lies in the investigatory powers of Congress. The Senate can halt the Executive by withholding consent and approval of treaties. The same is true of Presidential confirmable appointments. While it is true that the Executive can veto a bill, the ultimate power still lies in the Congress while it is in session by the overriding veto. But there is a vast area of power consciously not made explicit by the framers of our Constitution who were aware of the curbs placed on the Executive without corresponding explicit curbs which the Executive could use in its relationship with the Congress, and it is in the use of this area that a President fails or succeeds in the government of his country.

It is because the fathers of this country had an image of what the President must be to match the responsibility of the office—decisive, subtle, informed, and imaginative—that this area of power exists. When the office of the President is filled with a man limited in the exercise of these qualities, the country must suffer. So it is today.

We have had, unfortunately, too many commissions and not enough decisions. We have had a reliance on the resonant phrase: "dynamic massive retaliation"; "liberation"; "agonizing reappraisal"; to catch the public mind. We have had to swing around from "liberation" to "containment." We have had an unleashing and a re-leashing of the Chinese Nationalist troops on Formosa. We have had decisions made, remade, and un-made again, from the first decision that the Tachen Islands are vital to our defense to the un-made decision to evacuate the Tachens. We have had the decision of defending Quemoy and the Matsu Islands through the promise of Secretary Dulles to Chiang Kai-shek and again through "implications" in Mr. Dulles' foreign policy statement of last week. Now we are not quite sure what the decision will be since the President's statement to the Senate on the Formosa resolution. We have had the decision to defend Dien Bien Phu and then the decision not to defend Dien Bien Phu. What was at first the relentless decision not to consider the Chinese Communist government as either *de facto* or *de jure*, we now seek, through the language of the Formosa

treaty and through the efforts of cease-fire, to bring ourselves to the point of acknowledging the existence of two Chinese governments, one for the mainland and one for Formosa.

I do not quarrel with some of the decisions that have ultimately been made; I make only the point of the circuitous, contradictory routes that have been passed through to reach them.

Perhaps the severest test placed upon the office of the presidency is that of silence. In the delicate operations of negotiation upon which, perforce, the conduct of foreign affairs must hinge, there are changes from day to day which alter or amend earlier decisions. The volume and the complexity of such exchange among governments can be known to the President alone. The public cannot know what they are, nor should they. I am talking, mind you, of the day-to-day exchange among governments. Hence a dramatic announcement of policy must be watched lest it be tainted with the poison of prematurity.

We have seen just such a public scramble relative to the now ex-Premier of France, Mendes-France. It was first the violence directed against him in the repudiation of EDC by France, and then the reassessment upon the completion of the Paris agreements. Our policy in the Far East has been paralyzed by public statements emanating from the White House. Good intentions are not a substitute for firmness, nor over eagerness for public approval a substitute for delicacy and imagination.

This, of course, is not a brief for the withholding of information from the public. It is, rather, a reminder that the hasty jumping into public print carries with it a danger that public opinion, unaware of new and subtle developments, may compel a rigidity in the operation of foreign affairs which new developments no longer warrant. This eagerness for public announcement has already resulted in unnecessary confusion at home and abroad and has left the unwarranted impression that the United States leaps before it looks.

Hamilton has said it well in discussing the powers of the President:

"In the article which gives the legislative powers of the Government, the expressions are, 'All legislative powers herein granted shall be vested in a Congress of the United States.' In that which grants the executive power, the expressions are, 'The executive power shall be vested in a President of the United States.' The enumeration ought therefore to be considered, as intended merely to specify the principal articles implied in the definition of executive power; leaving the rest to flow from the general grant of that power, interpreted in conformity with other parts of the Constitution, and with the principles of free government."

It is well that those of us who are concerned with the conduct of government become increasingly aware of the relationship between the office of the President and the Congress of the United States. The indispensable factor must be Presidential initiative. There has been—unfortunately, I say, despite the fact I am a Member of Congress—a growing dependency upon congressional support, in the conduct of our foreign affairs particularly. If this tendency develops to too great a degree, we shall find a radical disturbance in the distribution of powers, an imbalance which bodes ill for the country.

This growing imbalance can only be redressed by the man who, by the strength of his visions, understands the responsibilities, duties, and the powers of the office of the President.

Tax Legislation

EXTENSION OF REMARKS OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to include an editorial from the New York Times of February 22, 1955, entitled "Political Taxmaking" and an editorial from the Washington Post and Times Herald of February 23, 1955, entitled "Tax Cuts a la Mode."

The editorials follow:

[From the New York Times of February 22, 1955]

POLITICAL TAXMAKING

The Democratic majority of the Ways and Means Committee approved yesterday a proposal to give a rebate of \$20 to every income-tax payer in 1955 and raise the allowance for each dependent by the same amount. This represents the application of politics to taxmaking in as pure form, we think, as even the oldest inhabitant will recall.

It is usually possible to clothe a move such as this with at least some semblance of financial or economic plausibility, however superficial. For example, a year ago the Democrats attempted to substitute an across-the-board reduction in personal exemptions for the administration's own carefully conceived program for tax reduction. At that time business activity was scraping the bottom of the 1953-54 readjustment. It was possible, in the circumstances, to make something, at least, of the argument that what the country needed was a shot of purchasing power such as that measure might be expected to produce. Today there isn't even the plausible pretext that existed a year ago. Yet Speaker RAYBURN, in discussing the proposal, is quoted as saying that such relief would "reach the people who would put the money back in circulation."

It is clear that Mr. RAYBURN hasn't followed very closely the figures on national income and its distribution. Because if he had he would know that people who put money back into circulation actually presented us with a record performance in the year just ended.

[From the Washington Post and Times Herald of February 23, 1955]

TAX CUTS A LA MODE

Democrats on the House Ways and Means Committee engaged in a piece of capricious irresponsibility in approving an income-tax cut of \$20 a person. It is dismaying to see Speaker RAYBURN and Floor Leader McCORMACK lending their prestige to the disruptive kind of politicking. The chagrin of the Democrats over the administration's gambit in holding out hope of a tax cut in 1956 is, of course, understandable. The administration, too, has its eye on the 1956 campaign, and it attempted to steal the Democrats' thunder. The difference is that a cut at the end of this year would play hob with a budget already submitted. It comes with ill grace for the Democrats to be talking about greater defense expenditures and chiding the administration about an unbalanced budget, and then voting to unbalance the budget further.

Moreover, the cut is unnecessary as an economic stimulant. The economy has recovered from the recession, and the pious concern for the plight of low-income taxpayers has far more political than economic justification at this time. All groups benefited from the tax cuts last year. If a further reduction were warranted now, a broad interest in keeping the economy expanding would call for permitting the scheduled reduction in corporation taxes and the elimination of certain excises to take effect. The administration has opposed even these reductions in the current year, and possibly the Democratic strategy is to put the administration over a barrel by giving it a choice of accepting a \$20-per-person cut or a lapse in the higher corporation rate that could be exploited demagogically. The hope of curbing this jag of irresponsibility seems to lie in the Senate and in the statesmanship of such men as Senators GEORGE and BYRD.

Higher Pay for Congress

EXTENSION OF REMARKS OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post and Times Herald of February 24, 1955:

HIGHER PAY FOR CONGRESS

The Senate showed courage and good judgment in voting to increase the pay of its Members and of Federal judges by \$7,500 a year. It would have done even better to have accepted the House bill raising congressional salaries by \$10,000. Several groups of experts who have studied the subject have advised increases substantially higher than those voted by either house. The controlling fact is that both the judges and the legislators have been carrying responsibilities wholly out of keeping with their remuneration.

A few Members have sought to make political capital out of opposition to the increase. In this newspaper's opinion, they have been very ill advised. The country is not well served by keeping its judges and legislators worrying about how to make ends meet. In recent years, many able men have given up or turned away from careers in Congress and on the bench because of the economic sacrifices entailed, and a conviction has been growing that wealth is necessary to avoid constant embarrassment in public office. No system of representative government should be subjected to such strains.

Congress has delayed this pay raise for many years because of fear that it would be misunderstood. We have no doubt that it will now be misunderstood by a vast number of persons who know nothing about the expenses that a Congressman must bear. But the proper course was not to yield to uninformed sentiment on the subject, in the way Senator MOSS seemed to do on the Senate floor the other day. What is needed is a campaign to acquaint the people with the circumstances that make a pay increase for Members of Congress a national necessity. If the people have the facts, we do not think they will expect their Congressman to mortgage his home, to divert his energy into lecturing, or to accept expense money from potential lobbyists in order to pay the expenses incidental to his public service.

Members of Congress who voted against the pay increase will be strongly tempted to make a political issue of it in the next election as will the opponents of Members who voted for the raise. In each case it will be well to ask, however, whether the complainant is independently wealthy and whether he has accepted the increase in his own pay or will accept it if elected. If any Member honestly feels that he does not need the higher salary, nothing will prevent him from refusing to accept it. That would be an honorable course. But politicians ought to beware of making a political football out of this salary increase if they themselves are taking advantage of it or intend to do so if elected.

Saps or Self-Styled Saviors?

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 22, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an editorial from the Milwaukee Journal:

SAPS OR SELF-STYLED SAVIORS?

A shocking thing increasingly stands out in any consideration of when and about whom Harvey Matusow lied:

Lying has been made easy by the Government, the gullible, and the self-appointed saviors of the country.

There has been in this Nation, until the fever recently diminished, a willingness and even an eagerness to suspect anyone and everyone, particularly persons in public positions or in intellectual activities. That fervor for witch hunting has invited irresponsible, pathological or sinister individuals like Matusow to smear, falsify and fictionalize.

Our Government and those who made it their anointed task to capture a quota of suspects even if they had to be invented gave the professional witnesses money and notoriety for their lies and encouraged them to lie.

The manner in which Matusow was used and encouraged by men like Senator McCARTHY and Roy Cohn is a matter of record. How could they have helped knowing that some of the things he said were lies? The best that can be said about them in things Matusow lied about is that they were gullible or so irresponsible as not to have put his statements to the slightest test.

The same can be said for the Justice Department. Individuals like Matusow, Paul Crouch, Marie Natvig and others lied in testimony given before Government agencies or courts. The ordinary checks on veracity that police give stool pigeons were not applied to these witnesses. This created a situation which encouraged them to lie.

But not only Government and those in official positions were guilty of these irresponsibilities. Advertising agencies handling radio and television shows and others in private life eagerly listened to informers like Matusow. Performers and others lost their jobs because of false accusations. Matusow even sold lists of suspects, lists he now says were false.

Not all informers have been liars, of course. But enough have to cause widespread uneasiness over the possibility of injustices that still have not been brought to light. And enough have been liars to make Americans

ashamed of the irresponsibility of some of their officials who were more eager to believe ill of individuals than they were in verifying charges.

It's bad enough to know that some of our self-appointed saviors have been played for saps. It is shameful to see evidence that some have actually connived to play the American people for saps. The least that can be done now is for the Government to institute safeguards against liars, to punish those who have lied and those who may have connived, and to try to set the record straight on those who have been lied about.

Partisanship on Taxes

EXTENSION OF REMARKS OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to include an editorial from the Washington (D. C.) Post of February 21, 1955, entitled "Partisanship on Taxes":

PARTISANSHIP ON TAXES

Speaker RAYBURN and his Democratic colleagues in the House are treading on dangerous ground in their obviously partisan maneuver on taxes. This is not the time to talk about personal income tax cuts. The real tax issue before the country is what to do about the corporation and excise taxes that are due to expire April 1. President Eisenhower has urged a continuation of the special excise taxes on autos, tobacco, liquor, and gasoline for another year. He also wants to retain for another year the 52 percent corporation income tax which, under the present law, will fall to 47 percent. The special excises are onerous taxes that should not be allowed to become a fixed part of the tax structure. They should have some sort of priority, therefore, when there is talk about tax cuts. The same is true of the excessively high corporate tax.

The individual income tax has such a far-reaching effect on the operation of the national economy that partisan considerations should play no part in the making of policy regarding it. The fixing of the tax rates is no longer just a matter of equity but also is a matter of the highest economic importance. Today it is too early to know whether, from an economic viewpoint, it would be wise to cut individual income taxes later this year. What we do know is that the unbalanced state of the budget and the operation of our economy on a very high level are powerful arguments against tax cuts now. Before lower taxes are ordered, moreover, we need to know much more than we do now about this year's appropriations—appropriations for school and highway assistance, for example, and about the Asian aid program.

In his budget message last month, President Eisenhower sought to beat the Democrats to the punch by expressing the hope a general tax cut would be justified in 1956—a presidential election year. He even adopted the Democratic theory of cutting at the bottom of the personal income tax scale when he said a cut should be designed to spread relief among all taxpayers. Now the Democrats have retaliated in kind with a proposal that is purely partisan in origin and character. In doing so, they have

weakened their claim that they will not play politics with the national interest.

The administration will doubtless oppose this move with all its strength; it has no reasonable alternative. And this in itself is unfortunate because it tends to freeze the position of the two parties on the vital question of tax policy instead of leaving them free to adapt themselves to changing economic requirements.

The Dirty Business of Wiretapping

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks, I include an editorial broadcast over station WMCA in New York City by Nathan Straus on Friday, February 18, 1955.

As I pointed out during the debate on the bill to permit wiretapping by the Federal Government in treason and espionage cases, the practice of wiretapping is continuing, and in fact, growing day by day. The recent disclosures in New York City of illegal wiretapping has once again brought this question to the fore. We cannot close our eyes to the fact that the tapping of wires is prohibited by section 605 of the Communications Act; yet the law is being increasingly disregarded by the Federal Government and many States, as well as private individuals and organizations.

As I have pointed out before, the law should and must be enforced. Wiretapping is a police-state method, and should be stopped. I fully agree with the statement made by the late Justice Oliver Wendell Holmes when he said:

It is a less evil that some criminals should escape than that the Government should play an ignoble part.

The editorial follows:

THE DIRTY BUSINESS OF WIRETAPPING

(Editorial broadcast over station WMCA by Nathan Straus, Friday, February 18, 1955)

There is one precious freedom that we are in danger of losing in this country. It is freedom of communication over the telephone, the right to speak without fear of eavesdropping. Does this sound like an exaggeration? Does it strike you as though WMCA were making a mountain out of a molehill?

If you know the facts, you may feel differently.

The FBI is authorized by Federal law to tap private telephones and listen in on private telephone conversations. This specific authorization was given by the President, in 1941, shortly before our entry into World War II. The FBI has continued the practice in cases involving internal security. Attorney General Brownell so testified last year before a Senate committee.

While the FBI is authorized to tap private telephone wires, the information so obtained, according to Supreme Court decisions, is not admissible in court as legal evidence.

This confusion should be cleared up. If it is legal for the FBI to listen in on private telephone conversations, as and when it pleases so long as the claim is made that our internal security is involved—then evidence so obtained should be admissible in

court. If evidence obtained by secret wire tapping carried on by the FBI is not admissible in court, then the practice becomes not only morally dubious but legally useless—and it should be banned by law.

In most States—and New York is one of them—the use of State courts of evidence obtained by wire tapping is sanctioned. While the New York State constitution forbids wire tapping in general, the State law authorizes a judge of the New York Supreme Court or a county court to issue an order permitting secret wire tapping when a police officer above the rank of sergeant swears there is reasonable ground to believe that evidence of crime may thus be obtained.

As a New York Supreme Court justice recently pointed out, when such authorization to tap a private telephone is granted, the most intimate conversations, personal, social, professional, business, or even confidential, of an unlimited number of persons may be laid bare.

The fact is that the average judge in New York City readily signs mimeographed wire tapping orders presented by any police officer—an order that authorizes the tapping of someone's private telephone for up to 6 months. Of course, the public is not told how many wire tap orders the police obtain every year. But we do know from Supreme Court Justice Douglas' latest book, *An Almanac of Liberty*, that in 1952 in New York City a total of 58,000 wiretap orders were issued by judges. This is an average of more than 150 a day.

And even this is not the whole story.

There is reason to believe that New York City is honeycombed with wiretaps. Taps are put on wires not only by law enforcement officers, but by private individuals—illegally. Perpetrators are private detectives, divorce lawyers hunting for clues, unscrupulous business men manipulating large deals, labor racketeers, and occasional politicians.

The illegal wire tap is easily executed. A ten dollar bill slipped to a building superintendent may gain admittance, or it is not too difficult to pose as an employee of the telephone company who wants to check the equipment.

While our State law makes this kind of illegal wire tapping a crime, we have never heard of anyone being punished for it.

As the late Justice Brandeis pointed out, a wiretap is a dragnet. It enmeshes many innocent persons along with an occasional criminal. A certain switchboard, for instance, in an apartment house or a business office, may be tapped; as a result all the conversations held on lines leading into that switchboard are recorded—confidential talk between husbands and wives, between business associates, between close friends—words spoken with no thought of their being intercepted.

The same invasion of privacy occurs when a party line is tapped; every subscriber to that line, as well as every person who makes a call to anyone on the party line has his words recorded, unknown to him.

When you make a call from a public phone booth you feel sure you have absolute privacy. But it is not beyond the bounds of possibility that even the pay station may be tapped. Small wonder, is it, that the late Justice of the United States Supreme Court, Oliver Wendell Holmes, called wiretapping a dirty business?

These secret taps, so foreign to the practices of a free country, have grown and grown because the general public doesn't know how many or whose wires are tapped.

Wiretapping, both legal and illegal, has become so widespread that we think our lawmakers should get back to first principles and reread the fourth amendment of the Bill of Rights which says: "The right of the people to be secure in their persons, houses, papers, and effects against unreasonable searches and seizures shall not be violated, and no warrants shall issue but upon prob-

able cause . . . and particularly describing the place to be searched and the persons or things to be seized."

Certainly wiretapping is an unreasonable search, and a seizure without a proper warrant, since no court order authorizing secret wiretapping can name all the persons whose privacy will be invaded.

WMCA believes that the right to tap private telephone wires should be permitted to the FBI only in cases involving internal security or kidnapping, and only when the FBI shows that there is reasonable ground to believe an actual crime has been committed. An order to permit tapping of wires by the FBI should require the approval of a Federal judge, one in each district, especially empowered by the United States Supreme Court to grant applications for tapping. The order, when granted, should be valid for only 90 days, to be renewed if necessary.

The law should require that all wire tap recordings be sealed by the FBI and, if intended to be used in court, the law should require further that they be supplied to the counsel for the defense. Finally, the Department of Justice should be required to publish monthly and annual reports on the number of wiretaps it had made, together with the number of prosecutions and convictions resulting from wire tapping. The law should provide strict punishment for all unauthorized wiretapping.

As for the New York State law, WMCA believes that denying the police the right to tap wires would represent a far greater social gain than loss. We agree with the *Wall Street Journal* that the medicine of wiretapping, the invasion of many people's privacy, is worse than the illness, a possible unapprehended bookmaker or other criminal. Justice Holmes has well said, "It is a less evil that some criminals should escape than that the Government should play an ignoble part."

Our New York State law, it is true, would not be so dangerous to civil liberty if it were strictly interpreted by the judges. But, however, strictly safeguarded against abuse, wiretapping is a practice that is rather a fit tool for a police state than a proper technique for criminal apprehension in a democracy.

WMCA believes it is high time that the "dirty business" of wiretapping, as Justice Holmes characterized it, be curbed lest it spread and spread until we have lost beyond recall one of our basic freedoms, the right to be let alone, which the same Justice described as "the right most valued by civilized man."

Wheat for the People Behind the Iron Curtain

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 23, 1955

Mr. ANFUSO. Mr. Speaker, several days ago I sent a letter to President Eisenhower urging him to give his approval to a proposal to send some of our surplus wheat to feed starving people behind the Iron Curtain. I suggested in my letter that it be undertaken as a "people to people project" and listed four major reasons why such a project should be adopted.

I was gratified to see a few days later that a newspaper like the *New York Daily News*, which is certainly known for its anti-Communist views, devoted an

editorial to my proposal and spoke of it as an interesting and provocative suggestion.

For the information of my colleagues in Congress and the country at large, I am placing into the Record the text of my letter to the President, as well as the brief editorial from the New York Daily News of February 23, 1955:

FEBRUARY 19, 1955.

THE PRESIDENT,

*The White House,
Washington, D. C.*

DEAR MR. PRESIDENT: The New York Herald Tribune of February 18, 1955, carries a story on the front page that there is before you a proposal to offer to Premier Bulganin of the Soviet Union some of the surplus wheat in our country "to relieve human suffering due to the officially announced breakdown of Malenkov's collectivized farm program." According to the same story, you and the members of your Cabinet will consider this proposal within the next few days.

I am writing this letter to urge you to consider this proposal at the earliest possible moment and to give it your approval. I am informed that our surplus of wheat reaches a total of 675 million bushels, which is enough for a 2-year supply for our own country—not counting the 1955 wheat crop. In other words, as far as the people of the United States are concerned, we are confronted with a problem of surplus rather than with the threat of a shortage. We could safely spare fifty or one hundred million bushels without seriously depleting our reserves.

Aside from the surplus factor, however, there are three other very good reasons why this proposal has merit:

First, it would be a worthwhile humanitarian act in the best American traditions to use part of our food surpluses to relieve famine-afflicted areas. We have done this on numerous occasions in the past, and surely we can afford to show our mercy in this instance, too.

Second, it would be an act of good will on our part toward the people of Russia, for it would prove to them that we seek peace and friendly relations. A gesture of this kind may perhaps be the beginning of improved relationship between the two countries and a lessening of international tensions which the whole world would cherish.

Third, it would be a desirable act from the standpoint of propaganda for the United States and its way of life since it would show up the glaring weaknesses in the Soviet economic structure which cannot feed its people properly. Nations throughout the world, whether allied with us, neutral or opposed to us, would surely take notice of this need of mercy on our part even to those who are supposed to be our enemies. The fact has always been emphasized by us that we have no complaint against the Russian people, but rather against their leaders who lust for power and world conquest.

Let this come then as an offer from the people of the United States to the people of Russia with whom we have no quarrel and with whom we desire to live in peace. In other words, let us try to make it a people to people project. We stand to gain nothing by denying this food to the hungry Russian people, except their hatred. We can have high hopes of gaining their friendship by extending to them a helping hand in an hour of need.

Given to them under these circumstances, it would be most difficult for the Russian leaders to reject our offer. Such callous disregard of human lives for selfish political motives would surely earn them the everlasting enmity of their own people.

Cordially yours,

VICTOR L. ANFUSO,
Member of Congress.

[From the New York Daily News of February 23, 1955]

SOME WHEAT FOR RUSSIANS

Representative VICTOR L. ANFUSO, Democrat of New York, has gone on record as urging President Eisenhower to offer some of this Nation's surplus wheat to the semistarved Russian people. He feels, without much chance of contradiction, that we could spare 50 or 100 million bushels of the stuff.

This looks like an interesting and provocative suggestion to us. Certainly, from the standpoint of propaganda, it would put the Kremlin slavemasters on a two-way spot. If they accept the bread-makings, they're admitting in public that the despised capitalist system can feed its citizens and even grow excess food, which Communists can't. If they turn the offer down, they're notifying the world that Russian hunger couldn't bother them less.

HOW ABOUT OUR FRIENDS?

But, on the other hand, how about our friends who might be able to use some of that grub? Shouldn't they get first whack at our excess? Japan, for instance, is banking more and more heavily on wheat as a solution to her diet problem. Japanese schoolkids are learning to enjoy bread instead of rice in their school lunches.

There no doubt are other angles to this one. But in no other nation on earth has a responsible official proposed such a people's friendship gesture. With proper safeguards, this proposed wheat deal might go far toward convincing the miserly Russian people that the outside world is aware of their plight, and is willing to do something about it.

Address by Hon. James P. Mitchell,
Secretary of Labor

EXTENSION OF REMARKS OF

HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I include the following address by Hon. James P. Mitchell, Secretary of Labor, before the brotherhood dinner, sponsored by the Washington region of the National Conference of Christians and Jews, the Mayflower Hotel, Washington, D. C., Tuesday, February 22, 1955:

There is a synagogue in Washington which bears these words: "To the glory of God and the brotherhood of man." All of us—regardless of our religion—would do well to dedicate our lives in this fashion.

The very discovery of America contains lessons in brotherly cooperation for all of us. In fact, the brotherhood of the New World was quite literally the result of unbrotherly acts in the Old World.

We are all familiar with the fact that many of those who first settled in America were motivated by a yearning for religious freedom. And the great diversity of groups settling in our country was apparent from the very beginning. We had the English settlement at Jamestown, Va., in 1607, the Dutch at New Amsterdam in 1614, the Pilgrims at Plymouth Rock in 1620, and the Jews who landed in New York in 1655.

These were among the forerunners of the mass migrations to our shores for 3 centuries. Here millions of people have found the fulfillment of their dreams of freedom, brotherhood and opportunity.

Here we have built a country in which the highest and best aspirations of individual human beings can be realized and rewarded. Here we have everything necessary for people to lead their lives in freedom, with dignity and with charity and brotherhood toward their fellow man.

We can be proud of what we have accomplished, but we cannot be satisfied, even today, with the conditions within our own land. Just this month, the National Council of the Churches of Christ in the United States of America advised its 35 million members that racial prejudice is sinful and un-Christian.

It would be nice if we could say that from the St. Lawrence to the Rio Grande, and from Sandy Hook to the Golden Gate, all Americans were brothers and prejudice, discrimination and intolerance were nonexistent.

Unfortunately, however, despite all the progress of 350 years, we still have far to go. Less than 2 months ago, a leading public opinion analyst estimated that "discrimination in employment wastes \$10 out of every \$75 paycheck on the phony luxury of indulgence in our prejudices." He estimated that the annual cost of discrimination to American business and industry is \$30 billion annually.

We all know of persons who preach brotherhood but do not practice it. Covert quotas still exist in some colleges and prep schools. Some businesses drastically restrict the level to which persons from minority groups may rise. One manufacturer will not have a Negro in a secretarial position; a law firm will not permit a Catholic to become a partner; an industrial enterprise will not promote Jews to executive positions; a financial institution will hire only native-born Americans. Some private employment services accept job orders that say "gentiles only," "white only," or "no non-Caucasians."

These forms of discrimination are still prevalent today. Unfortunately they sometimes occur even in firms whose officers or owners claim to practice brotherhood. They protest with indignant self-righteousness that some of their best friends are Jews, or that they have nothing against Negroes, but—

We may properly ask: How come all this at this late date? What is stopping us as a people, individually and collectively, from living up to the principles we profess? Why aren't we translating into daily living those basic tenets which are the foundation of every religion?

In a country in which persons of various races and creeds have served in the executive, legislative, and judicial branches of the Federal, State, and local Governments, how can we afford to reject any man, upon the basis of his race or religion or national origin? Have we not seen persons of every type make invaluable contributions to the national well-being, both in public and private life? Have not business, the arts, the sciences, the professions, labor, and public service benefited from the contributions of all the highly diversified population of our country? Who can stand before God and say that he is better than his neighbor because of the color of his skin, the way he worships God, or the country from which his ancestors came?

In a world that is one-third yellow, one-third brown, and one-third white, how can America maintain its position of leadership if we consider inferior the non-white, two-thirds of the world's people?

To ask these questions is to answer them. It is obvious that there is neither excuse nor justification for prejudice and discrimination. It is clear that as a Nation, both domestically and internationally, we are injured by prejudice and intolerance.

More than 2,500 years ago, the brotherhood of man became the Jewish fundamental law. As long ago as 500 B. C., Confucius said, "All

within the 4 seas are brethren." About 2,000 years ago, Christ taught us that we must love thy neighbor as thyself.

And we here in the United States have the words and actions of our own leaders to teach us the need for brotherhood and love of our fellowman.

When George Washington visited the Hebrew congregation at Newport, R. I., Moses Seixas, the warden of the synagogue, referred with a great sense of gratitude to the privilege of living under a Government which gives to bigotry no sanction, to persecution no assistance; but generously affording to all liberty of conscience and immunities of citizenship, deeming every one, of whatever nation, tongue, or language, equal parts of the great Government machine.

President Washington set the theme and direction of our national aims when he replied, "It is now no more that toleration is spoken of as if it was by the indulgence of one class of people that another enjoy the exercise of their inherent natural right, for, happily, the Government of the United States, which gives to bigotry no sanction, to persecution no assistance, requires only that those who live under its protection should demean themselves as good citizens, in giving it on all occasions their effectual support."

Thomas Jefferson expressed the epitome of brotherhood when he said, "All men are created equal."

It was for Abraham Lincoln to emancipate the slaves and officially remove this stain upon our democracy. In his life and literature, Lincoln left us a heritage of brotherly love, "with malice toward none; with charity for all."

Our progress toward full democracy for all our people has been slow. Minority groups have had a long and tedious climb to obtain fair treatment. Those who pioneered in breaking down racial and religious barriers showed courage and foresight. Down through the years, one after the other of our Presidents has by word and deed contributed to the forward march of democracy and the greater acceptance of brotherhood.

From President Jackson to President Eisenhower, our Chief Executives have shown that people can be appointed to high office regardless of religion or race.

Since Lincoln's day the Negro has made steady progress. One occupies today a sub-Cabinet position, and another has for several years sat on the Federal Circuit Court of Appeals. Segregation has been eliminated in the Armed Forces.

It was in 1948 that the Supreme Court struck down the restrictive covenant on real estate; and it was in 1950 that the Court opened the doors of white universities and colleges to Negroes who could not get equal facilities elsewhere.

In 1954 the Supreme Court found that segregation in the public-school system is repugnant to our Constitution.

The clause in Government procurement contracts which prohibits racial and religious discrimination in employment is being enforced vigorously through the work of the President's Government Contract Committee.

You can see that there is no one person, no one party, and no one era that can claim credit for all that has been done. Sometimes our progress has been greater, sometimes less. The fact that we have moved constantly forward, however, speaks well for the American people. It denotes their determination to take those steps necessary to make our democracy grow and to strengthen our institutions and our people.

If the progress of the past is any key to the future, it is safe to predict that in the lifetimes of many of those now sitting in this room, the last traces of discrimination

based on race, color, creed, or national origin will be swept away.

The America free of prejudice which I foresee will not come by itself. It will require the continued efforts and determination of groups such as the National Conference of Christians and Jews. It will require the continued observance of Brotherhood Week on an ever larger scale. It will require patience, understanding, cooperation, and good will. It will require the translation into our daily living—at work, in our schools, and at our places of worship—of all the principles of brotherhood.

In Brotherhood Week we have a great opportunity for the Christian to prove his practical Christianity and the Jew to prove his devotion to the teachings of his fathers. This is not asking too much for people of good will. It is not beyond the reach of those who wish to practice the principles to which we as a Nation are devoted.

We are all aware of the fact that children of every race, color, and creed can play together without difficulties. They even overcome barriers imposed by language differences, and by disparity in age. It is only from their elders that they learn the prejudice which corrodes and warps their spirits and hardens their hearts.

We have shown in many of our houses of worship, in hundreds of thousands of businesses across the land and in the Armed Forces that there is no more reason for adults to discriminate against their fellow human beings than there is for children to do so. We have shown that persons of all races, creeds, and national origins can work and live together in the military forces, in peace and war. Numerous employers and workers attest to the ease with which all types of persons can work together smoothly, efficiently, and profitably. And in thousands of communities across the land, persons of different races can pray together.

These examples of brotherhood in action have demonstrated conclusively that it can be done and that it should be done. I am convinced that reason and principle will prevail and that we shall continue to make progress until we have achieved our goal.

So far I have discussed only the discrimination based upon race, religion, or national origin. Other types of prejudice are equally costly and equally unjustified.

We are faced with a growing problem of discrimination against those of mature and advanced age. The extreme accent on youth which seems to be a part of our current national philosophy is not justified by the facts. It has been repeatedly demonstrated that the older workers, properly placed, are more steady, more reliable, and at least as productive as their younger fellows. In safety and attendance the records they compile set examples for younger workers to follow to advantage. Management's investment in training them is amply justified by the lower turnover rate among mature and older workers.

As a nation, we are growing older, both with respect to the population as a whole and our labor force. There are 42 percent more workers over 45 today than there were in 1940. There are 40 percent more workers over 65 than there were 15 years ago. This trend seems certain to be accelerated in the years ahead. It is estimated that by 1970 almost half of our people of voting age will be 45 or over.

In addition to the moral wrong involved, we cannot afford the waste that is caused by discrimination against older workers. It is far more profitable to have them productive than on public assistance.

This is another area in which we must work to break down prejudice and promote understanding.

There is still one other form of prejudice which is worth studying, and that is on the

basis of sex. While women are accepted as the boss in the home, they are not always accorded the status of equals in the labor market. The affection which we feel for mothers, wives, and daughters is not always translated into an equal break for women workers at the employment office. In addition, we too often pay women less money for the same work than we would pay to a man who did that job.

The brotherhood tradition is to use each and every one of our human resources. The increasing acceptance of women in all phases of this country's activities is evidence of the progress being made in the achievement of the goals for which we are working. Both President Franklin D. Roosevelt and President Eisenhower named a woman as a member of their Cabinet. Women have served our Nation as Ambassadors—our present Ambassador to Italy is a woman. Women are Members of the Congress and of State legislatures, and a number of them are serving as judges. Large numbers of women hold important posts in State, county, and local governments. And business and industry depend in large measure upon women workers. The total number of women workers, as of the latest estimate, approached 19 million. This was close to a third of the total working population of the Nation.

We in America have far less manpower than do the Communists. In numbers we stand no chance of matching them. Our effectiveness must be based upon the training and skill of our workers and the utilization we make of the talents they acquire. Those prejudices we still have based on race, color, religion, national origin, age, or sex hamper us in the effective utilization of our manpower. To that extent they weaken our country and impair our chances of survival. As individuals and as a Nation, we cannot afford the cost of this prejudice.

I am glad to see that there seems to be a growing awareness of this fact. There seems to be a real determination on the part of millions of Americans to throw off the blinders of discrimination and prejudice. There seems to be a growing realization that each man and woman is entitled to be judged upon the basis of his or her merits. There could be no better philosophy to guide us in our daily living than that which He enunciated in the Golden Rule 2,000 years ago.

If we are to achieve our goals in the field of brotherhood, all of us must (1) practice brotherhood in our daily lives; (2) teach and train and hire and promote upon the basis of ability alone, without regard to race, religion, color, or national origin; (3) urge others with whom we work, study, pray, or socialize to practice and promote brotherhood; (4) be positive and courageous in our attitude toward brotherhood.

If we will all follow these general rules every day of the year, we shall succeed in making a real contribution toward the strengthening and improvement of our great democracy.

Intellectual Freedom, Oppenheimer, and National Security

EXTENSION OF REMARKS OF

HON. HAROLD H. VELDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Thursday, February 24, 1955

Mr. VELDE. Mr. Speaker, last summer, soon after the release of the findings by the Personnel Security Board in the case of Dr. J. Robert Oppenheimer, Mr.

Glenn A. McLain, director of the Eastern Kentucky State College's Center of International Relations, wrote an article entitled "Intellectual Freedom, Oppenheimer, and National Security."

I had fully expected to have the article inserted in the CONGRESSIONAL RECORD before the close of the session. Even though the Oppenheimer case has slipped in news value, I believe the thoughts embodied in the article written by this university professor are very deserving of our thoughtful consideration today.

The article is written in two parts, the first of which follows, and it is my intention to insert the second part in tomorrow's RECORD:

INTELLECTUAL FREEDOM, OPPENHEIMER, AND NATIONAL SECURITY

The beginnings of a great debate are becoming apparent concerning the Oppenheimer case. Since the release of the findings by the Personnel Security Board in the case of Dr. J. Robert Oppenheimer and the Atomic Commission hearings, much heat and not much light have been thrown upon this very vital matter. American scientific groups have rushed into print criticizing the decision. Many of these groups failed to wait until the complete report was published before offering their comments. This type of hasty action before the facts were all in has been followed by a great deal of rash editorial comment. The usual special articles by columnists who are automatically against any investigations have been delivered with much alacrity. These dispensers of public information would do well to carefully analyze the findings before trying to mold public opinion in this matter. The climate of opinion in America is of such a negative type in this age of suspicion that many supporters of American liberties seem to be guilty of using the same kind of smear tactics they so often deplore. Let us examine these issues carefully before drawing conclusions which strike at the heart of two fundamental problems present in America today—intellectual freedom for the individual and national security.

The American people cannot be expected to read the 32 pages of closely printed report material inserted in the CONGRESSIONAL RECORD on June 2, 1954, pages 7095-7105. Those who enjoy their reading on the slick paper format can find the report in full in the June 11, 1954, issue of U. S. News & World Report. While few people can be expected to have, or to take the time to read these documents, the general public has the right to expect the gentlemen of the press, TV, and radio to give us the facts from the original sources. Perhaps this will eventually be the case, but it seems apparent that the American temper is not to weigh the original facts before formulating opinion. Is this too much to expect in 1954? Have we traveled so far down the road to intellectual serfdom that clichés such as the suppression of scientific thought, banishment of the unorthodox, and many others pass unchallenged by the American people? Does the American public actually trust the executive branch of our Government or must we actually relinquish power to legislative servants and informational savants who write before they read? These are some of the side issues which append themselves to this case. Let us go to the report itself for a true understanding of these problems.

The Gray board members stated the dilemma facing them in making their decision. They deplored the fact that free citizens cannot exercise uninhibited judgment because of the requirements of national security. The security system of the United States was thus considered to be on trial both in matters of procedure and as to sub-

stance. The three board members, Mr. Gordon Gray, president of the University of North Carolina; Mr. Thomas Morgan, former head of the Sperry Gyroscope Co.; and Maurice V. Evans, chemistry professor of Loyola University, concurred in the view that public opinion in America has polarized itself in two directions. The first was that our security program was compounded of fear, prejudice, and arbitrary judgments. The second point was that in recent years our Government had been less than careful of loose or pliable attitudes toward security. Cognizant of these facts, the board approached its task in a spirit of inquiry. Even the most bitter critic of investigations would have to admit the hearings were carried on with an air of impartiality, objectivity, and scrupulous fairness. Dr. Oppenheimer was allowed familiarity with the contents of every relevant document in the case. He was given the opportunity to cross-examine all witnesses and was represented by counsel, four in number, at all times. In his own words "he received patient and courteous consideration at the hands of the board." The entire proceeding was based upon the Atomic Energy Act of 1946, and subsequent acts or decisions made by the Commission and executive branch since that time.

The decision of the board may be evaluated in terms of four issues of importance: The activities and sympathies of Oppenheimer from 1940-45, "his susceptibility to influence" during this period, "the arrogance of judgment" of Oppenheimer during the entire period of his Government service, and his opinions concerning the H-bomb crash program since the Truman directive to produce this weapon.

In a detailed series of findings covering the period from 1940 until 1945 specifically and some activities since that time the Board states that Dr. Oppenheimer had shown little doubt he was deeply involved from 1936 until 1942 with many people who were active Communists. It was further concluded that Oppenheimer's activities perhaps diminished after his filing of a personnel security questionnaire in April 1942. The first affirmative action on the part of Dr. Oppenheimer in this report was his resignation from the independent citizens' committee of the arts, sciences, and professions. The Board would have preferred to have found an affirmative action at an earlier date.

In the criteria for the evaluation of these activities of Oppenheimer the Board found that:

1. There is no indication of disloyalty on the part of Dr. Oppenheimer by reason of any present Communist affiliation.
2. Oppenheimer had bad judgment in continuing his past associations into the present.
3. Oppenheimer is concluded to be a loyal citizen.

It would, therefore, seem that Oppenheimer was judged clear of complicity in reference to his activities before 1945.

The second issue of importance was that of Oppenheimer's susceptibility to influence in matters of judgment. Under the provisions of President Eisenhower's Executive Order No. 10450 criteria for removing an individual from a sensitive security position were given to be "for any facts which furnish reason to believe that the individual might be subjected to coercion . . . or which may cause him to act contrary to the best interests of national security." In the findings the Board clearly found that "there was a susceptibility to influence or coercion within the meaning of the criteria" although it was also admitted Oppenheimer's actions might merely be called bad judgment.

The most important example of coercion or influence revolved around Oppenheimer's contacts with Dr. Edward Condon. Dr. Condon had openly protested Oppenheimer's efforts to have a Communist physicist deferred

from the Army at the request of Oppenheimer. The physicist, Giovanni Lomanitz, had received his job at the University of California Radiation Laboratory at the insistence of Oppenheimer. This happened in 1943, but in 1949, Lomanitz and another Oppenheimer friend, David Bohn, both refused to testify before the House Committee on Un-American Activities on the usual constitutional grounds.

In the findings, Oppenheimer admitted his close professional association with these two Communists. He also affirmed the allegations that he had known Lomanitz was very much a Red from the first and that he gave Bohn a recommendation for a position in Brazil despite the fact he was worried about Bohn having pleaded the fifth amendment before the Un-American Activities Committee. Dr. Condon wrote about the Lomanitz case in a great sense of outrage. Another incident between Dr. Condon and Dr. Oppenheimer is of great significance. Dr. Oppenheimer testified before the Un-American Activities Committee in 1949 that one Dr. Peters was a dangerous Red and former Communist. After this testimony appeared in the newspapers, Oppenheimer repudiated his statements as a result of protestations by Dr. Condon and other scientists. This was the first strong indication that the scientific brotherhood had begun to exert pressure on Oppenheimer. In the findings, the Board concluded that Oppenheimer had failed to appreciate the impropriety of making statements of one character in a secret session and of a different character for publication. The almost clannish loyalty of the scientific group was clearly shown as Dr. Condon had first bitterly assailed Oppenheimer, but when the Oppenheimer testimony before the Un-American Activities Committee was repudiated, Condon supported his friend as before. In this second issue of importance the Board finally concluded that "while loyalty to one's friends is a noble quality . . . being loyal to one's friends above reasonable obligations to one's country and to the security system . . . is not clearly in the interests of security."

The third issue of importance was the matter of Oppenheimer's arrogance of judgment. This matter touches upon the importance of intellectual freedom. Modern war is conceived and developed by intellectuals, including physicists, whose professional existence depends upon the right to make mistakes. Few men of intellectual capacity would quarrel with this principle. However, according to the findings of the Board, Oppenheimer has gone a step further in the matter of intellectual freedom. "He has repeatedly exercised an arrogance of his own judgment with respect to the loyalty and reliability of other citizens to an extent which has frustrated and at times impeded the workings of the system." Several cases of this type of arrogance are cited in the findings, but the Chevalier case illustrates the point of the Board decision. Dr. Chevalier is an old friend of Oppenheimer. Some indication of Oppenheimer's opinion of his friend may be gained from the findings' analysis of this association which stated: "Dr. Oppenheimer declined in 1946 to discuss a meeting of Communists at the home of Chevalier on the ground that it was irrelevant." Although Oppenheimer was interviewed by security agents several times during his Los Alamos work concerning this and other front meetings where Chevalier and other friends congregated with him, blank refusals were consistently made until the Board hearings.

Dr. Chevalier's Communist background and association were clearly known and admitted by Oppenheimer in the hearings. In item 23 of the findings, Oppenheimer clearly admitted that Chevalier had solicited security information for transmission to Russian scientists in 1943. This information was re-

fused by Oppenheimer. In that same year Oppenheimer refused to identify Chevalier as a Soviet agent for the security agencies. Later, Oppenheimer identified three other Soviet agents to the proper authorities after he was ordered by a superior to divulge the information. But he still refused to identify Chevalier.

Although Chevalier visited Oppenheimer at his home and tried unsuccessfully to get this classified information, Oppenheimer lied to Colonel Landsdale on August 26, 1943, concerning the details of this incident. During the hearing Oppenheimer admitted his complicity in this case and said he was an idiot and that he knew Chevalier was deeply involved. Apparently Oppenheimer learned nothing from this mistake as his connections with Chevalier continue until the present time.

Chevalier and Oppenheimer consulted together in 1946 after Chevalier had been interviewed by the FBI. In 1950 Chevalier wrote Oppenheimer asking him the details of his testimony before the Un-American Activities Committee. In view of the fact that Oppenheimer knew without a shadow of a doubt of Chevalier's long record of Communist complicity, as well as Chevalier's open solicitation of American atomic secrets, it seems strange that Oppenheimer would consent to give Chevalier a summary of what he, Oppenheimer, had testified before the Un-American Activities Committee. The importance of this Oppenheimer letter was highlighted in the findings by the statement that this letter was later used by Chevalier in support of his application for a passport.

In December 1953, after these incidents should have resulted in a break between the two for the purposes of national security, Oppenheimer visited Chevalier in Paris. At this meeting, after the nature of the cold war could no longer be in doubt even to the most naive citizen, Chevalier informed Oppenheimer that he had used his name to establish a claim for a job with the United Nations as translator. Chevalier explained his problem to Oppenheimer as one of a security nature. He was worried because he was under investigation by the U. N. and was doubtful whether he would be cleared. Oppenheimer quickly responded to this crisis by dining with an official in the United States Embassy, although he denied assisting Chevalier in keeping his passport.

In summation of this third issue of importance in the Oppenheimer case, it is interesting to note Oppenheimer's continuing affirmation of friendship with this Communist, this open espionage agent of Russia and ideological intellectual. Dr. Oppenheimer, in his testimony, has stated that his association with Chevalier has continued and he still considers him to be his friend. The average citizen in our democracy might well ask: "Does the free flow of science require association between free scientists and Communists? Is it a threat to intellectual freedom if the genius is restrained from open association with Communists?" If so, the ordinary rules of our security system must be changed for the species homo genius. This type of action would seem to be incompatible with the workings of our security system which is firmly based upon the realization that Communist scientists are not free and that they are dedicated to the destruction of the West. No political party in America could institute security regulations on any other basis. No pious speeches will make America fit for world leadership. Only our conduct is the criteria. This conduct must apply to all citizens, geniuses as well as typists. Or so reads the decision of the Board which said, "Dr. Oppenheimer's continuing conduct and associations have reflected a serious disregard for the requirements of the security system."

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the official reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentations be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix, but this rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD Appendix the full report or print of any committee or subcommittee when said report or print has been previously printed.

10. *Official reporters.*—The official reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this restriction shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. The Public Printer or the official reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Illustrations.*—Pursuant to section 182b, title 44, United States Code (as shown above), requests for authority to insert an illustration in the RECORD should be submitted to the Joint Committee on Printing through the chairman of the Committee on Printing of the respective House in which the speech desired to be illustrated may be delivered. Illustrations shall not exceed in size a page of the RECORD and shall be linecuts only. Copy for illustrations must be furnished to the Public Printer not later than 12:30 o'clock p. m. of the day preceding publication.

13. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

Let's Put America First

EXTENSION OF REMARKS

OF

HON. ANDREW F. SCHOEPPPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Friday, February 25, 1955

Mr. SCHOEPPPEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent address delivered by the Senator from Indiana [Mr. JENNER] before the Dallas Public Affairs Club and the Committee of One Hundred, at Dallas, Tex., on February 14, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LET'S PUT AMERICA FIRST

(Address by Hon. WILLIAM E. JENNER, of Indiana)

It is always a pleasure for me to leave Washington and travel to one of our great States, to meet with the people there and to discuss our national problems. I believe fervently the strength of our Nation resides not in the Capital but in the vast expanse of our country. Empires are represented by, as they are governed by, their capital cities. Free countries are not divided into a capital city and the provinces which are ruled by it.

It is a special pleasure for me to come to Texas, because in my State of Indiana we still believe the United States is a Union of sovereigns, and our State is in every respect the sovereign equal of the Federal Government. There is no deference in Indiana to the glamour and show which are now so evident in Washington. We believe that we, the people, govern the country, and Washington is the front office, part of the administrative headquarters. I am sure that doctrine will sound right and proper in the State of Texas.

It is a favorite argument of the collectivists that foreign policy is something remote and abstract, which can be understood only by experts who have spent years in the precincts of the State Department or on the staffs of certain daily newspapers. Congressmen, who have not had the benefit of long indoctrination in the mysteries, and you, who do not even breathe the air of Washington, are supposed to sit patiently and wait until the great minds have handed down what you may know.

Americans never accepted such nonsense. Our greatest diplomatic achievements were the work of laymen, who had spent most of their years in private life. In the last few years we have been bewildered and bemused by foreign relations experts in Washington offices, but the moment has come when the American people need to decide what kind of foreign policy they wish to stand for, and then tell our Government to follow it.

PRESIDENT EISENHOWER'S COMMITMENT TO THE FREE NATIONS

President Eisenhower's message on defense of the nationalist stronghold on Formosa will certainly be a landmark in American foreign affairs, but what kind of a landmark it will be is not yet certain.

First let us look at the documents themselves—the message of the President, and the resolution of Congress supporting the President's position.

In the words of the message and the resolution, the United States reaffirms its close ties with its loyal ally, the Nationalist Government of China, and makes a commitment to defend the Nationalist stronghold with American military power if the Communists carry out their threat to attack it.

This statement does not solve all the problems of our foreign policy in the western Pacific. There is no good reason why it should be. We have had 20 years of mismanagement of our activities in Asia. It is not reasonable to ask that any single statement clear away all the confusion.

The message is significant because it deals with the most important question. We have announced that we shall tolerate no new retreat in Asia. The Red Chinese will not be permitted to breach the frontiers of the still free world. We will make it clear that we shall meet Communist military action with military action, the only argument the Communists understand. We will not start the shooting, but if the Communists choose to start a war, we will finish it.

A foreign policy carefully worked out in many conferences, publicly stated on the authority of the Chief Executive, and supported by Congress and both parties, should be firm as a rock.

But I say to you, what you know well, that the foreign policy established in the Formosa papers is not firm at all. The fact that it is clearly stated in a Presidential message, and formally approved by the legislative branch, may mean nothing. It is wholly possible that we shall follow the opposite policy of appeasement of the Communists, surrender of our advantage, and a sellout of our loyal allies in Asia.

Why am I so certain that the wishes of the American President, the American Congress, and the American people, may be flouted?

TWO AMERICAN FOREIGN POLICY CENTERS

The reason is, briefly, that we have two lines of authority in foreign policymaking. One is the line of responsibility laid down in our Constitution and followed by all those who believe in our Constitution. The other is a network whose members deliberately disregard our Constitution, our President, and our Congress, and act as a law unto themselves.

The sad fact is that no public document, no formal commitment, no legal mandate, can determine American foreign policy today. Our fluctuating foreign policy is a tug of war between these two forces. It is an unsettled question which group will be triumphant in the struggle to shape our Nation's destiny.

We have seen again and again in the last two decades, that the foreign policy put forward in our public statements, is not the foreign policy carried out by our Government.

This is not because the American Government has suddenly become untrustworthy. That would be a most inaccurate statement of what has happened.

The reason is that the American Government is a two-headed monster. It is led by two different organizing centers. The never-settled question of which center is to determine our foreign policies has kept us in

constant turmoil, and made us look futile and ineffectual before the world.

This conflict between two heads of our Government will not end until one or the other is wholly defeated, uprooted, and destroyed.

For years now our Government has been pulled in two opposite directions in making its decisions.

ONE CENTER IS PRO-SOVIET

The hearings of the so-called Tydings committee disclosed clear evidence, in spite of the whitewash, that a powerful and ruthless group were guiding our decisions to the advantage of the Soviet Union. This was not news. Committees of Congress had been making the same charge for years.

The Russell committee, which investigated the dismissal of General MacArthur, and investigations by the Senate Internal Security Subcommittee, showed that a secret faction in our Government had worked out its own foreign policy, to suit its own ends, and had by infinite skill, patience, and ruthlessness, put it into effect, regardless of the legally established foreign policy set by Congress and by our President.

Throughout all of 1951 and 1952 the Congress, especially the Senate, was engaged in a great debate to turn the light on this secret foreign policy and destroy its influence.

You know the achievements of this secret group.

After the defeat of Japan in World War II, our official foreign policy was to defend and strengthen the Nationalist Government of China. But the secret faction in our Government was determined we should support the Chinese Reds. In the name of the United States Government, they insisted on a united front government in China, with the Communist rebels retaining their own armed forces. Our representative gave the Reds a long cease-fire by which they could rest and re-equip their armies, and he set up an embargo on American bullets for the guns of the defenders.

Since 1950 we have had two policies for the Nationalist Government on Formosa. Our official policy was to support the legal Government and help rearm the Nationalist forces. Congress voted the money again and again as proper for our own defense. But the hidden faction in our Government intended that we should "disengage ourselves"—as the polite phrase goes—from the Nationalists. Their real policy for Formosa paralleled the famous advice of Owen Lattimore—to let Korea fall, but not let it look as if we pushed her. In December 1949—5 years ago—our State Department even issued instructions to its personnel abroad to show no regrets when the Government on Formosa fell—according to plan.

During the war in Korea we were ostensibly fighting to defeat the Red Chinese attackers. Our military leaders, our people, and I believe most of the members of the administration were loyal to that objective. But the invisible group had a different policy. They were determined to prevent military victory over the Reds. They intended to return by force the Chinese prisoners of war who did not wish to go back to Communist China, as they returned the hopeless refugees in Europe after 1945. They intended to leave North Korea a wasteland, occupied by Red troops who could infiltrate South Korea at will and descend at a moment's notice on free Korea with armies rested and reequipped.

The secret group won every objective except the return of the pitiful prisoners of war, who were saved by the insistence of Congress and the unremitting determination of our military leaders.

The same double purpose can be found in our German policy, in Austria, in Italy, in Greece, and in the tragic surrender of all Eastern Europe to the Soviet Union.

The public policy of the United States, which has in almost all instances denounced conquest and supported the independent peaceful nations, has faded away. The secret policy of the faction so friendly to the Soviet Union has in almost every instance been triumphant.

Our public policy of resisting communism has succeeded only in Turkey, and to a limited extent in Greece. But Secretary of Defense Forrestal, who was determined to block the Communist advance; and who won over President Truman, was driven to an early grave. His hard policy of armed resistance to communism was replaced by the soft policy of economic aid to Europe.

From 1945 to 1952 the power of the Soviet Union spread east and west, until it covered one-third of the world and put millions of people in bondage. The conflict between freedom and slavery was not lost in Asia or in Europe. It was lost in Washington, because the little group in our policymaking which favored the Soviet Union was stronger than the people who believed in a pro-American policy.

ITS PROGRAM IS DEFEAT OF THE FORMOSA POLICY

I say to you that the Eisenhower policy, for defense of the perimeter of the free world where it is threatened in the Formosa Straits, will be undermined, eroded, covered up, twisted, and made over into a policy favoring Red China, unless we learn our lesson, and deal with the realities of politics today.

Already erosion is apparent. We constantly hear it dinned in our ears that it is all right for us to defend Formosa, but very wrong to defend Quemoy and Matsu. That is as if the UN should say to the United States, "You will reduce tension with the Soviet Union if you give up Alaska, which is nearer the Soviet border than it is to the United States. The Soviet Union says Alaska belongs to it. It does not matter if you need Alaska for radar information, whether information, and early warning of threatened attack. You must give up Alaska to the Soviet rulers so their tension will be lowered."

Another form of erosion is hidden in the warnings that Formosa really belongs to Japan, and so it is alright for the United States to intervene, but Quemoy and the Tachens belong to China, and therefore, if we defend the coastal islands, we are threatening Red China. That argument omits the minor fact that we are not threatening the Reds. They are threatening us. They cannot get the coastal islands except by conquest. They have already tried and failed. It is they who talk of new conquests, not we.

A third form of erosion is the attempt to get a cease-fire in the United Nations. A cease-fire would tell the Nationalists they could never win back their own country. That would be like telling George Washington he could have a cease-fire if he would remain in Valley Forge, but make no effort to reconquer New York, or Philadelphia, or Yorktown.

A cease-fire would free the Red armies for a new attack on Indochina.

A cease-fire would give further recognition to the Red Chinese. It would tell the desperate people on the mainland they had no hope. It would tell the people of Poland, the Balkans, and East Germany, that the United States had no interest in their fate.

Other pitfalls are the proposals to establish two Chinas, and sooner or later to put

free China under a U. N. trusteeship. We know where that will lead. After Red China is safely installed in U. N. as a peace-loving nation, it will bring up the demand that Formosa be surrendered to it, and cite the Cairo declaration as proof we have already agreed to the proposal.

Perhaps the most serious threat of all is the recent report that our Government intends to ask other members of the U. N. to help us patrol the Formosa Strait. That would end all pretense of either a pro-American or an anti-Communist policy. It would mean another victory like Korea.

THE UNITED NATIONS MAKES NO COMMITMENTS TO FREEDOM

Whatever you make of U. N. in general, it should be possible to get agreement among all good Americans on a few facts. The Soviet Union is a member of the United Nations. So are her satellites. She has a permanent seat on the Security Council, with the veto power.

The U. N. has no commitments to support freedom. For every obligation to the free nations it has corresponding obligations to the Communist nations. Its staff includes a proportion of open Communists, but it also has a substantial number of secret Communists. The U. N. recently awarded large damages to some American fifth amendment Communists on its staff, who were dismissed only because of hearings held by the Senate Internal Security Subcommittee.

The U. N. is in the middle, seesawing between the free world and the Communist world.

The most favorable policy to us which the U. N. can adopt is neutralism. It is nearer to downright coexistence.

This is the minimum of undisputed fact about U. N. on which all Americans can agree. The U. N. is an agent of both Communist, anti-Communist and neutral nations. It has no justification for favoring the side of the free. It has never pretended to do so. Nowhere in the vast outpouring of documents that flows from the U. N. is there any commitment to freedom. The U. N. works for peace, for welfare, for one world. It does not pretend to work for liberty.

PRO-COMMUNISTS CANNOT BE STOPPED BY PAPERS

Why do I say that these proposals to soften up the Formosa resolution—so dangerous to the interests of the United States, so shameful a breach of our moral obligations—will probably prevail, in spite of the solemn commitment by the President and the Congress to a true American line of action?

The reason is this. A group of gangsters cannot be stopped by a written contract. A power group in government cannot be stopped by a state paper. A revolutionary junta, whose purpose is to take over the sovereignty, cannot be stopped by a resolution of congress. The only answer to a ruthless political-action group, determined to destroy the honor of America, is a political s Troy the honor of America, is a political-action group determined to support American political ideals and defend the men in Government who are loyal to them.

We have talked loosely and superficially about this rival-power system. But talk is no longer good enough.

We have called the product the Acheson foreign policy. This dual control of foreign policy was operating in our Government as nearly as 1940 under Harry Hopkins. It operated under Dean Acheson, but it has operated just as effectively since he left. We have no reason whatever to think this group lost its hold because Mr. Acheson resigned. Everything we know indicates the contrary.

Who then are the people we are discussing? Where do they operate? On what foundation does their power rest?

THEY DO NOT OPERATE UNDER CONSTITUTIONAL RESTRAINTS

Part of our confusion comes from the fact that this group does not operate along constitutional lines at all. Our legal foreign relations staff works in the State Department, under the direction of the President, and within the policy framework laid down by Congress. But the extralegal foreign-policy-making conspiracy operates all over the lot. Like a cancer growing wild, it ignores all the restraints inherent in a healthy, well-balanced organism. This collectivist machine operates, in part, in the State Department, in part, in the White House Secretariat, in the super-Cabinet agencies of national defense, in the Foreign Operations Administration, in the CIA. But a substantial part of it operates outside government. It may be found in the press, in the parties, in the colleges, in labor unions, in business, in the United Nations. The important point is that all the parts of this political machine are coordinated. They operate, as one, from some control tower we cannot see.

We have tried to blame our Presidents, the State Department, the party in power, for our failures in foreign policy. I am convinced we shall never recognize the octopus we have to fight until we realize it is not part of the legally established government at all. It is a revolutionary junta, operating within our Government, and through our Government, but not for our Government, our Constitution, or our Nation.

What keeps this cabal in power, under Democratic and under Republican administrations? Why has it been impossible for three Presidents and many Congresses to demolish it? That is a long story but it can be summarized in three p's: pressure groups, propaganda, and pelf—that is, big spending.

You are going to ask me whether this group is entirely Communist directed. I doubt if our problem is that simple. This group has, we know, included Communist Party members and Communist agents, and may still include them. It includes Socialists, collectivist one-worlders, ambitious individuals greedy for power, willing in time of trouble to advance themselves at the expense of their country. It includes trimmers and collaborators who believe they can make deals with the unscrupulous, who think they can get votes or power or contracts or publicity, from the Communists, and then cast aside their temptors. It includes the innocent and the simple minded, who love big words that have no meaning.

I do not know what proportion of these people are Communists, but I know for certain that everything they do is of benefit to Moscow, because it is directed by Moscow. The Soviet leaders are the most skillful people in the world today in the new political arts of propaganda, brainwashing, camouflage, and what I have called revolution by assembly line. We can save ourselves a great deal of time and thought if we realize one fact. As conditions are today, the Communist world revolution will control and use all the bits and pieces of collectivism, one-worldism, centralism, internationalism and all their variations. None of them will be helpful to us.

How are we going to redress the balance, and give strength to the vast majority of true Americans, so they can manage their own government?

We must give up our reliance on legalism.

The pro-Communist, internationalist, collectivist foreign policy, with its favoritism for everything which helps the Soviet Union, has triumphed again and again because of the energy, intelligence, and determination of a self-directed elite. We fight this advancing army with statements, promises, papers and laws. We will never win until

we oppose the collectivist political faction with resolute political action by men determined to put America first.

The pro-American group within our Government today is more numerous, abler, stronger, more devoted, than the collectivist group. It is supported by the vast bulk of the voters of both parties. Its weakness is that it is trying to win a debate under the rules of American political life. It should be fighting for victory over opponents who know no rules.

PRO-AMERICANS ARE UNDER ATTACK

We must know first the names of leaders of the pro-American group. You can find out who lead the American branch of our two-headed Government by the enemies they have made. The left-wing press and the collectivist collaborators are always ready to attack Secretary of Defense Wilson. They center much of their fire on Admiral Radford.

Khrushchev, speaking in Red China last fall, violently denounced Admiral Radford, and bracketed him with the Communist-hated Senators KNOWLAND and McCARTHY. Isn't it significant that left-wing American columnists today follow exactly the line spoken by Khrushchev 4 or 5 months ago?

You remember this bloc did not exactly like MacArthur. They denounce the Senators who support the free nations of Asia. They criticize President Eisenhower if he dares cooperate with Republicans they have not recommended.

The collectivist press has not yet started to attack Herbert Hoover, Jr., who is now our Under Secretary of State, but it is a rule of theirs never to call attention to good people on our side until they have to. Assistant Secretary of State Robertson has escaped their attack for the same reason.

Today, pro-American officials have not one moment's security. They are constantly under attack, mostly by moves they cannot see. If you need a blueprint of how the collectivists keep dangerous anti-Communists under constant pressure, I suggest you analyze the series of moves which they employed to destroy Senator McCARTHY, from the day in Wheeling, W. Va., when he tore down the curtain of censorship hiding the Communists in our State Department.

I tell you just such a subtle, complex, perfectly timed, secret campaign is already under way against the men who dared advise the President to resist the Chinese Reds. The strategy is worked out, and broken into steps. It will arise, spontaneously, from all directions. It will be echoed in all quarters of the world. The line is already apparent in the inspired British press and that of the Continent.

From a well-informed left-wing magazine I learn the shape of coming events. Once the U. N. is well in the picture the plan is to "build up enough pressure to make imperative the gentle liquidation of Chiang Kai-shek, and the establishment of true self-government for the Formosans under U. N. trusteeship." But, my friends, the Nationalists are not Formosans. Self-government will give the island to its prewar inhabitants. Can you see the Nationalist armies, driven from Formosan soil by a demand for neutrality, wandering like a ghost army about the world, as helpless as General Anders valiant Polish fighting men? Next we are told "binding multilateral agreements for the reduction of armaments are imperative." These agreements will blind us but not the Communists. Finally we are told, "then the gamble that the President has taken will start paying off. The greater his success, the more likely he is to acquire the freedom of action he needs to (and I urge you to note) shed his most troublesome aides."

ONLY POLITICAL ACTION WILL SAVE US

The bloc which intends to destroy the true Americans in our Government is in action. Is there a bloc to defend the true Americans

and drive out the secret enemies of our country? I am not urging you to help our friends in Asia. I am urging you to prevent the humiliating defeat of our country and everything it stands for.

You ask who are the leaders of the collectivist bloc. Who is taking Acheson's place today?

I can guess but I have no legal proof. Remember, the physician cannot have proof that his diagnosis is correct. He can get that only from the autopsy.

But I want to point out one significant fact. We are never going to have legal proof, about the most dangerous enemies of our country. We will not be able to use what proof we have, when the culprit is close to the top. Attorney General Brownell and J. Edgar Hoover told us how FBI reports on Harry White, for example, were sent to President Truman, and his Cabinet officers again and again. We know President Truman and his top Cabinet members opposed promoting Harry White to the International Monetary Fund, in view of his record. But he was promoted.

Who could tell the President of the United States he must promote a known Communist collaborator? I have been told who was the person responsible but I have, so far, no proof. Shall we sit and do nothing, when we have political proof that some of our officials are selling out our country, merely because we have no affidavits of what was said in their secret conferences?

One thing we know. The Communists and their collaborators push their best men close to the top, because that is the safest place to be. No one could remove Dr. John from his job in Germany though more than one person knew he was disloyal. We may get the little traitors by assembling legal proof. We will never get the big ones, except by political counterattack.

The pro-Communist attack on our political institutions is political action. We must use political action to remove from public life every man or woman who is beholden to the Communists, or committed to a philosophy alien to our Constitution. We cannot wait until we see a party card.

POLITICAL ACTION WILL BRING ABOUT AN AMERICAN POLICY

We must also know American policy. It is all very well to know Communist policy, but it is more important to know American policy.

We must have a clear American foreign policy and a clear American military policy before we enter any conference with other nations in the United Nations or outside.

There is no harm in conferring with foreign governments, inside or outside of U. N. so long as we put America first.

Nationalist China has perhaps half a million men eager to fight for their independence.

Korea has courageous soldiers ready to fight on their own soil. Indochina can provide others, with American training. Altogether free Asia can furnish millions of troops eager to guard their sectors of the frontier of freedom.

Can we guarantee that no one in our State Department or FOA will hamstring the funds Congress has voted to arm them? Can we guarantee that agencies of our Government will not conspire to undermine Chiang Kai-shek or Syngman Rhee or Vietnam? If the great brains, who have abandoned newspaper work for pontificating, sow planned confusion or attack our pro-American leaders, are we ready to meet them with better newspapers, better writers, better radio and television programs, or, if necessary, by mimeograph machines in every block?

The Chinese Communists have started four wars in the last 10 years, with no penalty. The Red Chinese know they can never put down the Chinese on the mainland, while the Chinese on Formosa have an army. They

will never be satisfied with less than total destruction of that army. They must destroy the armies of Korea and of Indochina. They count on the aid of their supporters in our councils.

Support of the armies of free Asia is American policy, as destruction of these armies is Communist policy.

The Communist regimes are weak and their people rebellious. The only strength they possess is the faction within the American Government which puts the Soviet Union first.

We must deal first with our own dual Government. If we will organize political action, to support the pro-Americans in our Government and in public life, the world conflict will soon be over. We can win true peace for all the world if we will gird ourselves to defeat the enemy within.

Tax Relief Under H. R. 4300

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. REED of New York. Mr. Speaker, there has been a lot of talk to the effect that the Republican tax program of last year did practically nothing for lower bracket taxpayers, specifically those with incomes below \$5,000. Let us put the record straight once and for all.

In the first place these statements have referred only to the big tax-revision bill. This ignores the fact that the Internal Revenue Code of 1954 was only one part of the entire tax program and, from a revenue standpoint a relatively small part. The entire tax reduction provided last year amounted to \$7.4 billion, of which the revision bill only accounted for \$1.4 billion.

The biggest single portion of the program was the across-the-board individual income-tax reduction which went into effect a year ago last January. That reduction amounted to \$3 billion. There are some who say that that reduction was provided for in a law enacted by a Democratic Congress. Of course, we all know that the actual reduction could never have been permitted to take effect unless tremendous expenditure reductions had not been achieved by the Republican Party. The \$3 billion reduction was achieved by a tax cut in the rate of about 10 percent in the lower and middle income brackets and ranging down to a little over 1 percent in the upper brackets. About 31 percent of the tax relief in that bill went to individuals with adjusted gross incomes of less than \$5,000. It should be pointed out that this was approximately the same percentage by which these individuals had previously had their taxes increased. In other words, we went down almost exactly the way we had come up.

Moreover, it should be recognized that this group with adjusted gross incomes of under \$5,000 to whom 31 percent of the tax relief went, actually bear about 29 percent of the total income tax burden. Therefore the percentage reduction in the below-\$5,000 area represented an

FEBRUARY 10, 1955.

Mr. J. E. BARR,
Chief, Inspection Branch,
Grain Division,
Agricultural Marketing Service.

DEAR MR. BARR: I am writing you in reference to the series of meetings you are conducting throughout the country concerning a proposal to define or classify soybeans with green seed covers, which in cross section are yellow, as green soybeans.

The growers in the section of Arkansas which I represent have been growing Ogden Lee, and Dortchsoy beans, all of which have a yellow meat but a green cast on their coats.

Such a reclassification, I am informed, would cause such beans to be labeled "mixed" and, as such, would sell for less. In addition, I am advised, they would receive a lower loan rate, and growers and producers would have greater expense of handling.

From information here in Washington, it would appear that there is some belief that within a few years these varieties will be replaced by others which have been given some trial in other sections. If this is true, I would be interested in knowing if sufficient trial has been given to assure that these new varieties will replace the beans now being grown in this section. This would, in a short time, eliminate the need for a reclassification.

Such action would prevent added economic difficulty to these growers and would solve the problem within a short time. For this reason, I am writing to suggest that any action to reclassify be deferred until it can be determined that these new varieties will be of commercial value to our growers and they can begin to switch over to these new varieties.

I will appreciate your placing this in the record of the meeting to be held in Memphis on February 14.

Yours very sincerely,

E. C. GATHINGS.

At the Memphis meeting, Mr. W. H. "Bill" Wyatt, of Blytheville, Ark., made a very fine statement relative to this reclassification, and for the information of the Congress, I wish to include Mr. Wyatt's full statement:

TESTIMONY AT MEMPHIS HEARING, UNITED STATES DEPARTMENT OF AGRICULTURE, ON CHANGES IN OFFICIAL STANDARDS FOR SOYBEANS, FEBRUARY 14, 1955

I am W. H. "Bill" Wyatt, of Mississippi County, Ark. As a member of the board of directors, I'm representing the Arkansas Farm Bureau Federation at this hearing.

Let's consider first the proposal to "define or reclassify soybeans with green seed coats, which in cross section are yellow, as green soybeans, instead of yellow soybeans as at present."

On the face of it, that seems to be all right since green soybeans and yellow soybeans now carry the same CCC loan value and both may be traded on the board. But on a closer analysis we find this to be entirely false as far as our Ogden soybean is concerned.

We called in C. A. Silas, of Woodson Tenant Laboratories, and asked for a description of the Ogden bean. This is what he said: "Ogdens are now classed as yellow beans. The proposed change would force them into the 'mixed bean' classification, because Ogdens are neither green nor yellow by seed coat analysis alone."

Keith Bilbrey, County Agent added, "The green pigment is variable and unstable depending on the age of bean and length of exposure to sun rays before harvest. So, because some of the Ogdens bleach out to yellow, they could no more be classed as green than as yellow. The dangerous consequence is that nearly all the highest pro-

ducing soybeans in the South would automatically be classed as 'mixed beans.'"

This is supported by the definition on page 69 of the Official Grain Standard section (g) "Mixed Soybeans—Mixed soybeans shall be any mixture of soybeans which does not meet the requirements for classes, yellow soybeans, green soybeans, brown soybeans, or black soybeans. Bicolored soybeans shall be classified as mixed soybeans."

What does this mean price-wise to the producer?

The 1954 CCC Grain Price Support Bulletin Supplement 2, Soybeans, said: "The support rates for soybeans of the classes, black soybeans, brown soybeans, and mixed soybeans shall be 25 cents per bushel less than the support rates for the classes, green soybeans and yellow soybeans."

Mixed beans may not be tendered on the board, could not be hedged, and could not be delivered.

The American and world markets have accepted the Ogden bean for 10 years, with no complaint that we have ever heard of before. Why the suggested change now? It would be a calamity to the South. A tremendously unfair and discriminatory act.

Southern production in 1951

	Acres	Bushels per acre	Total
Arkansas.....	607,000	20	12,140,000
Alabama.....	88,000	18	704,000
Georgia.....	21,000	10.5	211,500
Kentucky.....	130,000	19	2,470,000
Louisiana.....	38,000	17.5	665,000
Mississippi.....	425,000	13	5,525,000
North Carolina.....	309,000	16.5	5,098,500
South Carolina.....	83,000	12.5	1,037,500
Tennessee.....	183,000	17.5	3,202,500
Virginia.....	166,000	18	3,004,000
Missouri.....	420,000	20	8,400,000
1951 total.....	2,470,000	-----	42,458,000

¹ Assuming 1/4 of Missouri's production in the Ogden area.

(1951 figures were used because they are nearest to, but under anticipated production in 1955).

Surely it is fair to guess that 80 percent of all southern beans are Ogdens. Mississippi County Arkansas' percentage will run 90 percent Ogdens.

Eighty percent of the 1951 production would be 33,966,400 bushels.

If you force Ogdens into a "mixed-bean" class, then by 1954 loan standards, you would be saying to the world, "The South's 33,966,400 bushels of Ogden soybeans are worth \$8,491,600 less than the same number of yellow soybeans." And there would not be a word of truth in it.

And, by reclassification, the American market might start discrimination in price also, and for no reason, except promoted by Government classification.

We believe any foreign buyer can get strictly yellow soybeans from Northern areas for their limited needs without hurting them and without totally wrecking our economy. Then there is extra danger: We fear the idea would "snowball" and others would start demanding strictly yellow beans.

We are against the proposed change in classification of Ogden soybeans from the cross-section analysis to color of skin coats. If the United States Department of Agriculture can show us just cause why they should be changed, then time must be allowed to develop a comparable yielding yellow bean for the South. In other words, we want no change now.

Likely lowering of support price for 1955 crop from 80 percent down to 70 percent may be tragic enough: \$2.22 down to \$2.04 if the market follows.

The Soybean Industry

EXTENSION OF REMARKS OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. GATHINGS. Mr. Speaker, the soybean industry, and specifically the growers of soybeans in the Midsouth, are threatened by a proposal of the Department of Agriculture to reclassify certain varieties of beans.

This matter is rather complicated in its ramifications, and for the benefit of the Congress I would like to call to the attention of the Members several letters written on this proposal.

On February 14 the Department called a meeting of soybean growers in Memphis, Tenn. Herewith is a letter which I wrote to Mr. J. E. Barr, Chief of the Inspection Branch of the Agricultural Marketing Service Grain Division:

A conservative estimate of 4 or 5 million bushels crop in Mississippi County, Ark., alone in 1955, at 20 cents per bushel less would be nearly a million dollars to that county alone.

The United States survey shows 99 percent of Arkansas farmers sell less than \$25,000 gross annually. All our farmers grow soybeans with cotton controls on. This thing would affect all of us.

This proposed change would only concern the South as the Ogden bean is not grown in cooler climate and since the crushers find the oil content of the Ogden as high or even a little higher in some instances and since the cross-section the Ogden is as yellow as the purely yellow-coated beans, the 58,000 members of the Arkansas Farm Bureau Federation respectfully request that no change be made in the classification of the Ogden soybeans.

Concerning the proposed revision which would decrease the maximum limits of foreign material by 1 percent in each grade, we, as producers after much consideration, can not see that this will benefit us in any way.

Last year nearly all buyers bought the No. 1 grade, which as it now stands limits foreign material to 2 percent. If these buyers plan to return to a No. 2 grade for basis of purchase under the proposed change, they are still allowing the 2 percent foreign matter. What is to be gained?

Grading at its best, as far as foreign materials are concerned, is far from accurate. No two graders can probe the same load and come up with the same foreign matter percentage.

Going a little further into this, I checked the grades on two carloads shipped January 27, 1955, by Farmers Soybeans Corp., of Blytheville, Ark. Here are results of three different people grading.

	Woodson-Tenant Laboratories	Memphis Merchants Exchange	U.S.D.A. Federal appeal
T. W.	56	56.0	56.0
F. M.	4.0	2.5	2.7
Splits	18.0	19.0	20.0
Damage	3.9	2.9	4.0
Moisture	14.1	14.3	14.3
T. W.	56	56.0	55.5
F. M.	2.8	2.0	2.0
Splits	19.0	21.0	22.0
Damage	4.2	3.0	4.0
Moisture	14.0	13.9	13.9

You will note the difference in the grades especially, even in the last two when the car was in Memphis and did not move. Because of this inability to accurately determine the exact amount of foreign materials in a load of beans (and the difference is much greater on a farm truckload because the beans have not been blended) it is dangerous and injurious to producers for this grade schedule to be too strict.

Until a better means of grading is found or until the country elevators and local buyers will use their cleaners and weigh the foreign material, or until a premium is paid for better grades as in purchase of cottonseed, we would hesitate to approve any tightening of the United States soybean standards.

We do not want to be shortsighted and lose our export market.

We are interested in improving and delivering a quality product as are other interested groups such as the American Soybean Association. If a 5/64 round-hole bottom screen is put into use in order to remove the chipped beans from the foreign material count, we will support the proposed revision which would decrease the maximum limits of foreign materials by 1 percent in each grade.

As to the other proposed changes, they are minor as far as the farmer is concerned compared to the aforementioned proposals, but most of the argument of foreign matter will relate.

In addition to Mr. Wyatt's remarks, two other excellent statements should be presented to further emphasize the seriousness of this proposal. Mr. G. A. Hale, of the Hale Seed Farm of Burdette, Ark., has pointed out a very definite objection to this proposal, and his letter addressed to the Director of the Grain Division follows:

HALE SEED FARMS,
Burdette, Ark., February 15, 1955.
DIRECTOR, GRAIN DIVISION, AGRICULTURAL MARKETING ADMINISTRATION, UNITED STATES DEPARTMENT OF AGRICULTURE,
Washington, D. C.

DEAR SIR: After attending the very efficiently and fairly conducted hearing in Memphis yesterday, I wish to submit to you my comments on one of the proposed changes in the present classification of soybeans by your Division: namely, the classification of soybeans with green seed coats but yellow in cross section as green soybeans.

As a breeder, tester, and producer of soybean varieties for the Cotton Belt since 1942, I am of the opinion from the remarks made by your representative and others at this hearing that they do not fully appreciate the reasons why southern soybean growers are opposed to classifying the Ogden variety and its selections and possibly the new Lee variety, when grown under some conditions, as green soybeans.

Commercial, State, and Federal soybean breeders in the South have been cognizant of the desirability and the possibility of breeding a completely yellow, full-season soybean variety to replace the Ogden variety and its selection, which we realize have several undesirable characteristics. To date no breeder has succeeded in producing a widely adapted all-yellow variety with the maturity date and high yield of the Ogden-type soybean. All of the adapted, available yellow varieties, with the possible exception of the Lee variety—which has some green coloring when grown under some conditions—and which is not adapted to the northern part of the Cotton Belt, yield from 10 to 40 percent less than the Ogden and its selections according to tests made by our State experiment stations in cooperation with the United States Department of Agriculture.

It is the opinion of all the growers and buyers of soybeans that I have contacted in this section that, if the proposed change in the classification of the Ogden-type soybean is made, this change would likely result in southern growers getting lower prices for the bulk of their soybean crop. Our only recourse to this condition would be to switch to the growing of less productive all-yellow varieties. This change would be impossible until we have time to increase the present inadequate seed supply of these varieties to the volume required to plant most of our acreage.

As a soybean grower, I appreciate the clear and enlightening presentation of the reasons why the Department of Agriculture has proposed the change in the classification of the Ogden-type soybean. It is doubtful if all of your problems would be solved by changing your method of grading so that our Ogden-type soybean would be classed as a green soybean because of the fact that the green coloring in the Ogden seedcoat will fade and the coat will be yellow under some conditions. The seed analyst of the Arkansas State Plant Board, Little Rock, Ark., which is the official seed-certification agency of Arkansas, has difficulty in determining whether or not even our registered-grade Ogden-type soybeans are pure as to variety

because of the unstable color of the seed-coats.

Until soybean producers can develop and growers can increase an all-yellow soybean variety that is as good as the Ogden and its selections to replace it and until an accurate method of classifying soybeans with green seedcoats but yellow cotyledons such as the Ogden and its selections, which are very unstable in color, is devised, I am opposed to a change in the present classification because I do not think a change at this time would be to the best interest of any segment of the southern soybean industry.

Thank you very much for the opportunity to present my views.

Respectfully submitted,

G. A. HALE.

With this should also be included the letter written by Mr. Paul C. Hughes, of Blytheville, president of the Mid-South Soybean & Grain Shippers Association. Mr. Hughes points out the economic circumstances connected with this proposed change:

MIDSOUTH SOYBEAN & GRAIN SHIPPERS ASSOCIATION,
February 17, 1955.
TO DIRECTOR, GRAIN DIVISION, AMA, UNITED STATES DEPARTMENT OF AGRICULTURE,
Washington, D. C.:

VIEWS OF THE MIDSOUTH SOYBEAN & GRAIN SHIPPERS ASSOCIATION OF THE PROPOSED REVISIONS OF THE SOYBEAN STANDARDS

1. On the proposed revision that would reduce the maximum limits of foreign material 1 percent in each numerical grade. As country shippers we are in the middle on this question as we only buy on the grade that we have to sell but as the growers as presented by the American Soybean Association and the processors thought their present buying practices want 2 percent foreign material in No. 2 soybeans, we see no reason why the change cannot be made. We do, however, urge that a study be made to see if some simple method can be found to separate true foreign material from the small broken pieces of soybeans that fall through a 5/64 round hole screen. Maybe the use of a smaller hole size such as a 3/64 would let enough of the small weed seed through and leave enough broken pieces on the screen to reduce the buildup of foreign material we now have in soybeans through handling. If such a method can be found we urge its use.

2. On the reduction of moisture we see no reason why the moisture in No. 1 soybeans cannot be reduced to 12 percent. However, we feel that no change need be made in the moisture of No. 2 soybeans as we have found that even in our humid climate 14 percent moisture soybeans can be stored.

3. We can see no reason why the change in splits should not go through if you in the Department feel that it would improve the soybean grading system.

4. On the proposed special limits on heat damage in each numerical grade, we are against such limits as they would work a hardship on all shippers. Today inspectors are having enough trouble determining total damage or just how much total damage a sample contains. However, if the Department feels that such limits should be put into effect, then heat damage should be more clearly defined. We suggest that it means soybeans that have turned entirely black or brown from heat. The present methods of saying that a small brown spot in the middle of an otherwise sound soybean is heat damage leaves too much room for human error and judgment for such narrow limits of heat damage as have been proposed by the Department.

5. On the proposed reclassification of soybeans with green seed coats that are in cross section yellow from the yellow class to the green class. We cannot say too strongly that

we are opposed to this change. We have many reasons for being against the change. Here are just a few of them: 80 percent or more of the Midsouth soybean production would be affected by this change. No evidence was present at Memphis to disprove our conclusion that if the proposed change went through that 90 percent of our Ogden-type soybeans would grade as mixed. This was the case before the change in 1949. If they were classed as mixed in 1948 and before what new method has been developed to tell class by the variety predominate color and how could variety purity be proven? In other words how could an inspector tell the difference between a bleached Ogden and a pale S-100 to say that the sample was a mixture of green and yellow varieties or just a sample of Ogden-type soybean and therefore are classed green and just happen to have 10 percent or more that just happen to be faded yellow?

We recognized the Department's desire and the need to make a grade and class such that it will tell the buyer if he wants that certain quality or not. We agree that under the present standards for soybeans it is not always possible for the buyer to get just what he wants by buying a certain grade and class but as one of the speakers at Memphis pointed out No. 2 hard wheat does not always describe just what type of No. 2 hard wheat that a buyer wants. Therefore, a buyer will say that he wants Kansas or Texas No. 2 Hard Wheat and not Illinois No. 2 Hard Wheat. Today most buyers that need a yellow-coated soybean for their special products have found that they can get what they want by saying that they want a No. 2 yellow soybean from Illinois points or maybe Ohio. We feel that since the buyer can get yellow-coated soybeans by saying what he wants that it is not right to penalize the Midsouth that has no high yielding soybean that isn't mixed with green and yellow coats. We realize that you cannot sell a person for long something that he does not want so if it was not possible for a buyer to get yellow-coated soybeans without changing the standards we would not be opposed but as he can get yellow-coated soybeans leave the standards alone.

Respectfully submitted,

PAUL C. HUGHES,
President.

Mr. Speaker, from this brief outline of the facts it should be readily seen that this proposed change will work a great hardship on the South.

However, Mr. Speaker, in discussions with Mr. Barr and with Mr. Clyde M. Jackson, of the Grain Division, I have been unable to find a basis for this proposal.

I trust that the Department will abandon the reclassification plan. If it is put into effect the Southern soybean grower will be forced to sell his commodity at an appreciable smaller return.

The order should not be put into effect as it would work a severe economic hardship on a large section of the country.

The Atomic Development Mutual Fund

EXTENSION OF REMARKS OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. WILLIAMS of New Jersey. Mr. Speaker, the statement which follows

was submitted by Mr. Newton I. Steers, president of the Atomic Development Mutual Fund, to the Joint Committee on Atomic Energy. The Atomic Development Mutual Fund is an organization which has been one of the prime movers in the field of developing atomic energy for industrial use. Mr. Steers' statement, therefore, is of great significance. Among the many men who are involved in furthering this vital effort is Mr. S. Chadwick Reed, of Plainfield, N. J. As the statement indicates, the fund has grown almost fifteenfold in 1 year, which is an index to its importance.

My name is Newton I. Steers, Jr. I am president of Atomic Development Mutual Fund, Inc. When I appeared before this committee on May 11, 1954, we were about 5 months old, and assets of our fund were about \$1 1/4 million. We are now a little over a year old, and assets are in excess of \$15 million. This growth constitutes a record in the branch of the securities business known as the mutual fund industry.

This rapid growth, which others have called even phenomenal, is of particular significance because it reflects the public's view of the financial future of atomic energy. Our fund has been presented as a vehicle for capital appreciation and not for income. The investing public evidently agrees with us that atomic stocks have a greater growth potential than any other group of stocks which could be assembled.

Some people feel that the public's enthusiasm has bid prices up beyond what earnings can support, that atomic prices are too high. The commonly used ratio of price earnings is, as a result, abnormally high, when based on present earnings. The question, of course, is whether future earnings will sufficiently increase in a short enough time to justify purchase at present prices. That is to say, whether increased future earnings will cause prices to rise over present levels by a sufficient amount, and soon enough, to provide justification for present purchase.

It is, of course, true that atomic stock prices cannot be expected forever to remain abnormally high relative to earnings. On the other hand, they may be expected to remain high in relation to other stock prices as long as the atomic industry is expected to grow more rapidly than other industries and, hence, permit higher earnings by the companies engaged in it than by other companies not so engaged. And particularly is this so if the rate of growth of the industry is itself growing. For those of you with a mathematical background, atomic stock prices may be said to be a more direct function of the first, or even the second derivative of earnings than of earnings themselves. To hold otherwise is to imply that prices cannot, or at least will not, rise until potential earnings have actually been realized. Those who hold to such a notion will inevitably find themselves lagging behind persons more willing to act on, not earnings, but prognostications of earnings; lagging behind, and buying at higher prices instead of selling at higher prices; lagging behind and, in effect, paying capital gains to earlier worms. We must not forget, of course, that a company which enters a new field and derives the benefits of extraordinary growth is not benefiting itself alone. It benefits its customers—the public. Economically speaking, the leaders of such a company have achieved a more efficient allocation of resources. Those who finance such a shift in resource allocation also contribute to the public benefit, as do those members of the public who, by their investment, release the money controlled by the primary sources of new capital for use on the next round.

But still, say more sophisticated critics, let us concede that atomic stock prices will

naturally be higher in relation to earnings than other classes of stocks. But what if they are too high, even on that basis? The answer to this question involves an attempt to appraise how rapidly the atomic industry is now growing, and how rapidly that rate of growth is itself growing.

Such an appraisal is made more difficult by the concealment, most of it no doubt necessary for security reasons, of many of the key figures. The problem is further complicated by the fact that many atomic companies are in other fields as well and the extent of their atomic involvement is not always easy to estimate. Nevertheless, let us outline the various segments of the private atomic-energy business and infer as much as we can as to its all-important growth. In the table below, minimum figures are given on the dollar size of various portions of the private atomic industry at the end of 1955. For comparison, the figures supplied this committee in May 1954 are also given.

TABLE 1

	May 1954	Rate by end of 1955
Uranium and other atomic minerals.....	325	600
Radioisotopes and radiation instruments.....	27	40
Specialized equipment supply.....	107	200
Total.....	459	840

You will note that these figures are minimum figures. By this I mean they represent minimums which can be supported with reasonable assurance on the basis of the data available. Larger figures may, therefore, merely imply the release of additional data, rather than an increase in activity. Nevertheless, we must draw our inferences from the best figures available. Indeed, to ignore figures showing increases is in itself to draw the inference that there has been no increase.

Mr. Jesse Johnson, AEC's Director of Raw Materials, stated a few months ago that the domestic uranium industry was at the \$100-million mark annually and that production should double within 18 months. (He also revealed that persons engaged in uranium mining had multiplied 8,000 percent since 1948.) On this basis, the \$200-million mark should be reached about the end of 1955. We also know that two other areas are about as important as the United States. These areas are Canada and the Belgian Congo. If one of these is less important now than the United States, it may well be the other is more important. On this basis, we can arrive at a figure of 3 times \$200 million, or \$600 million. To be sure that this figure is truly a minimum, we should remember that South African production is mounting rapidly and by the end of 1955 may well cause that area to be 1 of the 3 leading areas. We know that 1954 production from South Africa was in excess of \$25 million and was over 5 times that in 1953. Furthermore, our total figure is based on the inclusion of other minerals important to atomic energy, such as zirconium, beryllium, thorium, and lithium. The lithium industry in 1955 will be over \$20 million, based on the expected sales of the 2 leading producers alone.

Passing from uranium to radioactive materials and radiation instruments figures, we are dealing with smaller figures, but ones showing very rapid increases. Thus, AEC figures show that radioisotope shipments have multiplied nearly 5 times in the last 5 years and the dollar volume of radiation instruments manufactured has increased more than 5 times to over \$30 million. No one can foresee how large a market may develop for the class of radioactive materials which are left over after uranium fissions (fission products). Chairman Strauss has indicated that potatoes can be preserved

for 2 years without freezing by irradiation with fission products and that this irradiation can be accomplished for one-half cent per pound. It appears that a figure of \$40 million can be postulated for the end of 1955 to include materials artificially irradiated (radioisotopes), materials resulting from fission (fission products) and radiation instruments.

The last figure in table I is \$200 million for specialized equipment supply. There are various reasons for believing that the previous figure of \$107 million must have about doubled. First of all, the \$107 million figure was derived from a percentage of AEC purchasing, as between lumber, concrete, etc., which are not uniquely tied to atomic activity, and mechanical engineering equipment, electrical engineering equipment, and electronic equipment, etc., for which atomic energy has very pronounced implications. Since that time, there has been a decided shift away from construction expenditures toward expenditures for operation (e. g., operations were 41 percent of fiscal 1954 expenditures, but 77 percent of fiscal 1956 expenditures as budgeted). Operating expenditures are much less concerned with items like lumber and concrete. Further, the AEC has put increased emphasis on fixed price competitive bidding as its experience has accumulated. Operational expenditure again is much more susceptible to fixed price buying (on which the seller can make a profit). For these reasons it appears reasonable to believe that the portion of the \$2 billion annual expenditure budgeted for the AEC which will be bought on a basis allowing a profit (excluding items included previously) will be at least \$200 million.

In addition to the figures above totaling \$840 million, there are many additional millions which are subject to profitmaking. One increment results from the large and growing business of treating uranium oxide to produce uranium metal and uranium salts. Another increment results from non-governmental expenditures for research reactors which now run to several millions annually. In addition, it is known that the Navy has budgeted funds for at least five atomic submarines in addition to the *Nautilus*, and some of the reactor portion of these submarines will be bought on a basis allowing profit to the seller. If a billion dollar private atomic industry is not here by the end of 1955, it certainly should be here by the end of 1956. It may well be here now.

Finally, the recent competitive contract whereby the Army will purchase a 10,000-kilowatt reactor for about \$2 million means that atomic power is not so far away as many have supposed. Only a year ago the phrase ran "a megabuck for a megawatt." This may be translated to \$1,000 per kilowatt of capacity. The Army reactor will cost about \$200 per kilowatt, and it is known that larger reactors can be built at a lower cost per kilowatt. Since coal-burning capacity costs around \$80 per kilowatt of heat and the fuel cost of uranium fission is markedly less than in the case of combustion, it is apparent that very significant progress toward truly competitive atomic power has been made. A massive giant stirs and makes himself known though he is not fully visible. He is the multi-billion-dollar atomic-power industry intimately related to all that has been discussed above, but basically just one of the several atomic giants which may be seen in the years to come.

Let us return to the financial world and see how atomic companies have fared, without implying that they have so fared solely because of their atomic activity. In table 2 figures are given on companies which our company has given greatest emphasis to. It should be noted that these were not selected as the stocks undergoing the greatest appreciation, i. e., with the advantage of hindsight.

TABLE 2.—Capital appreciation of selected atomic companies

	1953		Feb. 3, 1955 price	Increase over 1953 high
	Low	High		
Climax molybdenum.....	33	43	62½	45
Vanadium Corp.....	15	23	37½	61
Gunnar Mines.....	2½	13¾	14	2
Poote Mineral.....	11	15¾	48½	230
Lindsay Chemical.....	15	19	44½	135
Lithium Corp.....	3½	6¼	29½	372
Homestake Mining.....	33	41	43½	6
Beckman Instruments.....	11	17	24	41
Consolidated Engineering.....	11	15	29½	90
General Dynamics.....	31	47	100½	111
Union Carbide.....	61	75	83	11
Vitro Corp.....	5½	7½	19½	144
Westinghouse Electric.....	30	52	79½	52
Average.....				90
Dow Jones Industrial average.....	205	204	400	38

In table 3 below more inclusive figures are given. These cover some 75 companies in the fields indicated and were computed as of October of 1954. Yields and price-earnings ratios vary widely as might be expected from the varying degree to which the companies involved are expected to benefit from atomic growth and from the varying periods of time before these companies will feel the impact of atomic growth.

TABLE 3.—Price-earnings ratios and yields of atomic companies

	Price-earnings ratio	Average yield
		Percent
Raw materials:		
Uranium mining:		
United States.....	14.1	4.3
Canada.....		
Africa.....	19.5	4.8
Uranium processing.....	20.0	2.6
Byproduct uranium.....	15.7	4.0
Lithium, thorium, zirconium, beryllium.....	30.9	2.2
Radioactive materials and radiation instruments.....	37.5	0.9
Suppliers of special equipment.....	9.3	5.0
Atomic Energy Commission contractors.....	17.0	3.3
Application of atomic power.....	10.7	6.0
Diversified atomic activities.....	24.6	2.3

It appears evident that very substantial financing of the atomic industry will be necessary in coming years. The usual sources of new capital will undoubtedly be made available as the situation further crystallizes and intermediate obstacles are overcome. In the meantime, the public has demonstrated its faith in the future of the atom. Both large and small investors have shown their willingness to back up the new capital sources with the huge amount of liquid savings they hold throughout this Nation.

Great emphasis should continue to be put on Government-sponsored technical development. However, as this development proceeds, and we may hope accelerates, the procedures to allow private industry to apply its energy and ingenuity must also be developed. Passage of the act and the newly established market for plutonium and U-233 are important milestones. The advance of the variegated atomic frontier will be proportional to the incentives stimulating that advance. The uranium industry has shown how private enterprise can perform an atomic job when it is allowed to. Subject always to the paramount controls necessary to the national security, the uranium industry should serve as a model for the other phases of the atomic industry. In this fashion, the infant giant will mature most rapidly and in a manner consonant with the American tradition of freedom. The fundamental basis for free enterprise in the atomic arena is

simply that the cost to the American public of atomic profits will pale into insignificance when compared with the savings to the American people which will arise from the energizing effect of these same profits.

For Better Public Service

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to include an editorial from the *Christian Science Monitor* of February 15, 1955, entitled "For Better Public Service":

FOR BETTER PUBLIC SERVICE

The Federal Government needs more and better managers. Of course, every voter considers himself a manager. But what the Hoover Commission on Organization of the Executive Branch of the Government is talking about is the managerial talent engaged in the day-to-day conduct of departments and agencies.

Everybody knows there are relatively few Federal jobs paying more than \$10,000 a year. No business would dream of operating with such a thin sprinkling of top-level managers and administrators. No business would consider it economy to pay the men who make the big decisions so poorly. And almost any business would go bankrupt if it had a personnel turnover of 25 percent a year.

The Hoover Commission estimates that Federal costs could be cut \$50 million a year just by reducing turnover 5 percent. But its most vital recommendations have to do with strengthening the management of Government business. It wishes to add to the number of noncareer employees who have political functions in the sense of determining or defending policies. But it also wishes to create a senior civil service to give more secure status and better pay to selected career administrators.

Manifestly a lot of questions are going to be asked about these proposals, for just where an administrator becomes a policymaker or vice versa is not always easy to determine. The Eisenhower administration has insisted that it should have men and women in policymaking posts who were in sympathy with its aims. This is reasonable enough. Any shift of parties after 20 years may find some employees slow to accept a change in direction.

But manifestly the line must be drawn fairly tightly against political appointments or the civil service will be undermined. As the civil service tradition deepens the United States should be able to develop a corps of able professional administrators who will follow policy as laid down—as military commanders are supposed to follow policies set by civilian leaders. But in each case they will have to be adequately paid and isolated from politics.

This brings up a curious failure in the commission report. One of the more serious problems in recruiting and holding good public servants in the last few years has arisen from the uncertainties and harassments of the security system. The commission's task force, headed by President Dodds, of Princeton, recommended the naming of a distinguished body of citizens to study and clarify the security code. Why this proposal was not endorsed is hard to understand.

The commission has many useful ideas for improving the public service, including better training and recruitment procedures ending political clearance for rural mail carriers, and a plan for more equitable application of veterans' preference, which often now works a major distortion of civil service.

But the proposals for improvement at the managerial level are the most striking and potentially valuable. We trust Congress will study, adapt, and adopt them. Possibly with good prospects now for an increase in congressional salaries the lawmakers will be more ready to advance the pay of men and women in the executive departments who are also vital to effective government. Whether we like it or not, the Federal operation is a tremendous business; Americans cannot afford to have it poorly run.

Benefits to Little Taxpayers by Republican Tax Revision

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. REED of New York. Mr. Speaker, by eliminating wasteful, duplicating spending, the Republican 83d Congress, with the backing of the Republican administration, has made possible the largest tax reduction in the history of the world. Since we took over as majority party in Congress in 1953, the tax savings to the American farmers, consumers, and businessmen have been at the rate of \$7.4 billion per year.

Today, however, I would like to talk not about the great accomplishment of the Republicans in the field of tax reduction, but about what we have done in the field of tax revision.

The bill which I introduced and which the President signed on August 16, 1954, is the most monumental legislative undertaking ever attempted in any legislature anywhere in the world.

This 600-page Republican law cuts away the overlapping, unfair, and useless provisions of the Internal Revenue Code which had grown up piecemeal under successive Democratic Congresses. It corrects countless inequities which had been permitted to work against some of the most deserving groups of our taxpayers, such as farmers, retired old people, widows, widowers, working mothers, and those burdened with high medical expenses. And it closes innumerable loopholes in the old tax laws under which unscrupulous taxpayers were able to avoid their fair share of tax burden.

Work on this bill started in 1951 when, in anticipation of a Republican victory in 1952, I instructed my staff to prepare a questionnaire to be sent out to representative farmers, consumers, workers, and businessmen, asking them for their suggestions as to how our tax laws could be improved. The response was astounding. Over 15,000 taxpayer suggestions for improvements in the Internal Revenue Code were received. In addition, groups of leading tax experts throughout the country were organized

to study specific problem areas in our Federal tax structure.

The Committee on Ways and Means conducted public hearings on 40 different topics of major importance in connection with general tax revision. In the course of these hearings the committee heard testimony from over 500 witnesses. The committee and its staff then gave intensive consideration and study to the vast material which it had thus obtained. President Eisenhower and the staff in the Treasury Department endorsed this great task. In fact, the President has referred to it as the cornerstone of his legislative program. It has been estimated that over 500,000 man-hours have been spent on the bill.

Of course, I cannot summarize, today, the over 3,000 independent tax-law changes which the bill makes in our tax laws. I would like to give you just a few examples of the kind of thing that it does.

First, it permits a parent to take a \$600 deduction for a child whom he supports, if the child is under 19, or it attending school, or is receiving on-the-farm training, or is going to college, regardless of the child's earnings. Number of taxpayers benefited, 1,300,000. Saving to these taxpayers, \$85 million.

Second, it permits farmers to deduct up to 25 percent of farm income for soil and water conservation. Number of farmers benefited, 500,000. Saving to these farmers, \$10 million. In addition, farmers are benefited by provisions which permit more rapid writeoff of the expense of farm machinery equipment and construction and which remove the tax on the sale of diseased cattle.

Third, retired persons 65 or over will be exempt on all retirement income up to \$1,200, with tax saving up to \$240 per person. In addition, of course, to their personal exemptions. Over one and one-half million of our retired schoolteachers, firemen, policemen, and civil servants and other senior citizens will be benefited by this provision. Tax saving to them, \$141 million.

Fourth, under the bill medical expenses can be deducted when they exceed 3 percent of income, instead of 5 percent as under prior law. Thus under the new tax bill a family with \$3,000 of gross income, and medical expenses of \$150, will be able to deduct \$60. The same family would not be able to deduct anything under the old law. In addition, the bill doubles the present maximum limit on the amount that can be deducted for medical expenses. Eight and one-half million taxpayers will be saved \$80 million by this provision.

Fifth, the bill gives working widows, widowers, and mothers a tax deduction of up to \$600 for child care expense. Two and one-tenth million taxpayers in the low-income group will save \$130 million as a result of this provision.

Sixth, the bill exempts all death benefits up to \$5,000 paid by an employer to the widow or other beneficiary of the employee.

Seventh, the bill gives some relief from the double taxation of dividend income. It does this by excluding from the taxpayer's income the first \$50 in dividends.

A 4-percent credit on the amount of dividend income over \$50 is allowed. This is an election year and the Democrats have seized on this provision in an attempt to claim that it is designed to benefit the rich. They neglect to point out that among Americans who own stock are 2,130,000 housewives; 20,000 sailors, soldiers, and marines; 210,000 semiskilled workers, 323,000 farmers, 410,000 factory workers, 590,000 clerical workers, 250,000 small shopkeepers, and 200,000 salesmen.

Of the 4,750,000 families who own stock in public corporations those with income of \$5,000 a year or less own about one-third of the stock. These include 200,000 families with incomes of \$2,000 or less.

The Democrats neglect to point out that even under the new tax bill the total income tax on the single man who has wages of \$3,000 per year would be \$300. If the same man had made this amount of money in a corporation and had received it in dividends instead of wages the total income tax paid thereon would have been \$1,568.

The Democrats also neglect to point out that almost all civilized countries provide relief from the double taxation of dividends far greater than that in the new law. Canada, for example, provides a 20-percent tax credit for dividend income—five times the credit in the new bill. Incidentally, one of the results of this Canadian tax credit is that new capital has been flowing into Canada at a tremendous rate, creating jobs in that country which otherwise might have been made available in the United States.

In addition to these benefits, the new law will save taxpayers \$25 million in increased allowable deductions for charitable contributions; \$10 million in deductions for interest on credit purchases and \$10 million in more equitable taxation of pensions and annuities.

In addition to removing countless inequities in the taxation of individuals, the new Republican tax bill removes tax shackles which have impeded the growth of our economy. Thus, the bill will permit the more liberal writeoff of the cost of new equipment through the depreciation allowance. For example, in the first year of life of the new equipment the taxpayer will be able to write off twice the amount now allowed. This provision represents savings to taxpayers of \$375 million, of which seventy-five million represents savings to individuals, such as farmers, shopkeepers, and salesmen.

Of course, in the long run there will be no net loss of revenue to the Government from this provision since by accelerating the depreciation deductions these deductions are simply shifted from later to earlier years. However, the provision will mean thousands of jobs and better products at less cost.

Other aids to business found in the new tax law are as follows: Tax accounting rules are brought into harmony with business accounting.

The law will ease for small business the penalty tax on certain accumulated earnings which are retained for legiti-

mate business purposes in the corporation.

The law will give to small-business men favorable tax treatment in the deduction of expenditures for research and experiments designed to create new products and new jobs.

I have listed only a very few of the important changes in our tax laws made by the bill. All in all, the new law contains \$827 million of tax relief for individuals and \$536 million of tax relief for business. However, since the new law also extended the present 52-percent corporate income tax for 1 additional year, it will bring in an additional \$1.2 billion from corporations. This increased tax on corporations practically pays for all the tax relief granted so that the net cost of the bill to the revenue will be only \$163 million.

I hope I have said enough to show that the new Republican Internal Revenue Code will create more jobs, will help farmers and workers, as well as business, will promote the technological development needed for defense, and will provide more goods and services for all our people.

It is a blueprint for a better and more prosperous America.

Dedication of the Research Reactor Building at the Pennsylvania State University, University Park, Pa.

EXTENSION OF REMARKS OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. VAN ZANDT. Mr. Speaker, the Nation's second collegiate research reactor located on the campus of the Pennsylvania State University at University Park, Pa., was dedicated on Tuesday, February 22, 1955, as one of the many events in connection with the centennial celebration of the university. The dedicatory speech was delivered by Adm. Lewis L. Strauss, Chairman, United States Atomic Energy Commission. Chairman Strauss' speech follows:

Mr. President, distinguished guests, ladies and gentlemen, a century of academic and architectural growth lies between the Farmers' High School of 1855 and the Pennsylvania State University of today. During those years your predecessors and you have dedicated many new structures to the education of the young men and women of our country. We are met for such a dedication this afternoon as standing on the threshold of the second century we look backward with pride and ahead with confidence. Although we still know very little compared to what there is yet to be learned, we have discovered many useful things since 1855. This increased knowledge has enriched our civilization, lengthened our lives, and reduced our hardship and bodily suffering. Through mechanization we have done away with many of the chores of living. But the search for more capable tools to aid us in our learning and in our living is never ending. Over the years these devices, each based on the latest technology, have been

produced and operated for every purpose for which man could conceive a need. The automobile, household appliances, the airplane, electric lighting, and this microphone—all are examples.

You know, I am sure, that our Government is engaged in a vast program, seeking out, testing, improving, and applying peaceful uses of atomic energy. Government laboratories, industrial organizations, and institutions of learning, such as this great university, are all contributing to this work.

Indeed, universities play a vital role in this research and development program, for in academic surroundings, projects are not evaluated solely by economic gain and immediate, purposeful application. Here, bold thoughts from keen minds can find a place for expression, discussion, and experimentation. Questions are answered because they are born of scientific curiosity and not necessarily because solutions are needed for a particular purpose.

Much is expected of universities in the development of the uses of atomic energy. When this new reactor, which we are dedicating today, reaches critically some months from now, you will be in possession of a truly magnificent and versatile research instrument. Agriculture, medicine, chemistry, physics, and metallurgy are but a few of the great areas to which it can contribute. The radioisotopes it produces will provide tracers for analytical procedures. Beams of its neutrons will reveal by diffraction the composition of matter. Experiments can be conducted in the sterilization and pasteurization of foods, and studies can be carried out to determine the effects of radiation on cell structure. It is now possible, by the same radiation, to give new and useful properties to materials such as plastics, and you will be in a position to amplify this knowledge and to discover ever newer applications.

But, beyond all of these and many more projects too numerous to catalog, this reactor is due to render a service which is best performed in universities. That service is the training of new scientists, technicians, and engineers to carry on and expand nuclear energy exploration. Skilled people are today a limiting factor in our program, and you are here accepting the responsibility for providing more of them.

These men and women will go out into laboratories and plants equipped with the vigor of youth and an understanding of the latest technology. Although we cannot foresee their farflung scientific horizons, we can help them toward ours. Theirs are infinitely farther reaching. This is a role in which universities have proved themselves in all fields. It will be the salvation of our country in nuclear science.

It is interesting to speculate as to who may stand in our places here and what will be dedicated by them 100 years from now. How many of our grandparents in 1855 would have even dreamed of a nuclear reactor or would have associated anything with those words if they had heard them spoken? Can we possibly imagine what will be the order of the day in the year 2055? Alas, we cannot see a hundred years ahead, nor even a score, but our actions each day between now and then will, in a large measure, set the pattern for our tomorrows, including that day when some group will gather to mark the 200th anniversary of this university. We do know this—that during the years ahead, we must teach those who follow us to be not only as good technically as we can make them, but also that we must set them an example of citizenship in the United States and of citizenship in the world. The President's atoms-for-peace program is such an example. Unless such precepts are successful, there may indeed be no second centenary for universities.

This morning you broke ground for an all-faith chapel building. It is fitting that this

nuclear research reactor should be dedicated on the day already so hallowed. I have great faith in our future, faith in the next generation, faith that they will understand our failings and, in consequence, have fewer of their own.

Prayer being not inappropriate to a dedication, may I say that it is my prayer that this atomic reactor will become the instrumentality by means of which the potential for good and benign use of a great force of nature may make contact with the perception and the intellect of men.

To this unselfish and noble aim and in keeping with the genius of America and the spirit of this university, we dedicate this reactor.

How To Count the Years

EXTENSION OF REMARKS

OF

HON. ELIZABETH P. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mrs. FARRINGTON. Mr. Speaker, I have introduced in this Congress a bill to provide for the adoption of the perpetual calendar devised by Willard E. Edwards, of Honolulu. Under leave to extend my remarks, I wish to include an article by Mr. Edwards which appeared in the Honolulu Star-Bulletin describing a method of correcting time recording by inserting a zero year in the transition from B. C. to A. D. years, and its relation to the perpetual calendar. I wish to include also a chart showing correct time recording and copy of the perpetual calendar.

The article follows:

HOW TO COUNT THE YEARS

(By Willard E. Edwards, originator of the perpetual calendar)

Most of us look at New Year's Day as the birth of the newly numbered year, and are thinking of this year as the 1955th. This is really a misconception. Of course, last New Year's Day was the start of a new year. Nevertheless, it was really the start of the 1956th year of the Christian era, not that of the 1955th.

January 1, 1955, marked the anniversary or end of the first 1955 years, exactly as a person's 55th birthday anniversary marks the completion of 55 years of life. Just as a truthful woman says she is 55 all during her 56th year (the year before her 56th birthday anniversary), so we are recording the events of this year as occurring in 1955. The Christian era will become 1,956 years old on New Year's Day 1956.

HOW THE CUSTOM STARTED

Let us see how the misconception of looking at New Year's Days as birthdays began. It happened away back in the 6th century. In A. D. 533 Dionysius Exiguus introduced the system of counting years from the birth of Jesus. He erroneously took December 25th in the Roman year 753 as the date of birth. Then he arbitrarily decided to call January 1, 754, the start of the first year of the Christian era. He also called this first year the year 1 (one), being handicapped by the fact that the concept of zero had not been introduced into mathematical notation at that time.

Dionysius thus showed A. D. 1 as following 1 B. C. and overlooked the first 12-months that must precede the attainment of a year. Perhaps he counted age as the Chinese do,

by calling a baby a year old on the day he is born. But a Christian baby's first anniversary comes after he has lived 1 year. If Jesus had been born on January 1, 753, A. U. C., the year 1 of the Christian era would in reality have begun on January 1, 754 A. U. C. (A. U. C. is from *anno urbis conditae*, or *ab urbe condita*, and means dating from the founding of the city of Rome.)

It may also be that Dionysius was trying to date back the Christian era as far as possible. If so, he made a great mistake. Historians have proved him incorrect by at least 4 years. King Herod, who ordered the Massacre of the Innocents, died in the Roman year 750. And since Jesus is reputed to have escaped this massacre, he was living before Herod died. His birth is therefore now placed at 4 B. C. under the Dionysius style of counting. And this became an anachronism since the calendar year was not changed after the error was noted.

ADJUSTING THE ERROR

However, English astronomers Maskelyne, Herschel, and others have reduced this error by 1 year. They accepted a zero year A. D. (the Roman year 753) as a necessary mathematical requirement. This is explained by referring to the accompanying chart. When we count the years backward, the correct number of any year is always one less than the number of the year which followed it in time. The year 1, less 1, is equal to zero. Therefore, our old year 1 B. C. has been correctly renumbered as zero A. D. Similarly, the old year 2 B. C. has been correctly renumbered as minus 1 (or 1 B. C.), the old year 3 B. C. as minus 2 (or 2 B. C.), the old year 4 B. C. as minus 3 (or 3 B. C.), etc.

This was done so that B. C. years may be directly subtracted algebraically from A. D. years in order to find the correct elapsed time. Subtracting a minus number is the same as adding a plus number. Thus the elapsed time from 3 B. C., the reputed year of the birth of Jesus under the corrected count, to our 1954 Christmas anniversary was (1954) minus (-3) or 1957 years. In algebra, a number is not defined unless both its absolute value and its sign are given. However, it is customary to omit the plus sign. Our A. D. years are plus years, and subtracting an early A. D. year from a later one gives us elapsed time directly.

The correct assignment of the zero year between 1 B. C. and A. D. 1 is not simply a convenience. It is a mathematical necessity. We must also have a zero degree on our thermometer scales to show that the rise in temperature from -3 to +54 is 57. If Fahrenheit had used the same counting sys-

tem as Dionysius, our thermometers would read -2, -1, +1, +2, etc. In that case, we could not correctly say that the rise in temperature from -2 to +2 is 4 degrees. It would then be only 3.

ZERO IS A NUMERAL IN RECKONING

To say that we had no actual year called the year zero does not prove anything. We had no actual year 1, 2, 3, nor any A. D. year at all, until about 533 years after the calculated birth of Jesus. But since we do go back into history to renumber our years, the renumbering should at least be mathematically correct.

Zero is a perfectly good number, even though at first glance it may seem somewhat confusing to those who have not studied mathematics. Some of us think of it simply as meaning nothing, or the absence of quantity. But zero is also a real number, 1 less than 1. It is correctly shown as the first numeral (0, 1, 2, 3, etc.). Zero is the point of departure in reckoning and has many common uses.

We use it in the measurement of elevations, bearings, and temperatures; and as the first figure on our balances, meters, and scales. The first or prime meridian is the zero meridian. We speak of the zero hour, the time set to begin an attack. Midnight is expressed as 0000 in the 24-hour system of recording time. The first hour of the day is also the zero hour. The first minute of the hour is the zero minute. The first second of the minute is the zero second.

Also, the first day of the year could be called the zero day, or January 0, a day apart. This holiday, followed by 52 even weeks, would allow our calendar to become fixed and perpetual, as in the Perpetual Calendar.

We went into a zero-ending year at the start of the 20th century in going from 1899 to 1900. Note also on the accompanying chart that we began the second half of the 20th century with a zero-ending year. Let us subtract 1950 from each of the years shown on the last line of this chart. We then get the B. C. and A. D. years at the start of the Christian Era, including the year zero A. D. This alone proves their correct numbering.

ORDINAL AND CARDINAL NUMBERS

We should not confuse the counting of units with our recording of time or measurements. Suppose we pick an apple from a tree and place it in an empty box. It is the "first" apple picked, as well as the quantity "one" in the apple box. But in measurements there is a decided difference between "first" (an ordinal number) and

"one" (a cardinal number). The ordinal numbers show the order in a series, whereas the cardinal numbers express how many. Thus the "first" inch on an engineer's scale is the inch of "zero" measurements; 0.1, 0.2, 0.3, etc. The "second" inch is the inch of "ones"; 1.1, 1.2, 1.3, etc. We count our centuries, length of time in business, wedding anniversaries and ages likewise.

The years of the 20th century are those of the nineteen hundreds (1900-1999); of the second century, those of the one hundreds (100-199). Likewise, the years of the first century are those of the zero or no hundreds (0-99). Nor should we confuse a part of the first year A. D. (the year zero) with the entire year itself (one year). Our year "one" could not have started until the 12th month of our year "zero" had been completed.

During its 55th year, a business is spoken of as being 54 years old. At the end of the 55th year it becomes 55 years old. It is then beginning its 56th year. Throughout the 56th year it is spoken of as being 55 years old. This year is our 1956th year. Throughout this year we'll call it "1955."

COUNTING ANNIVERSARIES

A baby born on January 1, 1900, was in his first or zero year until January 1, 1901. If recorded in tenths of a year, his age during this first year was 0.1, 0.2, 0.3, etc. We can't start to count whole years until the first year has actually elapsed. The baby was in his second year from January 1, 1901, to January 1, 1902. But throughout his second year he was called only 1 year old. During this second year his age in tenths was 1.1, 1.2, 1.3, etc.

Last New Year's Day (Jan. 1, 1955) was the 1955th anniversary of the Christian era. Since 1,955 years had then elapsed, we are not in the 1956th year. However, during the 12 months of this year we'll speak of it as "1955," since 1956 years will not have been accomplished until New Year's Day 1956. If we count New Year's days the same as we do wedding anniversaries, the past misconception will disappear.

Acceptance of the year preceding the year 1 A. D. as the year 0 A. D. is the accurate, consistent and uniform way of recording our past time. Instead of perpetuating an ancient error, let's correct it like intelligent people. Let's consider New Year's days for what they are, closely approximate anniversaries of the beginning of the Christian era. On New Year's Day 1956 we shall have our next anniversary. It should be thought of and recorded as the 1956th.

The chart and the perpetual calendar are as follows:

(Accompanying chart)

Correct time recording, as accepted by modern chronologists, is shown below:

B. C.			A. D.						
-3	-2	-1	0	1	2	3	4	5	6
Rom. yr. 750 -3 3rd yr. BC yr. 3 BC	Rom. yr. 751 -2 2nd yr. BC yr. 2 BC	Rom. yr. 752 -1 1st yr. BC yr. 1 BC	Rom. yr. 753 0 1st yr. AD yr. 0 AD	Rom. yr. 754 +1 2nd yr. AD yr. 1 AD	Rom. yr. 755 +2 3rd yr. AD yr. 2 AD	Rom. yr. 756 +3 4th yr. AD yr. 3 AD	Rom. yr. 757 +4 5th yr. AD yr. 4 AD	Rom. yr. 758 +5 6th yr. AD yr. 5 AD	
Start of Christian era									
Years of the 20th century are continuous from January 1st 1900 through December 31st 1999									
1st half of 20th century					2nd half of 20th century				
Jan. 1 1947	Jan. 1 1948	Jan. 1 1949	Jan. 1 1950	Jan. 1 1951	Jan. 1 1952	Jan. 1 1953	Jan. 1 1954	Jan. 1 1955	Jan. 1 1956
1948th yr. yr. 1947 AD	1949th yr. yr. 1948 AD	1950th yr. yr. 1949 AD	1951st yr. yr. 1950 AD	1952nd yr. yr. 1951 AD	1953rd yr. yr. 1952 AD	1954th yr. yr. 1953 AD	1955th yr. yr. 1954 AD	1956th yr. yr. 1955 AD	
Midpoint of 20th century									

NOTE.—Please place January 1, 1950, on lower half of chart directly under the zero between B. C. and A. D. years on the upper half of chart, as shown.

THE PERPETUAL CALENDAR

*New Year's Day (a day apart from any week or month) is the first day of each year, a holiday, followed by the 364-day fixed calendar shown below:

January							February							March						
M	T	W	T	F	S	S	M	T	W	T	F	S	S	M	T	W	T	F	S	S
1	2	3	4	5	6	7	1	2	3	4	5	6	7	1	2	3	4	5	6	7
8	9	10	11	12	13	14	8	9	10	11	12	13	14	8	9	10	11	12	13	14
15	16	17	18	19	20	21	15	16	17	18	19	20	21	15	16	17	18	19	20	21
22	23	24	25	26	27	28	22	23	24	25	26	27	28	22	23	24	25	26	27	28
29	30						29	30						25	26	27	28	29	30	31

*Leap-Year Day (a second day apart) is observed only during leap years between June 31 and July 1 as the first day of the second half-year, a holiday.

April							May							June						
M	T	W	T	F	S	S	M	T	W	T	F	S	S	M	T	W	T	F	S	S
1	2	3	4	5	6	7	1	2	3	4	5	6	7	1	2	3	4	5	6	7
8	9	10	11	12	13	14	8	9	10	11	12	13	14	8	9	10	11	12	13	14
15	16	17	18	19	20	21	15	16	17	18	19	20	21	15	16	17	18	19	20	21
22	23	24	25	26	27	28	22	23	24	25	26	27	28	22	23	24	25	26	27	28
29	30						29	30						25	26	27	28	29	30	31

*These two Year-Days are definitely named and have a definite purpose. When considered apart from any week, they allow the calendar to become fixed and perpetual.

America's Business Future

EXTENSION OF REMARKS
OF

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Friday, February 25, 1955

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address delivered at Youngstown, Ohio, last night by the Senator from Ohio (Mr. BENDER) dealing with the subject of America's business future.

There being no objection, the address was ordered to be printed in the Record, as follows:

I am very happy to be here with you this evening after the most strenuous 2 weeks I have put in since the campaign. In the last 10 days I have been talking to men and women all over the State of Ohio and in Pennsylvania. People sometimes ask me why I accept so many invitations and why I work so hard at my job. I can tell you the truth—I enjoy it. The more I see the people the more I enjoy it.

There is a great alertness in our country today. People are better informed on public affairs than they have ever been. They are often skeptical, but they are ready to listen to reason, and I think they have a real understanding of our country's basic problems.

Talking to you business and professional people, I know that I reflect the thinking of the overwhelming majority of the American people in what I am going to say. We have changed our country's outlook tremendously in the last few years. When all of us were a little younger our country's position was vastly different from what it is today. A generation ago we were a creditor nation, to be sure, but we had not yet realized all the implications of the position. Today, we have discovered what the British learned in the 19th century. The country which provides

the world's financial foundations automatically assumes the responsibility of preserving these foundations.

This is, I think, the most important corollary of our new role in the world. Whether we like it or not, and many of us do not like it, a position of world leadership has been thrust upon us. I know that many of us would like nothing better than an opportunity to live our lives in peace and contentment. We have virtually all of the things we need upon this great North American Continent to provide for the needs of our country. If we were to stay at home, minding our own business, we would not require some of the raw materials which must be obtained from foreign sources for military forces.

If we could turn back the hands of time to the 19th century many of us would be far happier with our lot.

This is all a bygone dream. The world will not let us enjoy the luxuries of isolation. This last week a brigadier general of the Army told a group, over which I presided in Cleveland, that our entire system of military air defense is on a 24-hour 20-minute alert basis. Every military station in the country is prepared to go into action on 20 minutes' notice. This is a frightening prospect. But it illustrates the tension of the times in which we live. Today the expanding frontiers of science have compressed the world into a globe which is, figuratively, no bigger than a baseball. You can almost put your hands around it. Our means of communication can span the oceans in a matter of seconds. No one knows the exact speed of our potential guided missiles. Some of my scientific friends tell me that there is probably no theoretical limit which we can establish. Planes can already span our own country in a matter of 4 hours. If we can do these things, intelligence dictates the sobering knowledge that our possible enemies may do the same.

I say these things, not because I am fearful of the future, but because I believe sincerely that we sometimes think and react as if we could forget these facts of life. Often men and women who are confronted with the knowledge of something too frightening to contemplate, push it so far into the background that they lose all power of action. The Eisenhower administration has not made this mistake. Our President is a remarkable man. He has learned from long and bitter experience how to face a disturbing situation and how to live with it. When he relaxes it is only because he knows that he must do so in order to face the reality which he can never really escape.

There are people in our country who make a serious mistake of political judgment. Some of them have been writing me letters, declaring that they see no difference between the foreign policy of President Eisenhower and the foreign policy of President Truman. Nothing could be more erroneous. Truman and Acheson believed in waiting for the blow to strike. They did not anticipate. They did not plan. As a result, when the enemy did strike, in 1950, we were shockingly unprepared. Despite the fact that we had spent billions of dollars for defense purposes, our defenses in the Far East were grossly unprepared. Today that has been changed entirely. We are prepared for any emergency. We are not cocky. We have no chip on our shoulder. But, we are on the alert. More than this, our Secretary of State, acting under the President's direction, has taken the lead in organizing the free countries of Asia and the Pacific to meet any threat. For the first time in the history of the world, we are parties to an agreement in the Pacific. I want to call your attention to one of the specific terms of the Southeast Asia Treaty Organization. This provision declares that any of the countries involved may call for help from their allies to resist

not only external aggression, but also internal subversion. This is a most important development. In the past the Communist technique has been simple. They have infiltrated governments. They have used native Communists to stir up discontent and when they were challenged, they invariably said, "This is an internal problem, and it is none of your business." This is not going to happen again—thanks to the foresight of our President and his administration.

There is another vital distinction between the policies of President Eisenhower and his predecessors. Mr. Truman told American military leaders that they could go so far and no farther. He told our fliers that if they are attacked they could pursue their attackers up to point X. And then turn back. He told one of the greatest living military experts that he could not attack—he could only defend. President Eisenhower has reversed this entirely. If any one fires at an American plane, on an American ship, or on an American soldier, we are going to fire back. The prestige and dignity of the American people will no longer be ignored and trampled into the dust without retaliation. I think our people are sick and tired of playing the Communist game. We know that if we give them an inch they will take a yard. If we give them a yard—they will take a mile.

These are by no means the only differences that I can see in the administration's program. Right here at home, our President is doing his utmost to cut wasteful, meaningless spending of the taxpayers' money. We are reducing bloated Federal payrolls. We are trying to establish intelligent order inside the bureaucracy that has grown up over the years. This is not easy. It involves human beings and no public official enjoys the prospect of dismissing any employee. We can't help remembering that each one of them has a family—and a vote. But nothing that I have seen in public life comes closer to sheer downright political opium smoking than the latest stunt of the Democrats in Washington. For months they have been shouting to the high heavens about the reduction of military personnel by the Eisenhower administration. They have been crying for more public housing. They have been asking for Federal funds for everything they can think of. Now they want to cut Federal taxes by \$20 for every taxpayer and every dependent.

This is the best political mousetrap since Ralph Waldo Emerson's. No one in public life ever wants to raise taxes and cut spending. Everyone likes to cut taxes and increase spending, but unless somebody repeals the law of gravity and finds a way to keep going up higher and higher without ever coming down, it can't be done. I do not believe the American people will buy this kind of political goldbrick.

Just what is my conclusion from all of these observations? I am—you might not think it from what I have been saying—but I am an optimist. If I were not, I could not be a Republican. I was an active Republican when some of my colleagues were in hiding. But I have faith in America and its future. Our country shares that faith. Every 24 hours in the last year our population, throughout the country, has increased by 11,000 people. Every 30 days we have added to our population a city the size of Syracuse. This physical fact alone is going to create tremendous needs—more housing, more schools, more clothing, more automobiles, more savings, and more opportunities. More and more people reaching the age of retirement will be enjoying their years of rest. There will be more money to spend, more time to travel, and better health to enjoy it. The same technical skills which threaten the extermination of the world today can be used tomorrow to assure our country of an almost incredible future. The atomic science that can throw hydrogen ra-

diation to vast parts of the world can also fuel our factories, light our cities, and power every vehicle in the world. What we need is time—time to consolidate our knowledge—time to help mankind work out its destiny.

I am a man of faith. I do not believe that we are born into existence simply for our self-destruction. I believe that we have the intelligence and the judgment to prevent such a catastrophe. Certainly, here in America, we have the will to do so. With your help and with the help of the American people, I am sure that we will solve our problems, and that we will work together to create a world which will live and not die.

Public Power and the So-Called Partnership Program of the National Administration

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, February 25, 1955

Mr. NEUBERGER. Mr. President, early in February I was asked by the North American Newspaper Alliance to present my support of public power and my opposition to the so-called partnership program of the national administration. At the same time, Secretary of the Interior Douglas McKay was invited to state an opposite viewpoint on these vital issues.

I ask, Mr. President, that both of these statements, in fairness to Mr. McKay and myself, be printed in the Appendix of the RECORD.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

SENATOR NEUBERGER DEFENDS PUBLIC POWER, STAND THAT GAVE HIM UPSET OREGON VICTORY

(EDITOR'S NOTE.—The junior Senator from Oregon, a Democrat, won an upset victory over Senator Guy Cordon, the incumbent Republican, in the traditionally Republican, Northwestern State. That victory, last November, gave the Democrats control of the Senate. The big issue in the Oregon campaign was public power. In this exclusive article, Senator NEUBERGER explains his position on this issue.)

(By Senator RICHARD L. NEUBERGER, of Oregon)

WASHINGTON, February 2.—The ending of the public-power program can only mean economic stagnation in many key regions of the United States. The TVA and Bonneville and Grand Coulee Dams have brought electricity to American farms, strengthened industrial payrolls and during the war helped to make possible the production of atomic energy and 50,000 planes a year.

Why did the Eisenhower administration, through Secretary of the Interior McKay, abolish so beneficial a program for what it calls "partnership?"

Under partnership, the Government will put up half the cost of dams and private utilities generally the other half. When the dam is built, the Government gets the fish ladders and locks and floodgates, which yield no revenue. The utility acquires the kilowatts from the powerhouse for a period of at least 50 years.

What is the purpose of this? Under the Federal program, power receipts have been

pouring into the Treasury. The Government has invested \$128,549,822 in construction costs and operating expenses for Bonneville Dam. Yet, after only 11 years of full operation, this project has put \$48,825,958 in power revenues into public coffers. In fact, the whole Bonneville Power Administration, which markets energy from all Federal dams in the Northwest, has collected gross income of \$370,565,589 through the sale of kilowatts.

Why end this program for a vague partnership which could benefit only the private utilities and raise the cost of power needed for western industrial development? It is significant, I think, that the administration proposes partnership for the magnificent hydroelectric sites along the Columbia River, but at the same time recommends fully Federal dams for the far less valuable sites in the upper Colorado Basin where electric-power output is less profitable. In other words, the power companies get the cream, Uncle Sam the dregs.

I have compared the partnership proposed by the administration to the building of a department store by two men. Each partner puts up half the money. After the store is erected, one man receives as his share the drinking fountains, revolving doors, fire escapes, and escalators. The other partner gets the sales counters. That describes the partnership scheme under which the Government would get fish ladders while the utility corporations take over the power-plants.

Actually, partnership has proved to be the label for an empty package. In the 2 years that the administration has been pushing the idea partnership has failed to get a single Northwest power project underway. The only tangible accomplishment has been a 2-year moratorium on Federal construction of the Big Priest Rapids project while a local public utility explores the feasibility of construction. Meanwhile, the specter of a severe power shortage in the area—with inestimable economic repercussions—moves closer to reality.

As long ago as 1908 two great progressive Republicans—Theodore Roosevelt and Gifford Pinchot—fought an historic battle to keep magnificent waterpower sites on mountain rivers away from what they then called the Power Trust. Contrast this with the desire of Secretary of the Interior McKay to give the great Hells Canyon site on the Snake River to the Idaho Power Co., a corporation which holds its annual meetings in Augusta, Maine, nearly 3,000 miles from Idaho.

The Idaho Power Co. would not develop the full power potential of Hells Canyon. Its rates are high, far higher than the Government charges through the Bonneville Administration. Long before this controversy began, the Corps of Army Engineers recommended in their famous 303 report the construction of a multipurpose Federal dam in Hells Canyon. Why reject this master plan for development of the Snake River?

The plan for full development of the Columbia River Basin, pioneered through the years by the Army engineers and the Bureau of Reclamation, is an engineering masterpiece. The plan calls for operation of dams throughout the basin in a unified system for maximum power production, flood control, irrigation, navigation, and protection of wildlife. This integrated operation increases efficiency and total use of the region's water resources. As a result, benefits from the whole river system—as a unit—become greater than the sum of its parts.

From the standpoint of conservation, Hells Canyon is of major importance. If it is abandoned to partial development by a private company, as sought by the administration, the multipurpose possibilities of the entire river system will be greatly reduced. Specifically, this will mean the loss of 3 million acre-feet of storage for flood waters, loss of about 500,000 kilowatts of electricity,

loss of assistance to irrigation from power revenues, less navigation, and fewer recreation benefits. The shortsightedness of the administration in breaking up the river program can be measured in countless millions of dollars.

I was born and raised in a region, the Pacific Northwest, where there is no coal, no oil, no natural gas. Our sole industrial fuel is falling water, water which flows to the sea for "as long as the sun shall set in the sky and grass shall grow on the hills," to use a colorful Indian phrase. In the first decade that the Government tapped the swift reaches of the Columbia River, where lurks almost half of the Nation's potential hydro-electricity, industrial payrolls in Oregon and Washington soared 329 percent. Think of the private enterprise, the tax revenues, the self-supporting families made possible by that great gain in factory employment.

By any conceivable test, public power has been a success. It has brought comforts to farmers, jobs to workers, profits for businessmen. Equally important, it is paying for itself. Grand Coulee Dam has had its full quota of turbines in action only since 1951, and yet \$51,031,697 has been paid into the Treasury toward retiring an eventual power debt of \$221,462,229. Under partnership a large portion of this income, instead of going to the Federal Government, would be preempted by the private power companies.

ROOM FOR BOTH PUBLIC AND PRIVATE POWER IN UNITED STATES, SAYS SECRETARY MCKAY—AIM: MORE POWER FOR PEOPLE'S USE

(EDITOR'S NOTE.—Secretary of the Interior McKay, at the suggestion of North American Newspaper Alliance, gives here a blueprint of the Eisenhower administration's policy on development of United States power resources.)

(By Douglas McKay, Secretary of the Interior)

WASHINGTON, February 6.—The partnership power program of the Eisenhower administration is not a question of public power versus private power, but whether there is to be Federal power, and Federal power only.

The idea of partnership is very simple. It is based on the concept of all the things that made this country what it is today—the greatest in the world. It is based on the pride that people take in initiative, in doing things for themselves.

In the 1952 campaign, President Eisenhower said at Seattle:

"We need resource development, and we need it on a river-basin basis. We need resource development, not to the limit of the whim of any administration in power, but to the limit of the capacity of the region to benefit. And to do that we need partnership to the limit of everyone's ability."

There is the blueprint of the Eisenhower administration's power policy. First, we want to give local enterprise—either public or private—a chance to develop its power resources.

But when the time comes when these agencies are either unable or unwilling to do so, then the Federal Government should step in and develop the power for the benefit of the people of the region.

Public power is here and it is here to stay. There are some who insist there is no place in this Nation for it. I do not agree. There is room for both public and private power and the job is to see that both are developed in a working arrangement which has but one goal—more power for use of the people.

There is one fundamental difference between those who support the partnership power policy and those who oppose it.

We who support it do so to move toward a goal of more actual kilowatts, not conversation kilowatts. More electrical power, not political power.

Here is what we mean by partnership.

We want local agencies, either public or private, to develop as much energy as they can. In some instances flood control, navigation, recreation, fish and wildlife, and irrigation come into the picture. In these instances we want to become partners in the project.

Three big partnership programs were approved in the 83d Congress. All were supported by Republicans and Democrats alike. In two instances Democrats introduced the bills for the projects.

So partnership is not partisan. I repeat, the disagreement is between those who want Federal power and Federal power only.

Here is how the partnership policy works. Take, for instance, the big Priest Rapids Dam in the State of Washington, which will produce more than 1 million kilowatts. Here a public utility district, owned and controlled by the people in the area, wants to build the dam and have the Government build the navigation and flood-control features.

Congress approved the project and members of both parties joined. There are drillers now at work in that stretch of the Columbia River making test borings. It is a step toward the main goal—more power, not more conversation.

Take, now, the Cougar Dam in my home State. For years the Army engineers had approval of a flood-control dam on a fork of the McKenzie River. Then up came the city of Eugene, operating the oldest municipal power system in the State, and asked to become a partner in the project.

The city of Eugene wants to build the powerplant and pay for it and have the power available for the people in its area through the Northwest power pool.

A short distance away from Eugene is the Green Peter Dam site. Here the Government again has a flood-control project in which it plans to build a dam. A private power company offers to build the powerhouse and take the power through the Northwest power pool.

Senator KERR introduced and Congress approved a bill to permit a State-Federal partnership in the development of the Big Markham Ferry project in Oklahoma. That had been hanging fire for some time until the partnership idea led to its development.

Senators HILL and SPARKMAN, of Alabama, well known as public-power advocates, supported a proposal to deauthorize Federal development of the Coosa River in their State and Permit the Alabama Power Co. to join in a partnership to get this project started. So, you see that Democrats and Republicans alike in the Congress have joined in getting projects started. Power is needed all over the country and this is just a faster way to get it.

Just last month in my home State the Partnership policy came up in the State house of representatives. It was in the form of a memorial to Congress supporting the Cougar Dam and Green Peter proposals. The vote was 44 to 16 for the memorial.

Mrs. Richard L. Neuberger led the fight against the partnership. There are 25 Democrats in the Oregon house but 11 of them supported the partnership. Three of the 11 were recently elected from the Hells Canyon area. So, you see partnership meets with approval.

On the main stem of the Columbia between the Dalles Dam and the McNary Dam is the proposed John Day Dam. Here a group of private power companies want to join with public agencies to build the powerhouse and then take the power. They will simply be paying for their future power supplies in advance.

Now, the argument that here the Government surrenders its revenue-producing fea-

ture is fallacious. The Federal Government has always borne the cost of flood control and navigation. So the Government will not assume any more costs than it would if it built the dam alone.

In Oregon the house of representatives asked Congress to approve the project, either as a partnership or an all-out Federal project. The Federal Government is not withdrawing from the power field.

The President's budget includes \$20 million to enable the Federal Government to participate in 1956 in partnership developments. The President has also recommended legislation authorizing the Bureau of Reclamation to undertake construction of two comprehensive river-basin developments. These projects are beyond the capacity of local initiative, public or private. Both are needed for irrigation, power, flood control, and municipal and industrial water supply. These are the upper Colorado and the Fryngan-Arkansas projects. They are vitally needed to conserve the water supply in the Intermountain States.

These projects are beyond the ability of the local enterprise, either public or private, because they covered large areas in several States and require amounts of money beyond the capacity of anyone to raise except the Government. They meet the administration's standards and are being supported.

But to say that all power development must be Federal—all dams, all river development—is to ask the impossible from the money standpoint. To federalize completely all electric power and have control from Washington of all water supplies and the land which depends on these supplies is such a program of bureaucratic control of America or of any region to which the people will never subscribe.

Accomplishments of the Eisenhower Administration

EXTENSION OF REMARKS

OF

HON. FREDERICK G. PAYNE

OF MAINE

IN THE SENATE OF THE UNITED STATES

Friday, February 25, 1955

Mr. PAYNE. Mr. President, the accomplishments of the Eisenhower administration in encouraging initiative and enterprise have not made headlines because they do not involve controversy and crises. But these unspectacular achievements of the past 2 years have been very important to every American. The quiet, undramatic progressive developments the Eisenhower administration is helping in America—without making sensational news—are important for the present and future of our people.

This point was made very clearly by Treasury Secretary Humphrey in an address at Philadelphia last Wednesday, February 16. I ask unanimous consent that this address be printed in the Appendix of the RECORD, so that all Senators may have a chance to read this accounting of the fiscal management of the first 2 Eisenhower years.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS BY TREASURY SECRETARY HUMPHREY, FOLLOWING RECEIPT OF THE 1954 WILLIAM PENN AWARD OF THE CHAMBER OF COMMERCE OF GREATER PHILADELPHIA, FEBRUARY 16, 1955, BELLEVUE-STRATFORD HOTEL, PHILADELPHIA, PA.

I am deeply honored to receive the 1954 William Penn Award of the Chamber of Commerce of Greater Philadelphia. It is a great privilege for me to receive this honor as a member of President Eisenhower's administration.

I am going to talk to you tonight not as Secretary of the Treasury, not as a Cabinet officer, or even as a businessman who is now a bureaucrat. I will talk rather as a friend and fellow citizen and a taxpayer who shares with you the responsibility of good government, of keeping America the land of opportunity—the land where the economy of today must build for the economy of tomorrow by its wisdom, its soundness, and its farsightedness. We must build a world with more and better opportunities for our children and our children's children and not a world that will take opportunity away from them.

The problems and accomplishments I speak of tonight are the problems of every citizen, and the accomplishments are the work of all who, by their own efforts, have helped to build soundness and opportunity by hard work and honest endeavor.

I am going to talk to you tonight not of headlines, controversy, and crises, but of the quiet, undramatic, progressive developments that are going on all around us in America. There have been no headlines to tell you that more than 60 million Americans are working at jobs of their own choosing—jobs that they are free to leave or change if and whenever they so desire. There are no headlines to tell you that about 55 percent of the 47 million families in America own their own homes, that Americans have savings of \$80 billion in life-insurance policies; almost \$50 billion in United States savings bonds; and \$25 billion in retirement pension funds. There are no headlines to remind you that stringent wartime Government controls no longer hamper or restrict the individual or the businessman. And there are no headlines to herald the stirring return of confidence of Americans in their Government, in each other, and in our ability and strength to do whatever may be required of us in any emergency.

I am even more encouraged to talk about these simple principles that have made our country great when I read over the list of names of those who have been previous recipients of the William Penn Award, showing that the Philadelphia Chamber of Commerce over the years has been honoring men who stand for the same principles of free, competitive enterprise and initiative which we now believe are basic to our American way of life—the way of life which has yet to be surpassed anywhere in this world of ours.

It has been a dedicated goal of the Eisenhower administration to keep alive and vigorous the priceless principles of free, competitive enterprise and initiative. But we must do more than keep them alive and vigorous. We must keep them growing and always developing the new things and the better ways of doing things which have made this Nation great.

What has been done in encouraging initiative and enterprise has not been sensational or dramatic. But it has been important to every American in his daily life. It is important to the standard of living of every American worker and his loved ones. And it is vitally important to the defense of all Americans against any possible enemy attack, for the power and strength of American

industrial capacity is the very foundation of our security.

It is often true that "good news" is "no news" to attract public attention in the daily news outlets of press, radio, and TV. Yet the quiet, undramatic, progressive developments that are going on in America—without making sensational news—are important for the present and future of our people.

I have no quarrel with what makes news. I make these observations only as a reason for talking a little tonight about some of the constructive things that have been done during the past 2 years—important things which are worth mentioning because they do not draw the attention that controversy and violence do.

What are some of these unspectacular things that this administration has been helping to accomplish during the past 2 years?

The undramatic but steady and healthy progress which has been going on in this country has increased the confidence of all Americans in the possibilities of our future. This increasing confidence is the most important stimulant to the development of the strength of our Nation's economy, with the careful and quiet assistance of an administration which knows that Government can do relatively little except to help to properly set a stage upon which free vigorous Americans can perform.

Our Nation has made the transition from a wartime high to a lower level of Government spending without a major economic upset. This transition was helped substantially by heavy tax cuts and other moves stimulating confidence.

While there is still high tension in many places, there is no armed warfare between major powers at any point on the globe as of this moment. There is peace, uneasy as it is, as far as American fighting men are concerned. War in Korea has halted. War in Indochina has ceased.

The present improved relationships in many places throughout the world have been achieved by ceaseless and dedicated pursuit of solutions for the vexing and serious widespread international problems. It is a treacherous path. Bold risks must sometimes be taken, but success to date is high proof of the competence and wisdom of the policies which have been adopted in wrestling with this problem of preserving the peace and making it more secure.

Inflation has been stopped. In the past 2 years the value of the dollar has changed only one-fifth of 1 cent. This compares with a drop in the value of the dollar from 100 cents in 1939 to only 52 cents in January 1953. All departments and many people in Government have been working hard for, and insisting upon getting, our Federal spending under control. Deficits, which lead to more borrowing and so to inflation, have been cut substantially.

The Federal Reserve System has acted promptly, courageously, and wisely to adopt monetary and credit policies which have met the needs of the economy while walking the fine line between deflation and inflation. And the Treasury has done its bit in halting inflation, and avoiding deflation, by doing its borrowing so as to be as careful as possible concerning its effect upon the constructive course of the economy.

This is well illustrated by the issue and highly successful placement only a few days ago of nearly \$2 billion in 40-year 3-percent bonds. They are the longest bonds that have been sold by the Government since an issue to help pay for the Panama Canal in 1911.

There is nothing academic about the importance of keeping inflation locked out. The value of earnings and savings can be protected in no other way. Just realize that 55 out of every 100 families in America now

earn more than \$4,000 a year as compared with only 10 out of 100 earning \$4,000 a year early in the century in terms of today's prices. And recall the millions of owners of their homes, accounts in savings banks, savings bonds, insurance policies, and pensions, of which I spoke just a moment ago. Because this Nation has quietly become a nation of haves rather than have-nots, inflation must stay checked to protect the earnings and savings of millions of Americans.

We had a cash balance between money collected from the public and money paid out by the Government last year. Although we will not have a cash balance this year, we are estimating a small surplus in the fiscal year ahead. The total debt has continued to grow because of the large deficit we inherited in our first year in office and the subsequent deficits, even though they have been much smaller. But the inflationary effect of deficit financing has been almost wholly eliminated now that most of the increase in debt is being financed by securities issued to Government trust funds rather than borrowing from the public.

In fiscal 1956, spending will be almost \$12 billion less than in 1953. We have not yet balanced the budget. We could have done so in 1954, but a big tax cut was more stimulating to a growing economy and we believed that it was better for the people to have more of their own money left with them to spend, as they thought best, rather than to have the Government spending it for them. We have cut the deficit from more than \$9 billion in fiscal 1953 to what we estimate will be less than \$2½ billion in 1956. We are still a year and a half away from the end of that period, and we have every hope of cutting this deficit even further if some development elsewhere in the world does not upset our plans.

There is nothing in the Formosa situation or elsewhere in the world which up to this moment has altered our budget program for reduced expenditures in the year to come. And reduced expenditures we make do not mean reduced defenses.

As the President has said, the United States is in a stronger position to defend itself against aggression than it was 2 years ago. The Defense Department has developed a better balanced, more mobile and flexible and effective defense establishment at lower cost to the taxpayers.

Progress has been made in reducing waste and extravagance. Obsolete equipment and supplies are being eliminated. There is much left to be done, but that does not alter the fact that much has already been accomplished. We have a far better balanced program. We are making progress in real unification in the armed services, so that competition between them is less likely to duplicate efforts and expenditures that squander both tax money and our national resources. Greater unity adds strength to our defense position.

We can and we must spend whatever is needed for our security; that is our first concern. But we know that real security does not result simply from spending huge amounts of money. The worth of our defense must be measured not by its costs but by its wisdom.

The President's decisions on our defense forces are recognition of the fact that in this age of almost unbelievable developments in science and production techniques, we cannot have a static defense committed to old-fashioned strategy and weapons. Real security for our Nation over an extended period must also rest upon a sound and growing economy.

As cuts in future expenditures all through the Government's operations come clearly into sight, and if at the same time our expanding economy promises greater income with lesser rates of tax, we will look forward

to further reductions in our tax structure, distributed as fairly as possible among all taxpayers.

The expectation of further tax reduction and the maintenance of sound fiscal policies are firm foundation stones creating greater confidence in our future prosperity.

These, then, have been fine, worthwhile accomplishments for the good of the Nation, its economy, and its future. They have been accomplished without fanfare or sensational controversy. In the Cabinet and in the agency heads in this administration, there exists a wonderful team spirit which has resulted in real accomplishment with few headline battles.

The role which the Government can play in the economic affairs of the Nation should be limited. Government manipulation is the antithesis of a free America, and encroachment by government in restricting the freedom of its citizens should be limited to doing, as Lincoln said, "for a community of people whatever they need to have done, but cannot do at all, or cannot so well do for themselves—in their separate and individual capacities. In all that the people can individually do for themselves, government ought not to interfere."

The future of free America lies in the initiative, the resourcefulness, the tenacity, daring, and courage of 160 million Americans, each free to choose how best he can promote his own interest and the interest and future of his loved ones in whatever way he can best devise only so long as he does not interfere with the rights of others. It is the cumulative power of this great effort which has made America great in the past and which I am convinced will drive us ahead in the future at an accelerated pace in excess of anything we have ever known before.

You and I as citizens must participate in this great drive toward a better America. As such a citizen, I am pleased and proud to accept this fine award from the Chamber of Commerce of Greater Philadelphia, and to receive it in recognition of the contributions which President Eisenhower's administration has made to the advancement of the economy of this Nation.

Brotherhood Week

EXTENSION OF REMARKS OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, February 25, 1955

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record the address by a very distinguished citizen of New York, Mr. Charles H. Silver, which was delivered on Sunday, February 20, at Temple B'nai Jeshurun in New York City. Mr. Silver at that time was the recipient of the annual Brotherhood Day award by Congregation B'nai Jeshurun, and his address is one of acceptance. It is most appropriate and inspiring, and I commend it to the multitude of Americans who are interested in the significance of Brotherhood Week.

There being no objection, the address was ordered to be printed in the Record, as follows:

ADDRESS OF CHARLES H. SILVER

It is with a feeling of deep gratitude that I give to you my thanks for this distin-

gushed honor that you have conferred upon me. I count it a very high privilege to be named as this year's recipient of your brotherhood award. This award is the symbol of your high regard for me, and I accept it in the spirit of brotherhood which has prompted you to take this action. I am grateful to you.

At the same time, I am impelled to point out that the bestowal of this great honor represents in a very large sense a tribute to all of us who are striving to weld together the relations of men of good will and to take another step in the direction of making this ideal an actual reality. This objective was born centuries ago, and while we have moved slowly toward its attainment, we have yet a great distance to travel, for the world today is in the clutch of opposing forces that cannot be reconciled in a brief period.

This is indeed unfortunate, but we must accept conditions as they exist and unite to alter them for the benefit of all mankind. I think that is one thing we are trying to do through the medium of Brotherhood Week. We do not seek to destroy the beliefs of those not in our own faith, but we believe that there can be created a genuine spirit of brotherhood among Catholics, Protestants, and Jews if we have but the will and patience to bring it about.

These exercises are being held under the auspices of the Men's Club identified with a Jewish synagogue that is more than 130 years old. There are present men of other faiths, which is a clear indication that brotherly love is a vital part of the teachings of every faith and that we can meet on a common ground and live in a spirit of harmony, understanding, and affection.

I think that we who are members of the Jewish faith may well be proud of the fact that the principle of brotherhood was proclaimed centuries ago by our teachers, rabbis, and national leaders. We read in Leviticus the command "Thou shalt love thy neighbor as thyself." One of the great religious teachers of his time, and indeed of all time, said that this was a fundamental principle of the Torah. Universal love is here proclaimed, not merely as an ideal advocated in the Torah but as the only true standard of human relationships. Those who have studied the writings of hundreds of rabbis believe that this rabbinic outlook in the area of morals was universal and not national. Some of these rabbis made definite reference to non-Jews and Hillel, the great teacher, said "Be a lover of your fellow creatures," and when an ancient rabbi was asked, "Why were all men descended from one couple, Adam and Eve?" he replied, "So that no one may say that he is in any way superior to his neighbor since all men have a common origin."

Dr. Norman Vincent Peale, a minister of the Marble Collegiate Church, in an article which he wrote on the subject of "Understand—A Source of Strength," had this to say: "One of the most profound functions of religion after that of relating man to God is to relate man to his neighbor. Thou shalt love the Lord Thy God with all thy heart and thy neighbor as thyself. Indeed the hallmark of the Christian is the depth and quality of his love for all God's children regardless of their race, religion, or their place in life."

A distinguished prelate of the Catholic church, His Eminence Francis Cardinal Spellman, recently wrote, "If we are real Americans we must cooperate in checking the spread of bigotry which is a contagious and virulent disease. However, it is not only patriotic to cure this disease, it is essential to do so if America is to remain America. And how can we check the spread of this disease? The first step that each one of us must take to eliminate bigotry, selfishness, harshness, injustice, and contempt from the

minds and hearts of others is to make sure that they have no place in our own."

Here we have the expression of great theologians and spiritual leaders of the three religions. They are in complete agreement that if the human race is to survive there must be established firmly a foundation of understanding and brotherhood and that is the challenge of our time.

It seems to me that we may make the greatest contribution in the history of mankind if we can create an atmosphere of love and decency that will no more be marred by petty hates and dislikes and the evil forces of bigotry. The scientific advances that have been made, especially in the field of what may be called the destructive arts, have placed a great handicap on those who would substitute love for hate. What does it avail to build atomic weapons, to develop dozens of electrical appliances, to conquer the stubborn forces of nature, if we continue to live in a climate of apprehension and suspicion. Material progress takes us not a single step from a life that is harried by suspicion and the hard edges of hate.

Words of understanding and compassion are more powerful than the most deadly bomb. It has been said that a soft answer turneth away wrath. How much pleasanter it is to speak softly and kindly even to those who disagree with us than to wield a deadly weapon. The kind word helps to create a climate of friendship, the destructive weapon destroys without rhyme or reason and rarely leaves anything to take the place of its object of destruction.

And so, today my friends, while I speak to you with full appreciation of the tribute which you have seen fit to pay me, I want to express the fervent hope that this brotherhood week will be another link that will eventually become part of a powerful chain, not only in this country but throughout the whole world that will embrace men and women of every racial strain and religious faith who will live side by side in a spirit of mutual respect.

It has been a long, hard road through the centuries, but it is a comfort to know that we have moved slowly in the right direction. As the years follow each other, we have sought and succeeded to some extent in getting a little nearer to our goal. To us, this is a great challenge, just as it was to those of other generations. We can make a worthwhile contribution to human happiness if we only reject the theory that it cannot be done and that there is evil among mankind that cannot be wiped out.

I am absolutely optimistic about the future. We of the Men's Brotherhood of B'nai B'rith will march in that procession which leads to ultimate victory over the forces of disruption, bigotry, and intolerance. I pray to God that he should give us the strength to carry on and to uphold those who will follow us in the pursuit of universal happiness and decent living. Thank you again for this great honor.

What Is an American?

EXTENSION OF REMARKS OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Friday, February 25, 1955

Mr. SPARKMAN. Mr. President, this week we have been celebrating Brotherhood Week throughout our Nation. The Methodist church has many wellknown preachers. One of them, Dr. Harold W.

Ruopp, formerly pastor of Hennepin Avenue Methodist Church, and now minister-at-large of the Minnesota Council of Churches, has written an excellent statement on What Is an American? This was printed in the national Methodist weekly, the Christian Advocate, on July 1, 1954. It is so appropriate for this week that I ask unanimous consent to have it printed in the Appendix of the Record.

There being no objection, the statement was ordered to be printed in the Record, as follows:

WHAT IS AN AMERICAN?

(By Harold W. Ruopp)

An American is one who believes in the right of men and women—of whatever creed, class, color, or ancestry—to live as human beings with the dignity becoming the children of God.

An American is one who believes in the right to be free; free not only from crushing coercions and dictatorships and regimentation, but free for that way of life where men may think and speak as they choose and worship God as they see fit.

An American is one who believes in the right to vote, the right to work, the right to learn, the right to live, and—what is equally important—the right to be different; for he knows, that if we ever lose our right to be different, we lose our right to be free.

An American is one who believes in democracy, not only for himself, but for all his fellow-Americans, and by democracy he means not simply the rule of the majority, but the rights of minorities—and those minorities have rights, not because they are minorities, but because they are human beings.

An American is one who believes in the responsibility of privilege. What he asks for himself, he is willing to grant to others; what he demands from others, he is willing to give himself. His creed is not alone, "live and let live," but, "live and help live."

An American is one who acts from faith in others, not fear of others; from understanding, not prejudice; from good will, not hatred. To bigotry he gives no sanction; to intolerance, no support.

The only question the true American ever asks is not, "Are you a Protestant or Catholic, gentile or Jew, white or colored?" but "Are you an American? If you are, then give me your hand, for I am an American too."

Regulation of the Gas Industry

EXTENSION OF REMARKS OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Friday, February 25, 1955

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a revealing analysis by the reliable columnist, Thomas L. Stokes, from the San Francisco News of February 8, 1955, entitled "Heart and Spirit Have Been Reorganized Out of FPC," which reports the shocking degree to which the Federal Power Commission seems to be turning itself into an instrument of the gas industry rather than an instrument of Congress, as it was intended to be, for the protection of consumers. If the Commission's subservience to the

industry is as complete as indicated by its recent efforts (a) to limit its own jurisdiction and permit nontransporting gas producers to charge what the traffic will bear, (b) to rewrite its rate-making procedures to escape the fair requirements of the prudent investment or cost method, and (c) to reorganize the heart of the Commission's regulatory power out of existence and exile or send to Siberia any personnel that still wants to protect the public interest, then I fear that the time for major surgery is at hand.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the San Francisco News, February 8, 1955]

HEART AND SPIRIT HAVE BEEN REORGANIZED OUT OF FPC

(By Thomas L. Stokes)

WASHINGTON, February 8.—Something has been said here recently about the way Federal regulatory commissions have come under the dominant influence of business and financial interests, which the commissions are supposed to regulate—and how their function, ordained by Congress, to protect the public interest has been submerged.

A revealing case study is offered in the Federal Power Commission, which was created as an independent commission by Congress in 1930 during the Herbert Hoover administration to have jurisdiction over hydro-electric-power development and to which subsequently was assigned authority over natural gas in the 1938 Natural Gas Act.

The FPC emerged finally from a "reorganization" instituted by the Eisenhower administration. The result is that the "guts," heart, and spirit were possessed by this agency in behalf of protecting public and consumer interests have been nearly reorganized out of it.

OLD STORY

It's the old story. Things were made uncomfortable for key members of the expert staff whose conception of regulation does not coincide with that of the now prevailing business-minded element on the FPC. Some have been demoted and shunted aside to make way for more amenable personnel. Some have quit, including a number of lawyers on the staff as well as technical experts.

Morale is low. Apathy has supplanted a once-high esprit de corps.

The expert staff now finds itself frequently without support from the Commission, its recommendations and findings disregarded in vital issues with utilities, gas, and electric.

TWO STEPS

Instead there is developing a situation where the top officers of powerful utilities deal directly with the front offices of the FPC to negotiate for what they want.

Two steps achieved the transformation of the Commission, both familiar to anyone who has watched the same thing happen before.

First was a change in the Commission itself, which consists of five members. That began even before this administration. The offensive opened during the Truman administration when the Senate, under pressure from powerful oil-and-gas interests that were influential with leaders of both the Democratic and Republican Parties in Congress, defeated confirmation for another term of Leland Olds, for 10 years a stalwart defender of the public interest.

INDUSTRY VIEWPOINT

That started a shift in the very delicate balance on the FPC until, with three appointments during the Eisenhower administration, it now is weighted definitely toward what might be called the industry viewpoint.

But something more is required. That is the second step. That is to carry the treatment down below the Commissioners themselves, and intimidate or weed out in one way or another those on the permanent, civil service, expert staff whom the utilities, electric and gas, consider troublemakers because they seek to carry out the law in their recommendations without fear or favor.

Several months ago, as reported here at the time, the new chairman, Jerome K. Kuykendall, ordered a reorganization of the Commission which he announced at a staff meeting. Called in to make a survey was a New York management-engineering firm employed by the Budget Bureau, Cresap, McCormick, and Paget, which had no previous experience with regulatory agencies.

TOP EXECUTIVES

It called in the top executives of natural gas and electric utilities, at the suggestion of Chairman Kuykendall, but seemed to pay much less attention to the consumer so directly affected by everything the Commission does.

Though not adopting all of the firm's recommendations, the FPC has followed them fairly closely. It has abolished some bureaus, consolidated others, created some new ones—a technical process which it is not the intention to explore here, except for the effect.

The heart of the FPC was its Bureau of Accounts, Finances, and Rates, which passed on matters so vital to the public. Its head since 1936 has been Charles W. Smith, who has won a national reputation among men in his field for his knowledge of rainmaking. He was relied upon heavily by the Commission because of his experience and his fairness of judgment. His judgments were often counter to those of powerful utility interests, naturally.

DIVISION ABOLISHED

In the reorganization his division has been abolished and replaced with a new Bureau of Rates and Gas Certificates and a new office of chief accountant. Mr. Smith was fully aware of the purpose of the reorganization, opposed that aim, but knew he could not stop it. He has now been relegated to the newly created post of chief accountant, a position which his friends say he has taken until eligible for retirement a few months hence.

Thus a valuable public servant has been sidetracked. Everyone who has worked with him and under his direction is fully conscious of the meaning of his shuffling, and knows that it puts an end to the kind of regulation in the public interest for which Charles Smith always stood.

There's another clue to what is happening in the case of another veteran who has been with the FPC since 1933. This is Edgar S. Coffman, Chief since 1945 of the Division of Rates which was under Mr. Smith.

NEW BUREAU

This, too, was abolished. Its functions are being taken over by the new Bureau of Rates and Gas Certificates, of which not Mr. Coffman, but another man, Carl T. Kallina, formerly head of the Gas Certificates Division, was made Chief.

The purpose of this was clear enough to Mr. Coffman. He asked for another assignment and chose to leave here and become regional engineer of the Fort Worth, Tex., regional office.

That tells more of the story. Another clue, too, may be found in the single dissent to the whole shakeup in these various key divisions. It came from the one member of the FPC today who has been on it since its creation in 1930. Claude T. Draper, a Republican, who from his long experience can see just what is going on today. It does not fool him.

But his was a voice in the wilderness.

Escapees View United States as Their Haven, but Few Are Able To Get Visas

EXTENSION OF REMARKS OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, February 25, 1955

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting article, written by Mr. Don Cook, and entitled "Escapees view United States as their haven but few are able to get visas." The article appeared on February 17 in the New York Herald Tribune.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FRANKFURT, February 16.—The most important and vital problem an escapee faces when he comes through the Iron Curtain is that of getting a visa to settle down in a new land.

Needless to say, the United States is the promised land to which most escapees look with hope and confidence. Yet the fact is that as of January 1 only 43 United States visas had been issued under the Refugee Relief Act to escapees who have come across from the Soviet satellite countries since the escapee program began in the spring of 1952. Approximately 5,000 have escaped to freedom in that time.

The official figure of 17,050 visas recently given out in Washington by Scott McCleod, director of the State Department's Bureau of Security and Consular Affairs, includes over 16,000 visas-issued to Greeks and Italians who had been processed in years past but for whom there were no quotas under normal immigration law or the Displaced Persons Act. They were therefore declared eligible under the Refugee Relief Act—under which 209,000 new immigrants are supposed to be allowed into the United States by the end of 1956.

Thus there is a vast discrepancy between the generosity of the United States in assisting refugees through the escapee program and the performance in the vital final matter of stamping passports.

Under the old 1946 Displaced Persons Act, the United States opened its doors to some 400,000 refugees, and since the escapee program replaced the DP program, another 9,000 have gone to America with visas from the DP Act or normal quota visas.

The performance under the Refugee Relief Act has been far from what Congress appeared to have intended it should be when it voted the target figure of 209,000. This lagging has put a serious crimp in American propaganda efforts. Both the Voice of America and Radio Free Europe have soft-pedaled efforts to encourage satellite citizens to try to escape because an escapee finds things pretty discouraging on this side of the Iron Curtain.

The psychological situation has not been helped much by the occasional cases of spectacular United States speed in granting visas—as, for example, the engineer of the Czechoslovak "freedom train" who was immediately promised a job and house and everything he needed by a toy manufacturer who managed to get him to the United States in about 3 months.

Another such case was that of a Polish ballerina who deserted her ballet company in Western Europe and soon after got to the

States—but only because she had applied for a regular immigration visa in Moscow back in 1948 and her case could be speeded through the official machinery on the basis of the earlier application.

The escapee who comes through the Iron Curtain today must wait and wait and wait—and then his chances of going somewhere other than the United States are speedier and better. As of the first of 1955, there were 9,600 refugees living in camps in Germany and Austria waiting for visas to somewhere and another 16,300 living out of camps. With refugees coming in at the rate of barely 150 per month, it is clear that the United States program alone, if it ever gets going, could just about solve the escapee problem with a good many thousands of visas to spare.

The main stumbling block in the administration of the American legislation is not—oddly enough—the security check on an escapee. The Counter Intelligence Corps thinks it can do a pretty effective job of deciding in a few weeks or months who might be an agent and who is a genuine refugee.

The big problems are that the law requires a 2-year history on each case, and requires that every visa application must have an individual sponsor in the United States who guarantees a job, a house and financial responsibility for the person coming to America.

If a refugee comes through the Iron Curtain with very little known about him or his home town, then obviously the safest way to build up a 2-year history on the individual is to let him sit in a camp for 2 years. The Canadian Government, in fact, requires that the refugee be at least 1 year in the West before he can be admitted to Canada.

The American "sponsorship" problem is even more difficult. It requires some generous employer to give assurances of a job to a man whom he has never seen before and won't see for perhaps a year. The job must be approved by the Labor Department. Under the circumstances, obtaining a sponsorship is not an easy thing.

In this session of Congress, an effort is expected to be made to change the law to permit "blanket assurances" as was the case under the old Displaced Persons Act. Thus, the Tolstoy Foundation could, for example, give "blanket sponsorship" to so many Russian refugees without the difficulties of individual-to-individual sponsorship.

It is because of this complicated, cumbersome machinery that only 43 Iron Curtain escapees have gotten Refugee Relief Act visas.

American Knit Handwear Industry Seriously Injured by Low-Wage Import Competition

EXTENSION OF REMARKS OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. GROSS. Mr. Speaker, a serious crisis faces the American knit handwear industry as a result of ever-increasing imports of gloves, mittens, and glove linings from low-wage countries. In this regard I call attention to the following statement by Harry A. Moss, Jr., secretary of the American Knit Handwear Association, before the House Committee on Ways and Means on February 2, 1955, concerning H. R. 1, the trade-

agreements extension bill recently passed by the House:

Honorable chairman and members of the committee, the American Knit Handwear Association, Inc., represents the manufacturers of gloves, mittens, and glove linings which are knit directly from yarn.

To understand our interest in this bill, one must first examine the conditions wrought in this industry by import competition.

Mortality: In 1953 there were 30 firms in the industry. Today there are 22—a business mortality of roughly one-third.

Unemployment: In 1952 the industry had over 4,000 employees. In 1954 there were less than 1,500—comparative unemployment of 63 percent.

Financial loss: The ratio of net operating profit to net sales among the 15 leading firms in the industry dropped from 6.1 percent in 1952 to 2.9 percent in 1953, while that of the textile industry as a whole increased from 4.6 percent to 5.2 percent in the same period.

Total net operating profits of the same firms declined from \$1,210,000 in 1950 to \$863,000 in 1952, and to only \$273,000 in 1953.

But the full picture is more serious. Six out of 20 firms had net operating losses. An additional 3 had profits of less than 1 percent of net sales in 1953. An additional seven firms went out of business, and presumably each of them suffered a loss in its last operating year, which was 1953 for most of them. Were it possible to include the financial data of those firms which have gone out of business, the result would probably show a net loss for the entire industry in 1953, and unquestionably in 1954.

Lost market: Such corporate mortality, unemployment, and financial loss indicates the loss of a market. Production of the industry's principal product, wool handwear, dropped from 1,900,000 dozen pairs in 1949 down to 575,000 dozen pairs in 1954.

Import prosperity: As the American industry declined, importers enjoyed ever-increasing prosperity. Wool handwear imports jumped steadily each year, from 32,000 dozen pairs in 1946-48 to an estimated 1,200,000 in 1954, a constantly ascending increase from 1 percent to 68 percent of the total market in that period.

No mystery: The staggering success of imports at the expense of the American industry should pose no mystery. It is compounded from a single formula. The high percentage of labor in producing a glove makes its manufacture vulnerable to low-wage competition. Wages in this American industry average \$1.13 an hour. In our Japanese counterpart, wages average 11.6 cents an hour. This is the differential which the Tariff Act is supposed to offset, but it is the very factor which H. R. 1 would exploit. The provisions of the proposed bill would foster further tariff rate cuts and give the executive branch even greater latitude in exercising powers which were originally meant for Congress, under Article I, Section 8, of the Constitution.

Significance: This industry has unwittingly served as a pilot plant for the rest of the textile and clothing industry. A study of our case history proves that those industries producing the hundreds of products on the Japanese trade agreement bargaining list may validly fear the effects of H. R. 1.

Recommendation: That H. R. 1 not be enacted, because it bestows on the executive branch unprecedented authority and broader powers than Congress has heretofore seen fit to delegate; because it invites a wholesale reduction of our tariffs, with even greater risk of injury to American workers, farmers, and producers; and because the hurry to push this bill through Congress prevents a careful study of its relationship to many pending proposals yet unrevealed.

World Government

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. BURDICK. Mr. Speaker, 2 years ago there was much propaganda afloat in this country advocating a world government of which the United States is to be merely one of the states, surrendering its national sovereignty to the overall organization. That idea was apparently rejected by the people of the United States, and for a time the propaganda died out. Since January of this year, however, it has been revived and is now going full blast.

This is the most important issue before the American people today. The question is: Shall the United States give up its national sovereignty and become only a member of a world government?

Some of the people in high places startle us with their statements. Owen J. Roberts, former member of the Supreme Court of the United States is quoted as saying: "National sovereignty is a silly shibboleth." Justice Roberts is president of the Atlantic Union Committee. How he could hold up his right hand and swear to defend and protect the Constitution of the United States against all enemies, foreign and domestic, and then head a committee seeking to build a world government which would eliminate our own sovereignty is hard to understand.

Here is the text of the resolution introduced in the Senate on February 9 of this year:

Resolved by the Senate (the House of Representatives concurring), That the President is requested to invite the democracies which sponsored the North Atlantic Treaty to name delegates, representing their principal political parties, to meet this year with delegates of the United States in a Federal convention to explore how far their peoples, and the peoples of such other democracies as the convention may invite to send delegates, can apply among them, within the framework of the United Nations, the principles of free federal union.

Here again is the knockout blow against the Constitution:

This called meeting for next year . . . is to explore the possibility of relinquishing our sovereignty.

How can we support the Constitution and defend it against all enemies, foreign and domestic, if we are to contemplate relinquishing our sovereignty? The author of this resolution in the Senate just got through swearing to defend our Constitution, and in the next breath he proposes the possibility of surrendering it. This last resolution does not propose to surrender our sovereignty, but proposes the possibility of doing so. It is a new coat of sugar—but the same doughnut.

It is a curious fact that Rhodes scholars are quite generally in line with the philosophy of world government, not all, however. I wondered why and

looked into the matter. Here is the announced purpose of this school. From the American Oxonian, the official publication of the Association for American Rhodes Scholars, January 1945, we read:

This is not an educational endowment as ordinarily understood. Its purpose is not to give anyone an education he could not otherwise afford; not to promote learning; but to encourage in the rising generation . . . a particular outlook on problems of the world: To give them in fact a political bias.

And a booklet issued by the Chicago Tribune in 1951 says:

Rhodes scholarships were established for the primary purpose of instilling political bias in the minds of young Americans in favor of world federation, involving the surrender of American sovereignty.

I would be unalterably opposed to the appointment of John Marshall Harlan as a member of the Supreme Court, because he is a Rhodes scholar and if indoctrinated with the philosophy above quoted, I would not be sure he would support and defend the Constitution of the United States if it conflicted with the Charter of the United Nations. Some members of the Supreme Court have taken this position already, and I refer to the steel-seizure case under the Truman administration. We already have on the Supreme Court Justice William O. Douglas, who is a vice president of the United World Federalists. In a recent test case before that body it is reported that the vote was a tie, 4 to 4, on the question of which is the supreme law of the land—the United States Constitution or the United Nations Charter.

Judge Harlan, if appointed, might turn against the doctrine of his own school, but the chances are that he would not. We cannot afford to take chances on a matter as important as this.

Assistance to the Aged

EXTENSION OF REMARKS OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, February 25, 1955

Mr. NEUBERGER. Mr. President, as medical techniques improve, greater numbers of people are living longer. This is a fortunate and happy circumstance. Yet, it also makes essential a higher standard of economic security in old age. The United States, in this urgent respect, unfortunately, has lagged behind other nations.

Mr. President, I ask unanimous consent to have printed in the RECORD a most informative and revealing article by Edith Evans Asbury, from the New York Times of February 25, 1955, which shows how our own country could expand and improve its services and attention to the problems of our elderly people.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EUROPE LEADS UNITED STATES IN ASSISTING AGED—OBSERVERS FIND THIS COUNTRY SUFFERS BY A COMPARISON WITH AID GIVEN ABROAD—RESPECT FOR OLD CITED—BUT RISING PROPORTION OF THE ELDERLY IS CAUSING A BIG PROBLEM IN SOME AREAS

(By Edith Evans Asbury)

The proportion of the aged in the population is rising in Europe as well as in the United States.

In Great Britain 10.83 percent of the population are 65 years or older. In Germany 9.28 percent are over 65. The percentage in the United States is 8.18.

Both Germany and Britain had about the same percentage of over 65 population as this country in 1900. In Germany it was 4.88. Britain had 4.69 and the United States 4.05.

France, Sweden, and Norway had large numbers of aged in 1900, their percentages being 8.2, 8.37, and 7.9, respectively. Today in France 11.80 percent of the population are over 65, in Sweden 10.31, and in Norway 9.7.

The Europeans began planning for the welfare of the aged long before we did. That was partly because their populations have been aging gradually over a longer period. Also they showed concern earlier because older persons in those countries receive more deference from their families and the public.

UNITED STATES SUFFERS IN CONTRAST

A report on a tour made last summer to observe how the aged are cared for in Europe and Scandinavia has been made by Miss Ollie A. Randall, national president of the American Gerontological Society. She said: "We sensed above everything else a feeling that nothing was too good for the old people. It is something that we in this country have not acquired to the same degree."

Miss Flora Fox, director of the Central Bureau for the Jewish Aged, who also made the tour, said she was "deeply impressed by the acceptance of the aged as people and entitled to special housing. It puts to shame the meager efforts in this country," she added.

Government-sponsored retirement systems were well established in Germany and the Scandinavian countries when we established ours, largely patterned after theirs, in 1935.

Bismarck introduced social security in Germany in 1873. Britain established a non-contributory pension plan, involving a means test, in 1908. A contributory plan, without means test, was started in 1925.

In early times the Swedes, or rather their Viking forebears, solved the old-age problem by pushing their old folks over the nearest precipice. Today, their old-age pension system is so inclusive it covers every Swede at his 67th birthday, irrespective of financial status.

The King is excepted, but the Queen is not. She, being 67 this year, will receive the pension.

Government subsidized low-rent housing planned especially for older couples, or for unmarried men and women, has also been constructed on a large scale in Germany and in the Scandinavian countries.

OTHER GRANTS BESIDES MONEY

Besides money payments, some European countries provide other benefits for the retired aged. In France, some cities grant coal, milk, sugar, and other food allocations as well as hospitalization.

Denmark, in addition to subsidizing low-rent apartments that house 5 percent of the country's pensioners, pays rent subsidies to those living in other housing.

Sweden, too, either provides specially built low-rent housing, or rent subsidy to the aged pensioners.

With their entrenched systems and their experience in administering them, it might have been expected that those far-sighted countries would be better prepared than the

United States to handle today's aging population.

The European countries are, however, as perplexed and bedeviled as the United States by the mounting costs of chronic illness among the aging. They are learning, as we are, that pensions are not the final answer for the aged. And in many of the countries the retirement insurance structures have suffered from devaluations, war devastation and other blows to national economies.

As rapidly as possible, the European countries are making adjustments. There is a trend toward changing from fixed pensions to flexible ones tied to the cost of living. The Scandinavian countries already pay cost-of-living pensions. That system is being considered by the Governments of England and Germany.

DOUBTS ON MANDATORY RETIRING

The medically increased span of life, with its lengthened period of retirement, and the higher incidence of chronic illness have resulted in Europe as here in a trend away from institutionalization. It is also raising doubts about the desirability of mandatory retirement.

In some of the European countries older men and women who prefer to continue working are spared the hardship of enforced idleness and reduced income that is suffered by many American men and women past the mandatory retirement age.

Older persons are encouraged to stay on the job in England and Denmark. They receive larger pensions as a reward for delaying retirement, because in those countries there are more jobs than there are workers to fill them.

A third of the men and women over 70 in Sweden are still working. In Germany those retired on social security are permitted to earn money, and the majority do.

In France, on the other hand, it is reported that it is the lifetime dream of nearly every state employee to retire on a pension as soon as possible—at 50 or 55. Frenchmen, perhaps, feel less of a call to prove their worth to society by continuing to work. Older men and women are an integral part of the family in France, commanding respect and often obedience.

In Europe, as here, strenuous efforts are being made to keep ailing older persons in their own homes as long as possible, both for their own morale and to avoid higher cost of hospitalization.

Since Britain has socialized medicine, the aged are entitled to free medical care, including drugs and hospitalization. Homes for the aged are available, but about 95 percent of the aged maintain their own households or live with their children. This is approximately the same percentage as in the United States.

Officers of the National Assistance Board visit pensioners who need help, and the board contributes financially to voluntary agencies providing recreation, meals, or other services for the elderly in their own homes.

CLUBS ALSO OFFER SERVICES

More than 2,300 clubs, providing recreation, handicraft classes, and, above all, companionship, are run by local groups affiliated with the National Old People's Welfare Committee, in which voluntary and statutory bodies are represented.

Mobile food services provide many old persons with hot meals in their homes.

Prosperous Sweden, which has not engaged in a war since 1814, provides handsomely for the aged. That country's national health program, effective this year, supplies hospital and medical care and free medicine for everyone, including the aged.

In addition, there are many State and municipal services for ailing older persons. Visiting nurses and homemakers are sent without charge.

About 23,000 low-priced apartments and 210 modern houses for the aged with 8,800 beds, the bulk in single rooms, also have been built for Sweden's aged.

Less blessed with prosperity, Germany and France face a more severe problem. West Germany's own people have aged earlier, physiologically, because of the rigors of war. And the country has been flooded with large numbers of aging refugees from East Germany and the Balkans. Medical care, drugs, and hospitalization are free for Germans receiving pensions under the compulsory insurance system.

PROBLEM ACUTE IN FRANCE

France's problem is acute, because it has the oldest population in the world. The average age of the French is 35, compared with 30 in the United States. The percentage of men and women over 60 in France is 16.2 as against 9.9 in the United States. Many of France's aged are war widows.

As France also has had a high increase in the birth rate, she has a disproportionate number of persons either over 60 or recently born. This places a heavy burden upon persons in the producing years, whose numbers have been cut by the casualties of two wars.

So far the problem of an aging population has not arisen in the under-developed countries of Asia, but it is expected to develop there, too, within the next 20 years. The benefits of medical science that extend the life span are easily exportable. Already mortality rates in some of those countries have fallen sharply.

It may be that by the time their aged populations assumes larger proportions, the underdeveloped countries will be better prepared to grapple with the problem than were the United States and Europe.

For one thing, larger numbers of children in their traditionally larger families will also survive, thanks to medical science. Secondly, their predominantly agrarian society provides more space and opportunity for older men and women in the family.

And last, but not least, the Asian family pattern protects older men and women from the demoralization so often at the root of their dilemma in our modern, industrialized society.

Many of the so-called under-developed countries have preserved, along with other antiquated customs, the belief that a family includes not only parents and children, but grandparents, aunts, uncles, and cousins to the second and third generation.

These older members remain in the household, sharing in its work, its play, its poverty, or prosperity, and its love.

Outlook for Lithuania

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 25, 1955

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks, I include an article on the outlook for Lithuania which appeared in the Wilkes-Barre (Pa.) Times-Leader under date of February 16, 1955:

This is Lithuanian Independence Day. As it cannot be observed in Lithuania, enslaved by the Soviet Union since 1940, it is fitting that attention be called to the occasion in America, custodian of what freedom there is left in the world today.

It was at Vilna on February 16, 1918, that the Republic of Lithuania proclaimed its independence. After 23 years, Lithuania was engulfed by the Red tidal wave, although the United States has not recognized the absorption of the country into Communist Russia. So, officially, Lithuania lives on despite its fate at the hands of a brutal oppressor.

The Baltic States—Lithuania, Latvia, and Estonia—no longer carry on the uneven struggle alone. Today their hopes for liberation from the Communist yoke are brighter than ever, for the crisis, of which they have been a part so long, is approaching a climax.

The future of Lithuania is linked now with the United States, for our country has had the leadership of the crusaders of freedom thrust upon it. It is generally agreed a showdown is coming eventually between the forces allied with communism and with liberty. Then will Lithuania's fate be decided along with our own.

The world cannot go on indefinitely, half slave and half free. Even though we were satisfied, which we are not, to maintain the status quo, the Reds would not be, for their aim is world conquest. They will not be content with less. They hope to put the United States, above all, in bondage like Lithuania.

So in saving ourselves we shall rescue millions of Lithuanians and other nationals now behind the Iron Curtain. Nobody can say when the day of deliverance will come but it is getting closer all the time. During the past month it looked as though Formosa would supply the spark for the conflagration. The fact that open hostilities did not break out means only a postponement of a day that is inevitable.

Lithuania has suffered much but its spirit is unquenchable and its joy on the day of resurrection will be all the greater by reason of the hardships it has undergone during the past 15 years it has been held in subjugation.

Butter Over Guns

EXTENSION OF REMARKS

OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 24, 1955

Mr. WIDNALL. Mr. Speaker, today the Washington Daily News carried a most provocative suggestion and constructive proposal. It is well worth serious study by the State Department and the Congress.
